Certain charges were also made about the large increase in expenses in the ASC program, exclusive of CCC grain storage structures. The following statement shows conclusively that expenses in the ASC county officers have decreased with respect to programs where the workload is the same or has declined and has increased only in those cases where there has been additional workload. It demonstrates that the total increases in county expenses is attributable in its entirety to workload rather than the method of operation.

The statement which follows shows the program breakdown of ASC county committee expenses for the State of Missouri and in total for all States for the fiscal years 1953 and 1954:

ASC county committee expenses

Program	Fiscal year		Increase (+), decrease (−), 1954 over 1953
	1953	1954	
I. STATE OF MISSOURI			
Agricultural conservation and farmland restoration	$829,760	$718,435	−$111,325
Agricultural adjustment programs	190,202	950,214	+760,012
Loans and purchase agreements	131,622	134,054	+2,432
Crop insurance	44,208	14,913	−29,295
CCC (other than grain storage structures)	105,566	824,000	+718,434
Reimbursements	16,516	15,338	−1,178
Total	1,317,874	2,656,954	+1,339,080
II. TOTAL ASC COUNTY COMMITTEES FOR ALL STATES			
Agricultural conservation and farmland restoration	20,977,502	18,156,348	−2,821,154
Agricultural adjustment programs	8,627,680	33,869,387	+25,241,707
Sugar	285,000	318,108	+33,108
Loans and purchase agreements	4,298,236	5,505,107	+1,206,871
Crop insurance	1,992,075	545,988	−1,446,087
CCC (other than grain storage structures)	7,606,404	10,019,297	+2,412,893
Reimbursements	493,660	549,129	+55,469
Total	44,280,557	68,963,364	+24,682,807

Analysis of these figures indicates that for the only program where the workload was relatively stable, agricultural conservation, the expenditures decreased in 1954.

The increase in expenses for the agricultural-adjustment programs was due to the imposition of acreage allotments and marketing quotas on wheat, cotton, and corn in 1954, which were not in effect for 1953.

The increase in expenses for the sugar program was caused by the imposition in 1954 of proportionate shares on sugarcane.

An increase in the number and amount of CCC loans in 1954 accounts for increased expenses in that year.

The decrease in crop insurance expenses in 1954 reflects primarily the decrease in workload.

The emergency feed program, which was particularly heavy in Missouri, accounts for the increase in CCC programs other than grain storage structures.

The wide fluctuations of workloads makes it extremely difficult to segregate savings due to changes of methods of operations, but the agricultural-conservation program, the only program with a relatively stable workload, does show a significant decrease.

Analysis of expenditures for county committeemen, office manager, and chief clerks' salaries in the fiscal years 1953 and 1954 indicated (1) that about $1,200,000 was saved in 1954 over 1953 in the 10 States which had no office managers in 1953, and (2) that about $1,300,000 was saved in county committee salaries in 1954 over 1953, although the agricultural adjustment programs required nearly 400 man-years of additional work.

A comparison of 1954 expenses with those for 1953 in a State where there was no change in the method of operations proves conclusively that increased expenses in 1954 were due primarily to increases in workload chiefly the agricultural-production programs and the drought emergency programs. This is evident in the statement for Oregon, shown below. It should be noted that expenses for the agricultural-conservation program increased in 1954 and that there was no drought emergency program in Oregon in that year:

Oregon ASC county committee expenses

Program	Fiscal year		Increase (+) decrease (−) 1954 over 1953
	1953	1954	
Agricultural conservation	$213,619	$230,390	+$16,771
Agricultural adjustment programs	52,991	157,380	+104,389
Sugar	5,513	4,936	−577
Loans and purchase agreements	87,641	76,343	−11,298
Crop insurance	19,098	8,610	−10,488
CCC (other than grain storage structures)	93,688	68,717	−24,971
Reimbursements	4,911	6,324	+1,413
Total	477,461	552,700	+75,239

There was further criticism on the change in the farmer committee system and the establishment of country office managers. The following, I believe, is a statement that accurately presents the Department of Agriculture's position on this matter and the reasons for the changes.

Early in this administration, it became apparent from the department's studies that several changes were needed to strengthen the farmer committee system. The Department was aware of the splendid contribution these committees had made in the past, and determined to make the best possible use of their services in administering farm programs. This committee structure, composed of community and county committees elected by farmers, and the State committees appointed by the Secretary, is responsible for the local administration of the agricultural conservation, acreage allotment and marketing quota, price support, and sugar programs. Formerly known as production and marketing administration committees, these committees are now known as agricultural stabilization and conservation committees to conform with internal reorganizations made in the Department.

The first changes were made in March 1953. These were for the purpose of increasing efficiency, promoting economy, and attracting more competent farmers to serve in committee positions. The principal change made at that time was to separate the policymaking and policy-executing functions of State and county offices. The policy-forming functions were assigned to farmer committees. The committees now operate in much the same manner as a board of directors. They make the policies of the office and hire trained employees appointed by and responsible to them to carry out the committee's decisions and to be responsible for the day-to-day operation of the office. This method of operation has enabled both the farmer committeemen and their hired employees to perform the functions which each is best qualified to undertake. A second change was to employ committeemen on a part-time and when-actually-needed basis, rather than full time. This change not only reduced costs, but enabled the Department of Agriculture to attract many capable and interested farmers to serve in these positions who otherwise would have been unwilling or unable to serve.

These first two changes affected primarily the Midwest States. Most of the other States were already operating on this basis. The good experience gained from the operation in most of the States, convinced the Department that this system should be used nationwide.

Third, a rotation system was established for State committees under which a member is replaced each year. This has brought fresh and wider viewpoints to bear on farm problems in the State, and at the same time insured stability and continuity of policy by retaining experienced members of the committees from one year to the next.

Early in the Eisenhower administration it was determined that county committees should continue to choose their own personnel. It was felt that the local farmers had generally done a good job in selecting employees, and that an important part of the new grassroots approach should be to keep these committees functioning with a maximum of local responsibility. However, in order to attract capable people, the Department published minimum standards which employees were required to meet. The enforcement of these national standards, or such higher standards for the State as the State ASC committee elected to use, was delegated to the State committee. It was emphasized that these standards were to be used to get qualified employees and not to substitute the judgment of the State committee for that of the county committee where the employee selected by the county committee met the qualification standards. The Department also established for the first time a national scale of salaries for these employees which provides flexibility to meet varied situations in different States and counties.

Last year the Department made additional changes in the committee system, all designed to strengthen and improve it, and necessary to supplement the several improvement actions taken previously. These changes place the election machinery in the hands of an independent group of farmers to

insure fairness in the conduct of committee elections, tighten eligibility requirements for committeemen to exclude persons with conflicting interests, and simplify the election procedure. One of the most frequent criticisms of the farmer committee system in the past has been that some committees were using the election machinery to perpetuate themselves in office. This is not a valid criticism under today's operations because the Department has moved to make committeemen as representative as possible of the farmers they are selected to serve.

It has been, and continues to be, the Department's policy to free the farmer committee system of partisan politics. The Department has stated on many occasions that these committees can serve their cause and their country best in an atmosphere which is as devoid as humanly possible from partisan considerations.

Only Significant Difference Was in Quantity of Work, and Impaired Workers Rated Higher—Experience of Atomic Energy Commission in Employing Physically Handicapped

EXTENSION OF REMARKS
OF
HON. AUGUSTINE B. KELLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. KELLEY of Pennsylvania. Mr. Speaker, as chairman of several congressional investigations into the problems of the physically handicapped, and as sponsor of legislation to encourage the hiring of the handicapped, I have repeatedly been struck by the fact that all impartial and objective studies of the value of these employees as compared to unimpaired workers always show the handicapped ranking very high for any work they are capable of performing.

Adm. Louis L. Strauss, Chairman of the Atomic Energy Commission, confirms this experience of mine in a report just issued which analyzes the experience of the AEC employing the physically handicapped. Admiral Strauss reported that a study of the performance of 300 handicapped persons in one AEC laboratory revealed there was no significant difference in job performance between the impaired and unimpaired.

When comparing the two groups in ability, adaptability, attendance, attitude, dependability, quantity of work—

And so forth. He wrote in the July issue of the monthly publication Performance issued by the President's Committee on Employment of the Physically Handicapped—

The only significant difference was found in the factor, quantity of work. On this point the impaired workers were rated higher. The impaired group also had a better safety record than the unimpaired group. From janitorial activities to the design of new nuclear reactors, this group of handicapped employees has more than carried its assigned workload.

The AEC Chairman said that use of physically handicapped persons in atomic-energy work has added needed scientists to the labor force, helping to fill a serious shortage of qualified people.

The press release issued July 29 by Maj. Gen. Melvin J. Maas, chairman of the President's Committee on Employment of the Physically Handicapped, which reported on the study by the Atomic Energy Commission, is as follows:

AEC HEAD SAYS HIRE-THE-HANDICAPPED PROGRAM ADDS SCIENTISTS TO LABOR FORCE

The policy of employing physically handicapped individuals in the Atomic Energy Commission materially increases the number of scientists in the labor force, Adm. Lewis L. Strauss, Chairman of the Atomic Energy Commission states in the July issue of Performance, monthly publication of the President's Committee on Employment of the Physically Handicapped.

"One of our atomic-energy research laboratories," he said, "has employed several hundred persons whose physical disabilities cover practically every conceivable type of handicap. An analysis of the performance of 300 handicapped workers revealed that there was no significant difference in job performance between the impaired group and a similar group of unimpaired employees. The two groups scored almost identically in ratings by supervisors.

"When comparing the two groups in ability, adaptability, attendance, attitude, dependability, quantity of work, etc., the only significant difference was found in the factor, quantity of work. On this point the impaired workers were rated higher. The impaired group also had a better safety record than the unimpaired group. From janitorial activities to the design of new nuclear reactors, this group of handicapped employees has more than carried its assigned workload.

"Of particular interest to the Atomic Energy Commission is the fact that such programs increase the number of scientists and engineers in the labor force.

"As one example, one laboratory employed a design engineer who had atrophy of the right leg and paralysis of both legs since the age of 6 months. Using a basic form of remote-control equipment in his crutches, he designs mechanical arms and hands that can operate through protecting walls and manipulate radioactive materials.

"The ever-increasing needs of American industry makes it imperative, therefore, that no physically handicapped individual possessing usable skills be denied employment in a job for which his skills qualify him. Ability rather than disability must be the watchword of any individual who is responsible for employee selection and placement."

"Atomic energy research," Admiral Strauss said, "has placed new tools in the hands of medical scientists that will materially assist in the rehabilitation of handicapped individuals."

"These tools," he said, "will enable us to gain a better understanding of what makes the human body behave as it does and to assist in the rehabilitation of handicapped individuals, thus making more of them capable of gainful employment."

Always More To Learn

EXTENSION OF REMARKS
OF
HON. JOHN J. FLYNT, JR.
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1955

Mr. FLYNT. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD I include an editorial by Mr. Belmont Dennis, editor and publisher of the Conyers News. Mr. Dennis is also editor and publisher of the Covington News, and is a resident of Covington, Newton County, Ga. It was with pleasure that I read the editorial which follows, and I hope that it will be of interest to others who shall read it:

ALWAYS MORE TO LEARN

Learning is the common denominator of democracy. The higher the level of learning in this country, the higher will be the level of our form of government. Freedom to pursue knowledge is the birthright of Americans, and this means each individual is privileged to advance and learn with limitations set only by his own ambition and capabilities.

Public education and compulsory school attendance have raised the literacy level higher in this country than anywhere else in the world. With that rise also have risen our standards of ethics, our social and political institutions.

Mere literacy, however, is only a stepping-stone to learning. And learning is only the raw material of thinking. Because of our broad base of education, we Americans have become leaders in the sciences, the arts, and in human relations.

These thoughts are generated by the recent award of large cash prizes by the publishers of the New York Funk & Wagnalls Encyclopedia and of the Unicorn Book of the Year to the winners of two nationwide information contests.

The prizes awarded by the publishers of these excellent research and reference works are of interest primarily to the winners. The public has a much more profound interest in the contests. Thousands of contestants, of all ages and walks of life, of all degrees of formal education, have been stimulated to scholarship, research, and a thirst for knowledge.

We feel that this publishing firm has performed a noteworthy service in demonstrating that intelligent curiosity need not end in the classroom—that the home, the foundation of our free way of life, can be an important place of learning through ownership and use of family reference libraries. They have taught us that study can be a rewarding and pleasurable hobby which helps bind the family ties.

Richard B. Vail

EXTENSION OF REMARKS
OF
HON. LEO E. ALLEN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1955

Mr. ALLEN of Illinois. Mr. Speaker, I was shocked beyond measure when I heard of the passing of my good friend Richard B. Vail. He was possessed of great character and integrity. During the years he was in Congress he served his country, his State, and his district with distinction.

I know every Member of Congress who was privileged to serve with Dick Vail, will remember his many courtesies and acts of kindness.

I join with all his many friends in expressing my heartfelt sympathy to the members of his family.

The Nation's Medical and Scientific Needs

EXTENSION OF REMARKS
OF
HON. IRWIN D. DAVIDSON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. DAVIDSON. Mr. Speaker, I have today introduced 3 bills dealing with the medical and scientific needs of the country. These measures are the result of prolonged study and many conferences.

In essence, the 3 bills would:

One. Provide $250,000 to cover the cost of preparation, publication, and distribution of science teaching text and laboratory manual supplements for public, elementary, and secondary schools which would be prepared by qualified private science teaching groups.

Two. Institute a national program of 10 college scholarships per State each year for needy students who qualify in a nationwide mental examination.

Three. (a) Provide $20 million of Federal funds for use on a matching basis to aid the States in the construction of psychiatric hospitals and psychiatric rehabilitation centers; and (b) Provide $5 million of United States funds for aid to the States on a matching basis for use in building narcotic addicts hospitals and narcotic addicts treatment and rehabilitation clinics.

It is my firm conviction that our national medical and scientific research activities are in need of great augmentation. However, it is recognized that before any large-scale expansion can be undertaken, many more thousands of trained scientific personnel are needed. Yet, while this need is clear, American schools graduate fewer and fewer trained personnel each year. The gravity of the situation is well demonstrated in an excellent article which appeared in the magazine section of the New York Times this past Sunday. The author of that article is Dr. Alan T. Waterman, director of the National Science Foundation. He has stated the case with great directness and clarity. Dr. Waterman cited these startling statistics in his presentation:

Engineering graduates

	1950	1954
Soviet Russia	28,000	54,000
United States	52,000	22,000

He said, "The fact is that there are not going to be enough teachers and experienced research investigators to train the coming generation of scientists and engineers when the youngsters resulting from the high birthrates of the forties enter college in a few years."

This shortage is apparent today on the elementary and secondary school level.

Dr. Waterman set forth four basic steps to help reverse this shocking trend by "increasing the broad base of our educated population from which scientists and leaders in other fields must come; locating and attracting into the sciences youngsters with special aptitudes in that direction; improving the quality of instruction in the secondary schools; developing an appreciation of pure research as the foundation of our strength in science. Above all, we must strive for a climate of opinion that will be favorable to our intellectual as well as creative activities," he said.

I believe that two of the bills which I have introduced will help to meet the needs outlined by Dr. Waterman.

The first would provide funds to enable private groups to prepare, publish, and distribute, without charge, supplementary science teaching text and laboratory manuals to public elementary and secondary schools throughout the country.

Such manuals would fill the long gap which exists between publication of regular editions of grade- and high-school text and laboratory books. It has been found that revisions of such standard works are not economically feasible more frequently than every 7 to 10 years. As a result, classroom work can be seriously retarded, particularly when science courses in our crowded schools have to be taught by substitute teachers, not especially trained in the sciences.

These manuals would include text material to the extent that new topics come up that are deemed of interest to students and have not been treated in the textbooks that are available. Similarly, they would include laboratory exercises that involve subject matter and skills so recently developed that they are not included in the current laboratory books. The material would be distributed through national science-teaching societies and organizations. The established publishing houses could produce such manuals on a straight contract or other reimbursement basis. As is the case with the traditional preparation of manuscripts, science teachers and professors in teacher-training universities would produce the materials. Coordination of topics could be accomplished through a national science-teachers organization such as the Future Scientists of America Foundation of the National Science Teachers Association. Such an organization, a division of the National Education Association, would be eminently qualified to conduct the entire program and could be authorized to do so under my bill.

The cost of such a program is modest indeed when compared with the benefits to be derived. A typical booklet could be produced and a copy sent to each of the Nation's 28,000 high schools for approximately $5,000. To place 1 copy in the hands of each of the Nation's 365,000 physics students would cost 10 or 12 times that sum. There are in the United States approximately 70,000 teachers who have assignments involving one or more sciences. A worthwhile manual could be prepared for them at a cost of only about $1 per teacher, including the cost of development, production, and distribution.

The second bill which I introduced would carry on the training process at the college and graduate-school levels. In 1950, according to Dr. Waterman, we had 59,000 graduates in the natural sciences. Four years later, in 1954, we had only 29,000. He pointed out that the record total of graduates in 1950 was largely due to the GI bill of rights. He said:

> It shows what we can do. The substantially lower figures for the years that follow represent a serious handicap to the full development of our national strength.

My bill would increase college enrollments, principally at the land-grant colleges, by about 500 students each year. They would be eligible for both undergraduate and graduate work.

In February of this year, the Health Resources Advisory Committee under the able chairmanship of Dr. Howard A. Rusk, reported on the serious and increasing national shortage of trained health personnel. This report dealt essentially with physicians, dentists, and nurses but is a clear indication of the situation regarding all our scientific personnel. Dr. Rusk reported:

> We have a tight supply situation in the three major health professions—medicine, dentistry, and nursing. The supply both of physicians and dentists has not increased as fast as the population, in the period since the beginning of World War II. * * * There is little prospect for improvement in the total situation in this decade.

This report went on to point out the serious shortage of faculty members on the staffs of medical schools and that at least 30 million Americans live in areas without organized health departments. The report concluded that a civilian disaster of the magnitude possible today could put an incredible load on civilian health personnel.

Last year the Committee on Interstate and Foreign Commerce of this House reported that—

> An adequate number of well-trained scientists is the most important single factor in determining whether or not progress is made over the years to come in the fight against disease. Money and facilities are needed urgently, but they will not of themselves produce the knowledge we need so urgently. The crucial factor is the intelligence of adequately trained dedicated men and women who will, if given the oportunity, explore new avenues of science and thus bring us to our desired goal.

The bill I propose would give that opportunity to hundreds of Americans. It would give that opportunity to individuals capable of contributing to and strengthening our Nation. It would utilize the talents and intelligence of those who, through lack of encouragement or lack of funds, have been unable to contribute to our general well-being in the fashion they would like or to the full extent of their capabilities.

The third measure which I have introduced would expand the Hospital Survey and Construction Act to include psychiatric hospital and rehabilitation facilities and narcotic addict hospitals and treatment and rehabilitation clinics. The most critical health problem confronting the Nation today is in the field of mental health. Dr. Jonas E. Salk pointed this out immediately after the announcement of his success in culminating the conquest of poliomyelitis.

Today there is an estimated shortage of 5.3 hospital beds per thousand population in all categories of hospitals. This is a shortage of about 500,000 beds. Among the categories of hospitals,

need—as measured by additional beds required to meet minimum standards—is most acute in the mental-care field. The rate of additional beds needed per 1,000 population for mental care is 2.2; for general hospital care, 1.2; for chronic illness, 1.7; and for tuberculosis, 0.13.

At the present rate of illness, 1 out of every 12 children born will spend some time in a mental hospital. The number of patients in institutions for the care of the mentally ill is increasing steadily at the rate of approximately 10,000 per year. In addition, the number of noninstitutionalized cases have been estimated at 9 million people. That is almost 6 percent of the total United States population. Only 10 percent of these are thought to need hospital care. Thus, the urgent need for psychiatric hospitals and psychiatric rehabilitation facilities for ambulatory patients is clear. Advances in treatment have made it possible to provide increased care for the mentally ill outside of hospitals. It has become increasingly apparent that psychiatric clinics—usually defined as having a psychiatrist in attendance at regularly scheduled hours—can be of great assistance in relieving overcrowded mental hospitals. They serve as the center for the often neglected but urgently necessary followup care or rehabilitation of patients who have been hospitalized and have recovered sufficiently to return to their homes. Several States have already instituted outpatient clinics and rehabilitation facilities for the care of mental patients. I have been told that the average cost of treating a patient in one of the clinics now in operation in Michigan costs about $39 per adult as compared with $1,124 for a patient in a traditional State institution.

Despite the excellent advances which have been made under the Mental Health Act of 1946, it has been estimated that there is at present a need for more than 800 additional psychiatric clinics.

The need for similar facilities for narcotic addicts is even greater today. There are virtually no narcotic addict rehabilitation facilities in the country. In essence all of our efforts have been concentrated upon the two Federal hospitals for addicts located at Lexington, Ky., and Fort Worth, Tex. There have been a very few State projects such as the Riverside Hospital in New York City. Dr. Isidor Chein of the Research Center for Human Relations at New York University, Dr. Solomon Kobrin of the Chicago Area Project, the Provident Hospital and Training School in Chicago, and Dr. Ralph W. Fisher of the Los Angeles Youth Committee have been virtually alone in their activities with narcotic addict rehabilitation and treatment clinics.

In view of the apparent inability of the Federal narcotic agents to stem the tide of habit-forming drugs which is flooding the country, the only solution to this virtually insoluble problem of dope addiction must lie in the cure of addicts and their rehabilitation and restoration to a useful place in society. A fully integrated program of hospital treatment and postcustodial care at rehabilitation clinics must be established at once. One example of the growing curse of addiction, and many, many more could be given, is the fact that in New York City in 1954, more boys and girls under the age of 21 were arrested for narcotic violations than the total of all narcotic arrests of adults and teenagers combined in 1946.

There is at present a waiting list of over 500 persons seeking voluntary admission to the Lexington and Fort Worth hospitals. Based upon the operating record established at these two institutions, it will take approximately 40 more years to treat the present estimate of 60,000 addicts in the United States. In addition, adequate and extensive rehabilitation facilities would serve to greatly reduce the large number of repeat admissions which prevail today as a result of back-sliding addicts.

Increased hospital custodial treatment and a sound nationwide program of rehabilitation and postcustodial care is essential.

Mr. Speaker, I offer these three bills now in the hope that during the recess the appropriate administrative agencies and professional groups may be able to study my proposals and that when the Congress reconvenes we may be able to hold public hearings promptly and enact some helpful remedial legislation. I do not claim these measures as the final word, but offer them as my own thought on the subject, in the hope that discussion and study may produce additional proposals and professional suggestions which may be adopted to help alleviate the critical conditions which exist in these scientific fields.

With your permission, I would like to include here with my remarks analyses of the three bills which I have introduced:

ANALYSIS OF THE DAVIDSON BILL TO PROVIDE ASSISTANCE IN FINANCING PUBLICATION OF SCIENCE TEACHING MANUALS FOR USE IN ELEMENTARY AND SECONDARY SCHOOLS

SCIENCE TEACHING MANUALS

1. Purpose: To promote science education by providing Federal assistance to the Nation's elementary and secondary schools through grants to finance the development, publication, and free distribution of science teaching manuals to supplement standard textbooks and laboratory manuals.

2. Appropriation: Not more than $250,000 in any fiscal year.

3. The United States Commissioner of Education is authorized to make grants to finance the preparation, publication, and distribution of such manuals for use in elementary and secondary schools.

4. Grants shall be made only to nonprofit private agencies selected by the Commissioner on the basis of experience in science teaching in the elementary and secondary schools.

5. Grants shall be made under agreements between the Commissioner and such agency providing that the agency will distribute the manuals free (except for distribution costs) to United States elementary and secondary schools which request them.

(a) Manuals in excess of those used to fill such requests may be sold, with proceeds of such sale being divided between the United States and the agency on basis of their respective contribution to cost of manuals.

(b) All such funds paid into the Treasury shall be kept in a separate account available for making additional grants.

(c) The agency shall account to the Commissioner regarding all expenditures.

6. The Government is specifically prohibited from exercising any direction, supervision, or control over the selection of authors or materials or over the personnel, curriculum, or program of any school or school system.

7. Elementary or secondary schools are defined in the bill as those providing such education at public expense and under public supervision and direction.

ANALYSIS OF COLLEGE SCHOLARSHIP PROGRAM PROPOSED BY CONGRESSMAN IRWIN D. DAVIDSON

The purpose of this act is to promote interest in higher education and give an opportunity to needy qualified highschool graduates to attend college and graduate schools.

1. Provision is made for the awarding of the following annual scholarships:

(a) Ten to residents of each State.

(b) Five to residents of Hawaii, 5 to residents of Alaska, and 5 to residents of Puerto Rico.

(c) Two to residents of the Canal Zone and 2 to residents of the Virgin Islands.

2. Holders of scholarships shall either attend a land-grant college within their State or such other accredited college or university as the United States Commissioner of Education may designate.

3. The initial award of such a scholarship shall be based upon: (1) The results of annual competitive examinations to be held throughout the United States; (2) financial need as determined by such evidence as the Commissioner may require.

4. Examinations shall be conducted by the educational testing service of Princeton, N. J. (college boards) pursuant to arrangements with the Commissioner of Education. Any individual who has completed his or her secondary education, or who will do so within 1 year, and who has not commenced education at the college level is eligible to take the examination.

5. Initially, scholarships under this program may only be awarded for first year study at institutions of higher education. However, such scholarships may thereafter be renewed from year to year if the student's progress is satisfactory to the institution he is attending and to the Commissioner, and the student remains at least in the upper quarter of his class.

6. The Commissioner may continue to provide scholarship assistance to students who complete 4 years of undergraduate work under the program, and who he determines are outstandingly qualified to continue their education at the graduate level in the students' major field of study. The Commissioner may authorize all students to attend institutions of higher education other than those initially designated when such institution does not provide an adequate course of study in the field the individual desires to follow or when continued attendance at such institution is impracticable for other reason.

7. No scholarships may be awarded under this act or renewed under it, if the individual is receiving benefits under the educational provisions of the so-called GI bills or certain other scholarship aid.

8. Payment of scholarship assistance shall be made directly to each individual to meet in part the expenses of such individual's subsistence, tuition, fees, supplies, books, and equipment while holding a scholarship and actually enrolled at school.

9. The allowances provided are as follows:

(a) Each scholarship student, no dependents, $110 per month;

(b) Each scholarship student, one dependent, $135 per month;

(c) Each scholarship student, more than one dependent, $160 per month.

10. Holders of such scholarships who are otherwise subject to military service require-

ments shall be deferred during satisfactory attendance under the program. However, upon completion of studies under the program all former recipients of assistance shall automatically become subject to general military requirements unless, while attending college they pursue a full 4-year Army ROTC, Naval ROTC, or Air Force ROTC program and accepted a commission in one of the services.

11. The United States Commissioner of Education shall administer the program and shall make regular studies, investigations, and reports concerning the scholarship program and shall report annually to the Congress through the Secretary of Health, Education, and Welfare. He may employ specialists, experts, and consultants when deemed necessary.

12. The Secretary of Health, Education, and Welfare shall consult with the heads of other executive departments and Federal agencies with the aim of coordipating all scholarship programs administered by the Federal Government.

13. No Federal department, agency, officer, or employee may exercise any direction, supervision, or control over the curriculum or program of any educational institution or over its administration or personnel.

14. Scholarships shall be awarded without regard to sex, creed, race, color, religion or national origin.

ANALYSIS OF CONGRESSMAN IRWIN D. DAVIDSON'S BILL TO ASSIST THE STATES ON A PARTNERSHIP BASIS IN BUILDING MUCH-NEEDED NONPROFIT PSYCHIATRIC HOSPITAL AND REHABILITATION FACILITIES AND NARCOTIC ADDICTS HOSPITALS AND TREATMENT CLINICS

PSYCHIATRIC AND NARCOTIC ADDICTS HOSPITALS AND REHABILITATION FACILITIES

Title VI of the Public Health Service Act (42 U. S. C. 291) is amended by adding new parts H, I, and J which would assist the States in surveying their needs and in constructing:

A. Psychiatric facilities

1. Five hundred thousand dollars is authorized to assist the States to inventory their existing psychiatric facilities, survey the need for additional facilities, and develop programs for the construction of such facilities. The Surgeon General is authorized to use this fund to make payments of not more than 50 percent of the cost of such survey to States applying for assistance; no such allotment to any State may be less than $25,000.

2. Twenty million dollars is appropriated to aid the States in the construction of nonprofit psychiatric hospitals, rehabilitation, and treatment facilities. No allotment made to any State under this section may be less than $100,000.

3. The following types of nonprofit facilities are defined as proper for assistance under this portion of the bill:

(a) Psychiatric hospitals: These are hospitals for the intensive treatment and care of the mentally ill and those afflicted with psychiatric ailments, but not hospitals devoted essentially to providing long-term custodial care;

(b) Psychiatric treatment clinics and rehabilitation facilities: Such facilities are defined as those providing for the care, treatment, and rehabilitation of ambulatory patients afflicted with psychiatric ailments, through an integrated program of medical, psychological, social, and vocational evaluation and service which is either operated in connection with a hospital or in which patient care is under the professional supervision of persons licensed to practice psychiatry in the State.

B. Narcotic addicts facilities

4. $250,000 is authorized for use in assisting the States to inventory their drug addicts facilities, survey the need for such facilities, and develop programs for the construction of such medical facilities.

5. $5 million is appropriated to aid the States in the construction of the following types of nonprofit facilities:

(a) Narcotic hospitals to provide suitable custodial care and treatment of narcotic addicts.

(b) Treatment clinics and rehabilitation facilities for the care and treatment of ambulatory patients overcoming narcotic addiction and not in need of custodial care.

Appropriate integrated treatment by competent professional personnel in medical, psychological, social, and vocational fields would be provided at such facilities which are either connected with a hospital or in which the patient care is under the professional supervision of persons licensed to practice medicine in the State.

6. The States may submit applications for survey and construction funds for both psychiatric hospitals, rehabilitation facilities and narcotic addicts hospitals, treatment centers and rehabilitation clinics as provided in the original Hill-Burton Act.

The act provides for:

(a) A single responsible State agency to administer the States program;

(b) A State medical facilities advisory council which includes representatives of nongovernmental groups or provides for consultation with such groups.

(c) State reports to the Surgeon General supplying such information as he shall require, including relative need for such facilities determined in accordance with the Surgeon General's regulations.

(d) State plans for construction of facilities eligible for assistance.

(e) Review of State plans and modification of them from time to time as is necessary.

7. Allotments under both the psychiatric and narcotic addicts portions of the bill are to be made to the States on the same basis as was provided in the 1954 amendments to the Hill-Burton Act, except that the Surgeon General may consider special facts relating to the incidence of narcotic addiction within the States in allotting funds for drug addict medical facilities construction and surveys.

8. The Federal share of the cost of all projects is to be determined in the same fashion as is provided under existing law in the case of projects covered by the 1954 amendments to title VI. There are three alternatives:

(a) Special standards may be established under the State plan which is approved by the Surgeon General;

(b) In the absence of such standards, an amount to be determined, but not less than one-third nor more than two-thirds of the State's allotment percentage; or

(c) Fifty percent of the cost of construction, if the State so elects.

9. A State may, subject to the approval of the Surgeon General, request that a specified portion of an allotment to it be transferred and added to the corresponding allotment of another State in order to meet a portion of the Federal share of the construction in such other state of psychiatric or narcotic addicts facilities.

10. No application for diagnostic or treatment centers or psychiatric treatment and rehabilitation facilities may be approved unless the applicant is either:

(a) A State, political subdivision, or public agency;

(b) Corporation or association which owns and operates a nonprofit hospital; or

(c) A corporation, association, fund, trust, or foundation organized and operated exclusively for either charitable or educational purposes as described in section 170 (c) (2) of the Internal Revenue Code of 1954.

11. The recapture provisions of existing law are extended to the new act and definitions of "psychiatric hospitals" and "psychiatric treatment and rehabilitation facilities" are added.

Small Business and the United States Economy

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Tuesday, August 2, 1955

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the statement of Wallace J. Campbell, director of the Washington office of the Cooperative League of the U. S. A., before the Senate Select Committee on Small Business concerning the report of the Attorney General's National Committee To Study the Antitrust Laws.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

My name is Wallace J. Campbell. I am director of the Washington office of the Cooperative League of the U. S. A. The league is a federation of consumer, purchasing, and services cooperatives across the Nation with a direct membership of over 2 million families, both rural and urban. In addition, we have in associate membership an additional 9 million members affiliated through the National Rural Electric Cooperative Association and the Credit Union National Association.

The cooperative league is very much interested in the report of the Attorney General's committee, both in terms of its specific reference to cooperatives, and in terms of our more general concern with the protection of a free, independent, and competitive economy. The cooperatives are based on the premise of a democratic economy, one which is free from unnecessary controls on the part of the Government and also one free from control and domination by any single business or business organizations. We feel that it has been and must continue to be in the interest of all of the people of the United States to maintain our antitrust laws and to enforce them adequately.

We had hoped that the Attorney General's committee would take as its major task the review and strengthening of the antitrust laws. We are greatly disappointed in the results of the study.

It is a sad commentary on the committee itself that the press and the public breathed a deep sigh of relief when the report recommended continuation of the existing antitrust laws. This should have been the point from which the committee started rather than the point at which it arrived after long study. Unfortunately, in our judgment, the report opens the way for the weakening of the antitrust laws to such an extent that the actual effectiveness of the Government's antitrust procedure may be destroyed from within.

We would like to devote our attention first to our organization's point of specific interest, the section on agricultural cooperatives, pages 306–313.

While the report makes no recommendation for a change in the existing laws, the text itself falls into the trap set by the enemies of cooperatives who have been trying to make the public believe that cooperatives are exempt from prosecution under the antitrust laws. A layman reading the report might very well feel that some special privilege had been given to cooperatives under the Clayton Act or the Capper-Volstead Act or the Cooperative Marketing Act. None of these acts exempt the cooperatives from prosecution if they in any way violate the antitrust laws of the United States. No co-

operative organization and no cooperative official whom we know have ever asked for such an exemption.

The law is clear and the courts have always sustained the following position. The Clayton and Capper-Volstead Acts provide that the fact of the organization of a cooperative and its normal operation shall not be construed as combination in restraint of trade. The Congress felt that for the protection of the cooperatives themselves, the law should set forth plainly the fact that cooperatives, by their nature, provide the economic machinery through which people work together in their common interest. In many communities it is necessary for a cooperative, if it is to serve its members effectively, to handle the bulk of, or sometimes all of, the commodities produced or the items purchased. The law actually established the fact that this could and is being done in the interests of the members of the cooperative, and that such action does not in itself constitute a restraint of trade. If a cooperative, by its action, engages in practices which are unlawful there is nothing in the law, and never has been anything in the law, which frees the cooperatives from the same responsibility which falls on any other business enterprise.

In the conclusions and recommendations on this section, the report says, "Some members would add that the failure of the Secretary of Agriculture over two decades to institute a single proceeding against an agricultural cooperative at least suggests that enforcement responsibility be put elsewhere." The implication of the statement is obvious, and we feel, completely unwarranted.

A little earlier the report questions the growth of centrally controlled cooperatives, or federated cooperatives. These organizations are essential to the interests of the farmers and consumers of America, and are as completely a part of the pattern of American cooperation as is the small marketing cooperative or the farm supply co-op. These central organizations have no way of escaping antitrust prosecutions either, and are proud to stand up as part of the established business community, assuming their full rights and responsibilities.

It is extremely significant, as Congressman WRIGHT PATMAN pointed out in his review of the report, that the committee in all of its recommendations except one, leaned toward a relaxation of the antitrust laws affecting big business organizations. "As to small business, labor, and farmers," Congressman PATMAN says, "the recommendations are to make these groups open targets for the abuses of monopoly power and to enlarge the antitrust laws against the organized efforts of two of the groups—labor and farmers—by which these segments of our population have in the past sought, in some measure, protection from the abuses of the big corporations."

The Attorney General's Committee, as erudite and well informed as we assume it should have been, should know that America's cooperatives are a yardstick factor in the economy; that they have restored competition in areas where competition was in danger of being obliterated; that they are in themselves a factor in preventing monopoly; and, in the words of Senator GEORGE D. AIKEN, of Vermont, "The cooperatives are about the highest type of private industry" and "one of the strongest bulwarks against vesting too much power in Government." The committee might have better devoted its time to finding a way of strengthening cooperatives rather than implying that they may be guilty of monopoly practices.

Your committee is having presented to it rather comprehensive analyses of other sections of the report. Since I am not an attorney, I would like to give you a layman's appraisal of some of the features of the report which we feel are dangerous.

The most important loophole which the Attorney General's Committee would drive into the antitrust laws is the recommendation that greater attention be given to the rule of reason in the settlement of antitrust cases. This attractive, slick slogan—for slogan it is—may well be used to cover a drive to eliminate the rule of law in antitrust enforcement.

The Sherman Act, as you know, made "every contract, combination in the form of trusts or otherwise, or conspiracy, in restraint of trade of commerce * * * illegal." The hopes which small business had at that time were dashed badly when the Supreme Court wrote the rule of reason into the Sherman Act. The net effect was that the Sherman Act was made so weak that it was necessary for the Congress to pass the Clayton Act and the Federal Trade Commission Act to prevent further abuses. If the formation of a monopoly or the destruction of competitive business through price discrimination, exclusive dealing, quantity discounts, brokerage fees to purchasers, combinations and mergers, are unlawful, it is a destruction of the law to say that such practices are legal if they are carried on in good faith.

In recent years the good faith defense for illegal action has made it possible for huge business enterprises to excuse their discriminatory prices and other predatory actions by saying that they acted in good faith, fearing that some other large competitor would offer the same discriminatory prices. The result is that thousands of small businesses can be, and in some cases are, destroyed with the guilty party escaping by saying that his act was in good faith.

The Kefauver and Patman bills, S. 11 and H. R. 11, are designed to strengthen the antitrust laws by eliminating the possibility that businesses may hide behind the good faith defense.

You may be interested in a layman's interpretation of how you can most easily destroy your competitor. The practice is one of price discrimination. It is possible for a firm with many units, such as the A. & P. which was indicted for this practice, or other large organizations, to secure competitive economic advantage by forcing a supplier to give it a discriminatory price because of its economic power. The huge business may then cut its prices in an area where it wishes to destroy a competitor. Those prices can be at or below cost, forcing a competitor to carry on his business with a destructive loss until he is eliminated completely. The cost of this operation on the part of the chain organization is recouped by charging slightly higher prices in its other units around the country. The consumers actually, by this process, are paying for the destruction of a competitive factor in the economy.

The Robinson-Patman Act was designed to prevent discriminatory pricing. The enforcement of that act should be strengthened rather than weakened as the Attorney General's committee report would indicate.

The Attorney General's committee has successfully led the public to believe that it was on the side of the consumer because it advocates the repeal of the so-called fair trade laws. Such a repeal might turn out to be a temporary gain for the consumer if at the same time the Robinson-Patman Act and the Clayton Act were so weakened that thousands of small businesses were destroyed and the genuine competitive factors in the economy were eliminated.

The one point where the committee has urged a strengthening of the antitrust laws has been in the penalties advocated for violation of the Sherman Act, recommending the lifting of the maximum penalty from $5,000 to $10,000. The House of Representatives, not waiting for the committee, had already boosted the maximum penalty from $5,000 to $50,000. The doubling of the penalty recommended by the committee may sound "tough" until you realize that if you merely accounted for a change in price level in the 60 years since that ceiling was written into the act, an adjustment of economic penalty would be many times the size of the fine recommended by the committee.

True to the pattern of the report itself, this small increase in the penalty would be hard on genuine small business and would have no significance whatever to the multimillion-dollar corporations which are the chief targets of the antitrust laws.

Fortunately, the report itself contains some able and effective dissents. At many points throughout the report the minority have revealed about 30 places where the committee would weaken the antitrust laws. These dissents, like the famous dissents of Justice Brandeis, Justice Cardoza, Justice Holmes, and others, are actually the interpretation of the public interest. The Select Committee on Small Business of the Senate, in keeping with its tradition and philosophy, will find these dissents more important and more valid for a basis of legislative action than the majority opinion set forth in the report. We commend these dissents to your serious attention.

Relations With Communist China

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, August 2, 1955

Mr. WILEY. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an editorial entitled "Red Chinese Gesture," published today in the New York Times.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

RED CHINESE GESTURE

Inevitably, the first reaction to Peiping's announcement that 11 American aviators who have been imprisoned in Red China for about 2½ years are now to be set free in a feeling of relief and satisfaction. We are happy that these men can come back to their own world. We are especially happy on behalf of their families, who have been kept in cruel alternation between hope and despair for so long.

Likewise, there ought to be a feeling of gratitude to the Secretary General of the United Nations, Dag Hammarskjold, for the earnest efforts he made to obtain the release of these men. He pursued that objective unremittingly from the time that he felt that the obligation had been properly imposed upon him.

These sentiments of gratitude and satisfaction over the personal aspects of the case cannot, however, shut out some of the questions that must be asked. What does this gesture on the part of Communist China mean in the larger picture? Why was it timed precisely for the opening of the Geneva conversations? What is Red China angling for, and what does Red China expect to gain?

There is reason for skepticism. These men should have been released long ago. They could have been sent home at Panmunjom. They could have been set free when Mr. Hammarskjold made this trip to Peiping last December. They could have been freed to give an even sweeter aroma to the Bandung conference.

Instead, they are suddenly freed at the moment of the opening of this latest diplomatic meeting. More than that, they are twice stigmatized in Peiping's announcement as the 11 criminals. There is, therefore, no admission that the Red Chinese had ever acted badly, or even that they are now acting belatedly. Instead, the Communists have suddenly discovered that the behavior of these criminals was fairly good and that they can now be deported. That Peiping should expect to get worldwide credit for a new humaneness through this grudging and insultingly phrased gesture is impudent.

It was quite apparent in the summit conference that the Communists had decided that honey was a better bait than vinegar. Apparently the directive has now gone out to Peiping as well and Mao, Chou, and their underlings seem ready to give us a taste of the same, the sweetness and light treatment. Insofar as this means life instead of death for imprisoned Americans we are grateful. If it also means life instead of death for civilization, if the drive is really for peace, we can rejoice. But we need more certainty.

What does Red China want out of the Geneva talks? The immediate major objectives are already clear. First of all, the Communists hope to create further fissures on the question of Formosa. They want to make the Nationalists uneasy about the continuance of our support and to make us uneasy about giving it. They hope to raise, once again, the question of United Nations membership and United States recognition. And most of all, as they have repeatedly said, they want to relieve tensions by getting the United States out of the Pacific; lock, stock, and commitments.

As a start on this program they announce as a humanitarian gesture what they should have done years ago. It remains to be seen if their next gesture will be the promise not to do again what they had no business doing in the first place. Perhaps the next move will be to free some of the civilian hostages in China, who should never have been imprisoned, and we will be expected to receive that also in humble thankfulness.

Each of the gestures, of course, does make its contribution to a lessening of the tenseness that has gripped us all. The Russian smiles at Geneva were part of that. The Red Chinese are obviously taking the same line. Naturally, we welcome this relief, yet it would be folly to allow a lessening of tenseness to mean a lessening of caution and logic. The release of these 11 aviators may well be a good augury for a pleasanter atmosphere in Geneva. We hope so. But Red China still must prove that she wants a just peace.

Address by Hon. Edward Martin, of Pennsylvania, Before Annual Convention Baquet of the AMVETS, Department of Pennsylvania

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Tuesday, August 2, 1955

Mr. MARTIN of Pennsylvania. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of an address I delivered at the annual banquet of the AMVETS, Department of Pennsylvania, at Uniontown, Pa., on Saturday, July 30, 1955.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

We are assembled in a community enriched in history.

Here in Uniontown we are close to many historic shrines which are constant reminders of the courage and valor of the pioneers of American freedom.

In colonial days this region was the scene of many campaigns against the French and Indians which finally establish British supremacy on the North American Continent. Battles fought here shaped the course of our history and the destiny of two great European empires.

Fort Necessity, where George Washington first commanded troops under fire, is only 10 miles east of here. Washington knew this entire country. As a young soldier, on his first important military mission, he recognized the strategic value of the point, in the present city of Pittsburgh, where the Allegheny and the Monongahela Rivers meet to form the Ohio.

Route 40, over which some of you traveled to this convention, has a place of great importance in our history. It recalls the romantic days of our Nation's westward expansion.

First designated as the Cumberland Road, it became known as the National Pike. It was the first road built by the Federal Government. A little more than a century ago it was the principal highway between the East and the West.

Soldiers, statesmen, merchants, educators, preachers, farmers, explorers, and adventurers passed along the National Pike. They traveled on foot, on horseback, and in vehicles of every description. The road was used daily by fast stage coaches and long streams of Conestoga wagon trains. Cattle, sheep, and hogs by the thousands were driven over it to eastern markets.

The road was dotted with inns and taverns to care for the drivers, teams and stock. It was travelled by General Andrew Jackson, James K. Polk, Henry Clay, Sam Houston, Davey Crockett and many other celebrities of those days. In 1824 General Lafayette passed over it on his triumphal tour of the United States.

Part of the National Pike was cut through the mountain wilderness by General Braddock on his ill-fated advance on Fort Duquesne. The moving of Braddock's forces over the the mountains from Cumberland, Md., was a tremendous military operation.

About 15 miles from here, at New Geneva, is Friendship Hill, the home built by Albert Gallatin, a great Secretary of the Treasury, in 1789.

I mention these memorials of our historic past because they are part of our tradition and our way of life. Every Pennsylvania county has its shrines of great interest. They should revered and studied because the record of the past reveals the real meaning of Americanism.

You are members of a great patriotic organization. You are sincere Americans who have served our country in time of national peril. You are loyal to the one great ideal which is the strong foundation of our system of government.

Let us briefly consider that ideal and what it has accomplished.

In less than 200 years an uncharted wilderness has been transformed into the greatest Nation of all history—a country possessing the most extensive diversity of industry, the most outstanding agricultural production, the finest cultural standards and the highest spiritual level ever attained by any nation.

Many countries of the world possess more abundant natural resources than the United States. Many have soil just as rich as ours. They have people who are willing to work just as hard. They have places of historic pride. They have highly developed culture. They have deep religious beliefs.

Why is it then that we have made such great progress? Why is it that in such a short period of time we have surpassed other nations until we now have the duty of leading the free nations of the world?

The answer can be found in the ideal of freedom upon which the Founding Fathers established the American system of government.

They planned a constitutional Republic—not a democracy. For the first time in world history they proclaimed the doctrine of self-government by the people through their elected representatives. Their concept of freedom made the people the master of the government and not the servant.

The whole ideal of our individual freedom is embraced in the sacred words of the Declaration of Independence. The courageous signers of that noble document loved liberty above life itself. They were the first group brave enough to proclaim that "life, liberty, and the pursuit of happiness" are Divine endowments, bestowed upon all mankind by the Creator of the Universe.

We must never forget those brave patriots who met in Independence Hall in the summer of 1776.

They proclaimed the great truth that in the sight of God all men are created equal, with equal opportunity to develop the gifts or talents they may possess. These include the will to work, to be tolerant, to be considerate of the rights of others, to be humble, and to be upright.

The Declaration of Independence meant that every individual is important and that the purpose of government is to give every man an equal opportunity to succeed. Also that every man in America has a right to be rewarded for his industry, thrift, hard work, tolerance, and decency.

After the American Colonies gained their independence our forefathers adopted the world's greatest charter of freedom, the Constitution of the United States.

They framed a Bill of Rights to protect individual freedom from our own folly and to safeguard the citizen against oppression by an all-powerful Central Government.

They established the principle that government has no power over the individual beyond that specifically granted by the people themselves.

The Constitution guarantees human rights and dignity but it also protects the right of every American to acquire and own property.

The right to enjoy the rewards of one's labor and industry is one of the greatest of all human rights. It is the basis of the American system of free competitive private enterprise. It made possible the miracle of American progress and prosperity.

Yes, on this firm foundation of freedom and opportunity our Republic has grown in strength and vigor unparalleled in the history of mankind.

But we must remember the warning sounded by students of history that great republics and democracies of the past have been undermined and destroyed by certain evil conditions.

Among these are moral decay among the people, failure to understand the nature of their government, and emotionalism, generated by false leaders.

Government is weakened when demagogs play upon the emotions of the people, stirring up demands for great variety of functions, services, and payments at public expense. The demagogs cause the people to forget that government has nothing to give except that which it first takes from the people.

In order for a republic or a democracy to survive there must be constant teaching of what it means. The people must under-

stand that they are the government. They must understand that while we have great rights we also have equal obligations to defend those rights.

They must understand that everything the government gives in the way of grants, aids, or projects must be paid for by the people in direct or hidden taxes.

Hidden taxes are very dangerous. Debt is also dangerous. More nations have fallen as a result of confiscatory taxes and burdensome debt than from invading armies. Public and private debt in America is more than $600 billion. Even with inflation, it is more than our total wealth.

The greatest responsibilty of patriotic American citizenship is to protect our free Government. You men as soldiers fought to defend the ideals of our Republic.

Every soldier, in taking the oath to support the Constitution, assumes an obligation to do everything he can to become a better member of his organization.

After we have served in the uniform we have an equal obligation for faithful and earnest service to see that our Nation may progress and become stronger.

We should all take part in Government because it is our Government. Our forefathers, when they signed the Declaration of Independence, pledged their lives, their fortunes and their sacred honor. We must do the same thing.

There are enemies abroad and there are enemies within who would destroy our sacred ideals of freedom and independence. To preserve those freedoms, we must be vigilant. Our duty is to be as vigilant as civilians as we were on guard during the war.

At a critical time in the Revolution, General Washington ordered: "Place none but Americans on guard tonight." Real Americans, like yourselves, must be constantly on guard.

America became great as a land of opportunity. To keep it that way, we must have deep patriotism. Let freedom always ring. Let us always associate ourselves with true patriots Let us fight to preserve this as a land of individual freedom and opportunity.

How can it be done? Everyone must stand up for American ideals.

It has been suggested that true observance of the Golden Rule, that time honored and accepted way of life, would save the ideals of this Republic.

"Do unto others as you would have them do unto you."

This would mean less arrogance; it would mean obedience to the law; it would mean leaving out of good society men who do questionable things within the bounds of law; it would mean humility and repentance; and it would mean that everyone of us would strive to make this a better country.

There must be no question about the loyalty of an American. You were loyal to your service unit. Let us give equal loyalty to the township, borough, and city in which we live. Let us take great pride in our counties and in our States.

This will build a stronger America. It will preserve for future generations the great blessing of freedom—freedom of the individual and freedom of opportunity.

Schoolteacher Shortage

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Tuesday, August 2, 1955

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an interesting article written by one of my constituents, Mrs. Oscar A. Ahlgren of Whiting, Ind., which was published in the July 3, 1955 issue of Grit, a family newspaper widely distributed in the small towns and rural areas of this Nation.

Mrs. Ahlgren is a member of President Eisenhower's Committee for the White House Conference on Education. This presidential program seeks to improve education throughout the United States. The plan calls for the holding of statewide meetings on educational problems in the 48 States, and similar conferences on education in the District of Columbia, Alaska, Hawaii, Puerto Rico, and the Virgin Islands. These conferences will then culminate in the White House Conference at Washington November 28–December 1, 1955.

Mrs. Ahlgren's article discusses the schoolteacher shortage in the Nation, one of the six major subjects under study by the Presidential Committee and scheduled for the agenda of the national conference. Mrs. Ahlgren states in her article that:

Good teachers mean good pupils, and good students mean good citizens in peace or war. The end result of good teaching and good teachers is a society of individuals trained to accept the responsibilities of freedom.

I concur with her statement wholeheartedly. Her article is a timely one and reaches to the heart of the teacher shortage problem and the importance of its impact on the Nation.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SCHOOLTEACHER SHORTAGE SEEN CHALLENGING TO NATION

(By Mrs. Oscar A. Ahlgren)

(Mrs. Oscar A. Ahlgren is a member of the Committee for the White House Conference on Education and a past president of the General Federation of Women's Clubs.)

Do you want your child to become a schoolteacher?

The teen-age daughter of my neighbor bluntly told her mother: "Why should I become a teacher? There's no future in marrying someone who makes $60 to $75 a week. I want a job where I can meet fellows who have a chance to get ahead. Teaching is a dead-end street."

Her attitude startled me, so I decided to do some research. I discovered train baggagemen, bartenders, paperhangers, and truck drivers earn more than the average schoolteacher.

NO FUTURE IN IT

I talked to teachers, principals, businessmen, and civil leaders in more than 200 cities. I asked them about teaching school. "No future in it," too many of them replied.

I have a friend in Chicago, a good teacher, who is distressed by the low salaries and unwarranted criticism that teachers get and by a lack of cooperation and understanding in parents. I asked him why he did not give up teaching.

"My whole life is wrapped up in it," he replied. "I would be miserable doing anything else."

MORE TEACHERS NEEDED

There are upward to 1,278,000 teachers at the elementary and high-school level. By 1960 this country will need about 500,000 more teachers in this bracket. In addition, 50,000 new teachers are needed annually to fill gaps left by deaths, retirements, and those who quit teaching for better paying jobs elsewhere.

Yet lowered teacher prestige, inadequate salaries, and the consequent insecure future discourage mosts college students from entering the profession.

"Something must be done about it," we hear on all sides.

NATIONAL STUDIES MADE

Something is being done about it. President Eisenhower and Congress have set up a White House conference on education November 28 to December 1 this year. How we can get enough good teachers and keep them is 1 of the 6 major subjects listed for study.

Meanwhile, conferences are being planned in virtually every State to get all the facts on educational ills. Attending the conferences will be educators, businessmen, religious leaders, and representatives of labor, agriculture, publishing, and women's groups.

It will help if every American asks himself this question:

"What do good public schoolteachers mean to me?"

My own answer is that good teachers mean good pupils, and good students mean good citizens in peace or war. The end result of good teaching and good teachers is a society of individuals trained to accept the responsibilities of freedom.

The National Guard

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Tuesday, August 2, 1955

Mr. MARTIN of Pennsylvania. Mr. President, the various units of the National Guard of the United States are now performing their field service. I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Let's Go," published in the United States National Guard News.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LET'S GO

Technically, the militia back in the 1830's embraced virtually every adult male; the active field forces needed in any emergency were made up of militiamen who volunteered for active service.

Thus it was when 23-year-old Abraham Lincoln, of New Salem, and 72 other men from his region, answered the Illinois governor's call for 30-day volunteers to pacific the Sacs and Foxes. And, by the custom of the times, the company elected its officers. Young Abe and another, untutored as he in the military arts, stood aside; the men voted by taking their places behind the candidate of their choice. By a vote of about 3 to 1, Lincoln became the captain.

In the month that followed, Abe's company did a lot of marching, scouting, and going hungry, but no real fighting. Their time up, most of the men went home. Without a company, Lincoln unhesitatingly took a bust and enlisted as a private for another 20 days in an independent company on detached scouting service. When that was over, he signed up for another hitch as a scout in still another company. His comrades told of the gawky young citizen-soldier's constant readiness for duty, and his ready response: "Let's go," whenever the call came for volunteers for a patrol.

Today, a tighter-knit, better-organized, better-trained, better-equipped force by far than the militia of the Black Hawk War,

the National Guard that has evolved from the old militia still preserves the volunteer spirit and the push that was exemplified by young Abraham Lincoln's characteristic reply: "Let's go."

Anticrime Legislation

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Tuesday, August 2, 1955

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, the following communications from Kansas City, Mo., and San Francisco, Calif. They address themselves in part to the question of protecting the sources of information of the approximate 25 privately financed and operated anticrime commissions located throughout the United States, as well as to the information contained in the intelligence files of the department of justice of California. Both of these communications are from organizations which have performed excellent work in fighting crime and should be of value to the Congress when considering Senate Resolution 91.

In this connection, I particularly desire to call attention to State senate bill No. 1342, introduced by Senator Cunningham in the State senate of California, which embodies the essence of some of the recommendations made by our Crime Committee in 1951, as well as legislation that has been introduced by me and other Members of Congress since that time. I commend it to the Congress, and sincerely hope that other States may emulate California's worthy initiative in proposing this much needed vital legislation.

There being no objection, the communications were ordered to be printed in the RECORD, as follows:

STATE OF CALIFORNIA,
DEPARTMENT OF JUSTICE,
San Francisco, April 25, 1955.

Hon. ESTES KEFAUVER,
United States Senator,
Senate Office Building,
Washington, D. C.

DEAR SENATOR KEFAUVER: Thank you for forwarding a copy of the CONGRESSIONAL RECORD of April 18. Page 3826 thereof indicates that you introduced Senate Resolution 91 to explore the extent to which offices of anticrime civic organizations may be required to divulge confidential sources of information. This matter is particularly timely and interesting.

It has been my experience that the files of a crime commission are built up primarily from information received either on the basis of personal friendship or with the assurance that the information would not be divulged. I believe that any attempt to permit information so received to be used publicly would seriously hamper the spirit of confidential interchange under which crime commissions operate.

In the bill for the establishment of criminal intelligence files in California or, as I refer to it, a "California Hoods Who," this factor was anticipated, and the language of the bill was amended to include the following:

"Intelligence information contained in the files of the Department of Justice pursuant to this section shall be confidential, not open to public inspection, and shall not be admissible in evidence in any legal proceedings."

It is at once obvious that the revised language will give the Department "the right of refusal" in those instances where the information cannot properly be made available. It would also insulate against any attempts to reach the confidential files by means of subpena.

A copy of the bill as it now stands is attached, and the hearings are scheduled for May 11, 1955.

As you will note, the first part of the bill providing for a survey of law enforcement agencies has been stricken principally because of the opposition by the peace-officer organizations. It was deemed advisable to leave this function at least for the present on a voluntary basis as it is now performed rather than provide that it be done pursuant to legislative directive.

With kindest personal regards,
Sincerely,

H. G. ROBINSON,
Deputy Director, Department of Justice.

Senate Bill No. 1342

An act to add section 11010 to the penal code, relating to the establishment of organized crime intelligence files

The people of the State of California do enact as follows:

SECTION 1. Section 11010 is added to the penal code, to read:

"11010. The attorney general shall establish and maintain with the department of justice a criminal intelligence operation to compile, coordinate and disseminate intelligence information concerning those individuals engaged in organized crime to build up complete dossiers regarding the activities and alliances of all the assorted people who go to make up the field of organized crime in California, to coordinate activities with local law enforcement agencies, crime commissions, State and Federal officials and agencies, and to keep such officials and agencies fully informed concerning the activities of reported criminals, racketeers, and their associates. For the purpose of this section, organized crime is deemed to include among others individuals responsible for the unlawful use, sale, possession, or distribution of narcotics throughout the country and particularly in the State of California. Intelligence information contained in the files of the department of justice pursuant to this section shall be confidential, not open to public inspection and shall not be admissible in evidence in any legal proceedings.

KANSAS CITY CRIME COMMISSION,
Kansas City, Mo., April 29, 1955.

Senate Resolution 91

On April 18, 1955, Senator ESTES KEFAUVER, of Tennesee, introduced a resolution in the United States Senate which was referred to the Committee on the Judiciary:

"Whereas there are now in active operation throughout the Nation about 25 privately financed and operated anticrime civic organizations, devoted to the gathering of information, statistics, data, and evidence relating to law enforcement; and to reporting to the public and appropriate public officials any indications of lax or inefficient law enforcement; and

"Whereas these anticrime civic organizations are generally composed of responsible and reputable citizens motivated by patriotic efforts in behalf of clean Government and civic decency, who voluntarily dedicate their time and money to this commendable public cause, and who usually employ capable and well-qualified directors of investigations who are often former FBI agents; and

"Whereas these anticrime civic organizations are endeavoring on their own volition and resources to further the objectives outlined and recommended in the 1951 Senate Crime Investigation Committee report for citizen participation in, and public insistence for, high standards of community law enforcement; and

"Whereas the national public interest and welfare critically require the continuing and active support of all respectable and law-abiding citizens throughout the Nation, if the rising menace of crime is to be suppressed and kept under control: Now, therefore, be it

"*Resolved*, That the Federal Government should encourage, and aid by all reasonable and proper means, the continued active cooperation of citizens and functioning of civic anticrime committees; and be it further

"*Resolved*, That the Senate Judiciary Committee, or an appropriate subcommittee thereof, is hereby directed to conduct an immediate study and report promptly to the Senate body as to the extent to which the officers and directors of such anticrime civic organizations should or should not be required to divulge confidential sources of information, except in cases involving treason, where such confidential information was obtained by agreement that its source would be kept confidential, but wherein the substance of such information has been duly reported to an appropriate public official."

This resolution, which has the unqualified support of the Kansas City crime commission, was doubtless prompted by recent proceedings instituted by county and parish prosecutors in New York City and New Orleans, La., respectively, against crime commission representatives in those cities for failure to disclose their confidential sources of information in certain cases.

The Kansas City crime commission is not in possession of the facts which allegedly caused the district attorney of New York City, N. Y., and the prosecutor at New Orleans to institute court proceedings to force Mr. William J. Keating of the New York City anticrime committee, and Mr. Aaron M. Kohn of the metropolitan crime commission of New Orleans, respectively, to disclose their sources of information; but we are familiar with, as Mr. Dan Sullivan of the crime commission of greater Miami so aptly puts it, "the old dodge" used by officials unfriendly to crime commissions to punish private citizens and citizens' organizations rather than to prosecute the malefactors who commit crime.

There is one important fact that is apparently being overlooked by prosecutors who insist on harassing crime commissions and their officials by contempt proceedings instead of vigorously prosecuting those charged with crime and corruption, and that is, with a few exceptions, the privately financed and operated crime commissions presently in existence in cities throughout the United States came into being after the Kefauver committee of the Senate in 1950 and 1951 exposed the hookup between organized crime and public officials at the National, State, and municipal levels. These groups of public-spirited citizens were encouraged to organize in anticrime groups to further the objectives of the Kefauver committee, outlined in its 1951 report, for better law enforcement in the United States.

The crime commissions today are simply endeavoring to carry out the recommendations of this fearless congressional committee. They have no axes to grind; they are not trying to displace or compete with any law-enforcement organization, Federal or State; they are set up for the purpose of seeing to it that the organized crime element which was so powerful in the United States prior to 1950 does not again thumb its nose at those charged with maintaining law and order in the country. Crime

commission members and staff operatives throughout the United States have no political ambitions; all they are interested in is seeing to it that those charged with the responsibility of law enforcement do their job.

So, we are heartily in favor of the Kefauver resolution, and hope that it is favorably acted upon by the Senate, and that it proves as great a boon to law enforcement throughout the country as the historical Kefauver committee hearings did. One of the outstanding accomplishments of the Kefauver committee in its investigation of organized crime was to focus the attention of the public on the extent of the activities of the big-time criminal and gambling racketeers throughout the country. True, the Kefauver committee put few people in jail, but it did cause the public to sit up and take notice of the extent to which the underworld was operating and the effect of its activities upon government.

Speaking for Kansas City and Jackson County, Mo., we know that law-enforcement conditions in this area are much better in 1955 than they were in 1950.

Services by DAV to Disabled Veterans

EXTENSION OF REMARKS

OF

HON. LAURENCE CURTIS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. CURTIS of Massachusetts. Mr. Speaker, seeing the full-page advertisement in the April 18, 1955, issue of Life magazine, featuring the Skrambelgram puzzle contest—including objects to be identified by words formed out of sets of scrambled letters and inserting admissible words, of high letter-point value, into the interconnecting horizontal and vertical letter paths of the puzzle pattern—I am impelled to state that, during the last some 10 years, I have served as one of the 13 trustees of the sponsor of this intriguing puzzle contest, the Disabled American Veterans Service Foundation, which, incidentally, has its offices at 631 Pennsylvania Avenue NW., Washington, D. C.

Judging by my own observations during the past 7 years, I am sure that these annual puzzle contests are conducted by the DAV Service Foundation with complete fairness. Several hundreds of contestants have, during that time, been awarded prizes by the DAV Service Foundation totaling $568,333.38. The top winner in the current Skrambelgram contest may win as much as $28,600.

The primary purpose of conducting these annual puzzle contests is to acquire substantial net income therefrom, to be held in trust, for subsequent appropriation to the beneficiary of its trust, the 36-year old service-giving congressionally chartered Disabled American Veterans, to which the DAV Service Foundation has so appropriated the aggregate sum of $2,490,000 during the last 6 years. Such sum has been used by the DAV toward the maintenance of its nationwide service activities—of great benefit each year to scores of thousands of disabled veterans and their dependents.

Because I have so firmly believed that America owes a primary obligation to its disabled defenders, and their dependents—to enable them to live in the American way, for which they sacrificed so much of their bodies or their health—I have long been associated as a life member of the DAV. Moreover, I am a member of all of the other veteran organizations to which I am eligible, and am also associated with many other fraternal, patriotic, and civic organizations.

Only through their support of various private organizations can American citizens help to mobilize their mutual desires, abilities, and objectives for various constructive purposes. Every American ought to be a member of at least one or more of our Nation's many social, fraternal, patriotic, political, and civic organizations. Moreover, every veteran who has served our country in its Armed Forces, in peacetime or in wartime, ought to be actively affiliated with at least one of the national veteran organizations which contribute so much to this country, locally and nationally.

Every war-wounded and disabled veteran ought first to be a member of the only congressionally chartered veteran organization composed exclusively of those Americans who were either wounded, gassed, injured, or disabled by reason of active service in the Armed Forces of the United States, or of some country allied with it, during time of war—namely, the Disabled American Veterans. In addition to his membership in the DAV, he ought also to be an active member of at least one other congressionally chartered veteran organization, to give his support to its broader activities and objectives.

The DAV is a patriotic, noncompetitive, service-giving veteran organization, dedicated to the important objective of extending much-needed service to, for, and by America's disabled defenders. To that end, it has, during most of the 36 years of its existence, maintained a larger staff of full-time national service officers in the district, central, and regional offices of the Veterans' Administration than any other veteran organization.

The DAV specializes in service to distressed disabled veterans, and their dependents. The DAV is a one-purpose organization—to protect and to promote the welfare of America's disabled war veterans, and their dependents.

The DAV is presently headed up by a badly wounded veteran of World War II, Judge Alfred L. English, of Shelbyville, Tenn. Its national adjutant—who has served the outfit for more than 27 years—is a wounded marine of World War I, Mr. Vivian D. Corbly, who maintains his offices at the DAV national headquarters at 5555 Ridge Avenue, Cincinnati 13, Ohio.

The DAV's chief fund-raising project—sending out miniature automobile license tags to automobile owners—comes under the overall supervision of its national adjutant. By reason of this nationwide key insurance, some 115,000 sets of lost keys are each year returned to their owners, without regard to whether the owners may previously have made any contribution for their Idento Tags.

Only about 20 percent, unfortunately, of the recipients of such key insurance Idento Tags send back donations to the DAV. Those who have done so have enabled the DAV to maintain some 300 to 600 employees, mostly disabled veterans and their dependents, and to have a very substantial net income each year, which is used by the DAV in the maintenance of its nationwide setup of full-time national service officers. The DAV itself owns and operates this Idento-Tag project.

If every recipient of a DAV Idento Tag were to respond with a $1 donation, its net income from its serviceable Idento-Tag project would then enable the DAV to employ additional very much needed full-time national service officers in all of the some 166 hospitals maintained by the Veterans' Administration throughout the country, to advise, counsel, and assist their patients, first, to establish, technically, their entitlement to those governmental benefits to which they may be lawfully and equitably entitled; second, to guide them toward physical restoration and vocational rehabilitation; and third, to assist them toward self-sustainment as self-respecting American citizens, through useful, suitable employment which utilizes their remaining abilities.

Some Americans, if not most of them, have the erroneous idea that governmental benefits to disabled veterans are automatically awarded. Such an assumption is entirely wrong.

More claims are denied by the Veterans' Administration than are allowed. It is more difficult, ordinarily, for a disabled veteran to prove factual and technical entitlement to the benefits to which he may be equitably entitled, than is the case as to an able-bodied veteran who may be entitled to some benefits under the so-called GI bill of rights, by reason of having actively served in the Armed Forces of the United States during the period of World War II or in the Korean war.

Official records too frequently fail to substantiate the disabled veteran's claim that his disability originated in military service, whereupon he must positively prove that contention, by detailed specific fact-giving affidavit evidence. Too frequently, that becomes exceedingly difficult if not impossible to do, because of loss of memories with the passage of time, inability to get in touch with former buddies, inexperience in preparing specific factual affidavits which actually do set forth all of the pertinent facts, and so forth. Too many equitable claims are ruined because of inadequate careless preparation of the substantiating evidence.

The average disabled veteran claimant needs the expert advice of an experienced service officer, one who knows what is required by the Veterans' Administration, to justify favorable adjudication of the claim, if the facts which would substantiate it, can be brought to light, by

digging into the memories of those who originally observed the pertinent facts, and then persuading them to set forth such facts convincingly and in sufficient detail.

This is the task which cannot be properly performed by an employee of the United States Veterans' Administration, which, in the final analysis, must act as the judge and jury and, as defendant, must pay the damages to the claimant, in the form of disability compensation, vocational training, medical treatment, and so forth, if the claim is awarded.

More than a thousand laws are being administered by the Veterans' Administration pertaining to disabled veterans and their dependents, many of them complicated and technical, making it even more advisable for a disabled veteran to have the helping-hand advice of an expert national service officer than for a businessman to employ an expert in the preparation of his Federal income tax report.

Because the average disabled veteran does not bother to try to avail himself of the laws which have been passed for his protection until driven by economic necessity to do so, claims of disabled veterans will continue to come up for consideration for many years in the future, probably following the pattern as to World War I veterans, for whom service-connections of disability were still being legally established by the DAV, more than 35 years following their active military service.

It will therefore undoubtedly be necessary for the DAV to continue to maintain a large staff of full-time national service officers for many years into the future. Adequate provisions for the disabled of America's wars is a must, not only from a humanitarian standpoint, but to equalize the burdens that would otherwise have to be assumed by relatives and friends, and by local communities.

Even more important it is that America's possible future veterans will have been impressed by the fact that our country does not permit the disabled veterans to become mere forgotten heroes—to be relegated to the economic scrap pile. The future welfare of our country is inevitably linked with the welfare of its disabled war veterans.

Americans who help to extend the opportunity for security to America's disabled defenders thereby help to fortify the future of our beloved country.

The nationwide service officer setup of the DAV is supervised by the DAV's national director of claims, Capt. Cicero F. Hogan, who maintains his offices in the DAV's national service headquarters at 1701 18th Street NW., Washington 9, D. C. Some 200 full-time national service officers serve under him.

Also located at the national service headquarters is the DAV's national director of legislation, Maj. Omer W. Clark, former Deputy Administrator of Veterans' Affairs, and his able assistant, Col. Charles Foster.

A very important aspect of the services rendered by the DAV comes under the jurisdiction of its national director of employment, John W. Burris, who is also the organization's national civil service officer.

A complete account of all of the DAV's activities, including a detailed audited statement of its receipts and disbursements, appears in the proceedings of the DAV's annual conventions, which are reported to the United States Congress and then printed as a separate House document by the United States Government Printing Office. Also included in such document is the annual report of the DAV's incorporated trustee, the Disabled American Veterans Service Foundation.

The foundation's activities are under the supervision of its 13 trustees, 10 of whom each serve for 5-year periods, with 2 expiring each succeeding year, whereas the remaining 3 consist of the incumbent national commander and chairman of the national finance committee of the DAV and one other elected for a 1-year term.

The foundation's president is Miles H. Draper, Esq., a prominent attorney and friend of mine, from Tampa, Fla., with John L. Golob, of Hibbing, Minn., a past national commander of the DAV, as vice chairman, and with Mr. Lewis L. Clarke, former president of the American Exchange National Bank of New York City, trustee of the Bowery Savings Bank, as chairman of the foundation's finance and budget committee. Serving with him on such committee are Arthur W. Procter, Esq., a New York attorney, and Maple T. Harl, Director of the Federal Deposit Insurance Corporation in Washington, D. C.

The president of the American Security & Trust Co. in Washington, D. C., Mr. Daniel W. Bell, is the chairman of the foundation's trust fund investment committee. Serving with him on such committee are Maple T. Harl and Boniface R. Maile, a past national commander of the DAV and a prominent attorney in Detroit, Mich., and Mr. Lewis L. Clarke.

Other trustees include Gen. Charles Hines, who succeeded his older brother, Gen. Frank T. Hines, former Administrator of Veterans' Affairs; Gen. George C. Kenny, United States Army, retired; James L. Monnahan, DAV past national commander and presently the national service officer and department adjutant of the DAV at Fort Snelling, Minn.; Mr. Thomas Savage, of Rome, N. Y., as chairman of the DAV national finance committee; and Judge Alfred L. English, as DAV national commander; I, myself, constitute the 13th member. It has been my pleasure to so serve during the last 10 years.

What is the purpose, one might ask, of the Disabled American Veterans Service Foundation, as a separately incorporated trustee for the congressionally chartered DAV? The foundation was incorporated under the laws of the State of Ohio on May 16, 1931, with the specific prior authorization and subsequent approval of national conventions of the DAV, primarily thus, through the overlapping terms of the trustees, to be able to extend assurance to potential donors of a continuity of policy as to the conservation and investment of donated funds and as to their judicious subsequent appropriation to the DAV toward the end of helping it to maintain its invaluable nationwide service setup.

The DAV Service Foundation has also raised money for the DAV. Under the terms of the foundation's charter and its trust agreement with the DAV, these funds can be appropriated by the trustees for the rehabilitation program of the DAV and for its work on behalf of disabled veterans, their widows and orphans.

One of the most successful fund-raising efforts of the foundation was a series of puzzle contests. These were conducted with the utmost scrupulousness, and a board of nationally well-known scholars and experts was secured to pass on questions as to the propriety of the words used in the contest. Following the success of the first contest, other organizations tried the same methods of fund raising, and the foundation ran into the law of diminishing returns.

There have also been other fund-raising projects, which taken all together, have brought in several million dollars for the charitable purposes of the foundation. This has enabled the foundation to appropriate to the DAV during the last 6 years the sum of $2,490,000 in addition to smaller amounts appropriated to State departments and DAV chapters which had made their contributions to some of the fund-raising efforts. The foundation still has over a million dollars in cash and Government securities on hand.

But for these appropriations from the foundation, it would have been impossible for the DAV to maintain its most valuable work in which its members take the greatest pride, namely, its national service officers program.

These service officers are maintained in many of the Veterans' Administration offices and hospitals where the Government furnishes them with desk space. They have been specially trained for this work. Many are graduates of a special course arranged for by the DAV at American University, where their schooling was largely paid for from educational benefits available under the GI bill of rights, or similar benefits for disabled veterans. The cost of maintaining this skilled group of approximately 200 service officers throughout the United States is in the vicinity of a million dollars a year.

Designations in insurance policies, assignments of stock and bonds and other property to the DAV Service Foundation, by disabled veterans, and by social-minded Americans, are greatly needed and highly justifiable, and will be reflected in continuance of valuable service each year to scores of thousands of distressed disabled veterans.

Special trust funds, designed to contribute toward the solution of some phase of the problems of disabled veterans, are particularly desirable, but would be feasible only on the part of other foundations or wealthy individuals. The foundation has one special trust fund, for example, the Irving J. Phillipson Rehabilitation Fund, which has been earmarked toward the support of activities sponsored by the Disabled Veterans Committee of the President's Committee on Employment of the Physically Handicapped.

During the last several years, such special trust fund has paid for the expense of printing some 350,000 attractive calendar cards, which each year have been distributed among the Nation of the Veterans' Employment Service, its State veterans' employment representatives, and the cooperating local officers of the respective State employment services throughout the country. Employers, and others, interested in the employment of the physically handicapped, might well wish to make contributions toward this special trust fund, toward the perpetuation of such special activities in future years.

Many other types of special trust funds might well be established by large donors or bequests: First, maintenance of full-time DAV national service officers in certain States or in certain hospitals; second, maintenance of all or a part of the national service staff of the DAV in Washington, D. C.; third, special travel allowances for DAV national service officers to enable them to visit disabled veterans in local communities; fourth, maintenance of secretarial staff of DAV national service officers; fifth, establishment and maintenance of part-time and/or full-time DAV national service officers in all or some of the 166 hospitals of the Veterans' Administration; sixth, expenses for special surveys pertaining to various phases of problems of disabled veterans in this country, and/or in other countries, and so forth.

Mr. Speaker, Americans who are grateful for the sacrifices made by America's disabled defenders, of parts of their bodies or of their health, by reason of their special services to our country in time of war, will generously support the vitally important service activities maintained by the DAV and sponsored by the DAV Service Foundation.

National Rivers and Harbors Congress

EXTENSION OF REMARKS
OF
HON. FRANK E. SMITH
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1955

Mr. SMITH of Mississippi. Mr. Speaker, under authority granted to extend my remarks in the RECORD, I wish to submit the report of the resolutions committee which was unanmiously adopted by the 42d convention of the National Rivers and Harbors Congress held in Washington, D. C., recently.

The resolutions committee, of which I served as chairman, consisted of one delegate from each State, Territory, island possession, and the District of Columbia. The members gave careful and painstaking consideration to the matters before them, suggested numerous changes in the draft of the resolutions presented to them, and reached unanimous agreement thereon. An additional resolution was offered from the floor of the convention and was adopted without objection.

This convention was attended by 346 registered delegates from 44 States, Alaska, Hawaii, Puerto Rico, and the District of Columbia, as well as many others who failed to register, guests, visitors, and so forth. These delegates were from all sections of the country, representing both legislative and executive branches of the Federal Government; State, city, county, and other local governmental agencies and interested groups; commercial, waterway, flood control, and reclamation associations; agricultural, labor, industrial, and trade organizations, and transportation interests; with memberships totaling several million.

We believe this unanimous expression of representatives of such different interests and pursuits is strong evidence of the general sentiment of the people of the United States concerning the matters dealt with in these resolutions:

REPORT OF THE RESOLUTIONS COMMITTEE TO THE 42D NATIONAL CONVENTION OF THE NATIONAL RIVERS AND HARBORS CONGRESS, JUNE 1, 1955

FOREWORD

Proper development and appropriate conservation of our soil and water resources affect the welfare and happiness of all of our people to no lesser degree than the adequate defense of our Nation; the delivery of our mail; our health, education, and welfare; protection of our persons; and other functions of Government historically dedicated to the general welfare.

These truths were apparent to the National Rivers and Harbors Congress when it was founded more than a half century ago. They are even more apparent today. In keeping with the trend of the times the demands on our resources are increasingly greater and therefore impetus must be given to their development and conservation. In this respect this Congress is ready and willing to fulfill its obligation to assist in sponsoring and accelerating those developments which are necessary for our economy.

THE PRESIDENT'S MESSAGES

Many aspects of President Eisenhower's state of the Union message on January 6 were encouraging. The transition to a peacetime economy mentioned as being largely behind us is but one of the promising factors he finds contributing to the position from which to carry forward our economic growth. Furthermore he includes our land and water resources among our resources making up the foundation of our economic growth and encourages their development, wise use, and conservation. Here we are in complete agreement.

The President emphasizes the need to follow the historic pattern of developing these resources by private citizens, under fair provisions of law and with proper provisions for conservation and also the need to treat resource development as a partnership in which the participation of private citizens and State and local government is as necessary as is Federal participation. The latter emphasis is qualified later to provide that the Federal Government is obligated to undertake projects of such complexity and size that their success requires Federal development. Here we repeat with emphasis that the development of our resources will continue to require the overall financial and administrative assistance of the Federal Government.

The President's budget message of January 17 states that the fiscal year 1956 budget makes provisions for the Bureau of Reclamation to start construction on 5 new irrigation and water-supply projects, and for the Corps of Engineers to begin work on 10 local protections, 2 larger flood-control projects, 8 for beach erosion control, and 14 navigation projects. Provision is made for resumptions of projects and for the selection of a number of small projects by the Secretary of the Army. These new starts and resumptions indicate a desire to reduce the backlog of worthy projects and this trend lends encouragement to those of us interested in the development of our resources. However, with the public works program, as reflected by the backlog of approximately $8 billion of authorized active and unstarted projects, running 20 years behind schedule, we believe that the general welfare of this country would be better served by substantially increasing the civil functions budget each year until this tremendous backlog of authorized projects is eliminated.

WATER RESOURCES STUDIES

We await with interest the findings of the President's Advisory Committee on Water Resources Policy, the Hoover Commission Report on Water Resources and Power, and the report of the Kestnbaum Commission on Intergovernmental Relations. These commissions are composed of individuals of wide experience in the field of natural resources and their talents no doubt will result in some recommendations conducive to the proper conservation and development of our resources. These we will give our wholehearted support. There will, however, no doubt be some recommendations which will not be in the best interest of sound resource development and consistent with the rights of our people. Such recommendations must and will be emphatically opposed by the National Rivers and Harbors Congress and it behooves those who are not associated with us to take cognizance of any such detrimental proposals and voice their objections.

Specifically we will oppose any attempts to disturb the present status of the Corps of Engineers with respect to its civil functions; and any attempt to place a larger burden on local interests in the form of contributions toward flood protection when the national responsibility would dictate less.

CIRCULAR A-47, BUREAU OF THE BUDGET

It is apparent to us that the conflict between congressional resources policy, established by law, and executive formulas promulgated by the Bureau of the Budget is having a detrimental effect on orderly resource development and the morals of those who depend on such development for protection of life and their economy. Formulas promulgated by the Bureau of the Budget in December 1952 through its circular A-47 set patterns for determining benefits to cost ratios that are reported to be restrictive to the extent that qualified projects under previous procedure are now curtailed. It is alarming to note that a contemplated revision of A-47 will be more restrictive as to which projects can be constructed. We urge immediate action by the Federal Congress to elliminate this stalemate to progress.

APPROPRIATIONS

Adequate appropriations for resource development are in effect investments in the capital assets of our Nation in peacetime and requirements for a national war effort. These appropriations must first be adequate to provide for the proper study and design of projects preparatory to requests for construction. The two phases must remain in balance if we are to continue orderly progress. The amounts appropriated should admittedly be in phase with the national economy and by the same token should not be subordinated to those for similar purposes destined to promote the economy of other nations.

The Chief of Engineers has estimated that the development of our resources contemplated by the civil functions of the Corps of Engineers alone should proceed at a rate of not less than $650 million per year. The record of the Corps and our confidence in

that organization and our knowledge of the requirements prompts us to urge the Appropriations Committees of the Congress to accept that estimate and make such amounts available. Moreover, we urge adequate appropriations for all the other important phases of resource development, including construction of Federal reclamation projects for which the Commissioner of Reclamation estimates that a minimum of $250 million annually is required.

WATERWAYS

The historic development of our waterways for commerce by the Federal Government has paid ample dividends through their contribution to our economy in peacetime and our security in times of international conflicts. As our country continues to develop and our population to increase, so will the need for additional improvements to our waterways increase. Furthermore, the existing improved waterways should be maintained to authorized depths if they are to continue to serve the useful purpose for which they were constructed. We accordingly urge the United States Congress to provide ample funds for that purpose.

TOLLS ON WATERWAYS

This Congress submits that the imposition of tolls or user charges on our inland waterways is incompatible with the historic free use of these waterways for the flow of commerce by which an extensive economy on, along, and off them has been developed. Moreover, the complexities of any equitable imposition of such charges on waterways improved over a period of a century are aggravated by the varying amounts of local contributions heretofore made. Tolls or user charges in lieu of some form of non-Federal participation in projects will have an adverse effect on water transportation perhaps to the extent of eliminating a number of carriers, increasing rate structures for the remainder, and even the elimination of important links in this vast transportation network. The Nation cannot afford such deterioration of a valuable asset by experiment. We cannot remain idle and permit it to take place.

We are pleased to note that the President's Cabinet Committee on Transport Policy and Organization found from its exhaustive study of the subject that tolls on waterways would be an unjust experiment and eliminated them from consideration in its final report.

HURRICANE PROTECTION

This Congress is cognizant of the toll in death and destruction wrought by hurricanes along the Atlantic seaboard and particularly in the New England area. The protection of these areas from such damages in the future presents a problem of such magnitude as to preclude appropriate action by local and regional authorities. The impact of such damages on the economy of the area and the Nation makes it a matter of national concern. Accordingly we urge the United States Congress to enact immediately appropriate legislation and appropriate funds which will permit a thorough study to be undertaken with a view to determining what protective measures are required for the coastal areas subject to hurricane damage. Furthermore, in view of its experience and knowledge in the fields of navigation, flood control, and beach erosion, we recommend that the Corps of Engineers, United States Army, be the agency selected to make such a study.

FISH AND WILDLIFE

This Congress notes with apprehension the growing tendency on the part of sportsmen and other fish and wildlife enthusiasts to look with disfavor on many worthy projects constructed or authorized primarily for flood control and drainage, irrigation and navigation. Their condemnation of these projects in their organizations and in the press ignore benefits to wildlife that should be apparent. We submit that there is an obligation on the part of every citizen to protect and provide habitat for this valuable resource to the greatest extent practicable. We must, however, remind those who live in flood-free humid areas that there are some substantial citizens who are not so fortunate and must attempt a livlihood under threat of flood and drought. These latter citizens include many who also realize the obligation of all citizens to contribute to our economic growth through the conservation of all of our resources including fish and wildlife. The Fish and Wildlife Service of the Department of the Interior has the dual obligation to protect and develop our wildlife resources and conversely to assist other agencies in protecting our citizens by discouraging condemnation of projects approved by the President for land and water resource development. This becomes all the more important in the face of the prediction that our present population of 165 million humans will soon increase to 200 million and will require products from the land far in excess of our ability to provide them from areas now available.

MERCHANT MARINE

We share the definite apprehension of America's shipbuilders and operators as to the future of our American merchant marine. Many ships of our active and inactive fleet are rapidly approaching obsolescence. Some constructed under the somewhat frantic conditions of World War II are already obsolete. American shipping and its related industry, shipbuilding and repair, represent two important components of our peacetime economy and our national security, and must not be allowed to deteriorate either. To the end that this not happen we support with vigor the efforts of the Maritime Administration in its vigorous prosecution of a Government and private shipbuilding program to insure orderly replacement of those vessels which threaten the American merchant marine with obsolescence.

"THEY INHERIT THE EARTH"

In its 41st annual convention the National Rivers and Harbors Congress adopted a resolution entitled "They Inherit the Earth," in which it expressed opposition to S. 3111 of the 83d Congress, a bill which later died in committee without action. Its counterpart in the 84th Congress is S. 951, which would extend into the field of bulk transportation on inland waterways the devitalizing influence of Government regulation. Among the more than 1,000 contract carriers now serving the public on all of our inland waters except the Great Lakes, the bill's effects would be to restrict competition and to prevent them from bidding effectively for the new traffic steadily growing on our waterways.

The bill would benefit a handful of prosperous major barge lines holding unlimited commodity rights and extensive territorial rights as common carriers under present regulation.

This special-interest legislation, however, would be to the great disadvantage of the shippers of bulk commodities who would be called upon to pay increased rates, to the public in general who would be expected to absorb these higher costs in the prices of consumer goods, and to the more than 99 percent of the carriers who deliver more than 90 percent of the traffic on our inland waterways.

We urge Congress to reject such legislation and to remember that the benefits of our public waterways improved at public expense should redound to the many and not to the few.

TRANSPORTATION AMENDMENTS ACT OF 1955

S. 1920, H. R. 6141, and H. R. 6142 are identical bills introduced by request to implement the report of the President's Advisory Committee on Transportation Policy and Organization. They are entitled "The Transportation Amendments Act of 1955, and, according to the basic document, would modify the existing obsolete national transportation policy and the established scope and methods of regulation so as to place increased reliance on competitive forces in transportation pricing under a system of dynamic competition and to reduce economic regulation of transportation to a minimum consistent with the public interest. Where our national transportation policy of 1940 now recognizes and would preserve the inherent advantages of each means of transportation and foster sound economic conditions among the several carriers, the new policy would be to encourage and promote full competition between modes of transportation subject only to certain vague provisions intended to prevent the charging of rates less than cost.

The existing system of economic regulation of railroads was designed for the purpose of restraining their practices of selective rate cutting which in the past have been so successful in stifling competition by water carriers. Inland water for-hire transportation owes its very existence and its encouraging curent growth to the fact that this system of regulation has at last become partially effective. Our present national transportation policy is based upon the judgment that it is in the public interest to protect small carriers who render efficient services from the destructive rate practices of large carriers who, by virtue of their size alone and regardless of efficiency, have historically been capable of putting their small competitors out of business unless a proper restraint is exerted by Government.

These transportation amendments, while purporting to reduce economic regulation of transportation, would do so only for the railroads and with respect to water transportation would actually increase the scope of regulation in such a way as to impede its flexibility and efficiency. Ninety-three percent of inland-water traffic consists of bulk commodities not subject to regulation under present law. Shippers and carriers alike are well satisfied with the vigorous competition now existing among carriers of these basic materials of commerce under a system of free enterprise beneficial to all. To place artificial restrictions upon water carriers while relaxing the restraints upon rail carriers will ultimately assign inland water transportation to the field of private carriage where its benefits are limited to only those shippers large enough to afford their own fleets.

We are sympathetic with the need for developing an efficient and sound railroad system in the United States, but we are convinced that the sensible approach to this objective is to improve the outworn administrative and operating practices of the railroads and not to cripple their small competitors. Let Congress continue the policy of survival of the fittest in transportation and not be tempted to substitute survival of the biggest.

GREAT LAKES LEVELS

The present and recent high levels of the Great Lakes is a matter of grave concern to the citizens of eight States, such condition accelerating shore erosion and placing in jeopardy both human life and property at numerous points on the Great Lakes.

Such higher lake levels are, in essence, the accumulation of floodwaters on the total watershed of the Great Lakes.

The present National Flood Control Act does not adequately recognize the necessity of dealing with such accumulated floodwaters in the Great Lakes, nor for providing for the protection of life and property therefrom.

The Corps of Engineers has developed plans and made recommendations for various crit-

ically needed projects along the shores of the several lakes, for which funds have not been recommended by the Bureau of the Budget on the basis that they are not presently authorized in the existing National Flood Control Act.

The Congress of the United States of America is respectfully petitioned to amend the existing National Flood Control Act to include the authorization of projects, in cooperation with the several States and their subdivisions, for the protection of life and property which are now or may be placed in jeopardy by reason of accumulated floodwaters in the Great Lakes.

MAINTENANCE OF PORTS AND WATERWAYS

Adequate port and waterway facilities are indispensable to the economic welfare of the Nation and the national defense.

Commercial shipping and the use being made of the country's ports and waterways has greatly increased during the past decade, mounting to nearly 1 billion tons in 1953.

The size of vessels being placed in service is increasing, requiring deeper and wider channels for efficient and safe navigation.

Additional and more frequently dredging is necessary to maintain the ports and waterways adequately.

Many of the breakwaters, jetties, and other harbor protective structures are in immediate need of repair and restoration.

The federally improved harbors and waterways are not being maintained to the authorized depths and widths.

The maintenance of shallow-draft harbors have generally been neglected in recent years due to insufficient appropriations for maintenance.

The Congress in authorizing and appropriating funds for the improvement of the Nation's ports and waterways has also accepted the responsibility for their maintenance to properly accommodate existing shipping.

We strongly urge that the responsible Federal agencies request and that the Congress of the United States appropriate adequate sums of money necessary to restore and fully maintain our ports and waterways in order that the increased needs of commerce and vessel traffic may be adequately served.

We join with the American Association of Port Authorities, other national associations, and regional and local organizations concerned, in a united effort to support before the responsible Federal agencies and congressional committees the annual appropriations required to carry out an adequate national program of maintenance of the Nation's ports and waterways.

SHORE PROTECTION

Resolved, That the National Rivers and Harbors Congress support H. R. 4470, a bill to amend the act entitled "An act authorizing Federal participation in the cost of protecting the shores of publicly owned property," approved August 13, 1946. (Offered from the floor of the convention by Mr. Lynn F. Baldwin, vice chairman of the Michigan Water Resources Commission, and adopted without objection.)

No Place To Hide

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Tuesday, August 2, 1955

Mr. KEFAUVER. Mr. President, the Committee on Armed Services has held a number of hearings on the problem of civil defense. Other hearings should be held, particularly in view of the results of the test that was conducted throughout the country. A very thoughtful editorial on this subject appeared in a recent issue of the New York World-Telegram and Sun, and I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NO PLACE TO HIDE?

A Senate Armed Forces Subcommittee finds, after some scratching around, that the country's civil defense plans are "inadequate."

At best, that's an understatement. "Nonexistent" would come closer to the facts.

There's been plenty of big talk, and millions spent for sirens, test alerts, and emergency stockpiles. But no city dweller yet knows with any confidence just what he should do if the bombers really were on the way.

Evacuation, the latest catchword, is deceptively misleading. It's an invitation to traffic chaos, not a ticket to safety.

The net effect of all the warnings, all the ballyhoo, all the TV drama from Yucca Flat, largely has been to persuade people of the futility of trying to do anything to protect themselves.

The Senate group criticizes an absence of leadership. That's right.

If there are some practical answers, they should be sorted out from all the loose and confusing talk and passed along.

If there aren't, the leadership should have the courage to say so, frankly and candidly. Then people will know where they stand. That's far better than lulling them into the comfortable but dangerous notion that there really may be some quick way to get out of the range of a hydrogen bomb.

Tribute to Michael F. Higgins by Senator Johnson of Texas

EXTENSION OF REMARKS

OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Tuesday, August 2, 1955

Mr. JOHNSON of Texas. Mr. President, paking through Sports Illustrated a few days ago, I came across a familiar name and a familiar face—Michael Franklin "Pinky" Higgins, manager of the Boston Red Sox.

The article was of deep interest to me because his brother, the late C. L. "Ox" Higgins was one of the best friends I ever had. It was through "Ox" Higgins—a boyhood pal—that I first met "Pinky."

"Ox" Higgins was one of the finest and most honorable Americans I have ever known. He exemplified all of the qualities that have made America strong—integrity, aggressiveness, honor and fair play.

His brother "Pinky" inherited an equal share of these attributes.

Like every Texan, I am proud of the eminence that "Pinky" Higgins has attained in the great American sport of baseball. I believe he has reached his position not just because of skill but because of the imagination, daring and sense of fair play that means preeminence in any field.

As long as such men have a firm hold on the hearts of American youth, our future as a great nation is assured.

I ask unanimous consent that this article on "Pinky" Higgins be included in the Appendix of the RECORD as a part of my remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE PINKY IN THE RED SOX BOOT

(By Al Hirshberg)

For several years, there has been no more uncomfortable seat in baseball than the one currently occupied by Michael Franklin Higgins, a large, blue-eyed Texan who sometimes answers to the incongruous nickname of Pinky. Manager since last fall of the Boston Red Sox, Higgins is the fifth man in 9 years to tackle the touchy job. The betting is that he will keep it for a long time.

Ever since Joe Cronin escaped in 1947 from the bench to the front office, where the brickbats land with a thud instead of a crash, the Red Sox managers have lived a life of triple jeopardy. Saddled by what are generally conceded to be the worst press relations in the league, they have had to face, usually alone, one of the most prolific, exacting, and competitive presses in the land. But if they have had troubles from these sources, they are as nothing compared with the going over they have had from the rabid, baseballwise following of a million self-appointed assistant managers. When things went wrong at Fenway Park—and they did often in those trying years—the fans exploded with a clatter that suggested time bombs had been thoughtfully provided by the management under each seat. And the wrath of the fans landed with a loud, resounding smack on the head of the man who at the moment was thoughtless enough to answer to the name of manager. The trick was not so much to manage. It was to survive.

Why Pinky Higgins should want the job, much less think he could succeeed at it, is still somewhat of a mystery among sound baseball men. Yet the fact remains that for the past 8 years the low-pressure Irish Methodist has surely and steadily stalked his way to Fenway Park.

When he quit as a major league player after the 1946 World Series, Higgins could have become manager of the Class AAA Toronto club of the International League. He turned the chance down in favor of the same job with Roanoke in the Class B Piedmont League. The difference was that Roanoke was in the Red Sox farm system, while Boston had only a lose working agreement with Toronto. "At Toronto I would have had only 2 or 3 Red Sox men," Higgins commented recently. "At Roanoke I had a whole ball club of 'em."

Higgins has had whole ball clubs of Red Sox ever since. But there was a time last fall when it seemed as if all the training might go for naught. He had just finished his most successful season, winning the Little World Series with the Louisville Colonels of the American Association, when he was offered the managership of the Philadelphia Phillies. Higgins told the Boston management about it, and they decided to pay off Lou Boudreau, whose contract as manager still had a year to run. Boston wasn't allowing Higgins to escape.

JUMP FOR GENIUS

This week, as the Red Sox continue to show surprising strength in chasing the American League pennant, the Boston management's quick decision to grab hold of Higgins has the aura of genius about it.

Boston's brain trust could look bad, though, if the team should go into the kind of tailspin it suffered beginning in the second month of the season, when nothing Higgins did went right. The return of Ted Williams is credited with adding much of the lift, and undoubtedly his presence in the lineup has been a boost to morale. But other Boston managers have foundered with Williams on the roster. Those who are counting on Higgins to keep the team in high fettle are depending rather on qualities not often sought after nor found in a new manager: sound knowledge of his players and their wholehearted respect. Of the 44 men who were on the roster at spring training headquarters in Sarasota, Fla., this March, 23 had played for Higgins somewhere along the line and all 23 swore by him.

What it is exactly that Higgins has is hard to lay a finger on. Patient, colorless, plain, slow of speech and manner and action, he is a living bromide, the still water that runs deep, the honesty that is the best policy, the virtue that is its own reward. He is a good, kind, unspectacular man, rugged and simple and given to uttering such homely phrases as "rules are made to be broken" and "a happy team is a winning team."

Even these phrases do not come readily. Higgins speaks in a deep drawl and his voice is so low that a visitor has to pay close attention to catch everything. He rarely answers a question without turning it over for inspection several times first. Sometimes he ponders so long that he appears to have forgotten the question. His easy ways give him the disarming manner of a country boy and strangers often mistake him for a ready mark in the big city. But they soon discover that underneath he is as shrewd as a banker and a sharp man in a corner.

In one sense Higgins is fortunate in taking over the Red Sox this year. The many woes that once beset his worthy predecessors have for the most part vanished. The press, and even at times the public, chastened by the near-certain knowledge that their antics were in some part responsible for the repatriation of the Braves in Milwaukee, are acting with a restraint that proper Bostonians find comforting.

Many other things are different. The policy of buying up established stars and installing at their head a manager who had recently won a pennant was buried under an avalanche of raw youths brought in 2 years ago by Boudreau when he combed Red Sox farms for new talent. Boudreau's players are maturing.

So is Williams, a national hero today. Ted was always something of a problem child in earlier days. Charming one minute and gloomily uncooperative the next. Williams was bigger than any manager, a law unto himself. He did as he pleased, and no manager dared try to cross him. Joe McCarthy, a martinet when he won eight pennants with the New York Yankees, was willing to forego one of his strictest regulations in Boston. A stickler for formality in dress, he appeared without a necktie on his first day of spring training in Florida so that Williams, who flatly refused to wear one, would not be embarrassed. Big Steve O'Neill treated Williams with stout deference, and Boudreau and Williams maintained a mutual silence. The long shadow of the great slugger was always darkening the manager's door.

Not so Pinky Higgins. He and Williams have been friends since 1946, when both were on the only Boston team ever to bring a pennant home to millionaire owner Tom Yawkey. When Higgins was appointed manager, Williams was quoted as saying, "Mike is a nice guy," a grudging compliment from anybody else perhaps, but from Williams, who is not given to paying unsolicited tributes, high praise.

Throughout the spring, when rumors over Williams' intentions were meeting each other coming and going, Higgins maintained an attitude of impassive indifference. The slugger had announced his retirement at the beginning of the 1954 season, but few believed that he meant it, and almost everyone but Higgins had an opinion on the subject.

THE WILLIAMS ENIGMA

"I'd like to have him," Higgins said, "but I don't know what his plans are. I haven't heard a thing. In the meantime, Throneberry's my left fielder. He'll do all right."

Faye Throneberry, a taciturn 24-year-old youth fresh out of the Army and happy to be a big-league ballplayer, is typical of the new Red Sox. He and his teammates of several years' standing offer the last and possibly the sternest contrast with Red Sox teams of the past. In 1950, the year after the club had missed winning 2 successive pennants on the very last day of the season, there were 11 Cadillacs in the players' parking lot behind Fenway Park. Those Red Sox were big-business men ballplayers, not loafers, but not hungry men either. They could, with some equanimity, shrug off defeat as part of the game, then blithely drive their Cadillacs home to wait for the next season to roll around.

The current team is completely unspoiled. The men are lean, hungry, determined, and eager, and their salaries are commensurate with salaries of other ball clubs. Prima donnas and big-business men lurk in the shadows of remembrance and the Cadillacs are confined mostly to a few players' futures.

This is the kind of team Higgins wants. Indeed, it's the team he virtually grew up with. There is the 23-year-old Tom Brewer, whose 3-hit shutout over the Indians last Sunday is typical of the good ball Higgins is getting from his young men. There is the 22-year-old Gene Stephens who, when things were going badly for him in Boston in 1953, said, "Send me back to Louisville with Mike." There is 25-year-old Ike Delock who made the same request at just about the same time. There are others who have asked to be sent back from Louisville to Birmingham "so I can be with Mike again," just as boys in the Red Sox farm system 7 years ago asked to be sent from Birmingham to Roanoke "with Mike."

"Higgins is the greatest judge of human nature I have ever known," says Charley Wagner, a Higgins teammate on the 1946 Boston team and now assistant farm director of the Red Sox. "He knows instinctively how to get the most out of young ballplayers."

Players like Al Curtis, George Susce, Pete Daley, Frank Malzone, Don Buddin, Marty Keough, Norm Zauchin and Al Van Alstyne, some of whom are with the Red Sox now and some of whom are on the way, can testify to that. So can veterans like Milt Bolling, who was with Higgins at Louisville, and Leo Kiely and Willard Nixon, who pitched for him at Birmingham.

The late Harry Agganis, for whom Higgins had high hopes as a player before he died as a result of pneumonia this summer, got typical Higgins treatment at Louisville in 1953. Fresh out of Boston University, where he had been an outstanding football star, he got off to a terrific start, then suddenly went into a terrible nosedive. He suffered in silence for weeks, and finally went to Higgins with the plea, "Mike, what am I doing wrong?"

Higgins pointed out a few minor flaws and Agganis promptly pulled out of the slump.

Why didn't he tell him sooner?

"An independent guy like Agganis would have resented me butting in," Higgins explained. "He always figured he was man enough to solve his own problems. I wanted him to want help before I said anything."

But when Gene Stephens ran into the same trouble at Louisville last year, Higgins began working with him right off. Stephens eventually got back into the groove, but it took him longer.

"You'd go to a kid like Stephens," Higgins said. "You couldn't wait for him to come to you. He was scared and nervous and he needed confidence. You had to coax him into believing in himself. That takes time."

In his playing days, Higgins was a steady, solid third baseman who occasionally hit spectacular heights. In 1938, his second year with the Red Sox, he established a major league record of 12 straight hits which still stands, although it has been tied by Walter Dropo. Higgins twice hit 3 home runs in 1 ball game, and he played on 2 American League All-Star teams and in 2 world series during his 15-year career. He started with the Philadelphia Athletics, then went to the Red Sox, on to Detroit, and finally, in 1946, back to the Red Sox. After winning the pennant that year, they lost the world series to the St. Louis Cardinals. Higgins, then 37, played through all 7 games, being replaced only once, and that by a pinch-runner in the ninth inning of the first game.

Higgins was noted in his day for a peculiar batting stance, in which he stood stiff-armed, holding his bat high over the plate and almost perpendicular to the ground. His lifetime average of .292 was well ahead of that of the average third baseman. Generally known as a "ballplayer's ballplayer," he was a valuable team man, who could hit in the clutch and whose record did not quite do justice to his true ability.

He spends a good deal of his off-season time now hunting and fishing, which he loves. He lives in Dallas during the winter with his attractive brunette wife, Hazen, and his two school-age daughters, Diane and Elizabeth, otherwise known as Bootsie. The rest of the year they rent a house in Newton, Mass., not too far from the Fenway. The girls and their mother are all musical, a circumstance which Mike accepts with placid good nature. Sometimes, if the noise gets too loud, he quietly goes to his room and closes the door.

His name, a source of embarrassment to him for years, came from the fact that he had a rosy complexion as a small boy. A sister nicknamed him Pinky, and he carried it with him through school, college, and the big leagues. Given his choice, he'd prefer to be called Mike.

"I don't suppose it makes a hell of a lot of difference," he says, "because I'm more interested in what people think of me than what they call me. But, honestly now, don't I look more like a Mike than a Pinky?"

Before the season began, Higgins minced few words in showing more confidence in his young ball club than the baseball experts, many of whom picked the Red Sox to finish no better than fifth this year. He told reporters the club would definitely be in the thick of the pennant race.

"I wouldn't want to predict that we can win," he said, "but I think we'll take more games than last year's team did." Boudreau's 1954 club won 69 games, finished fourth, 42 games behind the league-leading Cleveland Indians.

At 46, Higgins knows exactly what he wants and where he's going. When he talks baseball, he expresses himself with quiet confidence. He punctuates his remarks with pithy phrases, along with the aforementioned maxims which he likes to assemble in simple battle array, the better to score his points. Here are some typical volleys:

"Baseball doesn't change much. What changes is the personnel."

"Percentage baseball must be good. If it weren't, it wouldn't work so often."

"It's easy to see what a fellow is doing wrong. The big job is to make the proper corrections."

"Each man must be treated as an individual. No two do things alike."

"Every manager has his own way of dealing with problems."

"I don't consider handling ballplayers a problem. It's a pleasure."

"Discipline never reforms a bad actor. I'd rather get rid of a man than fine or suspend him."

"The golden rule is old, but it still works pretty well."

The phrases may not make any notable additions to Bartlett's Quotations. As exemplified by Pinky Higgins, however, they do apparently shape ball games.

Housing Amendments of 1955

SPEECH

OF

HON. JESSE P. WOLCOTT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, July 29, 1955

The House in Committee of the Whole House on the State of the Union had under consideration the bill (S. 2126) to extend and clarify laws relating to the provision and improvement of housing, the elimination and prevention of slums, the conservation and development of urban communities, the financing of vitally needed public works, and for other purposes.

Mr. WOLCOTT. Mr. Chairman, I yield myself 12 minutes.

Mr. Chairman, probably the issues have pretty much narrowed in this bill, as usual, to the question of public housing. It was advisable that a rule be granted in order that the House solve once and for all again this question of public housing. So it was necessary that the Committee on Rules make in order, if they reported out any rule, the Senate bill. The Senate bill was before the House committee and the Senate—I should, in this respect, say the other body did a deplorable job on the housing bill. We have had housing legislation before us to my knowledge since 1937. I never saw a worse mess than what came to us from the other body. I am quick to add that the great House Committee on Banking and Currency, of which we are usually very proud, at least I am, did not do a much better job. Neither the Senate bill nor the House amendments to the Senate bill constitute the President's program on housing—anything to the contrary notwithstanding. So it was thought advisable in an attempt to salvage something of the housing program that we start almost from scratch again and see what could be done. So at the suggestion of the administration I prepared and introduced a bill, the bill H. R. 7473, but minus any public housing provisions. The provisions contained in the Senate language, the provisions contained in the House language do not reflect the wishes of the President in respect to public housing. The only similarity, even the much touted House committee language, is that it just happened by coincidence, perhaps, that both the President's recommendation and the action taken by the House committee provide for 35,000 units—and there the similarity ends.

The bill, H. R. 7473, which is introduced, will be offered as a substitute for both the Senate bill and the House amendments after the first section is read. It is a streamlined, stripped-down bill, but it contains all the essentials—every one of the essentials necessary to continue the housing program. It provides that title I, in respect to modernization loans, be continued until July 1, 1956.

It provides in effect and in substance and in fact for a continuance of the FHA financing, and provides for additional insurance authorization sufficient to carry the FHA program throughout this fiscal year 1956. It increases the authorization for that purpose by $3,400,000,000. It is estimated that something less than that will be necessary to carry the program at the rate it is now going for the balance of this fiscal year. It provides for some military housing under the so-called Wherry Act, title VIII of the act, not as broad or as comprehensive as the House language provides for, nor as specific as the Senate language. But nevertheless, at the suggestion of the administration, Wherry financing is continued, but only for those projects which have already been certified by the Secretary of Defense.

Section 4 of the bill makes some technical changes which we can pass over.

Section 5 of the substitute provides an additional $500 million for capital grant authorization for the urban renewal programs. That section also increases the amount of the capital grant authorization which could be used in any one State from $35 million to $70 million. All of the other provisions are controversial provisions, many of which, most of which, have not been parts of, and never have been included in any housing bill which we have enacted.

It is unnecessary to enlarge the concepts of the housing program, for the reason that as of this moment we are building at an annual rate of 1,320,000 units, the greatest number which has ever been built in any 1 year. I may be in error. There might have been 1 calendar year when we got up to 1,400,000.

So it is not necessary to take up all of these controversial matters. If you want the program continued at the same rate that we are building housing units at the present time all we need to continue at that rate is this additional insurance authority.

I hope we take into consideration the potentialities of the actions which we might take and be realistic about this situation. If my substitute is adopted, it will continue the program about as is for another year.

If it is adopted and passed by the House the matter will go to conference, and I do not know of anything that is not in the Senate bill; I cannot conceive of anything in respect to housing that is not in the Senate bill, so almost anything that you can imagine will be before the conference, including public housing.

This House, as the gentleman from Virginia has so rightly said, has denounced and refused to approve public housing on 4 or 5 occasions.

May I take just a moment to clear up in your minds my understanding of the President's position on public housing? We must go back a year to the time when we were considering the Housing Act of 1954. You will recall that somebody had contended that the President wanted 140,000 housing units over a 4-year period. We had conferences with the President. The President, I believe, announced publicly, but surely privately, that his concern was only that we have enough authority to build sufficient public housing units to house the people who were to be displaced by slum-clearance project, urban-renewal projects, or because of other action taken by the Government; in other words, if by Government action a person's shelter is taken away from him, then it is the duty of the Government to make available safe, sanitary shelter.

That was his purpose, and that is all we should provide for, and that is all we did provide for. We provided ample units, because it was at the President's suggestion that we wrote into the act these standards under which we have worked all this last year. Although we gave him an authorization of 35,000, and they have been working under standards which the President himself set up, they found in 51 weeks there was necessity for building only 142 of the 35,000 units; in other words, replacements of safe, sanitary housing was found for all but 142 families who were displaced.

That is all the President wants; that is all he asked us to give him, and my bill does it.

Status of Forces Treaties

SPEECH

OF

HON. H. R. GROSS

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

(Mr. GROSS asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. GROSS. Mr. Speaker, some of us are very strongly opposed to the status of forces treaties and other secret agreements that are being made, under which American servicemen and their dependents may be tried in the civil courts of foreign countries and incarcerated in foreign prisons.

I should like to read an item appearing in one of last Sunday's newspapers. It is from the leased wire of the New York Times and the dateline is London.

An American airman lost the right to drive in Britain for 12 months, and paid a $14 fine, for an act that would have won him commendation in most American courts.

Thomas Eugene Rogers, 25, told a South End magistrate that he knew he had had too much to drink the other night, so he climbed into the back of his car to sleep it off. A friend removed the ignition key.

But British law says you're "in charge" of a car if it isn't in the garage. A bobby pulled Rogers out of the back seat and took him to a police station, where a doctor certified he was unfit to be "in charge."

Rogers pleaded strenuously that he had done just what American police would have advised, and couldn't possibly have started the car without the keys.

Eighty-fourth Congress and the President

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1955

Mr. EVINS. Mr. Speaker, as the 1st session of the 84th Congress nears adjournment, we may look back on the past 7 months in an effort to sum up and evaluate what has been accomplished in the Congress.

In this connection, I ask consent to have reproduced in the RECORD an analysis of the work of this session of the Congress as reported in the New York Times of yesterday. This report follows:

THE 84TH AND THE PRESIDENT

Anxious and turbulent were the words for President Eisenhower's first 2 years in the White House. He was beset by great problems—the worsening situation in Indochina, the long delay over West German rearmament, the recession at home. He was bedeviled by the right wing of his own party. The "Asia Firsters" kept pressuring for a "tougher line." Senator MCCARTHY kept up a barrage of challenges. At one point the President somewhat plaintively remarked on the peculiar situation of a President of the United States—not only did he have to make decisions for the good of the country, he also had to be head of a political party.

Confident and amiable are the words for the past 7 months. The problems of the cold war remain, but the tension has eased. The Nation has moved into a period of great prosperity. Senator MCCARTHY has become a voice muted and ignored. The right wing led by Senator KNOWLAND has been largely silenced as public opinion, thoroughly aroused to the meaning of thermonuclear war, has strengthened the President's determination to seek and pursue peace. In defiance of all precedent, the nature of politics and the nature of man, the President has enjoyed almost unexampled good relations with a Democratic Congress. A few weeks ago, when asked how he liked his job, he replied: "Anyone who finds himself in a position of authority * * * to work toward a * * * peaceful world, of course it is a fascinating business. * * * There are in this office * * * unique opportunities to meet especially interesting people."

DEMOCRATS ON OFFENSIVE

The Democrats, of course, know a mote when they see it and have been quick to pluck it—Mrs. Hobby's handling of the Salk vaccine, the Dixon-Yates contract, the Talbott affair. But they have given the President full support on his foreign program—as they were duty-bound to, considering its lineage. On the domestic side, some of the President's measures have come through nearly intact, several have been modified, and a good many—which ran foul of the conservative-liberal split in the Democratic Party—have not been acted on.

All last week both Houses were driving to meet the adjournment deadline, which had been set for July 30—yesterday. As always when the cry "Home ho" goes up, Congress disposed of several measures which the President had marked "urgent" by throwing them overboard. Last night, as the session was drawing to a close, this is how the President's program stood:

FOREIGN AND DEFENSE

Treaties: Senate ratified the Mutual Defense Treaty with the Chinese Nationalist regime; the Paris pacts on West German sovereignty and membership in NATO; the Austrian State Treaty.

Formosa: Congress supported the President's request for a free hand in the defense of Formosa and the offshore islands.

Foreign trade: The administration bill for a 3-year extension of the Reciprocal Trade Act and authority to lower tariffs by 5 percent a year was passed.

Foreign aid: The President asked for $3,266,000,000. The final conference figure agreed on last week was $2,703,000,000—a cut of $563 million. A good part of this will be made up, however, because the Pentagon found some $302 million of former appropriations not obligated, which had become lost in bookkeeping. Congress gave the Defense Department permission to use the money which would otherwise have been returned to the Treasury.

Defense appropriations: A request for $31.9 billion was granted without major change.

Military reserves: To make up for manpower cuts under the New Look program, the President proposed increasing the Ready Reserve from 800,000 to 2.9 million by (1) requiring all men entering the services since the 1953 Korean armistice to serve a combined total of 8 years of active and reserve duty; (2) setting up a training program for up to 250,000 men a year aged 17–19, who would take 6 months of active duty and seven and a half years reserve. Congress finally passed a bill which (1) limits compulsory reserve duty to those entering on active service after the bill is signed, but offers incentives to those now on active duty to take reserve training; (2) sets the term of combined service at 6 years, the last year in the Standby Reserve, requiring no training; (3) permits youths 17 to 18½ to volunteer for 3 to 6 months' active training to begin when they graduate from high school, leave school, or reach 20, followed by reserve duty for a total of 8 years.

DOMESTIC

Appropriations: Regular departmental appropriation bills went through without drastic cuts.

Taxes: Congress supported the President on postponing scheduled cuts in corporate and excise taxes, and finally rejected a $20 personal income tax cut sponsored by House Democrats and opposed by the President.

Highways: The President proposed a 10-year, $39.1 billion, Federal-State road program, of which $21 billion for an interstate system would be raised by bonds not figuring in the national debt. The House Democrats sponsored a 13-year, $50.3 billion program, of which $24 billion for the interstate system would be raised by increased user taxes. Last week the House killed both the administration and Democratic bills. Democratic leaders charged their bill had been lobbied to death by the trucking industry.

Minimum wages: The President asked an increase from 75 cents to 90 cents an hour; Congress voted for $1, and the President will accept it.

School construction: The President wanted a 3-year program of $200 million in outright grants to the States, plus authority to buy up to $750 million of low-interest bonds issued by local school districts. A House committee increased the grants to $1.6 billion over 4 years. Largely because southerners feared an antisegregation rider would be attached to the bill, the measure was not acted on.

TROUBLE ON HEALTH

Health: The President's broad health program with a proposal to encourage extension of private health insurance through Federal reinsurance against loss never got out of committee. Conservative legislators feared the reinsurance proposal would be an entering wedge for socialized medicine; New Deal Democrats thought it vague and inadequate.

Housing: The President asked 70,000 low-cost units over 2 years. The Senate passed a bill providing a total of 380,000 over an indefinite period, with a minimum of 85,000 and a maximum of 200,000 a year, plus 50,000 over 5 years for elderly couples. The House knocked out all public housing. Last evening the conference committee was still seeking a compromise.

Atom showboat: Both Houses rejected the the President's plan for a nuclear-powered merchant ship to serve as a world-girdling exhibit on atoms for peace. Majority felt funds should be devoted to developing atom-powered marine engines.

Hawaii: No action on the President's statehood request.

Immigration: No action on his request for liberalization of the McCarran-Walter Act.

Casting over this record for its campaign potential, politicians of both parties are pretty well agreed—privately, of course—that:

There is not much here which the Democrats can use to cut down the President's popularity.

There is not much here which the Republicans can use to enhance the popularity of the party.

In 1956 the Democrats have only 15 Senate seats at stake, 8 of them safe. They hold only 31 House seats won by less than 55 percent of the vote, as against 63 Republican marginal seats.

Therefore the feeling is growing in Washington that if the President runs and unless the Republicans gain considerably in public esteem, the Nation may well witness that unprecedented phenomenon—a President who failed to carry his party into Congress.

Company Coming

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1955

Mr. MCCORMACK. Mr. Speaker, there is a great deal of commonsense to the within editorial, "Company Coming," that appeared in the Boston Traveler of July 29, 1955:

COMPANY COMING

We might as well get out the little old date book and make a note of the fact that the Moscow Happiness Boys are heading this way—date undetermined.

That possibility became almost a certainty Wednesday in the British House of Commons. A formal communique was read, announcing that Khrushchev and Bulganin had accepted Anthonk Eden's invitation to visit England in the spring. And the Britons responded with a roar of cheers.

So where does that leave us? We're being boxed. If the Merry Men of Moscow can go down to Kew in lilac time, sooner or later they'll be in Washington to see the cherry blossoms. Otherwise, what price stuffiness?

Even before the British announcement arrived, you could see this thing taking shape at the White House. At his Wednesday news conference, the President was asked if he'd discussed at Geneva the possibility of visiting back and forth with the rambling Reds.

In his reply, he said the matter had been talked about "a very great deal"—that no proposals had been made but "opportunities were discussed in a general way in arranging, let us say, throughout the whole echelons of government and everything else."

Stripped down, that means—sure, next question.

Well, we are indeed a strange people. No wonder the rest of the world finds it hard to understand us when most of the time we can't even understand ourselves. It seems only yesterday that we were hurling violent purple warnings in one direction at Chou En-lai and in the opposite direction at the Russian Rover Boys. Now we share the dry martini at Geneva, and soften up the home folks for unexpected company.

In Commons on Wednesday, Laborite Herbert Morrison said Eden's optimism frightened him.

"It did remind me, with something of a shiver," he said, "of the return of Mr. Neville Chamberlain from Munich with his little piece of paper which, he said, meant peace but which, as it turned out, did not."

Took the words right out of our mouth, Mr. Morrison.

Objection to H. R. 5205, a Bill To Extend to Uniformed Members of the Armed Forces the Same Protection Against Bodily Attack as Is Now Granted to Personnel of the Coast Guard

EXTENSION OF REMARKS
OF
HON. PAUL J. KILDAY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1955

Mr. KILDAY. Mr. Speaker, H. R. 5205 is entitled "A bill to extend to uniformed members of the Armed Forces the same protection against bodily attack as is now granted to personnel of the Coast Guard."

That language would seem to make the bill highly desirable. However, such is not the case.

This proposal has been pending before Congress for a good many years. It has been considered in the Committee on Armed Services and in the former Committee on Military Affairs a number of times, and has in each instance been rejected. On at least one occasion it was considered on the floor of the House and rejected.

Members of the Coast Guard occupy a dual status. They are members of the armed services. In addition, they are charged with the duty of enforcing the customs laws. In this latter category, they are Federal peace officers similar to United States marshals, border patrolmen, or customs agents. As Federal peace officers, they are entitled to, and have, the same protection against bodily attack in the discharge of their duties as is granted to all other Federal peace officers. The law has long provided that protection.

Members of the Army, Navy, Air Force, and Marine Corps have no duties as peace officers. In a democracy such as ours, they should have no duties as peace officers. Their duties are, and must remain, strictly military duties.

Should the provisions of this bill become law, every affray or fist fight in which a member of the Army, Navy, Air Force, or Marine Corps is a participant could be cognizable in the Federal court. This is highly undesirable. The proposal is a mischiefmaker. This bill appeared on the Consent Calendar, a portion of which was called on July 30. Should it be called on the Consent Calendar, or unanimous consent for its passage be requested, I shall object.

What I have stated with reference to H. R. 5205, by the gentleman from New York [Mr. CELLER], applies also to the similar bills for the same purpose, being H. R. 5279, by the gentleman from New York [Mr. POWELL]; H. R. 5309, by the gentleman from California [Mr. ROOSEVELT]; and H. R. 5399, by the gentleman from Illinois [Mr. BOYLE].

Annual Chiropractic Day

EXTENSION OF REMARKS
OF
HON. HAROLD O. LOVRE
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1955

Mr. LOVRE. Mr. Speaker, I call the attention of my colleagues in Congress to a very special observance that will occur in America next month. For in September, the chiropractic profession—the Nation's second largest profession of healing—will observe its annual Chiropractic Day.

On that day—September 18, 1955—more than 25,000 chiropractors throughout the United States, Canada, and many foreign countries, will celebrate the 60th anniversary of the discovery of chiropractic by the late Dr. Daniel David Palmer.

It is not my purpose here to enter into controversy over any method of practice of the healing art, nor to endorse or to condemn any school of healing. But I do want to submit for the RECORD the following statement by Dr. Emmett J. Murphy, director of public relations, National Chiropractic Association, Washington, D. C.:

On September 18, chiropractors will look back to survey more than a half-century of progress wherein the chiropractic profession has been raised to a firm basis of professional skill and ethical standards, and to the point where chiropractic today enjoys the prestige, standing, and material rewards of other professions.

Chiropractic is the second largest healing profession in America. It is classified as 1 of the 4 major healing professions, along with medicine, dentristry and osteopathy, by the Executive Office of the President of the United States, Bureau of the Budget, Washington, D. C.

Recognizing the goals already reached by this prominent profession, and the confidence of 33 million people who have received chiropractic treatment in the United States and Canada, it is indeed proper that we all should pause for a moment to consider the basic principles which form the foundations for this growing profession in our Nation today.

A fresh concept in the art of healing based upon the physical and mechanical approach, rather than the chemical, was given to the world 60 years ago. For it was in 1895 that Dr. Palmer brought to the modern world the benefits of chiropractic principles.

These principles were actually in use many years B. C. with the healers of Greece. Hippocrates himself, the father of healing, said "look well to the spine for cause of disease." And from the Greek words meaning "efficient hand" came "chiropractic," the modern term for this science, art, and practice.

And it was Plato, the great Greek philosopher, who broke the bonds of "hidebound," custom-restricted thinking and noted, along with many other early Greeks and Romans, that what we call "nerve energy" and other principles of spinal health are basic to the healing of the ills of mankind.

After exhaustive research, Dr. Palmer in 1895 reintroduced to our world these principles which have been carried on by chiropractors who are devoted to the prevention and treatment of disease and to the promotion of public health and welfare.

The specific function by which the chiropractor is distinguished from other modes of healing is his adjustment by manipulation of the structures of the body, especially those of the spinal column, to restore normal nerve function. Such adjustment is frequently supplemented by any or all of the modern tools of physical therapy.

The remarkable effectiveness of chiropractic methods in treating disease has won for chiropractic a permanent place in the family of health sciences, and in the hearts and homes of suffering humanity.

This rapid acceptance of this science of healing in the past 60 years leads us to inquire of the standards in use today. And extremely exacting standards they are found to be.

Chiropractic colleges are required to give 4,000 academic hours in a standard 4-year course to obtain accredited ratings from the committee on educational standards of the National Chiropractic Association. A basic course of 4,400 hours is recommended.

Up to 2 years of professional (college) education is required by State chiropractic laws of licensure. A large percentage of students entering apprroved chiropractic colleges today have college degrees.

The following typical or basic curriculum for approved chiropractic colleges is based on the National Chiropractic Association code for a minimum of 4,000 hours in a 4-year course:

	Hours
Anatomy, including embryology and histology	740
Physiology	240
Biochemistry	180
Pathology and bacteriology	520
Public health, sanitation, hygiene	160
Practice of chiropractic principles and technique, neurology and psychiatry, pediatrics, dermatology and syphilology, urology, ophthalmology, otolaryngology, first aid and minor surgery, roentgenology	1,960
Obstetrics and gynecology	200
Total	4,000

The average graduate of an accredited chiropractic college is as well qualified to practice chiropractic as the average graduate of an accredited medical college is to practice medicine, and often must pass the same board examination in the basic sciences to gain a license.

An appreciation of these high standards has been expressed by the 33 million people—1 out of 5 Americans—who have found this way to restored or improved health. This marks a great contribution by chiropractic to the general health and well-being of the people.

Chiropractors everywhere will join in the observance of September 18, 1955, as Chiropractic Day with a full appreciation of the freedom of the Western World, where, in three score years a new profession can gain public acceptance on its merits.

Assuring Fair Division of the Benefits of the Sugar Program

EXTENSION OF REMARKS
OF
HON. WILLIAM S. HILL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1955

Mr. HILL. Mr. Speaker, under permission granted me to extend my remarks in the RECORD, I wish to include the following material from Agriculture Information Bulletin, No. 111, dated July 1953, and published by the Production and Marketing Administration of the United States Department of Agriculture:

ASSURING FAIR DIVISION OF THE BENEFITS OF THE SUGAR PROGRAM

The principal way in which the domestic industry derives benefits from the sugar program is through the stabilization of raw and refined sugar prices at reasonably profitable levels. But the framers of the Jones-Costigan Act did not leave solely to competitive forces the carrying of these benefits through retailers, wholesalers, refiners, and importers, to beet and raw-cane processors, growers, and farm workers. They provided in that act for a system of grower payments to assure that this sharing would take place. This system was carried forward in succeeding legislation though, as pointed out earlier, handled in a different manner. Under the present act these payments are called conditional payments.

Conditional payments are financed out of the general funds of the Treasury. However, a tax on sugar provides funds for the Treasury which more than offset the total of all conditional payments plus the costs incurred by the Department of Agriculture in administering the Sugar Act. This tax is in the amount of one-half cent a pound, raw value, on all sugar processed and imported for direct consumption. It is imposed on domestic processors, principally beet processors and refiners, and importers of direct-consumption sugar by the Sugar Act, through an amendment to the Internal Revenue Code.

As indicated in the section on proportionate shares, conditional payments act as an incentive to growers to adjust their production to the quota and carryover needs. But this payment system also has three other objectives. These other objectives are: (1) To help provide adequate incomes to growers; (2) to assure growers and field workers a fair sharing of returns to the industry; and (3) to prevent the employment of child labor in field work.

The first objective is accomplished by augmenting grower income through conditional payments. The second and third objectives are achieved by requiring growers to observe certain conditions in order to receive conditional payments. These conditions are in addition to the requirement that growers comply with their proportionate share determination. They are as follows:

1. Growers, who are also processors, are required to pay fair prices for cane or beets purchased from other growers in order to receive conditional payments. Fair prices are determined annually by the Secretary for each domestic area after public hearings and after investigation on the economic position of growers and processors. The fair price determinations fix the level of prices paid to growers by processors who are growers. In addition, they affect the level of prices paid to growers by processors who are not growers. Processors who are not growers pay about the same prices as grower-processors.

2. Growers must pay fieldworkers in full for work performed on cane or beets and at rates not less than those determined by the Secretary of Agriculture to be fair and reasonable. Each year the Secretary determines fair and reasonable wages for fieldworkers in each domestic area. These wages are established after investigation and public hearings at which all interested parties may testify.

3. Growers must not employ children under the age of 14 years or permit them to work on the farm. Adolescents between the ages of 14 and 16 may not be employed or permitted to work for more than 8 hours a day. The children of growers who own at least 40 percent of the crop they are cultivating are exempted from this condition. If this condition is not observed by a grower he is penalized by a deduction of $10 from his payment for each child and for each day or part of a day during which such child was employed or permitted to work.

The rates of conditional payments vary with the volume of sugar, raw value, produced from the cane or beets grown on a farm and are graduated downward from the small to the large producer. The basic rate of 80 cents a hundred pounds of sugar, raw value, is paid on the first 350 short tons produced on a farm. This rate is reduced progressively to a minimum of 30 cents a hundred pounds on all sugar produced in excess of 30,000 short tons on a farm. From 1942 to 1950 the average rate of payment was 67 cents a hundred pounds, ranging from 46 cents in Hawaii where most of the production is on large farms to 79 cents in the beet area. Payments in the mainland cane area, Puerto Rico, and the Virgin Islands averaged 68, 67, and 72 cents a hundred pounds, respectively, during the same period.

It is noted that the average payment per pound for all domestic areas exceeds the tax per pound—an apparent paradox in view of the fact that total tax receipts exceed the cost of the program. However, this is because the tax is imposed on all sugar (foreign and domestic) processed or imported for direct consumption and payments are made on domestic production only.

To summarize, the conditional payment provisions of the act help to assure that the benefits of the sugar program are shared equitably by growers and farm workers, by (1) making conditional payments to growers; (2) fixing a fair division of the returns from sugar between growers and processors; (3) fixing a fair and reasonable wage for workers engaged in producing, cultivating, and harvesting cane and beets; and (4) eliminating the employment of child labor.

The Late John Roland Kinzer

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1955

Mr. GAVIN. Mr. Speaker, it was with deep sorrow that I learned of the passing of my very good friend, and our former colleague, John Roland Kinzer, who died last Monday at the age of 81 in Lancaster, Pa. Our State has lost one of its finest citizens.

Mr. Kinzer served in Congress from 1930 until his retirement in 1947. He was an honest, conscientious, and loyal legislator. His work in the House of Representatives was useful and constructive and his ambition was to preserve the principles and ideals of our great Nation.

He was a humble and kindly man and one whom you admired as a companion and a friend. He was always considerate of everybody and the kind of man who added much to our daily lives, with a kind word for everyone.

Today it is with a feeling of sadness that we record his passing, and remember him for the many little acts of kindness that marked his friendship and good will toward all of us who knew him.

Highway to the Arctic Ocean

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
DELEGATE FROM ALASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1955

Mr. BARTLETT. Mr. Speaker, I take especial pleasure in presenting here an article entitled "Highway to the Arctic Ocean" written by Col. G. L. Curtis, USAF, which appeared in the National Defense Transportation Journal for July-August 1955. The article tells of a revolutionary development which took place in transportation last winter in transporting supplies and fuels for the "Dew Line" radar screen:

In a pioneering adventure which made transportation history, a common carrier has driven its regular highway trucks from Fairbanks, Alaska, to the shores of the Arctic Ocean, carrying supplies and fuel for construction of the United States-Canadian "Dew Line" radar screen. Making the feat more impressive is the fact that the private trucking concern blazed its own more-than-four-hundred-mile highway through the Arctic in only 39 days, smashing through a virtually unknown and uncharted area of snow and ice.

Original plans for the project called for truck and trailer delivery to a specified point. From there, a specially designed giant tractor-propelled snow train would haul the freight overland to designated spots.

This project began in the latter part of 1954, when Alfred Ghezzi, Jr., President of Alaska Freight Lines, Inc., made an unusual proposal to the Western Electric Corp., prime contractor in charge of building the "Dew Line" radar screen across the Arctic perimeter between Alaska and Greenland. Mr. Ghezzi proposed that Alaska Freight Lines load an initial block of 500 tons of freight at Fairbanks and make delivery to specified sites in the Arctic. Alaska Freight Lines would build its own highway through the Arctic; would provide its own equipment; would guarantee delivery; and would fly the freight in if the road proved unsuccessful. Alaska Freight Lines would use its own funds for the entire project, and would not be paid for the freight haulage until final delivery.

Sensing the possibilities of a complete new concept in Arctic military supply, the Departments of the Air Force and Army, gave their approval to Mr. Ghezzi's proposal. United States and Canadian authorities realized that if Alaska Freight Lines could build a highway to the Arctic Ocean and make overland delivery of the supplies and equipment needed to build the radar screen, the high cost of airlifting the same supplies could be greatly reduced, and transportation schedules could be maintained despite the tricky Arctic weather.

Even before receiving the official go ahead from the Departments of the Air Force and Army, Alaska Freight Lines ordered new Caterpillar D–8 tractors from Peoria, Ill., and a huge Snowtrain from LeTourneau's Texas plant.

Mr. Ghezzi set up headquarters in Fairbanks, and began assembling the crew of Alaskans whom he knew could lick the Arctic.

WANNIGANS USED

Alaska Freight built its own Wannigans (sled-mounted cabins for use as sleeping and cooking quarters for the crews), and the first units headed north from Fairbanks just a month and 2 days from the day the project was given the green light.

Although a summer road exists between Fairbanks and a small unidentified community way station located on the Arctic Circle, this road has always been impassable during the bitter Arctic winters. Alaska Freight Lines' lead "cat" train blasted through to this intermediate point over terrain previously considered impassable in exactly 8 days. The "cat" train crossed the frozen Yukon River and headed north for the Arctic Ocean. Ahead of the lead unit, an Alaskan guide from Big Delta and an Alaskan Indian guide from Fort Yukon went forward on snowshoes, working in constant liaison with Alaska Freight Lines' own scouting plane. Red flags dropped from the plane were spotted along the most passable routes for the lead "cat" to follow. Constant radiotelephone communication was maintained between the scouts, the plane, and all units of the following trains.

Two weeks after the original "cat" train left Fairbanks, a second train followed. This unit was charged with the actual building of the Arctic Highway, a road 25 feet in width, across the roughest, coldest, least-known territory in the Northern Hemisphere, to the Arctic Ocean, more than 400 miles away. Following in the wake of the "cats" was a convoy of 32 line-haul diesel truck and trailer units, designed for paved highways but never for Arctic transportation.

Day and night the "cats" kept punching into the north, with the big diesel truck-trailers right behind. Temperatures hit 68° below zero, and engines had to be kept running 24 hours per day to prevent freezing. Drifts 50 to 75 feet high were commonplace, and at times the "cats" worked in layers of 2 and 3.

Behind the train of roadbuilding "cats" and diesel trucks rolled the LeTourneau Snowtrain, each of its 24 wheels individually powered, its 5 trailer units loaded with 150 tons of supplies. The wheels of the Snowtrain were 7 feet 4 inches high, and the trailer beds stood 9 feet off the ground, enabling the train to roll securely over the roughest terrain.

Alaska Freight Lines' original plans called for the diesel trucks and trailers to go only to the dividing line between the sub-Arctic and actual Arctic. There the cargo would be transferred to the Snowtrain for final delivery to the Dew Line radar network along the rim of the Arctic Ocean. However, the diesel trucks and trailers surpassed all expectation and kept rolling north as if they had been intended all along for Arctic operation.

The lead "cats" of the trail-blazing section were the first vehicles ever to be driven north to the Arctic Ocean, and their "cat skinners" had accomplished the impossible by blazing a more than 400-mile highway through the Arctic, over a route considered by many experts to be impassable, and in the face of conditions designed by nature to test to the limit both men and machine.

While waiting for the arrival of the main highway construction train, this same unit built an airstrip at destination. They completed a runway 7,500 feet long in less than 1 week's time.

Early this year, Alaska Freight Lines' Snowtrain, as well as Alaska Freight's 32 line-haul trucks and trailers, reached their Arctic shore destination with 500 tons of freight for the Dew Line.

MAY CHANGE PROGRAM

This achievement of the Alaska Freight Lines in pioneering a land route to the Arctic has opened up an entire new concept in logistic support of Arctic sites.

This new concept may reverse the original resupply program of the Dew Line from the summer open-water season to the winter frozen-tundra season. Supplies may be fanned out to individual sites from strategic inland staging points, such as Fairbanks, in this first winter's operation or ships may move supplies into 3 or 4 central locations on the Dew Line during the summer open-water season for lateral movement to individual sites during the winter season. In addition to possible savings in actual transportation costs, this new concept developed by the Alaska Freight Lines provides a valuable alternate mode of transportation in the event supplies cannot be moved to the sites via the sea lanes.

The Department of the Air Force is studying this entire area in the light of this recent development.

Tribute to Hon. Thomas J. Dodd, of Connecticut

EXTENSION OF REMARKS
OF
HON. T. JAMES TUMULTY
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1955

Mr. TUMULTY. Mr. Speaker, on Monday, July 11, 1955, the Honorable THOMAS J. DODD, a distinguished Representative from Connecticut, made what many of us thought was an eloquent address entitled "How High Is the Summit?" This speech of Congressman DODD was not only eloquently delivered but contained sound and courageous advice to our Nation.

Shortly after July 27, Congressman DODD received a letter from former President Harry S. Truman, which I hereinafter set forth. Former President Truman certainly has paid Congressman DODD an unusual tribute. It is typical of the gallant and courageous Harry S. Truman that despite his retirement from the high office of President, he nevertheless follows the affairs of our Nation and reads the CONGRESSIONAL RECORD.

It is with pleasure that I include the President's letter in the RECORD, not only as a tribute to Congressman DODD, but also as a reminder to all that Harry S. Truman's service to the Nation has not ended and that is something for which the Nation should be grateful.

The letter follows:

KANSAS CITY, MO., *July 27, 1955.*

Hon. THOMAS J. DODD,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN DODD: I have just received a copy of the RECORD for July 11 which contains your speech, the subject of which is How High Is the Summit?

It is one of the best statements on the subject I have ever read, and I am certainly glad you were thoughtful enough to put it into the RECORD. I congratulate you heartily on it.

Sincerely yours,

HARRY S. TRUMAN.

Highway Legislation a Must

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following timely editorial from the St. Louis Post-Dispatch, July 29, 1955:

ROAD MAP NEEDED

Americans aware of the serious gap between supply and demand in our road system will support President Eisenhower thoroughly in his appeal to Congress to reconsider road legislation.

The House defeated the administration highway plan by 224 to 193 and then defeated a Democratic substitute by the even greater margin of 292 to 123. As a result, Mr. Eisenhower said he was "deeply disappointed." He added:

"The Nation badly needs good roads. The good of our people, of our economy, and of our defense, requires that construction of these highways be undertaken at once."

Nobody, including all the Congressmen who voted against highway legislation, can deny this. And if these Congressmen are as interested as the President in getting action on a road program, they will take advantage of his offer of a compromise. For Mr. Eisenhower said that contention over the method of paying for the roads should not deny the Nation the roads.

His program, first offered Congress, suggested a special Federal corporation to issue road bonds outside the Federal debt limit. The House substitute proposed a penny increase in the 2-cents-a-gallon Federal gas tax and increased levies on trucks, tires, and tubes. There was little difference between the two plans as to the roads to be built or total expenditures.

Many Congressmen opposed the administration plan because special bonds would be costly and devious in terms of increasing the national debt without seeming to increase it. And as it turned out, the powerful truckers' lobby fought the House substitute because of the increased taxes proposed. House Democratic Leader MCCORMACK observed, "The answer is, everybody wants a road bill and no one wants to pay for it."

The answer to that is, the Nation needs a road bill and cannot have it without paying for it. Bonds will only postpone and increase the payment. But if major tax increases are not politically possible, then Congress has to find a program which it feels the public will support.

That program might lie somewhere between the defeated plans, or in a scaled down version of them. If Congress will not accept a 10- or 12-year proposal for 38 to 42 billions in expenditures, it might settle on a somewhat less ambitious 5-year plan such as the Gore bill which the Senate approved. And if Congress cannot approve either special bonds or sharp tax increases, it might agree to regular Treasury bonds plus a limited tax increase.

Highway legislation is must legislation, both to the President and, we think, to millions of motorists and the American people. It should not be put off until an election

year, when politics could crack all the proposed payment.

What is needed now is a legislative beginning that will get the highway expansion underway. Obviously the only way this Congress can begin is to compromise. President Eisenhower has given the legislators a good road map in the right direction.

Federal Home Loan Bank

EXTENSION OF REMARKS
OF
HON. JAMES B. UTT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. UTT. Mr. Speaker, the titles to the homes of many thousands of California families, including many of my own constituents, have been clouded and reclouded, and bounced in and out of courts for the last several years, as a result of two major factors:

First. A Federal agency, the then Home Loan Bank Commissioner, acted in a vindictive and capricious manner. Such conduct resulted in very grave and irreparable injury to citizens of California.

Second. The courts failed in their function to grant protection to citizens who had been the victims of the bank commissioner's diabolical scheme.

The bank commissioner's capricious scheme was made possible through the abuse and misapplication of powers granted Federal agencies under the Federal Home Loan Bank Act and the Home Owners' Loan Act.

Under the claimed authority of these acts, the then bank commissioner seized, without trial, notice, or hearing, two solvent and prosperous financial institutions. The lack of merit and capriciousness of such seizures were conclusively brought to light in two subsequent congressional hearings, by the sworn testimony of a host of witnesses and documentary evidence.

The United States district court has however, thus far been precluded from trying the charges of fraud against the seizing Government officials, by a series of United States circuit appellate court decisions. These appellate court decisions are based upon purely technical grounds, denying the United States courts jurisdiction to hear the complaints and claims of injury of our victimized citizens.

Congress enacted these laws as a protection for its citizens and to aid in stabilizing our national economy at a time when it was sorely needed. Under these enactments, over $28 billion savings deposits have been built up by over 16 million people.

When the congressional enactments were abused by the home loan bank officials, the circuit court blamed Congress by holding the United States district court without jurisdiction, and said:

> The simplest kind of an amendment [by Congress] would have achieved such a result.

It should have been obvious Congress never intended these abuses, and certainly did not intend to deprive its citizens of the protection of the courts. To make its intention crystal clear, Congress did correct the law by enacting the 1954 Housing Act.

By such act, Congress wiped out the excuses of the United States circuit appellate court for its failure to properly function. Such court had previously held the following:

First. Home Loan Bank Board was not sueable.

Second. That exhaustion of administrative remedies was a prerequisite for citizens to judicially regain their property seized from them by force and duress.

Third. Lack of jurisdiction in the United States courts of the "subject matter," of the claims of the citizens.

Fourth. Absence of Government defendants from the jurisdiction of the United States district court precluded the courts from functioning.

None of these appellate court excuses went to the merits of the injustices perpetrated upon our citizens.

Congress in its 1954 Housing Act was plain and forceful in its language and intent when it repudiated the United States Circuit Appellate Court's contention by adopting a law which: (a) Made the Home Loan Bank Board a sueable entity; (b) authorized direct jurisdiction by the local United States district court to hear and grant relief to its citizens, without the prior necessity of administrative process; (c) committed to the local United States district court jurisdiction to review all acts of the Home Loan Bank Board embracing the whole gamut of the subject matter of such board's functions; (d) provided a definite and specific manner of serving process on the Home Loan Bank Board and Federal Savings and Loan Insurance Corporation; (e) after consideration of the specific litigation pending—for example, Long Beach Federal Savings cases—Congress refused to limit its enactments to future matters. All of its citizens are entitled to equal protection against fraud and corruption of Government officials.

Notwithstanding the plain intent of Congress, evidenced by the legislative history as well as the clear and concise wording of the act, the United States Circuit Appellate Court, by its ruling in July 1955, still precludes the United States district court from exercising the jurisdiction specifically granted by Congress.

There has been no prior trial on the merits of the issues. There can be no res judicata of something never tried. The Congressional enactments are procedural and remedial. Such a conflict of the United States Circuit Appellate Court rulings and congressional enactments, are unwarranted and unjustified. with the heavy and burdensome workload of Congress, it should not be subjected to criticism which follows as a result of the failure of our courts to protect its citizens against capricious acts and abuse of power of Government officials.

These United States circuit appellate courts are experimental creatures of Congress, intended to serve a useful purpose. However, if the experiment proves a burden rather than an asset, Congress has the responsibility of correcting the evil in the courts, as well as in the agencies.

In such United States circuit court's latest decision, it nullifies a California State law granting our citizens a right "to quiet titles" to their homes against allegedly false and fraudulent claims of people and agencies with whom they have had no dealings. Such nullification and encroachment into State law was necessary, to sustain the appellate court's erroneous rulings which are in conflict with the congressional act.

What ultimate damage to Government and citizens alike will result as a consequence of the United States appellate courts flaunting of congressional enactment, is impossible to estimate. The damages thus far reaches into many millions, in addition to the unwarranted heartaches and hardships already thrust upon thousands of our citizens.

Congress has the responsibility to correct abuse of its enactments, or face a growing host of injured citizens, who have been deprived of their homes and property, without trial, hearing, or right of redress, because of the failure of the courts to properly function.

Harvey Plans Courthouse Visits With Indiana Citizens

EXTENSION OF REMARKS
OF
HON. RALPH HARVEY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. HARVEY. Mr. Speaker, in an effort to be of service to the citizens of the 10th District of Indiana, I plan to tour the 10-county area during the period of October 3 to October 14, inclusive. With the cooperation of local officials at county-seat cities, I have been assured courthouse space in which to confer with individuals and groups who feel they have matters to discuss with their Representative in Congress.

It is sincerely hoped constituents will feel free to call on me during the time allotted their community. Whether they wish to discuss personal problems or national affairs, I shall welcome the opportunity to face them.

No appointments will be necessary for those wishing to spend a few minutes with their Congressman. It will be my intent, aided by staff members, to give attention to all callers.

My itinerary, with the daily conference periods to run from 10 a. m. to 4 p. m., local time, is as follows:

October 3, Monday: Greensburg, Decatur County.

October 4, Tuesday: Winchester, Randolph County.

October 5, Wednesday: Shelbyville, Shelby County.

October 6, Thursday: New Castle, Henry County.

October 7, Friday: Muncie, Delaware County.

October 10, Monday: Greenfield, Hancock County.

October 11, Tuesday: Connersville, Fayette County.

October 12, Wednesday: Liberty, Union County.

October 13, Thursday: Rushville, Rush County.

October 14, Friday: Richmond, Wayne County.

Eisenhower's Statesmanship at Geneva

EXTENSION OF REMARKS
OF
HON. JOHN E. HENDERSON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. HENDERSON. Mr. Speaker, the world this side of the Iron Curtain has applauded the sincere and brilliant leadership of President Eisenhower at the conference at Geneva. The President's personal triumph is a victory for our Nation and free men everywhere—opening the way for the ending of the decade-long cold war through the exertion of a quality of statesmanship long absent in our time.

I wish to commend to the House of Representatives the excellent analysis of the President's contribution to the Geneva Conference which appeared in the Times-Recorder of Zanesville, Ohio, on Monday, August 1:

ENCIRCLING MOVEMENT

The ponderous, long-heralded summit conference, from which the world expected little and hoped for much, will go down in history as the scene of the "Eisenhower Challenge"—probably the greatest stroke of statesmanship in our time.

As Western newsmen struggled desperately to send home reports of progress and optimism, when the key issues of German reunification and European defense had both been kicked under the table for resurrection at the foreign minister level at some later date, when Russia's Bulganin had once more repeated the threadbare Soviet formula for disarmament—of other nations, when the meeting seemed hopelessly fouled up and rapidly disintegrating * * * President Eisenhower let the peace-loving Russians have it.

In the same simple, friendly, but deadly earnest manner of his earlier addresses in Geneva, he called upon the masters of the Soviet to exchange with the United States complete blueprints of each other's military establishment. Further, he invited them to take all the aerial photographs they wished over the United States—extending the same privilege to American fliers over the U. S. S. R. in return. He emphasized that the exchange of military installation blueprints was to cover the United States from end to end and to extend likewise across the vastness of the Soviet Union.

The jolt that turned the tables and placed President Eisenhower in command of the situation was received by the Russians in stony silence. Premier Bulganin, as chairman, adjourned the meeting.

Such a proposal is obviously not to the Reds' liking. But will they dare to reject it? If they turn it down their protestations for peace and amity and understanding are forever gone with the wind that generated them. If they turn it down they can never again charge us with warmongering. And if they should accept the President's challenge the Iron Curtain comes crashing down. The secret fastnesses of the Urals, the slave camps of Siberia, the wretchedness and poverty of the Russian people and the Soviet satellites will be revealed to all the world. The days of the Kremlin hierarchy will be numbered. And if they accept we suspect there is little about our Military Establishment for them to add to the intelligence data they already have.

Either way, General Eisenhower has taken the summit.

How an Industrial Payroll Stimulates the Economic Life of a Community

EXTENSION OF REMARKS
OF
HON. PERKINS BASS
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. BASS of New Hampshire. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an interesting article dramatizing the purchasing power of an industrial payroll. It is probably a typical example of how payroll earnings are spent not only in a typical New Hampshire town, but small towns anywhere in this country so I thought it might be of interest to my colleagues and readers throughout the country. An economic survey by Paul Weiner of the department of economics, University of New Hampshire, How an Industrial Payroll Stimulates the Economic Life of a Community, follows:

HOW AN INDUSTRIAL PAYROLL STIMULATES THE ECONOMIC LIFE OF A COMMUNITY

(By Paul Weiner)

When the International Packings Corp. of Bristol, N. H., paid its employees 11,803 silver dollars on May 27, 1955, an opportunity was provided for the community to determine the flow of money in and around its shopping area.

Among the questions Bristol businessmen were interested in were how much money stays in town and how much goes to surrounding communities; what percentage of wages is spent on food, clothing, notions, services, etc., to what extent does a dollar multiply its purchases.

This survey, based on an economic study of questionnaires filled out by 37 Bristol merchants and interviews with bank officials in and around the area, will try to answer these questions and show how the community may realize the maximum benefit from its major industrial payroll.

Of the 11,803 silver dollars paid out to employees of the International Packings Corp., approximately 6,060 silver dollars were accounted for after the first full week of business. There were 5,743 silver dollars unaccounted for. The First National Bank of Bristol held 4,165 silver dollars and the various merchants in town were left with 400 silver dollars at the end of the week. The interesting statistic is that the neighboring banks in Plymouth, Laconia, and Franklin had collected 1,495 silver dollars, which may turn out to be a modest early figure. A breakdown of these banks found the Franklin bank holding 900 silver dollars, the Plymouth bank holding 367 silver dollars, and the Laconia bank holding 196 silver dollars. The latter figure is expected to be much larger after this week.

The important thing, as will be indicated later, is that once a dollar is spent outside of Bristol, the chances seem slim that it will be respent in Bristol. This means that the town and merchants lose the important benefit of induced spendings or having this money spent over and over again in the town. This severely limits the possibility of economic expansion. The one important principle is that the initial expenditures must be encouraged to be made in Bristol.

Of the silver dollars traced down after the first week of business, 25 percent were found outside of Bristol. If this same percentage holds true for the silver dollars not yet located, then eventually 8,852 of them should be located in Bristol. However, I feel that this figure is somewhat high and I think that the Bristol bank will probably have closer to 7,000 silver dollars.

However, far more important than the dollars handled during the week and accounted for at the end of the week is this question: How much more business will be induced and created in Bristol as a result of this payroll? A normal rate of savings and an estimated leakage of silver dollars to other areas based on the various bank's figures will have to be taken into account. Eventually, as pointed out above, the Bristol bank will probably take in the area of 7,000 silver dollars and most of this money will be respent partly in Bristol and partly outside of Bristol. On the basis of earlier figures, I feel that eventually some $23,000 worth of economic activity will be created in Bristol as a result of 1 payroll. It takes a great deal of time for one payroll to work itself out, but this may approximate the added weekly lift to the town of Bristol.

Let's take a look and see what may happen to silver dollars when an employee of the International Packings Corp. spends them. After deductions, employee A receives 50 silver dollars and it is his practice to save $5 and spend $45. He buys various items such as food, clothing, services, entertainment, and pays his rent. The merchants and the landlord now have an extra $45 that employee A has spent, and they as a group also save part of this money and respend part of it (by far the larger part). Let's keep the same percentage of savings (10 percent) so that they as a group save $4.50. They also spend as a group $40.50 to pay for food, services, entertainment, and rent. This process keeps on occurring with a percentage of leakage to other areas and has a multiplied effect so that the employee who was paid 50 silver dollars and spends 45 can create around $450 worth of economic activity. An industrial payroll of $11,803 can induce over $100,000 worth of extra economic activity. Some of this will be spent in Bristol, some in surrounding areas, some in Concord, Manchester, Boston, New York, and so forth. The more money that is initially spent in Bristol, the more in extra sales and added economic activity for Bristol.

Thirty-seven merchants of Bristol handled around 4,000 silver dollars during the first week of business. Of this amount, 45 percent was handled by food, grocery, and beverage lines; 20 percent was handled by gas stations and auto repair shops; 11 percent was handled by clothing establishments; 6 percent for restaurants; 6 percent for gifts, drugs, and newspapers. Another 5 percent was handled by services such as cleaning, laundry, barbers, etc. The remaining 5 percent can be put in the miscellaneous category.

The full impact of an industrial payroll cannot be measured, but it is clear that any

industry entering a community will have a powerful economic impact on that community, and for the whole area as well. A vigorous, progressive community that rapidly and effectively adjusts to a new industry can manage to keep a larger share of the payroll and induced spendings within its boundaries. Although, I have not had the opportunity to make a personal study of the retailing practices in Bristol, some principles developed from similar areas may be of help. It should perhaps be borne in mind that there is a decided difference between storekeeping and being a merchant. The storekeeper's concepts and methods of yesterday cannot meet the needs of today's markets and those of the future. As one economist pointed out, "The continued expansion of trading areas, increasing competition, better informed and discriminating consumers, and the rapid tempo of economic and social changes have made the management tasks of even the smaller retail establishments complex, difficult, and risky."

The day is past when anyone can keep store when basic business and merchandising principles can be ignored and when retail management can fail to assume the economic and social responsibilities rightfully expected of the retail industry. If there be a loss of more business than what is expected to other areas or not enough business, then much of the difficulty can be traced to faulty management. Attractive window displays, sales promotions, a proper stock balance, advertising, public relations, merchandise control, and store layout all play an important role. The advantage of holding on to an industry and attracting new industries extend far beyond a single payroll. It is up to the merchants of Bristol to maximize this advantage.

Cooperative Congress

EXTENSION OF REMARKS
OF
HON. VICTOR WICKERSHAM
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. WICKERSHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post of August 2, 1955:

COOPERATIVE CONGRESS

The most notable fact about the first session of the 84th Congress is that President Eisenhower's fears of a cold war between the White House and Capitol Hill did not materialize. The President's remark was made, of course, in the heat of the 1954 campaign, and he himself later acknowledged that his choice of words had been unfortunate. Actually there has been a large degree of cooperation between the Republican President and the Democratic Congress. On a number of issues, especially in the field of foreign policy, the Democratic majorities have given the President more support than members of his own party.

On such vital questions as the Formosa Resolution, the Paris Treaties and the Austrian Treaty party differences were not discernible. Both parties were also firmly behind the President's efforts at Geneva. While his foreign-aid program was trimmed, it came through with a large part of what he had requested. Authority was also given to enter into reciprocal-trade agreements for 3 more years. According to the Congressional Quarterly, majorities of both parties in the Senate stood with the President on 31 of the 33 issues on which votes were taken.

Credit for this sensible and constructive policy of working together for the national interest goes in considerable measure to four men. President Eisenhower consulted with the leaders of both parties and in general kept partisanship in the background. Senator GEORGE, chairman of the Foreign Relations Committee, played a role similar to that of Arthur H. Vandenberg in the Truman administration. His wise counsel and initiative helped to keep the administration looking forward in foreign affairs. And Majority Leader LYNDON B. JOHNSON, who missed the last month of the session because of a heart attack, consistently placed the national interest ahead of party interests in marshaling his forces. In large measure, the same can be said of Speaker RAYBURN.

In the field of domestic policy, the President was less successful in getting his program enacted. Congress defeated his highways bill as well as the Democratic substitute. The aid-to-education bill and statehood for Alaska bogged down in controversy. Also postponed were revision of the Taft-Hartley Act, the Refugee Act, and the Walter-McCarran Act. The Colorado River bill was put aside in the House to avert defeat. On the other hand, Congress passed a military reserves bill that had at one time appeared to be doomed, extended the draft for 4 years, and renewed the Defense Production Act. It raised the minimum wage to $1 an hour, and the President is likely to accept this despite the fact that it exceeds his recommendation. It increased the pay of its own Members as well as that of judges and executive personnel.

Congress corrected the investigative excesses of the previous session, but it effected no general reform of the procedures of investigating committees. The improvement was largely in the shift of control to more responsible committee chairmen. Senate investigations led to cancellation of the Dixon-Yates contract and put Secretary of the Air Force Talbott on the spot, but otherwise they have made little impression on administration policy. Congress sensibly turned over the loyalty problem to a Commission on Government Security.

Although they control both Houses of Congress, the Democrats did not offer a formal legislative program. In the House there was a drive for a $20 income tax cut, for restoration of farm-price supports at 90 percent of parity, and for further liberalization of social-security benefits. These measures were clearly aimed at establishing a record for the 1956 campaigns, but they were killed or put aside in the Senate. The Congress as a whole is entitled to generous thanks for keeping partisan considerations at a minimum. It has notably minimized the fear of divided control over the White House and Congress and has shown that men of good will under separate banners can work together when public-spirited leaders point the way.

Congressman Jerry Ford's Schedule for His Mobile Office

EXTENSION OF REMARKS
OF
HON. GERALD R. FORD, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. FORD. Mr. Speaker, I have a very strong contention that each Member of this great deliberative body, the Congress of the United States, should make every effort within his power and ability to bring Government closer to the people he represents in our Nation's Capital. In an effort to do just that, Mr. Speaker, I plan to tour my district this fall with a mobile office. I am doing this because I hope that my meeting face-to-face more of the people I represent, I will be not only better qualified to represent their interests but will also help to extend the knowledge that our great Government has a personal concern in the welfare of each citizen.

I am planning to locate this "mobile office" in the nature of a house trailer in 26 communities of Ottawa and Kent Counties, Mich. Members of my staff and I will be in the office from 2: 30 until 8 on the afternoon and evening of the day indicated.

Congressman JERRY FORD's schedule for his "mobile office," 2:30–8 p. m., on day indicated: Friday, September 16, Hudsonville; Monday, September 19, Zeeland; Tuesday, September 20, West Olive; Wednesday, September 21, Allendale; Thursday, September 22, Robinson Township; Friday, September 23, Ferrysburg; Monday, September 26, Nunica; Tuesday, September 27, Coopersville; Wednesday, September 28, Conklin; Monday, October 3, Marne; Tuesday, October 4, Sparta; Wednesday, October 5, Kent City; Thursday, October 6, Sand Lake; Monday, October 10, Cedar Springs; Tuesday, October 11, Rockford; Wednesday, October 12, Belmont; Thursday, October 13, Harvard; Friday, October 14, Grattan; Monday, October 17, Cannonsburg; Wednesday, October 19, Alton; Thursday, October 20, Lowell; Monday, October 24, Cascade; Thursday, October 27, Bowne Center and Alto; Friday, October 28, Caledonia; Monday, October 31, Byron Center; Tuesday, November 1, Jamestown.

Dollar-a-Year Men

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Tuesday, August 2, 1955

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "'I'm Merely Serving the Govment,' Says Executive on Leave," written by Albert M. Colegrove, and published in the Indianapolis Times of Tuesday, July 26, 1955.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

"I'M MERELY SERVING THE GOVERNMENT," SAYS EXECUTIVE ON LEAVE—$1-A-YEAR MAN BORROWED FROM AUTO INDUSTRY TELLS OF NEW CAREER

(Congress is spotlighting business executives who take leaves of absence to work for the Government without Federal pay. Representative EMANUEL CELLER, Democrat, New York, opened a House subcommittee's hearings yesterday by saying his group will look

for "abuses" where such businessmen may have "feathered their own nests." What sort of men are these fledgling bureaucrats? Here's the story of a typical "WOC.")

(By Albert M. Colegrove)

WASHINGTON, July 26.—Joe Eskridge has just returned to the job in Detroit after a Florida vacation last February when he had a phone call from his boss, S. G. Baits, a vice president of American Motors (Hudson and Nash cars).

"Joe," said Mr. Bates, "George Romney wants you to go to Washington and work for the Government."

Three weeks later, Joseph W. Eskridge was sitting behind a walnut desk on the fourth floor of the Commerce Department here.

The sign on his door said, "Director, Automotive Division, Business and Defense Services Administration."

Joe Eskridge now was what his fellow businessmen call a bureaucrat. To the Government, he was a w. o. c., meaning he was working for Uncle Sam "without compensation."

"What a change," 52-year-old Joe Eskridge said today. "If anybody had told me 6 months ago that I'd be working in Washington soon, I'd have said he was crazy."

Still, after the first jolt, Mr. Eskridge hadn't greatly minded the idea. "It was a challenge," he recalled. "I'm a production man and an engineer. This was something really different."

After the phone call, Mr. Baits had given the pitch to Joe in person. The Commerce Department, he had explained, needed a motor executive with savvy to handle a tough job.

A key part of the job would be to act as a sort of man-in-the-middle with Government and motor-industry representatives in drawing up a complete set of national defense "standby orders."

These orders would stipulate how many cars, trucks, etc., a manufacturer could make for civilian use during the first months of a national emergency.

Each of the auto and truck companies, Mr. Baits explained, was going to lend a man to the Government, one at a time, for a 6-month "tour of duty." They would contribute in alphabetical order—which meant American would send the first man.

George Romney, American Motors president, had suggested Joe—provided he was willing.

Mr. Eskridge would, of course, be on leave with full pay from his post as vice president in charge of manufacturing for the Hudson Special Products Division.

Joe decided to go.

He was sworn in April 7 and took over his desk in the Commerce Department, where he supervised 11 Government employees instead of 3,000 Hudson workers.

Mr. and Mrs. Eskridge, and their 18-year-old daughter, closed down their spacious home at Grosse Point Farms, outside Detroit. They got a two-bedroom apartment here.

"Under the terms arranged," Mr. Eskridge explained, "I could have sort of commuted between here and Detroit. But I figured that if I were going to do the job, I ought to do it full-time.

"I think we've made progress. We've sweated over those standby orders and have a couple ready to go.

"I was pretty green at first, but the people here have been really fine about helping me get started."

Mr. Eskeridge was on the job 2 weeks before he discovered that, although he wasn't being paid by the Government, he was entitled to $15 a day living expenses. "A happy surprise," he said.

He works from 8:30 a. m. to 5 p. m., 5 days a week. On weekends, he goes sightseeing—and sometimes reads the CONGRESSIONAL RECORD, to see what Congressmen are saying about people like him. "I get a sardonic pleasure out of that," he said, wryly.

But his face turns dead serious when he's asked about the fears of some Congressmen that the Government unpaid businessmen might feather their own nests.

"Some people," said Joe Eskridge, "seem to think patriotism only blossoms in wartime. That's rather shallow thinking, seem to me."

It's clear that Joe Eskridge would just as soon be back home, enjoying the prerogatives of a well-paid motor executive. It's equally clear that nest-feathering remarks disturb him.

"When Mr. Baits said goodbye to me in Detroit," he recalled, "he said, 'remember, Joe, you're going down there to serve the Government.' He stressed the words 'serve' and 'government.'

"I've been doing just that."

The Junior Order of United Mechanics Is a Patriotic Organization

EXTENSION OF REMARKS
OF
HON. THOMAS A. JENKINS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1955

Mr. JENKINS. Mr. Speaker, we have in our great country many fraternal organizations, most and probably all, of which are patriotic and law abiding. There is one fraternal organization that specializes on advancing patriotism and Americanism. I refer to the Junior Order of United American Mechanics. This organization has councils in many sections of the country and has a large membership.

Just recently, on the 22d of June, the national council of this fraternal organization met in its biennial session in the city of Cincinnati, Ohio. While in session this council adopted a number of resolutions of public importance. Mr. Speaker, under leave to extend my remarks, I include in the CONGRESSIONAL RECORD the following resolutions:

RESOLUTION CONDEMNING REVOLUTIONARY ACTIVITIES IN THE UNITED STATES

Be it resolved by the national council of the Junior Order of United American Mechanics of the United States of North America, Inc., in session assembled in the city of Cincinnati, Ohio, this the 22d day of June 1955, That we highly approve and endorse Senate bill 251, providing penalties for membership in, or participation in, the revolutionary activity of the Communist Party, or any other organization furthering revolutionary conspiracy; and be it further

Resolved, That a copy of this resolution be sent to the President of the Senate, the chairman of the Senate Committee on the Judiciary, and to Senator MARGARET CHASE SMITH, of Maine, the author of this bill; and be it further

Resolved, That the national council office have this resolution reproduced and a copy mailed to each council in the country asking them to contact their Members of Congress and express their opinion of this bill.

RESOLUTION ON THE HOUSE UN-AMERICAN ACTIVITIES COMMITTEE

Whereas the members of the national council of the Junior Order of United American Mechanics, and the individual councils throughout the United States, feel that the House Un-American Activities Committee of the Congress has performed an outstanding job in the field of anticommunism, and that it should be encouraged and supported in its further work along this line: Therefore be it

Resolved by the national council, Junior Order of United American Mechanics of the United States of North America, Inc., in session assembled in the city of Cincinnati, Ohio, this the 22d day of June 1955, That we urge that the powers, functions, and duties of the House Un-American Activities Committee be not curtailed but encouraged by sufficient appropriations to carry on; and be it further

Resolved, That copies of this resolution be forwarded to the Speaker of the House of Representatives and to the members of the House Un-American Activities Committee.

RESOLUTION ON IMMIGRATION AND NATURALIZATION

Whereas there has been going on in the United States a vigorous campaign to destroy the McCarran-Walter Act which became a law of the United States on December 24, 1952; and

Whereas the McCarran-Walter Act is the result of almost 4 years of study of the immigration system and is well suited to the present conditions and situations in our country; and

Whereas the act was passed by an overwhelming majority of the House of Representatives, and when it was vetoed by the then President of the United States it was enacted into law over President Truman's veto: Therefore be it

Resolved by the national council of the Junior Order of United American Mechanics of the United States of North America, Inc., in session assembled in the city of Cincinnati, Ohio, this the 22d day of June 1955, That we call upon Members of Congress to keep the McCarran-Walter Act on the statute books of this Nation in order to ward off attempts to weaken or modify the act, and to continue to screen carefully all aliens who apply for admission; and to keep the present immigration quotas.

Migrant Labor

EXTENSION OF REMARKS
OF
HON. STUYVESANT WAINWRIGHT
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. WAINWRIGHT. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I should like to include an article from the New York Herald Tribune for Friday, July 29, 1955, on the subject of Migrant Labor. The problem of the migrant laborer and his family is one of deep concern to me, as it is to every Member representing an agricultural area.

It is gratifying to know that a pilot project is being successfully conducted in Huntington, Long Island, N. Y. This program is being conducted by a group of public-spirited citizens, representing 12 local churches, and headed by Mrs. C. Arnold Smith, of Greenlawn. Mrs. Smith, under the able guidance of Rev. Austin H. Armitstead, chairman of the Suffolk County Migrants' Committee, is

doing a magnificent job. The pattern for this project could well be used in other areas of our country.

The article follows:

HUNTINGTON AIDS FARM MIGRANTS—CHURCH SERVICE GROUP AT WORK

(By Emma Bugbee)

HUNTINGTON, LONG ISLAND, July 28.—Five hundred migrant workers, here for the bean and potato picking on Suffolk County's level acres, are benefiting this year from a communitywide service organization unparalleled on the east coast.

Usually ignored by the townspeople in farming areas, these workers travel from the South in trucks, settle in run-down buildings, linger a few weeks until the crops are harvested, then move on to the next picking. Their children get little or no schooling.

All this has been a concern of the National Council of Churches and civic organizations for several years. Many communities have long been aware that "something ought to be done."

JOB FELL TO HUNTINGTON

It remained for Huntington Township to set machinery going at a pace which veteran workers in this field say is unequalled.

Mrs. C. Arnold Smith, of Greenlawn, a village bordering on Huntington, is chairman of the Huntington Township Migrant Committee of the Suffolk County Council of the Churches. Here motto is, "We never close shop and we never bother about red tape."

Women of twelve churches cooperate in cooking and serving a hot lunch to thirty children, who attend a daily vacation Bible school in the Presbyterian Church at Greenlawn. A car pool takes the children to and from school. Teen-agers wash the dishes. Sometimes there's a slipup in the organization. A teen-ager forgets that washing the dishes isn't enough. Some of the pans must be transported to the women who are to fill them with tomorrow's lunch. So it is Mrs. Smith who brings the pans back to her own home, and it is the Rev. Isaac Henderson, chaplain of the project, who totes them from there to tomorrow's cocks. It's all part of the job.

GRADUATE OF SEMINARY

Mr. Henderson is a Jamaican, a minister of the Disciples of Christ, and a graduate of Hartford Seminary. He taught school in his early days and has an easy way with children. He has served the migratory workers for 8 years in camps in Florida, North Carolina and Virginia.

It was due primarily to Mrs. Smith's energy that the Huntington Township committee was able to obtain Mr. Henderson's services this year. She attended a church women's meeting a year ago at which the Rev. Austin H. Armitstead, chairman of the Suffolk County Migrants' Committee, told about their problems: Mrs. Smith got busy on the telephone and raised $700 from the townspeople to guarantee the salary of a full-time chaplain for 4 months this year. The other necessary committees were soon organized. The churches, the police, the health authorities, the public schools, and townspeople of varying occupations volunteered to help.

SERVICES ARE NEEDED

"It seems to us that the migrants are American citizens and just as important as any other citizens," Mrs. Smith explained this afternoon, after sending Mr. Henderson off with the baking pans. "We realize they need education, welfare services, and religious inspiration just as much as anybody else does."

Mrs. Smith said that a registered trained nurse was giving her services four days a week to migrant families. A young woman about to have a baby was helped by the welfare agency to enter the local hospital. A young lawyer has aided the migrants with legal advice.

Mr. Henderson conducts religious services whenever and wherever he can collect a group of workers. Usually this is under the trees at a "camp" where a dozen or more families are within walking distance.

Asked which feature of the Huntington Township project he regarded as most valuable, Mr. Henderson replied that more important than any single service to the migrants themselves was community cooperation. It was, he said, a "pilot project" which might have far-reaching effects up and down the Atlantic Coast.

Operation Brave

EXTENSION OF REMARKS

OF

HON. GERALD R. FORD, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. FORD. Mr. Speaker, I am glad to be associated with my distinguished colleagues in this statement commending Mr. George W. Brazier, Jr., on the proposal he has so appropriately called Operation Brave.

At a time when a real hope for a just peace is being cautiously murtured by thinking men around the free world, it is good to know that individual citizens like Mr. Brazier are giving of their personal efforts to so noble and unselfish a cause.

It is significant, I think, that the President reserved his greatest optimism in his report to the people on the meeting at Geneva for the hope that a better understanding between nations can be achieved by closer contacts between people.

He said:

But the subject that took most of our attention in this regard was the possibility of increased visits by the citizens of one country into the territory of another, doing this in such a way as to give the fullest possible opportunity to learn about the people of the other nation. In this particular subject there was the greatest possible degree of agreement. As a matter of fact, it was agreement often repeated enthusiastically and supported by the words of the Members of each side.

I can think of no better group of American citizens to explain the desire of the President and the Nation to achieve this understanding than the men who fought in Korea. They best exemplify our deepest aspirations for a just peace and our firm determination that it shall be an honorable peace in which justice and freedom are the essential ingredients.

The men who held the line of freedom in Korea know that the ideal of human freedom is not cheaply held. In the truest sense, they represent the spirit that has made our country great and I think Mr. Brazier has made a happy choice in calling his proposal Operation Brave.

Courage is universally admired among freemen and the bond of comradeship steeled on the shell-torn hills of Korea can yet be a real force for peace. There is no firmer respect than that born out of common suffering for a just cause and this is surely a good foundation for cooperation between freemen. We are the strongest of the free nations and the task of leadership has fallen to us. It is fitting, therefore, that in an effort like this we should again take the first step in keeping alive the great potential for futual understaning that began in Korea.

Sending 22 American veterans to visit their comrades in 22 nations is surely no grandiose stunt or pompous propaganda maneuver; it is a simple and modest effort to renew an area of understanding between men who already shore an unforgettable experience in the never-ending struggle to preserve freedom.

It is especially noteworthy that this is the idea of a private citizen who is determined that every step shall be taken to avoid the necessity of other citizens again fighting that kind of war. He is asking the veterans of that struggle to make the same sacrifice for peace in their own countries, to take up different weapons to preserve the same ideals.

The American veterans would again assure their comrades that the effort is not unnecessary or meaningless but that our military strength is a symbol of our firm purpose to preserve the freedom which is at once our real strength and our hope for other men.

I also want to join in personally commending Mr. Brazier for his unselfish contribution of time and talents to a cause in which he believes so firmly.

Let Us Not Be Taken In by Communist Smiles

EXTENSION OF REMARKS

OF

HON. CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, July 29, 1955

Mr. ZABLOCKI. Mr. Speaker, during recent weeks, our newspapers and other mediums of communication have been filled with accounts of the new friendly attitude of the Communist leaders.

Our people have seen numerous photographs of smiling Red dignitaries attending various parties, visiting western factories and farms, and sitting down at a conference table with our Chief Executive and with other leaders of the free world to discuss world problems. They have been reminded of the alleged friendship between the Soviet army chief and our President.

It seems to me that this publicity campaign has given many people the impression that world tensions are easing, that the Communists may be ready to negotiate peaceful solutions to various world problems, and that the era of peaceful coexistence may be just around the corner.

In my opinion, there is absolutely no justification for such optimism at the

present time. We must face reality. We must realize that Communist policies have not changed, even though a few Communist leaders have decided to smile at photographers. We must remember that the cold war is not over, but that it is still raging with intense fury in many parts of the globe.

Mr. Speaker, the Reds had consented to come to Geneva, to a highly-publicized but very uneventful conference. The Soviets came, advanced a few proposals, and listened to others suggested by the leaders of the free world. They did not negotiate any issues, and they made no concessions. On the contrary, it appears that the commies may have received some concessions from our side of the conference table.

The fact that we have agreed to negotiate with Red China is in one sense, a victory for the Soviet leaders who have persistently championed the cause of the recognition of the Mao Tse-tung government. and worked for the admission of Communist China to the United Nations. It further appears that we are getting ready to expand free world trade with the Communists, and perhaps send some of our exports to Soviet Russia to bail them out of their economic difficulties. These considerations may at least partially account for the smiles on the faces of Communist leaders.

If we look at the other side of the ledger, we will find no evidence of any change of heart on the part of the Communists.

In Europe, there has been no easing of the Soviet grip on the Communist-dominated nations behind the Iron Curtain. As a matter of fact, fresh Soviet troops are moving into East Germany and the people there have been told openly that German unification can only be accomplished at the price of German withdrawal from NATO.

In the Far East, the situation is even graver: the desire to terminate hostilities as promptly as possible, and to seek world peace, has resulted in concessions to the Reds in Korea, in Indochina, and in the Formosa Straits. These Communist gains are now being solidified and extended.

In northern Korea, Red military power is being amassed in direct violation of the truce terms.

In Indochina, truce terms are being repeatedly and continuously violated by the steady accumulation of Communist military strength in North Vietnam, and by the aggressive Red campaign in Laos.

In the Formosa Straits, the Chinese Communists continue to bombard the coastal islands held by Chiang Kai-shek, and are concentrating great fighting power within striking distance of Formosa.

In Indonesia, the Communists are fomenting internal strife and appear to be gaining strength.

In Malaya, the Communists have stepped up guerrilla warfare against British and have paralyzed Singapore with riots, strikes, and bloodshed.

Similar developments are taking place in other parts of the world, where the Communists are fomenting strikes and disorders, engaging in subversion, and endeavoring to take over local and national governments.

Do these actions resemble the behavior of peace-loving men?

Let us not delude ourselves, the Communists have not relented and they have not to date changed their policies. The cold war goes on, while the Soviet leaders are trying to charm us with their friendly smiles.

As another instance, I would like to recall last week's shooting down of an unarmed Israeli passenger plane, which strayed off its course and crossed the Iron Curtain. Fifty-eight persons, including 12 Americans, perished in that tragic disaster, caused willfully by trigger-happy Communist border guards in Bulgaria.

In the thought that it may prove of interest to my colleagues, I would like at this point to insert an editorial which appeared in the Milwaukee Journal of July 28, entitled "Red Smiles and Cold Murder":

RED SMILES AND COLD MURDER

The 58 victims who were shot down in flames in the Israeli airliner give the lie to the smile of friendship that world communism has turned to non-Communist nations.

Here is a new example of what Lloyd George used to call the "brutality of barbarians." Here is new proof, if any is needed, that the Communist world still lives by the law of bandits rather than by the law of the family of civilized nations. If any change is coming, it isn't here yet.

In a civilized nation a plane off its course is ignored, unless it is in need of help—in which case help is given. But the Bulgarian Communists, like headhunters lying in wait on a jungle trail, consider it fair game for murder.

This was no military plane. It was a passenger airliner. It was no plane of one of the Western nations that Communists say they fear. It was a plane of little Israel, a threat to no Communist nation. It was a plane largely passengered by persons seeking refuge in Israel—persons to whom the heart of the civilized world goes out in support of their desire for a land of their own.

Whether it was flying off a course well inside Bulgaria, as the Bulgarians claim, or just inside the border, as Greek observers claim, isn't important. That's no excuse for coldly shooting down a passenger plane to start with.

This is not the first victim of Communists treating planes like targets. The only thing different here is that Bulgaria admitted the shooting quickly, said it is "sorry" and will investigate. But in every other respect it is typical Communist barbarism—and that means a barbarism that has been promulgated from the Kremlin.

The wreckage of that Israeli plane and the charred bodies of its passengers speak more loudly to the world of Communist philosophy than any smiles and soft words, any cocktail parties, and assurances of friendly intentions by a Khrushchev or a Bulganin. For the world, it wipes the smile from the Kremlin face.

Until these brutal tactics end, and the U. S. S. R. and Soviet-controlled countries act like peaceful and civilized nations, no honeyed words mean anything.

Mr. Speaker, it is my sincere hope that world tensions will be truly relaxed, and that we may make some true progress toward the attainment of world peace. It is my earnest belief, however, that we cannot afford to consider those goals as being even partially attained until the Communists demonstrate, through concrete actions and policies, their readiness and willingness to act like peaceful and civilized nations.

Until that stage is reached, let us not be deceived by empty smiles or by clever doubletalk. The security of our Nation, of the entire Christian civilization, may well depend on our ability to look reality straight into the face, and to meet it unflinchingly. This is no time for daydreaming, or for wishful thinking.

Recognition of Red Chinese by United States Feared by American Allies in Asia

---

EXTENSION OF REMARKS
OF

HON. THOMAS J. DODD

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1955

Mr. DODD. Mr. Speaker, for some time I have been warning the Members of Congress and the American people of what I believe to be a well-organized plan to bring about recognition of the criminal Communist Chinese Government by the United States and the admission of the same Red Chinese Government to the United Nations.

In the Washington Post and Times Herald of this morning, August 1, there is an excellent article written by Earnest Hoberecht, United Press vice president for Asia. Every American should read this article which follows:

TOKYO, July 31.—The United States is moving closer to the recognition of Communist China.

This is the conclusion reached, reluctantly, by many of America's anti-Communist allies in Asia.

It is a trend which many Asians, who are being urged by the United States to resist communism, cannot understand.

The talks between the United States and the Chinese Communists which open Monday in Geneva is one piece of evidence which leads many Asians to believe the United States is moving steadily down the road to eventual recognition of the Peiping regime.

These Geneva talks already are being discussed as a signpost pointing to possible United States-Red China talks at a foreign ministers level.

The Chinese Nationalists and the South Koreans, both of whom have put armies in the field against Communist forces, cannot understand why the United States is willing to negotiate with the Chinese Reds.

FILIPINO RAISES ISSUE

An important Filipino leader today raised this question in a private conversation on the matter: "Is the principle of negotiation and compromise—or coexistence by any other name—more important than the principle of right and wrong?"

There is increased suspicion in many Asian quarters that the United States is dealing with the Reds while urging others to refrain from the same type of action.

There are more than 10 million overseas Chinese, and many countries in Asia fear what might happen within their own borders if the United States joins those nations which already have recognized Communist China.

In Singapore, a well-informed student on Chinese affairs described the situation as follows:

"If the United States recognizes Communist China or if Communist China is admitted to the United Nations, you can be sure the Chinese will take over all the small countries which thus far have enjoyed freedom and independence. The large Chinese populations in the various countries of southeast Asia will have increased prestige, backing, and confidence. The tide of Chinese expansion—directed from Peiping and Moscow—will be impossible to halt."

REGARDED AS BAD SIGN

The mere fact that the United States is sitting down in Geneva with the Chinese Reds is considered by many anti-Communists in Asia as a bad sign for at least two reasons:

1. It tends to give the Peiping government status and importance equal to that of Soviet Russia with whom the United States, France, and England recently conferred.

2. It revives memories of the Indochina conference in Geneva which was a big defeat for the free world.

Many Asians see the Geneva talks as another successful move by the Chinese Communists to gain recognition and respectability. Some insist it shows how the United States gradually has moved, step by step, and issue by issue, closer to the big problems of recognition and U. N. membership for the Communist regime.

With these things in mind, free Asians will be watching to see how the United States handles the talks in Geneva.

IMPORTANCE REALIZED

Some American diplomats in Asia realize the importance of these Geneva talks on future American relations in other areas throughout Asia. Some say privately they hope American public pressure for the release of Americans now in Communist China will not force the United States to make concessions which would undermine the confidence of America's faithful anti-Communist allies in Asia.

"Perhaps the Americans are convinced that the Communists have put aside their plans for aggression in Europe," a Thailand source told United Press. "If so, good. But we out here still are not sure the Communists have abandoned their Asian dreams of expansion. So far the only aggression in Asia in recent years has been Communist aggression, and the Reds out here have not withdrawn any of their announced plans for adding to the territory they already control."

Public Works Bill

EXTENSION OF REMARKS

OF

HON. WAYNE N. ASPINALL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1955

Mr. ASPINALL. Mr. Speaker, in years of yesterday, not long gone by, we heard and read much about confusion along the Potomac. This was part and parcel of the mammoth program to defeat the Democrats by whatever means or methods required. Miraculously, or calculatedly, this great roar died to a faint whisper as the new administration assumed the stately functions of public enterprise. It was fitting, although hardly so completely necessary, that criticism be withheld until the new administration got its feet on the public path in view of the inexperienced nature of its top personnel in matters public. However, at some reasonable point in time, this desire toward charity must yield to necessary examination. By now surely time enough has passed for the new team to become adjusted to the public business they requested the opportunity and duty to administer.

In a spirit of constructive criticism, I hope, I am constrained to object to a current instance of consorting with confusion because it deals with a matter vital to the West and to Colorado in particular. I refer to a recent administrative pronouncement and its actions as they effected reclamation and reclamation development.

On July 15, a press release from the White House carried the news that the President had "with great reluctance" approved the bill making appropriations for the AEC, the TVA, certain agencies of the Department of the Interior—in ordinary language, reclamation—and civil functions administered by the Department of the Army—in ordinary language, flood control, rivers, and harbors—for the fiscal year ending June 30, 1956.

This "great reluctance," the press release said, stemmed from two major considerations. The first of these was the apparent cut in funds for the Atomic Energy Commission, yet simple examination would have revealed to the administration that these self-same funds were already included in the upcoming supplemental appropriations bill. This was clearly pointed out on the floor of the House during debate on the above civil works bill. That should have been confusion enough for one day.

However, not to leave well enough alone, this Executive message went on to point out a second factor in the "great reluctance." This was, and I quote:

> The large increase in the number of new construction starts for the Corps of Engineers and the Bureau of Reclamation. * * * In all, 107 unbudgeted projects were added by Congress. We can only guess what their total cost to the taxpayers will ultimately be. * * * The best guess that can be made at the present time is upward of $1.5 billion, but when planning is completed, this guess, in the light of past experience, may well prove to be far too low.

Then came the real joker and again I quote from the message:

> As a consequence of these considerations, initiation of the added projects cannot be undertaken until the detailed engineering plans have been completed and we have a sound basis for cost estimates.

Now if ever there was a thinly or transparently veiled threat to freeze money appropriated by the Congress, this clearly is it. There was a natural and an immediate reaction from the Congress to whom the Constitution gives the right and duty of providing both policy and appropriations which are to be "faithfully" executed by the President. It was a bit too much coming on top of a similar announcement that funds for maintaining the Marine Corps were to be impounded. Also, we cannot forget a previous message where the President saw fit to take the Congress to task for what he called an infringement upon executive rights in the Defense appropriation bill. By July 18, a hasty supplemental release from the Bureau of the Budget attempted to redress this error in part by saying that of course there was no intention of impounding these legally appropriated funds. The heat generated by this administration confusion had gotten home somewhere along the administrative ladder.

However, that problem, and the problem of the Corps of Engineers is more in the interest of other areas. On the other hand, Reclamation is important to the West—so important as a matter of fact that on July 15th, the very day that the Presidential message announced the Executive's reluctant approval of the money for the Bureau of Reclamation for fiscal 1956, the Commissioner of Reclamation was out in Denver reporting in glowing terms the Bureau's program as "one of the largest and most important in recent years." This is what he reported to the Secretary of Interior after a big pow-wow in Denver and then released as information to the press. I realize that it is real handy for the left hand to conceal its activity from the right, especially where different areas with different interests are involved, but it makes life a bit confusing.

It is obvious that one cannot be doing two opposite things at the same time, or for that matter attempting to do such a thing, without someone suggesting that a pedal extremity is filling some mouth that should have been left closed. I am aware that this blooper will be passed over as lightly as possible in most quarters, but we of the West can hardly stand this pliant political trafficking in our vital programs. Either the program is good and worthy of support, or it should not be praised only where it is known to be popular and discounted elsewhere.

I should like to remind the executive department that the sum appropriated for Reclamation construction and rehabilitation for fiscal 1956 is the sum requested in the President's budget—to the exact penny. Now, I will be generous and also point out that to achieve this inestimable station, it was necessary to reduce funds for 3 other projects in order to initiate 3 more new ones. Yes; three whole already authorized construction projects were given funds which were not included in the budget. Add that amount to the seven new starts in the budget, and even these are the only new ones since the Korean emergency, and you have this terrible thing about which the President apprised the Congress of his great reluctance. I cannot conceive of criticism with less factual base or less useful purpose.

The reclamation program can hardly be called substantial at best. In fiscal 1946, as we began to emerge from World War II, appropriations for construction and rehabilitation rose from a wartime $20 million to a peacetime $109 million. They reached a postwar peak in 1950 of $335 million and then went steadily down, due at first to the "no new starts" rule of the Korean emergency. Such rule, however, cannot explain the 1954 fiscal year appropriation of a meager $116 million. That came in the initial effort,

still unsuccessful, of the new administration to balance the budget and before it occurred to them that a reclamation program was not only valuable but necessary. Thus, for 1956 some new starts are proposed and the appropriation recommended is advanced clear up to $146 million, 10 whole percent over last year's limping program. It may indeed be the largest and most important in recent years, but one must be very careful about the particular years considered. The recommended appropriation still looks a bit sickly compared to the once-achieved $335 million.

This more careful examination of the general problem and the record which is referred to or ignored as ambition dictates, leaves 100 plus of the unbudgeted new starts, which the President dislikes, completely outside of the reclamation field. His blanket criticism of water resource projects and his careless lumping of reclamation and flood-control programs as deserving the same criticism is unwarranted and unfair. One might conclude that he is just about 2-percent accurate.

I am pleased, as no doubt virtually all westerners are, with the small but significant advance in the reclamation program. It is my hope that the White House in the future can keep its different arms better informed as to the actions of the day.

Farm Income

EXTENSION OF REMARKS
OF
HON. RALPH HARVEY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. HARVEY. Mr. Speaker, in the issue of August 5 of the U. S. News & World Report appears a statement which is untrue and which if not corrected will certainly be misleading. The magazine in question occupies a very high position as to its quality and veracity among readers throughout the Nation and in fact all over the world; it is for this reason that the statement should not be permitted to go unchallenged. On page 9 near the center of the page appears the following statement which I quote:

> Farmers aren't doing so well, it's true. Farm owners, however, have only 11 billions out of a national income of 320 billions. That's under 4 percent, so that if farm income goes down 25 percent for owners, barely 1 percent of national income is involved. Planners in Government are not so concerned about troubles on the farm as they were in the past.

The farm income—gross—in 1954 was near 34 billion and the figure of 11 billion must have been the estimated net farm income which is quite different. Historically there has been a direct relationship between farm and total national income of about 1 to 7. At present the farm income is about 1 to 10 or 11. This does not represent a healthy condition for if the economic history continues as it has, then the total national income will come down or the farm income will go up or both will happen.

While this magazine does not state directly that their philosophy is the same as the quote it would leave the inference that they do believe the figures quoted substantiate the conclusion that farm income is of little importance to our national economy.

This is not a sound conclusion, for farmers are consumers of all the products of our factories only when their net income will permit them to be. But the total economy of our Nation can only result from the processing, distribution, and selling of the raw products of our Nation. Since the percentage of raw products from within our own boundaries is the highest of any major nation, it follows that our total income can only be a multiple of the value of our raw products. From 1929 to 1953 the proportion of raw material income to total national income was 1 to 5. Agricultural products constitute almost two-thirds of the value of all raw products fed into our economic stream. If agriculture or farm values are permitted to continue to slide, it will eventually be reflected in our total national income.

While deploring the inaccuracy of the statement, this in itself would not be so dangerous were it not for the fact that this will be accepted as a fact by the readers and the conclusion which is derived, namely, "that the farm income is of no real importance to national welfare" could have serious repercussions. Farmers are having a tougher time each year to show a profit in the price squeeze in which they find themselves; their lowering net income is reflected directly in the stores and factories of the Nation.

Unfortunately there is a tendency on the part of those who are not interested in the welfare of agriculture to minimize its importance and to conclude that we could very well do without a prosperous farm economy. Such a viewpoint was freely expressed in the late twenties. Only when the effects of a failing agriculture were felt in the whole economy was the effort made to correct the trend; but it was too late. My concern is that we may make the same mistake until we again find trouble too far reaching to correct.

Hoover Commission Report

EXTENSION OF REMARKS
OF
HON. THOMAS G. ABERNETHY
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1955

Mr. ABERNETHY. Mr. Speaker, the Hoover Commission among its surveys made one covering the field of transportation. It came, in some instances, to strange conclusions.

It was the purpose of the Hoover Commission to improve the operations, the efficiency, of the executive branch of the Government. Yet, one of its recommendations, if put into effect, would have merged the traffic management operations of the TVA into those operated at far greater cost to the taxpayer by the General Services Administration.

The report itself shows that the payroll costs for TVA traffic management are only 1 cent per ton of freight. This is the lowest cost for any governmental agency. On the other hand, the Central Traffic Management's payroll costs run to 98 cents per ton, or nearly 100 times as much.

As a matter of fact, the costs of the Central Traffic Agency are $11.39 per $100 of freight charges, which appears to me enormously high.

The Hoover Commission itself declared that the TVA has done an extremely good job of traffic management, a job beyond criticism. It is clearly faulty reasoning to turn a job which has been done so well and so cheaply over to an agency which is less efficient and far more costly.

The Georgetown University Forum

EXTENSION OF REMARKS
OF
HON. MICHAEL A. FEIGHAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 27, 1955

Mr. FEIGHAN. Mr. Speaker, it was my pleasure to participate in a panel discussion over the Georgetown University Forum which on Sunday, July 24, was devoted to the topic Need for Congressional Watchdog Over United States Information Abroad. As many Members know, this forum, conducted under the able direction of Rev. Francis J. Heyden, S. J., and Rev. Daniel E. Power, S. J., is one of the most outstanding radio and TV forums in this country and is consistently an award-winning one for its informative and analytical discussions on major issues of public interest and action.

The pointed answer to the question raised in the topic for discussion is, of course, no. All three of the panel discussants, including, in addition to myself, the Honorable Abbott Washburn, Deputy Director of the United States Information Agency, and Dr. Lev E. Dobriansky, professor of economics at Georgetown University, strongly agreed that the need is not for a congressional watchdog over our overseas information services and all that this misleading term implies. Instead, the pressing need is for the establishment of a Joint Congressional Committee on Overseas Information which positively and understandingly would work closely with the United States Information Agency in meeting the grave challenge that Russian Communist propaganda poses in the present contest to win the minds of people everywhere.

In a real, practical sense the need for this joint committee is more essential than that which existed prior to the formation of the Joint Congressional Committee on Atomic Energy. If in the

basic realm of human ideas, attitudes and sentiments we should lose this fundamental struggle for the minds and hearts of men, then even our atomic capacity would prove inadequate to withstand the direct or indirect aggressions of the Russian Communist conspiracy against the free world. Moscow understands this truth of first things first, and consequently pours heavy resources and subsidy funds into its worldwide propaganda organization and activity. Sadly enough, our efforts are pitifully meager by comparison. To rectify this dangerous discrepancy and to insure the success of our information efforts in the war of ideas, in order that the unsuspecting might not fall victim to Russian Communist adventures, to prevent an armed global conflict, the formation of a Joint Congressional Committee on Overseas Information is a prime necessity that requires speedy legislative attention.

Mr. Speaker, due to the timely importance of this subject, I include the entire transcript of the radio portion of the Georgetown University Forum in the RECORD, as follows:

Mr. WARREN. "Need for Congressional 'Watchdog' Over United States Information Abroad?" is the topic for the 453d consecutive broadcast of the Georgetown University Radio Forum, another in a series of educational and informative programs from Washington. The Georgetown University Forum was founded in 1946.

This is Matthew Warren speaking by transcription from the Raymond Reiss studio, on the campus of Georgetown University, historic Jesuit seat of learning in the Nation's Capital.

The participants in today's discussion are the Honorable Abbott Washburn, Deputy Director, United States Information Agency; the Honorable Michael A. Feighan, Democrat, Member of Congress from Ohio; Dr. Lev. E. Dobriansky, professor of economics, Georgetown University.

Transcripts of today's broadcast are available. Send 10 cents to cover the cost of printing and mailing, with your name and address to Georgetown University Forum, Washington 7, D. C. Please mention also the subject matter of the transcript desired.

The end of this week will mark the second birthday of the United States Information Agency. On August 1, 1953, President Eisenhower set up a separate agency to handle the task of reaching people all over the world with the truth about the United States and what we stand for as a nation. This week marks the end of the second year of operation, and provides an opportunity to examine the progress of this Agency whose mission is so vital to each and every American, and to consider the role Congress plays in these overseas information activities.

To begin our discussion, Mr. Washburn, I would like to ask you to tell us just how the United States Information Agency has gone about this assignment by the President.

Mr. WASHBURN. Fortunately, we have been given a very clear-cut directive from the President and the National Security Council. To carry out this directive, we use just about every means of communication, press, radio, TV, motion pictures, personal contact, overseas libraries. The job, roughly, breaks down into four main tasks. The first is to explain our United States foreign policies and objectives to people overseas; to counter Communist propaganda, nail down the lies they circulate about us; to show that our policies are in line with the aspirations of other peoples, that, so to speak, our goals are their goals; and to project abroad those aspects of American life and culture that will help foreigners understand us better.

We obviously can't project abroad a total picture of America; the country is simply too big and too varied to do that. What we have to do is select certain aspects of American life that will help people overseas know us and what we stand for, and give them an idea of what they can expect from us. For instance, the desegregation that is taking place in our public schools all over America today is such an example, because it shows what a deep belief we have in the fundamental equality of human beings everywhere, not just here in America.

About three-quarters of our personnel in the Information Service are stationed overseas. They man the United States Information Agency centers abroad, and the posts over there throughout the free world. We have over 200 of these information posts in 79 countries. We used to have some behind the Iron Curtain, but quite some time ago the Communists closed them up.

A good many of these posts have United States libraries attached to them. These are very popular places. For instance, our library out at Rangoon, Burma, is crowded all the time. I recall a piece in the New York Times recently to the effect that this library has made thousands of friends for the United States in a part of the world that is normally so suspicious and distrustful of our motives.

In connection with the libraries, we also have an extensive book translation program. So far, we have translated and distributed abroad, more than 18 million books by American authors. Then, there are the traveling exhibits that go out from the information posts into the rural areas and reach millions of people that way. Right now in Pakistan and in India, and also in many other countries, people are crowding in to see the United States Atoms for Peace exhibits that are traveling from town to town and from village to village.

Also, in the posts abroad, we have experienced press and publications people who see to it that the facts about the United States and our position on major issues in the world today, such as disarmament, to see that these facts are put into the hands of editors of newspapers and publishers of magazines, radio and TV, commentators. In that way, over a billion people regularly receive the truth about the United States.

Also, the agency puts out an enormous number of pamphlets and posters and booklets, as many as 150 million a year.

Then, there is a film program. Films are very important in getting the United States story overseas. In some areas, films are about the only way you can reach people. We have special trucks equipped to generate their own electricity in order to show pictures in these areas.

Finally, and perhaps the most glamorous and best known of all these activities is the Voice of America, the radio arm of the Agency. The Voice broadcasts every day in 38 languages, and reaches into 93 countries every day. One thing that is not so well understood is that three-quarters of these broadcasts go behinfd the Iron and Bamboo Curtains to the people of the Soviet Union and the satellite states of Eastern Europe and Red China.

Mr. WARREN. I presume the United States Information Agency covered the Conference at the summit at Geneva?

Mr. WASHBURN. Yes, we did. We had a team of people there covering all aspects of the United States participation. They got the material back to us very quickly so that it could be translated and sent out over the Voice.

Mr. WARREN. What consequence do you think Geneva will have for the Information program?

Mr. WASHBURN. We are hopeful as a result of Geneva some of the artificial barriers will be gradually lowered by the Soviet Government so that we will be able to get the truth through to many more of the Russian people.

Mr. WARREN. You have given us a good picture of the scope of the United States Information Agency, Mr. Washburn. I would like to ask Congressman FEIGHAN to give us the other side of the picture in this war of ideas. Congressman, I know you served on the Select Committee To Investigate Communist Aggression in the 83d Congress. Will you tell us what you think we as a Nation are up against on this subject of Communist propaganda?

Mr. FEIGHAN. From my study of the world Communist conspiracy, I would like to make it clear at the outset that in my opinion it is a tremendous undertaking to expose and counteract Communist propaganda.

I say this because they have been at this since they got into power in Moscow in 1917. They devote a substantial part of their resources to propaganda. We know from our own sad experiences that their false propaganda has deluded many people and caused great damage throughout the world. I have seen estimates as to the expenditures annually of the Russians on propaganda. It is estimated between $1 billion and $1.5 billion. From my own observations, I am certain it is in excess of $1 billion.

The Russians do a lot of things that we are just beginning to think about. For example, they maintain a number of scientific research institutes on the use of information media. They are constantly testing the orthodox media for transmitting information, as well as developing new and unique devices for the transmission of information. In these institutes they evaluate the effectiveness of their propaganda programs.

Another thing they do, which is abhorrent to us, is that they have established ideological centers for the training of professional propagandists. Some of the products of those training schools are called "agitprops." It is obvious their duty is to agitate with Communist propaganda. Candidates for these schools are selected from every country in the world. After they get their specialized training, they go back to their native land to carry on this massive Russian propaganda for the Communists.

As an example, everyone has heard about the Marx-Engles-Lenin Institute in Moscow. That is one place where these men and women are trained for their future tasks in the Communist conspiracy. There they learn the technique of sabotage, espionage, guerrilla warfare, how to incite a riot, germ warfare, and all other conspiratorial techniques. But with all the training given the candidates, the greatest emphasis is put on propaganda. They realize that it is important for them to flood the free world with this propaganda by very subtly slipping it into the information media of the world, such as radio, television, magazines, books and newspapers.

So, to sum up the world-wide Communist propaganda effort, I would say the Russians consider propaganda to be as important as the H or A bombs, tanks and germ warfare.

As an example of my point of view on what the Russians spend for propaganda, I have some books from my own collection here. These are entitled, "Joseph Stalin." They have to do with some theoretical work of Stalin. They are all intended to advance the Communist conspiracy. One of them here is printed in Spanish. It was printed in Moscow. It was distributed in vast numbers throughout all of Latin America; inexpensive, selling for under 10 cents. Another, with the same title, is in English, printed in Moscow, by the Foreign Languages Publishing House. That is sold in the United States for 13 cents. The third volume is a

deluxe issue. That is printed in the German language, published in East Berlin, at a cost of under 25 cents. Here is another one, printed in Moscow. It is a paperbacked edition, costing 10 cents. It is obvious these deluxe editions are very heavily subscribed. I suppose the paperbacked editions are sold at cost.

An estimate was made for me as to the cost of publishing the deluxe edition in the United States, and I am told it cost $1.50. Another example is this book, "Lenin," printed in Moscow. It is sold in the United States for 79 cents. It has 774 pages. It is a very high-quality work. The lowest estimate that I have as to its publication in the United States is $1.50.

One that intrigued me was this very super deluxe propaganda piece in color, called Union Sovietica. It was printed in Moscow, in the Spanish language, for distribution to the Spanish-speaking world. I picked it up in Guatemala. It is an expensive piece. It is a straight propaganda piece to show that life under communism is a workers' paradise. I would call it, in descriptive words, Hollywood extravaganza, because it bears no reality to the facts of life under communism.

These propaganda pieces are very much like this, and are put out in major languages throughout the whole world and given wide distribution.

Another book, entitled "The Lenin-Stalin Solution to the National Question," was printed in over 40 different languages, over 80 million copies distributed in practically every country in the world.

Mr. WARREN. Congressman, from what you tell us, the Communists are spending a great deal of money in expounding their theories and ideas. What about our own budget to combat that?

Mr. FEIGHAN. I think it is very woefully weak. I think that we must increase our expenditures, because we are very, very far behind in what I consider is one of the biggest fights to preserve our freedom and the free way of life throughout the world.

Mr. WARREN. Dr. Dobriansky, you have been listening to both of these gentlemen. How effective do you think our program is?

Dr. DOBRIANSKY. I didn't wish to evaluate the effectiveness of the program until I had certain questions answered for me by both Mr. Washburn and Congressman FEIGHAN. The excellent portrayals of American informational activity and Russian Communist propaganda activity by Mr. Washburn and Congressman FEIGHAN, respectively, bring a number of questions to mind.

The first that I would like to direct to Mr. Washburn is this: To what extent do we have participation on the part of individuals, unofficial groups, organizations in our informational activity? I raise this question, Mr. Washburn, for a number of reasons. One, not so long ago, General Sarnoff submitted a memorandum, as you know, to President Eisenhower in which he stressed this very thing, the need for more active participation on the part of the individuals and on the part of numerous American groups. Then, secondly, after having read carefully the recommendations of the former Hickenlooper subcommittee, which, as you know, made a very extensive survey on the activities of the Voice of America, one of the recommendations of that subcommittee was the need for more extensive participation on the part of these groups.

To what extent do we have this participation today?

Mr. WASHBURN. The Hickenlooper committee report was extremely valuable. Actually, it was one of the main guide lines we used in setting up the new agency 2 years ago. I think if you go down the list of its recommendations you will see that just about every one of them have been acted upon.

In this matter of private groups and organizations helping with the job, we certainly couldn't agree more. It is an enormous task. Government can't possibly do it alone. Quite a bit of progress has been made. Hundreds of projects have been developed and are underway. One, as an example, is the American Bookshelf, which is a portable library of 99 paper-backed books which have been gotten together through the cooperation of several publishers, and with the help of the CARE organization, can be sent overseas to hospitals and schools and universities at $30 a set. We find that the VFW and Rotary and the General Federation of Women's Clubs, and a number of other groups, are running campaigns to buy these books and get them sent overseas in quantity. This is a wonderful thing, and is particularly helpful in combating this cheap book campaign that Congressman FEIGHAN was talking about.

Mr. WARREN. Doctor, you had a question for the Congressman.

Dr. DOBRIANSKY. We have noticed in the past few months during this peace offensive on the part of Moscow quite a step-up in the cultural offensive, as they call it, of Moscow and the Communists. You have ballets that are being staged in various capitals of Western Europe, and, of course, sports activities. In other words, there is a much greater participation on the part of the citizens of the Soviet Union in the free world and in the activities of the free world. I just wondered if Congressman FEIGHAN has any view on that particular thing in terms of our combating this cultural offensive on the part of Moscow; whether he feels that anything we are doing in that respect actually is effective in combating this cultural offensive on the part of Moscow.

Mr. FEIGHAN. I might say since a couple of years ago we have participated in these trade fairs. Previously, the Communists have had a propaganda springboard, creating the false impression there was a life of plenty behind the Iron Curtain. But now that the Americans have competed, the Russians have withdrawn at Bangkok, Paris, Liege, France, Salonika, Greece, and other places. I think it is extremely important that the United States Department of Commerce, with our American manufacturers, participate in all these fairs.

I urged the President to take the initiative in forming a free world trade block in order to protect free labor and free enterprise in the United States. We should never permit our fruits of free labor to compete with slave labor. If we do, it will only lower our standard of living to the common poverty that is in existence behind the Iron Curtain.

I am certain that is one good thing that we have entered into. Another thing that is very disturbing to me is the fact that in the coming Olympics in Melbourne next year, our amateur athletes will have to compete with those professional Russians. It is my hope that the people in the United States will make every effort, along with organizations, to help to send athletes who will be able to compete with these Russian professionals.

Dr. DOBRIANSKY. Congressman, may I interrupt there? I understand you to say, "Russian professionals." My reading of many of the newspapers that come from Moscow, and also pamphlets, shows that they certainly don't represent themselves in that fashion. You have individuals that may be, let us say, employed at one of the installations in Baku, an oil company, and they are on the payroll there. They are certainly amateurs in the same way, I imagine, as we have our basketball team with the Phillips Oilers, who are actually employed in the concern, and yet in their free time play basketball or engage in swimming, or anything else. In other words, I can't understand you saying "professionals."

Mr. FEIGHAN. They are professionals because they are specially trained, and those to whom you refer working in various oilfields, or wherever it may be, I doubt if they are working. They are really just training. Of course, the reason for the Russians trying to win the Olympics is to try to show that life behind the Iron Curtain is a very pleasant life and the people there will become the superior people. We have to try to put up in the field individuals and teams that will compete with them. I think they really are professionals. They are not the amateurs like ours, that are usually in high school or college.

Dr. DOBRIANSKY. You are definitely correct in that respect. It is a definite subterfuge. But, nevertheless, Moscow propaganda has them as amateurs.

Mr. Washburn, in connection with the USIA, are there specific projects underway now to meet this tremendous cultural offensive on the part of Moscow, and also in preparation for the Olympics next year?

Mr. WASHBURN. There has been in the past 10 months quite an effort made in this direction, Dr. Dobriansky. Under the President's fund, $5 million was appropriated by Congress, and we are getting into the trade fairs. There is no question but what the Communists have the jump on us in that. They are in 65 fairs this year, and we will be in a total of about 21. But we have been very successful in those we have been in. As Congressman FEIGHAN said, Cinerama scared them out at Bangkok. When they found out they were going to have to compete against is in Djakarta this fall they pulled out of that fair, too. It is interesting that at Djakarta, and also at New Delhi, the United States exhibit there will present television to Indonesia and India for the first time. That should be a rather interesting exhibit for the United States to have over there.

Dr. DOBRIANSKY. Mr. Warren, if I may also interject here another question that has certainly been burning in my mind, and at the same time I think quite disturbing is this: Reading the newspaper accounts or the articles of various commentators, there has been a crying need in the eyes of some people for a joint congressional committee on the overseas information program. I know that the Select House Committee to Investigate Communist Aggression, otherwise called the Kersten committee, made that recommendation and, of course, numerous others have.

I just wonder here how Congressman FEIGHAN feels about the formation of such a committee.

Mr. FEIGHAN. I think it is most necessary, if we are going to carry out our objectives of acquainting the people with what we stand for and exposing and counteracting the evils of Communist propaganda. We must prepare for a full-scale undertaking. I call it a political offensive, and a substantial part of that offensive must be assumed by the USIA. Our Kersten committee report recommended that Congress establish such a joint committee. I think that our information programs have a major bearing on the question of peace or war. I believe that it is entirely within our capabilities to prevent world war III, and at the same time to bring to the world an era of peace and freedom. But we must measure up to our full capabilities——

Dr. DOBRIANSKY. Congressman, are you suggesting that this joint committee serve somewhat as a "watchdog"—which I think is an unfortunate term that many people employ, but nevertheless, you do have that term used in articles and editorials and the like?

Mr. FEIGHAN. The term "watchdog," to me connotes more or less of an overseer of expenditures. This joint committee, in my opinion, should be something entirely bigger and more effective than that. This should be a committee that will get the best brains of the entire country, to put them together in order to disseminate truth. We have to

realize that the Information Agency has to do certain things that are novel. They have to go into unchartered waters. You can't always have them be 100 percent correct. With the joint committee, we would have a joint initiative on the problems that face us in our propaganda efforts.

Dr. DOBRIANSKY. As you envision it, the members of this joint committee would be concerned also with the content of information?

Mr. FEIGHAN. Absolutely.

Dr. DOBRIANSKY. For example, a few days ago, George Sokolsky wrote an excellent article on nationalism. He claims that we have hardly used this weapon of nationalism, especially directed against the many non-Russian nations in the Soviet Union, Ukraine, Georgia, Armenia, and the like. It is my information that the term, "independence," can't even be used on the Voice of America in connection with these non-Russian nations. Would the Congressmen be concerned about that and urge something of that sort?

Mr. FEIGHAN. I certainly would. I think that the question of the independence of these nations that are enslaved by communism is the key to peace and freedom. I think that is the only way we are going to break up the Communist conspiracy which has the chains of slavery throughout the entire world behind the Iron Curtain.

Mr. WARREN. Thank you, gentlemen. I am sorry that our time is up for further discussion of our topic today, "Need for Congressional 'Watchdog' Over United States Information Abroad.

GSA: Washington's Most Durable Mess—I

EXTENSION OF REMARKS
OF
HON. JACK B. BROOKS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1955

Mr. BROOKS of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following by Mr. Herbert Solow, editor of Fortune magazine:

GSA: WASHINGTON'S MOST DURABLE MESS

(By Herbert Solow)

Three years ago the Republican Party asked a chance to "clean up the mess in Washington." One aspect of the mess was the giant General Services Administration, purchasing agent and property manager for much of the United States Government. GSA's 25,686 employees buy, sell, construct, rent, lease, maintain, design, research, mine, manufacture, transport, store, and otherwise "service" most Federal agencies outside the Pentagon (and in some respects the military, too). GSA holds almost $9 billion in land, buildings, automobiles, clerical supplies, and other physical assets ($4 billion more than General Motors' assets). Its purchases in fiscal 1954 came to $1 billion. GSA is, in effect, a vast, diversified commercial-industrial corporation in the Government, and its operations touch thousands of enterprises outside the Government. And GSA is in just as much of a mess today as it was in 1952.

The irony of this situation is not confined to the fact that the Republicans campaigned against messes. The mess that Truman left behind in GSA was especially susceptible to a businessman's cleanup, and the Eisenhower administration is full of businessmen. To enrich the irony, the very conception of GSA as a consolidated service agency was Republican in origin, for Public Law 152, which created GSA out of several older agencies in 1949, was adopted on the recommendation of the first Hoover Commission.

The GSA mess arises mainly from messy appointments. True, Truman's appointee as Administrator, Jess Larson, an Oklahoma politician, has given way to Eisenhower's, an Illinois politician named Edmund F. Mansure. But this has brought no benefit to GSA. Nor has there been any net improvement in the echelon just below the Administrator. In short, the Hoover idea of GSA has never had a fair test.

The new Administrator claims there have been improvements in GSA. Mr. Mansure personally examines travel requisitions of his Washington staff; he encourages removing clips from waste paper; to limit phone talks, he has put 3-minute egg timers on subordinates' desks. There are weightier changes, too. Among them are a promising scheme for lease-purchase of Federal office space, the contracting to private industry of some property-management services, and simplified accounting. It is, in short, hardly possible to employ 25,686 people in so diversified an operation as GSA and fail to produce islands of positive achievement.

The mainland of GSA is, nevertheless, the most durable mess in Washington. It would take a congressional investigation to light up the whole of it, but this article aims to illuminate a number of corners. The story involves great United States corporations and marginal operators; oriental swindlers and Caribbean grafters; Chicago politicians; Washington influence-peddlers and fixers; Republicans and Democrats, and, above all, time-serving bureaucrats who are neither Republicans nor Democrats, nor yet honest mavericks, but just jobholders, glowing with contempt for the United States taxpayer. Happily, the cast also includes some honest, capable, GSA employees, men harried, half underground, and hoping for better days.

If better days are to come, they will come only when the White House decides to clean up GSA. As of mid-July, the White House was quietly looking into GSA. Should it look hard enough, GSA might have a new Administrator before this article appears. In that event, this article may serve as explanation of a long overdue reform—and as a report on what a new Administrator would be up against.

AN EXPENSIVE REPUTATION

Fifty-four-year-old Ed Mansure, the first Republican Administrator of GSA, speaks of himself as a businessman. He says that he made "considerable money" in Chicago "and so I have a rather expensive reputation." Nobody has challenged his financial integrity. Superficially, Mansure seems to be a public-spirited citizen on a self-sacrificing tour of Washington duty, with plans for early return to his home State and an industrial career. But he has burned some bridges behind him. Two years before Mansure went to Washington in April 1953, he had sold his business. Soon after his appointment to GSA, he disposed of his residence in plush, placid Libertyville near Chicago, home of Adlai Stevenson and of many Republican businessmen. Mansure is in politics wholeheartedly, and, if he can manage it, permanently.

Mansure actually was as much in politics as in business even before coming to Washington. True, he did preside over a $5-million-a-year upholstery and drapery-trim manufacturing enterprise inherited from his father. But from the time he graduated from Chicago's Kent College of Law, Mansure gave much time to the gamy politics of his native Cook County. He managed several local Republican campaigns and in 1937 became the party's State treasurer. He held posts on three State boards, to one of which he was appointed by Governor Stevenson, his neighbor across the road, and he was busy in the Illinois Manufacturers Association, Red Cross, the Chicago Crime Commission, and similar bodies. He backed Stassen for the presidency in 1948 and joined Chicago's Citizens for Eisenhower before the 1952 convention.

Mansure says that he puts merit above party ties, and he has, in fact, not fired a single one of GSA's holdover bureaucrats, either for cause (which abounds in GSA) or at pleasure (and he has this option in a number of important cases). Defining practical politics as "just back-scratching," he speaks with contempt of "civic do-gooders," characterizing their code as "hypocrisy."

Among Republican Mansure's cronies are "practical politicians" of both parties, including the no-do-gooder variety. He praises Jess Larson, his Democratic predecessor as GSA boss. Larson was associated in an oil deal with the influence-peddler, Frank Nathan, one of the most memorable witnesses turned up by the King Committee investigation (1951–52) of income-tax scandals. But Mansure says that when he took GSA over, he sought out Larson for his views on personnel and operations. Soon after came the indignant resignation of GSA's Deputy Administrator Russell Forbes a nationally recognized expert in public procurement and related matters, who had helped Hoover to conceive the GSA and who, after leaving GSA, was associated with the second Hoover Commission. Only one high-echelon GSA job has been given to a Republican since Mansure came in—and that was at the instance of the White House.

"Ed Mansure," says a long-time Libertyville neighbor, whom Mansure cites as a character reference, "could easily get over his head in very shallow water." The explanation of the GSA mess is not so simple, however. For Mansure has the guidance of a highly experienced Chicago politician, the man who got him his job. This man is William J. Balmer, of Chicago. In the words of a mutual acquaintance who has discussed GSA business with both men, Balmer "has Mr. GSA in his pocket. Whenever Balmer walks in, Mr. GSA bows." Says Mansure: "Balmer is a king and holds court."

GSA: Washington's Most Durable Mess—II

EXTENSION OF REMARKS
OF
HON. JACK B. BROOKS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1955

Mr. BROOKS of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the continuation of an article by Herbert Solow, editor, Fortune magazine:

THE SILVER FOX

William J. Balmer, who got Mansure his job, is the boss of the 17th Ward Republican organization and vice chairman of the Cook County executive committee of the Republican Party. In political clubrooms and in the Loop's Bismarck Hotel, where he can sometimes be run to earth, 63-year-old Balmer is known, only in part because of his white hair, as the Silver Fox.

Balmer says he has been in politics "ever since I can remember." He managed "Big Bill" Thompson's second mayoralty campaign, was a commissioner in Big Bill's ad-

ministration, perhaps the most corrupt in Chicago's fabulous history. During the war Balmer was much in Washington. Mansure says that at that time Balmer had "access to the White House." One of Balmer's main activities was wangling Government orders to permit the production of civilian items barred by general regulations. Balmer says he believes in doing things for Government employees who are helpful in getting contracts and who later "look at you, thinking 'he made all that dough out of me.'" He gets them hotel reservations, he says.

Mansure calls Balmer a "business consultant." Some others call him a trouble shooter, especially for people who, under Illinois law, must argue with an elected tax assessor about how much personal-property tax they shall pay. According to Mansure, Internal Revenue has investigated Balmer, "but has never found anything." "On finances, Balmer is one of the closest-mouthed persons I ever knew," says Mansure. "He has two accountants and he doesn't let one know what the other knows." He has been sued often by individuals, by a hotel, a bank, and the telephone company, for amounts from $30 to $5,500.

Mansure and Balmer have been acquainted since the 1930's intimately acquainted since the 1950 county campaign. Mansure regards Balmer as a political genius. He once brought together Balmer and Edward Ryerson, a top Illinois businessman (Inland Steel), civic leader, and Republican stalwart. Says Mansure: "It was cat and dog." Mansure says that, for Ryerson, Balmer is a moral question. But not for Mansure. "Without reservations," he says, "I admire Bill Balmer as a friend. I wish we had a dozen Bill Balmers in Chicago." Balmer often visits Mansure in Washington. Mansure's appointments to second-level GSA jobs are mostly Chicago Republicans close to Balmer.

Even before Mansure was publicly named for his job, it was being said in Chicago that henceforth Balmer would influence GSA contracting. And Mansure admits that Balmer has talked with him about GSA contracts. Among the instances that he says he can remember is the effort of a Moline, Ill., architect to get a GSA contract for a Rock Island, Ill., project, and the effort of a Milwaukee building material manufacturer to sell his product to GSA.

Not all Balmer proteges get the deals they seek, but the Paint Products Corp., of Elgin, Ill., is one that did. Through a friend, the company got in touch with Ed Moore, who is Balmer's partner in an insurance-brokerage business. Moore is chairman of the GOP's Cook County central committee. Through Moore and Balmer, Paint Products met John Skeen, director of the Chicago regional office of GSA. In the words of A. W. Johnson, president of Paint Products, the company "really got going through Mr. Balmer and Mr. Moore." They sold paint to GSA.

GSA: Washington's Most Durable Mess—III

EXTENSION OF REMARKS
OF
HON. JACK B. BROOKS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1955

Mr. BROOKS of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the third of a series of articles appearing in Fortune magazine, written by Herbert Solow, editor:

A BYPRODUCT

With a nice sense of timing, Balmer & Moore registered in Illinois as insurance brokers in May 1954. Mansure had just set in motion a process that was to make available a good piece of insurance brokerage. For a projected $40-million overseas construction job, there was to be chosen a subcontractor who would have to buy a workmen's compensation policy. Now, thanks to Mansure, two-thirds of the brokerage fee is to go to Balmer & Moore. The contractor, hired 90 days after Balmer & Moore became registered brokers, is Snare-Merritt, now expanding the capacity of GSA's Nicaro nickel plant in Cuba. After all premiums are paid, the Nicaro commission of Balmer & Moore will be about $44,000. (The other one-third is to go to a Cuban broker who is actually to do the technical work on the policy.)

Mansure admits that Balmer discussed Nicaro insurance with him. And Balmer sent to Mansure one Erwin Shafer, a Balmer & Moore employee, whom Mansure in turn sent to his Nicaro operating officer. Later the agent revisited Mansure, finally telling him that "things" looked "pretty good." So they were. "Insurance," Mansure says, "is a byproduct of politics."

Balmer has also been interested in Government surplus. For one set of surplus deals, a group of men including Balmer are now defendants in Federal court in Chicago in a $400,000 fraud suit. The statute of limitations has run on criminal prosecution, but a civil action was brought last December by the Justice Department. In 1946, according to the complaint, the defendants induced veterans to permit use of their names so that Balmer and the others could fraudulently purchase unused trucks and other then scarce and much-sought items. Some of the defendants' agents, according to the United States attorney, were exconvicts, one a counterfeiter. And when some of the veterans wanted to pull out of the scheme, they were threatened with violence.

A SHAME

At the moment the case is pending, and Balmer is trying to negotiate a cheap settlement. Balmer says that the alleged facts were known to the Government when the Democrats were in power. As he sees it, the Democrats' failure to act shows that the present prosecution is political. He blames Senator EVERETT DIRKSEN, of Illinois, an old opponent, for the action begun by United States Attorney Robert Tieken. But Tieken is an Ike appointee drawn by Attorney General Brownell from a top Chicago law firm—Winston, Black & Towner.

Balmer's friend Mansure has interested himself in the case. He echoes Balmer's arguments and has asked the prosecutor not to press the suit, which he has characterized as "a shame."

Of Mansure's friend and sponsor Balmer, more later. Let us now take a look at some GSA operations with which, so far as Fortune knows, Balmer has no connection. None of these involves a spectacular sum of money. Taken together, however, they suggest the scope of the GSA mission and of the GSA mess.

FROM LARAMIE TO THAILAND

1. In march 1954, GSA began to dispose of a surplus experimental alumina plant built during the war at Laramie, Wyo., at a cost of almost $5 million. The procedure has been protracted over 16 weary months. The initial range of bidding was set inordinately low by poor business tactics. GSA at first called for bids and got three. It took none. Later, after 10 weeks of negotiating exclusively with Monolith Portland Midwest Co., of Los Angeles, Calif., GSA contemplated selling to them for $1,110,000. When GSA informed one of the other original bidders, Ideal Cement Co., of Denver, that its bid was to be rejected, Ideal raised to $1,200,000. GSA decided to take this bid. Then a congressional subcommittee under Democrat JACK BROOKS, of Texas, investigated, and last spring it asked Mansure to call for new bids. Reluctantly he did so; Ideal offered $1,373,000, and apparently will get the property. But whatever happens, it is clear that GSA can get at least $173,000 more for the plant than it was ready to take before BROOK's committee acted.

2. The Brooks committee is also looking into GSA's handling of a piece of land near Seattle, Wash., which was condemned by the Government during World War II. According to GSA, it had a verbal understanding with the former owners to sell it back to them. In June 1954 Standard Oil of California asked GSA's permission to prospect on this land for oil. GSA refused. The reason given for denying the taxpayers a possible windfall is a high point in bureaucratic willfulness: to allow oil prospecting might disturb GSA's appraisal of the land.

3. In January 1954, just before the Democrats took over the House, a Republican subcommittee issued a little noticed report about four GSA tungsten developmental contracts given to mining companies in Thailand. Written in Larson's time, three contracts were still operational under Mansure. After the market price of tungsten began a sharp decline, the Thai contractors delivered ore that they had bought from lower cost operators, rather than ore mined by themselves. This fraud ran over $1 million, and the committee headed by Representative CHARLES BROWNSON, Republican, of Indiana, condemned the improper administering and policing, as well as the ambiguous language of the contracts.

4. There was a $360,000 loss of critical stockpile material in an unsafe warehouse that burned up in May 1953. With several sets of GSA inspectors at cross-purposes, the material was destroyed just as some of the inspectors had predicted it would be. In GSA there is internal argument over the blame, but the neglect is admitted.

GSA: Washington's Most Durable Mess—IV

EXTENSION OF REMARKS
OF
HON. JACK B. BROOKS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1955

Mr. BROOKS of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I include another of the articles by Herbert Solow, editor of Fortune magazine, entitled "GSA: Washington's Most Durable Mess":

SLOW AND SLOPPY

Now let us consider some broad criticisms, originating in other parts of the Government.

1. Government agencies required to make certain purchases through GSA complain of slow service. In fact, the gap between GSA's receipt of an order for goods supposedly in stock and the date of delivery to the customer agency averages 2 weeks—three times what GSA calls its "norm." GSA has never got around to performing for the Veterans' Administration the procurement services that are part of its legal mission.

2. Although GSA is supposed to handle real property disposal, President Eisenhower felt compelled in December 1953 to create a special Surplus Real Property Disposal Proj-

ect, attached to the Budget Bureau, to stimulate and accelerate GSA's disposal work. But that work continues to drag. Until a few months ago, the Washington office of GSA did not even possess a full list of GSA's disposable real estate.

3. The inventory records of the critical-materials stockpile are not entrusted to GSA's Emergency Procurement Service, the stockpile operator, but to the Comptroller of the GSA. Commissioner A. J. Walsh of EPS says he has trouble getting information he needs for operating purposes. He also says that the Comptroller's recordkeeping staff is grossly inflated. In any case, nobody really knows what is in the $4.9 billion stockpile, as distinguished from what some invoices say is there, and Congress has called for a checkup.

4. Bidding procedures are often strange, as in the Laramie alumina case. At a recent House committee hearing, Representative PORTER HARDY, JR., Democrat, of Virginia, proposed studying GSA's general practice of submitting invitations for bids which are not invitations for bids, but are merely invitations to become eligible to negotiate. Others have also criticized these procedures.

5. When the second Hoover Commission and its task forces studied GSA, they praised its records-management job, but found fault with almost every other operation they examined. Here are a few Hoover complaints: "Instead of creating one centralized, coordinated traffic organization * * * GSA superimposed upon the already confused situation still another traffic agency. * * * Those regulations on real property management which have been issued by GSA are not applied by other executive agencies. * * * There has been no adequate inventory of the stockpile. * * * GSA does not provide adequate centralized direction and control in the management of Government-owned and leased real property used by executive agencies. * * * The potential economies and efficiencies have not been realized."

THE NICKEL FIASCO

Perhaps GSA's messiest single mess is Nicaro nickel. Nicaro is a United States Government-owned nickel refinery built in the Cuban jungle during World War II, and shut down in 1947. Previous Fortune articles (April and June 1952; June 1953) have told how the reactivation of the Nicaro plant was botched by GSA in Jess Larson's time. For political reasons, it may be recalled, Larson chose as manager of the plant a Dutch company, Billiton, totally inexperienced in nickel production. The purpose was to please Robert Butler, then Ambassador to Cuba, a notable Democratic fund raiser. Butler, in turn, was anxious to please some Cubans (including a notorious grafter) who wanted to elbow their way into the Nicaro project. This elbowing Billiton was willing to accept, but otherwise Billiton did so badly with Nicaro that Larson was compelled to force them out. Thereupon the National Lead Co. took control, the Cubans remaining as junior partners with increased influence.

So much for Nicaro in Larson's day. Mansure's record is no better—and he is responsible for all major decisions on Nicaro.

Production has never reached the level called for in the manager's contract with GSA. Even with nickel at a record price level, GSA—the Hoover Commission has noted—loses money at Nicaro. Efficiency, as measured by unit costs and the rate of metal recover, has lately declined. A promised by-product, cobalt, has never been produced.

What is more, the whole arrangement is probably illegal. For Congress, as GSA's general counsel, Maxwell Elliott, has told Mansure, gave GSA no authority to run a nickel plant beyond a trial period that ended more than 2 years ago. Mansure says Nicaro's legal status "is in a friendly tangle."

Despite all this, GSA began almost 3 years ago to prepare to expand Nicaro by 75 percent at a minimum cost of $40 million, thus boosting the direct investment of the Government in the risky nickel business to a total that may approach $100 million. The excuse is the severe nickel shortage.

The expansion has been wretchedly bungled. It was not undertaken directly by GSA through operating subscontractors, but by National Lead as a supervisory contractor for GSA. National Lead then let subcontracts to the operating architect-engineer and theoperating constructor. In order to super-supervise its supervisor, GSA has retained a metallurgical-engineering consultant, Singmaster & Breyer, at a monthly fee of $3,500.

GSA: Washington's Most Durable Mess—V

EXTENSION OF REMARKS
OF
HON. JACK B. BROOKS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1955

Mr. BROOKS of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following by Herbert Solow, editor of Fortune magazine, the fifth of a series of articles entitled "GSA: Washington's Most Durable Mess":

EXPANDING THE FIASCO

The company that actually does the building is a 50–50 partnership known as Snare-Merritt Co. Mansure explains that he felt "there should be two constructors for this big job." Actually, this job is smaller than the pioneering wartime job of building Nicaro, which was well handled by a single company. That company was Frederick Snare Corp., famous in Cuba for over 50 years as an American constructor. Now it is the Snare of Snare-Merritt.

The Merritt of Snare-Merritt is Merritt-Chapman & Scott, whose previous Cuban venture, a 1952 water-supply project, ended in a lawsuit. The boss of Merritt is Louis Wolfson, antagonist of Sewell Avery and manipulator of Capital Transit. At best, Merritt was superfluous. To elbow its way in, it got the help of National Lead. National Lead's main product is paint material, and Merritt's subsidiary, Devoe & Raynolds, makes paint. National Lead pressed Merritt's cause with Mansure.

So, by the way, did Secretary of Air Harold Talbott. Says Talbott: "I met Louis Wolfson in 1948 when I was chairman of the Republican finance committee." Talbott was also a major Republican money raiser in 1952, but says he "never heard of Wolfson" in that campaign. He says that when he backed Merritt, with Mansure, it was "casual, at a dinner party."

Merritt had another avenue to Mansure. For Lewis M. Schott, Merritt's executive vice president for administration, knows Bill Balmer. Schott used Balmer—who is experienced in this sort of thing in the political field—to solicit proxies in Wolfson's unsuccessful fight for control of Montgomery Ward. Knowing that Balmer was a friend of Mansure, Schott discussed with him the contract for Nicaro. Balmer in turn discussed it with Mansure. The discussion, says Mansure, was "casual, at a dinner party."

Dining out is a well-known feature of Washington life, of course, and what with one thing and another, Mansure decided that Merritt should get 50 percent of the Nicaro deal. Snare glumly took what was left. The fee to Snare-Merritt is $1 million.

The deal has not been good for the taxpayer. Snare has staffed the top of the on-site operation with men experienced in Cuban and in Nicaro operations. But the purchasing side of Snare-Merritt has been increasingly dominated by Merritt, with the backing of National Lead and the blessing of GSA. Interestingly enough, more than $300,000 worth of material has been bought by Snare-Merritt from subsidiaries of Merritt-Chapman & Scott and of National Lead.

SLOW AND HIGH

At least one contract, for big cranes, did not go to the low bidder but to Marion Power Shovel, a Merritt-Chapman & Scott subsidiary. Marion, which bid $230,800 and offered 2-week delivery, prevailed over a Baldwin-Lima-Hamilton distributor, who offered 3-week delivery but asked only $185,000. Marion delivered 1 crane 4 weeks late by dint of using a rebuilt motor instead of a new motor as originally called for. Delivery of the second crane has been even more seriously delayed.

Delays have been heaped upon delays. It took GSA almost 5 months to name National Lead as its prime contractor. National Lead consumed 3 months in coming to its curious choice of a Snare-Merritt partnership. At first this delay was ignored by GSA, though it constituted a breach of contract; then it was forgiven. There have been other delays—in starting a program of workers' housing; in completing a construction-progress forecast; in completing engineering design (a job let out to H. K. Ferguson Co., a subsidiary of Morrison-Knudsen). After one-fourth of the 2-year contractual time period, only about one-sixteenth of Nicaro's expansion had been done, as measured by payments made. It seems impossible that the job will be finished on the date set as a target in the contract—unless the estimated cost of $40 million is grossly overrun by crash steps. Already there has been an overrun of almost $500,000 in engineering costs—25 percent.

HOW GSA GOT THAT WAY

The origins of GSA's many messes go back to the first Truman administration. In 1947 Jess Larson, later to be Truman's GSA Administrator, was General Counsel of the War Assets Administration, later to be dumped into GSA. WAA was headed by Maj. Gen. Robert M. Littlejohn, who had won high praise as Eisenhower's top quartermaster in the European theater. But WAA was a businessman's job, not a general's. In 1947 a congressional investigating committee, headed by Ross Rizley (since appointed to the chairmanship of the Civil Aeronautics Board by President Eisenhower), took a look at Littlejohn's WAA. Here are some of its findings:

Slow disposal, small money return, inadequate control of regional offices, "unbelievable conditions of bad organization," improper accounting, deceptive reporting, possible fraud, failure to inventory millions of dollars' worth of desirable surplus property, loss of much inventoried property, inaccurate and misleading sales figures, the loss of quantities of sales documents, countrywide violation of prescribed procedures, repeated promotions of individuals who made serious mistakes. "The amount in money," the committee concluded, "which this administrative failure has cost the taxpayer is inestimable, but it is certainly enormous." A White House aide of the period (Truman's) summed things up: "Littlejohn did a messy job."

Eventually, Litttlejohn quit and Larson took his place. The Rizley committee sent material to the Department of Justice for study of possible criminal or civil action against people involved in frauds. The Department never took any action—for reasons that will be related below—and Larson left the WAA personnel undisturbed.

GSA: Washington's Most Durable Mess—VI

EXTENSION OF REMARKS
OF
HON. JACK B. BROOKS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1955

Mr. BROOKS of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I include No. 6 of an article by Herbert Solon, editor of Fortune magazine:

WAA FOREVER

Many of the WAA bureaucrats had been the first castoffs of the war agencies in 1945–46. Yet many of them, because WAA at its birth had a problem of quick staffing, were given high grades and salaries. And in 1949 they were taken into GSA with full civil-service rights when Congress dumped WAA into the new GSA for liquidation and Truman made Larson GSA's first Administrator. Personnel of the other agencies merged into GSA remained largely on the operating level, but the WAA refugees moved into the new agency's vacuum—central staff positions and regional directorships.

Today, 7 of the 10 regional directors of GSA are ex-WAA men. So are all but 1 of GSA's 4 staff office chiefs. So are many of their top aids; a couple of second-echelon men in Public Buildings; the assistant general counsel in charge of real property management and disposal activity. So are almost all the GSA people ever involved in the Nicaro fiasco. So is Mansure's confidential secretary, who used to be Larson's confidential secretary.

So is GSA's No. 2 man, Assistant Administrator Almon E. Snyder. When Larson was Administrator, Snyder was his office assistant. He was close to influence-peddler Nathan, who testified that he brought occasional delicatessen lunches to Snyder's office. Mansure recently promoted Snyder to be his Assistant Administrator at a salary of $14,800. "When I'm away," says Mansure, "Snyder has the authority to sign documents for me; he knows my thinking."

Within GSA there has been some courageous, but on the whole ineffective, opposition to the WAA crowd controlling most of the staff and regional offices. It has come from the chiefs of GSA's four main operating divisions.

All the operating chiefs, when Mansure took over GSA, were old hands who had been legislated into GSA: Three Commissioners—A. J. Walsh (Emergency Procurement, the stockpile), W. E. Reynolds (Public Buildings), Clifton E. Mack (Federal Supply Service)—and Dr. Wayne C. Grover, the National Archivist.

NINETY-DAY REVOLT

All these men took part in an abortive revolt against the staff clique, during a strange interregnum of 90 days between the departure from the Administrator's office of Democrat Larson, in January 1953, and the arrival, with spring, of Republican Mansure. The revolt was invited by the man who served during those 90 days as Acting Administrator—Russell Forbes, the first GSA Deputy Administrator, the man who had helped the first Hoover Commission to conceive GSA, and a conscientious public servant.

When Larson left, Forbes offered the Commissioners their first opportunity to register their critiques. He set up a Committee on the cost of staff services headed by the National Archivist. The report described GSA as being in "a situation where everybody is boss, nobody can be held responsible, and our chief central office characteristics are friction, confusion, paperwork, and delay. [Operations are] continuously hampered * * *. In the field, we encourage [expensive personnel] to engage needlessly in the make-work manufacture of 'administration' to the tune of several hundred thousand dollars a year. * * * If the recommendations in this report are adopted, annual savings would run to nearly $2 million as a minimum."

Forbes did not subscribe to all expressions of the Grover committee report, finding some of them extreme. But Forbes was anxious to cut the GSA budget and economize wherever possible, and he welcomed the report's general line.

The WAA clique took alarm and leaked copies of the report—supposedly for the Washington brass only—to regional directors. One copy turned up in the Chicago regional office. At that time Mansure, with his high hopes of getting the Administrator's job, was dropping in there regularly. John Skeen, ex-WAA and the man who later was to be helpful to Balmer's friends, Paint Products Corp., of Elgin, was then, and is now, Chicago's regional director. In the Chicago office Mansure saw the Grover committee report. He also heard it denounced.

When Mansure shortly thereafter arrived in Washington to take over GSA, he addressed the agency's top-echelon men, both staff and operating. He was, he said, a personal friend of Larson. He made it clear that there would be no further encouragement of the type of criticism expressed recently by the operating chiefs. "I take full responsibility for shelving it," says Mansure of the Grover report. And he bore down on the operating chiefs and Deputy Administrator Forbes.

Mansure so chastened Dr. Grover that even today the National Archivist will not discuss the episodes of the interregnum beyond saying that some people did not view his report as constructive. If Commissioner Mack's Federal supply operation is fairly effective, the main reason is the close relationship between Mack and his field men, dating back to Treasury days. Mack manages to communicate with them out of channels, evading the regional directors, but Mansure now campaigns against evening telephone calls and similar desperate operating methods. Though Commisioner Walsh ostensibly has 700 stockpile employees under him, most of them have been put under the thumb of the staff clique in the central staff offices or in the regional offices. Commissioner of Public Buildings Reynolds took a pounding from the WAA clique, retired, and went to work for Webb & Knapp.

The successor to Reynolds as Commissioner of Public Buildings is Peter Strobel, a distinguished New York engineer who took the job on the urging of the White House and at considerable financial sacrifice. Strobel is not happy with the GSA setup. For one thing, Mansure has decentralized most of the records of the Public Buildings Service. Strobel is largely ignorant of the actions of his field men and the procedures they follow. He sometimes finds his efforts to control field operations impeded by Mansure's personal control of travel authorizations.

As for Deputy Administrator Forbes, who helped to father GSA, Mansure aimed to lift his administrative power. When Forbes, balked and disillusioned, was asked by the second Hoover Commission to serve as a consultant in November 1953 he quit GSA with pleasure.

GSA: Washington's Most Durable Mess—VII

EXTENSION OF REMARKS
OF
HON. JACK B. BROOKS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1955

Mr. BROOKS of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the seventh and concluding article by Herbert Solow, editor of Fortune magazine entitled "GSA: Washington's Most Durable Mess":

THE QUALITY OF JUSTICE

So the old WAA people have been riding high all through Mansure's regime. Though he slurs the loyalty of his operating chiefs ("They would still like to be the XYZ Service instead of a division of GSA"), he defends and pampers the WAA clique. He poohpoohs the Rizley Committee report that condemned them so scathingly. True, the Justice Department never took action as a result of the Rizley Committee's suggestion, but when that has been said, how much has been said?

The Justice Department to which the Rizley Committee referred certain of its WAA findings, for possible criminal or civil action, was the Justice Department of Attorney General (now Supreme Court Justice) Tom Clark. Here is part of the picture of that notorious Department as painted by a congressional investigation committee in 1952–53: shockingly inefficient handling of contract fraud cases, acceptance by Department officials of favors from persons against whom they were supposed to be defending the Government's interests, improper interference with the work of a St. Louis grand jury "to an extent which merits grave censure."

Responsibility for many of the conditions and events was charged to Assistant Attorney General Caudle. But the committee concluded that much of the blame properly belonged to his superiors. Among the superiors named as responsible was one Peyton Ford. From 1947 to 1951 Ford was Assistant Attorney General in charge of the civil division, then the chief assistant attorney general, and at times in 1950–51 Acting Attorney General. Peyton Ford is today the law partner of Jess Larson, who was WAA's General Counsel when the Rizley material was sent to the department.

No suit was brought. In the Justice Department today, there is in the central files no "closing-out" memorandum as required by departmental regulations, to show why no criminal suit was brought. The papers were, as explained last month by a department spokesman, "just sent to the central files without ever being properly closed, either on a formal or informal basis." The date of the pigeonholing was sometime in 1950, when Peyton Ford was the second man in the department. And the criminal statute of limitations ran out in 1951.

For Mansure, the whole matter is closed. He says he has read only a part of the Rizley Committee report and none of the King Committee hearings. "If there are any skeletons in the GSA closet," says Mansure pleasantly, "I haven't looked for them, and you can quote me on that."

There remains the question: How did President Eisenhower ever get stuck with this Mansure? The answer goes back to the in-

fighting before the Republican national convention of 1952.

GUNNER'S REWARD

One of the many politicians, big and small, who worked for Wesley Roberts and Herbert Brownell, top Ike tacticians, was Bill Balmer of Chicago. Balmer was what Roberts called his "gunner" for the Illinois delegation, before and during the convention. It was understood that on the second ballot Balmer could help swing more than 20 Taft-pledged votes to Ike. In the event at Chicago, Ike won on the first ballot, with Illinois going 59 to 1 for Taft, but Gunner Balmer was credited with a good preparatory performance.

Right after the election, Balmer and Moore, using the letterhead of the Cook County Republican organization that they control, wrote to Brownell. In tones of familiarity, they asked for Mansure's appointment to the GSA job. The letter was eventually forwarded to Sherman Adams, Eisenhower's chief of staff. Brownell, who as Attorney General has since fully supported the Chicago fraud suit against Balmer, raised no warning flag. Adams was also the recipient of letters in Mansure's favor that were forwarded by Roberts, who had become Republican national chairman. Adams also received copies of favorable press articles, warm letters from businessmen and Congressmen, and an FBI field report that showed no blemish on the Mansure record.

In Chicago there was some opposition to Mansure, whose intimacy with Balmer had come under observation at the national convention. It is said to have been led by Edward Ryerson of Inland Steel, and R. Douglas Stuart of Quaker Oats, the latter now Ambassador to Canada. Both these men are longtime acquaintances of Mansure. But, on balance, they made little impression. As a lawyer, private enterpriser, civic leader, and party stalwart, Mansure looked all right to Roberts, to Brownell, to Adams, and to the President. And Balmer, not yet hit by the fraud suit, was thought of by top Republicans as just another ward leader and preconvention gunner—if anyone thought of him at all.

Mansure got the GSA job. He had had it, as this article went to press, for 27 months. How much longer he would have it was up to Mr. Eisenhower.

Tenth Annual National Conference on Citizenship

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following news release of the Honorable Justin Miller, president of the National Conference on Citizenship, and former judge of the United States Circuit Court of Appeals for the District of Columbia, with respect to the 10th annual national conference on citizenship:

Justin Miller, president of the National Conference on Citizenship, and former judge of the United States Circuit Court of Appeals for the District of Columbia, has announced that the 10th annual conference will be held at the Statler Hotel, Washington, D. C., September 19–21, 1955.

The conference, formerly cosponsored by the Department of Justice and the National Education Association, now operates as an independent entity under a charter unanimously grated by the 83d Congress. Earl Warren, Chief Justice of the United States, will again be the honorary chairman.

The conference will bring together around 1,200 men, women, and youth from all of the 48 States and Territories. Approximately 800 public and private organizations and agencies with widely varied interests will be represented.

The 1955 conference theme is "The Blessings of Liberty," taken from the preamble to the Constitution. The discussions of the group sessions will center around subtopics of the theme such as whether "the blessings of liberty" are in danger by neglect, erosion, or direct attack.

Harry P. Cain, member of the Subversive Activities Control Board, and former United States Senator from the State of Washington, will deliver the keynote address on the theme of the conference at the opening session. Mr. Cain has been very outspoken in defense of the constitutional rights of the individual, especially where they have been jeopardized by the loyalty security programs.

Justin Miller will formally open the conference with a welcoming message. Members of the United States Marine Corps will advance the State and Territorial flags. The American Legion national guard of honor will advance the colors. The national anthem will be rendered by the Navy Band, followed by the pledge to the flag. Tom C. Clark, Justice of the Supreme Court, and Willard E. Givens—who were the heads of the sponsoring agencies, the United States Department of Justice and the National Education Association, respectively, when the conference was initiated—will greet the delegates. David Leahy, Brooklyn, N. Y., a national winner of the American Legion high school oratorical contest, will speak. God Bless America, sung by Janice Anzulovic, Oberlin College Conservatory of Music, will close the opening session.

At the luncheon, September 19, Alexander Boyd Campbell, president of the Chamber of Commerce of the United States, and, also, an outstanding leader from the field of labor, will speak. Music will be provided by a service orchestra.

The first group session will be held in the afternoon; the second and third sessions will follow on the morning and afternoon of the 20th. The 1,200 delegates will be divided into 30-member discussion groups, in which everyone has the opportunity to express his viewpoint.

A Musical Americana—music that enriched America—will be given by the United States Army Band on the evening of the 19th.

The annual dinner, addressed by a distinguished American, will take place on Tuesday, September 20. Justice M. Chambers, Congressional Medal of Honor recipient of World War II, will introduce Purple Heart veterans now at Walter Reed Hospital and the Naval Medical Center. Purple Heart veterans from these hospitals are always honored guests at these annual dinners. David Dwight Walker, Oskaloosa High School, Iowa, 1 of the 4 national youth winners in the Voice of Democrary contest, will speak on I Speak for Democracy. A service orchestra will provide the music.

The closing session on September 21 will include a summarization of group discussions by W. Cameron Burton, past president of the Bar Association of the District of Columbia; and a speech, I Speak for Democracy, by Abron Maletzky, Nott Terrace High School, Schenectady, N. Y., another national winner of the Voice of Democracy contest. This will be followed by an impressive naturalization ceremony wherein a large class of qualified foreign-born persons will become United States citizens. This ceremony will be in charge of the chairman of the Citizenship Committee of the District of Columbia Bar Association. The Presidential Auditorium of the Statler Hotel will be transformed into a courtroom for the occasion. The naturalization hearing will be presided over by Bolitha J. Laws, Chief Judge, United States District Court for the District of Columbia, who will address the new citizens.

The Air Force Band with the famous singing sergeants will furnish the music for the closing session. The national anthem will be sung by Maria de la Hull, soloist of the Columbia Opera Co., a naturalized citizen.

The colors will be retired by the American Legion national guard of honor.

The purposes of the National Conference on Citizenship as set forth in its constitution and bylaws are:

"To support and strengthen the efforts of the people in maintaining the blessings of freedom and justice and in protecting and perpetuating the principles and ideals upon which this Nation is founded; to develop a more thorough knowledge of citizenship rights and responsibilities; to inspire a deeper devotion to citizenship obligations; to encourage ever more effective participation in citizenship activities and to promote a spirit of cooperation on the part of all citizens—to these high purposes, the National Conference on Citizenship is dedicated."

The conference was founded in 1946, when a small group of men and women met in Philadelphia to consider how the spirit of cooperation that had bound together all citizens of the United States during World War II could be conserved for the future. They sought a means to maintan this spirit so that, in peacetime as in wartime, all citizens might dedicate themselves to upholding continuously our concept of government and the democratic way of life.

From 1946 to 1954, the United States Department of Justice and the National Education Association sponsored the conference. The two agencies lent their support until the conference could function as an independent entity. A bill to incorporate the National Conference on Citizenship, introduced in the Senate by the late Senator Willis Smith, of North Carolina, and in the House by Representative THOMAS J. LANE, of Massachusetts, passed both Houses unanimously and was signed by President Eisenhower, at the summer White House, Denver, Colo., on August 13, 1953.

The conference is unique in that it brings together the most comprehensive cross section of organizations and agencies to be found in any single national meeting. Over 1,000 delegates representing hundreds of various organizations and agencies took part in the ninth annual conference in 1954.

Since 1946, more than 1,200 organizations and agencies have participated. Through their memberships and activities these touch nearly every wholesome aspect of our life and reach most of our 164 million population.

Included are all levels of government—national, State, and local; schools, colleges, and universities; major religious faiths; professional associations; veterans' and related organizations; labor, business, industry, and finance; farm and civic groups; and youth organizations.

The conference has had four honorary chairmen. The late Chief Justices of the United States, Harlan F. Stone and Charles Evans Hughes were the first two, and former Vice President ALBEN W. BARKLEY, the third. The present honorary chairman is the Chief Justice, Earl Warren.

The present officers and board of directors of the National Conference on Citizenship, who have been closely identified with it since its beginning, are:

Justin Miller, president; former Associate Justice, United States Court of Appeals for the District of Columbia Judicial Circuit.

Emma Mae Brotze, first vice president; principal, Marshall Junior High School, Marshall, Tex.; and chairman, National Education Association Citizenship Committee.

Leo M. Cadison, second vice president; former Assistant Director of Public Information, United States Department of Justice.

Earle T. Hawkins, third vice president; president, Maryland State Teachers College.

Maurice Bisgyer, treasurer; secretary, B'nai B'rith.

Carl B. Hyatt, executive director; former Assistant Commissioner, Immigration and Naturalization Service, United States Department of Justice.

Robert N. Anderson, general counsel: Special Assistant to the Attorney General, United States Department of Justice.

Thomas F. Clear, principal, Katherine T. Murphy School, Stamford, Conn.

Willard E. Givens, former executive secretary, National Education Association.

Richard B. Kennan, secretary, Commission for the Defense of Democracy Through Education, National Education Association.

THOMAS J. LANE, Representative from Massachusetts, United States Congress since 1941.

Elizabeth F. Hart, secretary; publications editor, Immigration and Naturalization Service.

Distinguished Americans have participated in each of the nine annual meetings. President Eisenhower and former President Truman have sent greetings to the conference on each occasion. Mr. Truman has spoken to the delegates six times. Speakers at previous conferences have included:

Henning W. Prentis, past president, National Association of Manufacturers; Ellis Arnall, former Governor of Georgia; Daniel A. Poling, District of Columbia, churchman and editor; Joseph H. Ball, former United States Senator from Minnesota; Ernest J. King, fleet admiral, former Commander in Chief and Chief of Naval Operations; Robert A. Taft, late United States Senator from Ohio; Richard M. Nixon, Vice President of the United States; William G. Carr, secretary, National Education Association; Robert G. Simmons, chief justice, Supreme Court of Nebraska; Tom C. Clark, former Attorney General of the United States; Donald R. Richberg, author and attorney; George D. Aiken, United States Senator from Vermont; Watson B. Miller, former Commissioner of Immigration and Naturalization; Anna Lord Strauss, president, League of Women Voters of the United States; Justin Miller, former judge, United States Circuit Court of Appeals for the District of Columbia Circuit; Robert B. House, chancellor and vice president of the University of North Carolina; Hubert H. Humphrey, United States Senator from Minnesota; Alben W. Barkley, former Vice President of the United States; Andrew D. Hold, past president, National Education Association; J. Howard McGrath, former Attorney General of the United States; Irving M. Ives, United States Senator from New York; George Maurice Morris, past president, American Bar Association; Estes Kefauver, United States Senator from Tennessee; Wayne L. Morse, United States Senator from Oregon; Florence E. Allen, judge, United States Court of Appeals, Sixth Circuit; James P. McGranery, former Attorney General of the United States; Sarah G. Caldwell, past president, National Education Association; Mrs. James B. Patton, president general, National Society, Daughters of the American Revolution; Eleanor Roosevelt, former member, Commission on Human Rights, United Nations; John C. Bell, Jr., justice, Supreme Court of Pennsylvania; William A. Early, past president, National Education Association; Herbert Brownell, Jr., Attorney General of the United States; John J. Parker, chief judge, United States Circuit Court of Appeals, Fourth Circuit; Gertrude S. Carraway, president general, National Society, Daughters of the American Revolution; Waurine Walker, past president, National Education Association; Simon E. Sobeloff, Solicitor General of the United States; Alvin M. Bentley, Congressman from Michigan; Kenneth A. Roberts, Congressman from Alabama; W. Cameron Burton, past president, Bar Association of the District of Columbia; and F. Dickinson Letts, judge, United States District Court for the District of Columbia.

The future of the National Conference on Citizenship is challenging. The congressional charter empowers the conference to translate its ideals and objectives into realities. Plans for the future include both long-range and immediate projects and activities. The conference will initiate and conduct some of these activities directly. Others, it will encourage and assist organizations and agencies in States and communities to initiate and carry on. Proposed projects and activities include the following:

1. Annual meetings of the national conference at which participants will consider the rights and responsibilities of citizenship, discuss major problems facing the Nation, and ways in which the ideas inspired by the national meeting can be carried out in their home States and communities.

2. Regional, State, and local conferences on citizenship which will have purposes similar to those of the national conference, with organization and procedures adapted to State and community situations.

3. Citizenship Day observances which will commemorate the signing of the Constitution, recognize the native youth reaching voting age and the foreign-born receiving citizenship through naturalization, and afford all citizens opportunity for rededication to the ideals and principles of the Constitution.

4. A "new voter" program which, carried on through cooperating groups and other organizations and agencies, will stress responsible exercise of suffrage by all, and emphasize greater recognition of youth in civic affairs and their better preparation for the assumption of citizenship responsibilities.

5. Naturalization ceremonies in which the conference, through its participating organizations and agencies, will assist Federal and State courts with inspirational court induction ceremonies that stimulate in new citizens appreciation of American traditions and ways of living.

6. Integration of foreign-born citizens through State and local programs in which the native and foreign-born may achieve mutual understanding by working together and those of foreign birth may become more effective citizens.

7. A magazine and other publicity materials which will provide current, pertinent information for the press, radio, and television, for those carrying on projects and programs to promote good citizenship, and for those planning conferences and patriotic observances.

8. Citizenship programs in schools and colleges for which the conference, in cooperation with educational authorities, will assemble and make available information about significant developments in methods and materials for citizenship education.

9. Information on legal aspects of citizenship which will be assembled and made available to conference members and other participating organizations and agencies.

10. A clearinghouse which will collect, compile, catalog, exchange, and disseminate information and materials on matters relating to citizenship.

What Is the Latest Communist Party Line?

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. JUDD. Mr. Speaker, to help Americans keep on guard against Red propaganda dictated from the Kremlin, International New Service brings a weekly roundup of Communist Party line aims as disclosed in official Red publications and directives. These are prepared by Mr. Jack Lotto, a staff writer.

While using every subtle device and deception to trick Americans into believing that the Communists accept and want genuinely peaceful coexistence between their bloc and the free world, the Communist Party makes clear to its members that they must not fall for their own propaganda put out to lull to sleep their intended victims. Their objective always is and must be isolation and destruction of the United States.

ON YOUR GUARD

American Communists were told bluntly this week to abandon any dangerous ideas that from now on all will be beer and skittles between the United States and Russia. They were pointedly reminded by party boss William Z. Foster that their eventual goal, despite the new era of outward Communist friendliness, still remains the destruction of the capitalist system.

Here is a summary of this important theme and other campaigns stressed in Communist propaganda organs in the United States and abroad:

Geneva: From the millions of honeyed words pouring from the Communist presses on the Geneva talks, some cold facts emerged on the continuing Red strategy. Phase two of their global peaceful coexistence program started humming almost as soon as the conference ended. Eventually, why not now was the key slogan advanced in plugging for quick ministerial-level talks and friendly relations between Red China and the United States.

The Reds called for pressure for exchange visits of delegations from both countries, recognition of Communist China, its admission to U. N. membership, opening of trade relations, and an end to what it termed the "Pentagon occupation of Formosa." Bowing to all these demands, it was claimed, would be "a logical follow-up to Geneva."

After all, editorially commented the Daily Worker, "If the cold war is to be ended * * * then it has to be ended in all parts of the world."

Foster was worried that the local comrades might be lulled into complacency by their own soft words. He wrote:

"There is the danger that would arise from any notion that the great peace fight has been already won, that * * * we can rest generally upon our oars. Such pollyanaism is nonsensical. The basic difference between the world Socialist and world capitalist systems as such will continue. * * *

"The relaxation of international tensions may also give freer and sharper expression to the natural competition among the capitalist powers."

The London Daily Worker, in a front-page editorial, put the same thoughts in much blunter language, declaring:

"Preoccupation with the cold war and the dangers of world nuclear war has tended to obscure the danger of wars in general among capitalist states themselves. Capitalism inevitably generates such wars. Only the ending of capitalism will end the inevitability of war in general."

Atheist Attempt To Deceive the Public

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. HIESTAND. Mr. Speaker, I would like to call the attention of the Congress to a disgraceful attempt of two members of the National Liberal League to falsely use the name of George Washington to forward their base plan of denouncing a new series of "In God We Trust" stamps.

The two individuals, John L. Manners, 44, and Walter B. Stevens, 25, both of New York City, are members of the American Association for the Advancement of Atheism. I am informed they are attempting to send envelopes through the mail with a red-lettered inscription which quotes George Washington as saying that "The Government of the United States of America is not, in any sense, founded on the Christian religion."

This is a most flagrant misquotation for evil purposes. Research I have conducted shows that the quotation did not come from George Washington at all. It first appeared in an English translation of a treaty between the United States and Tripoli, executed in 1797, and signed by John Adams. It has been accepted as authentic to this treaty for years, but in fact the statement came from nowhere but the imagination of the translator, a latter day bureaucrat named Joel Barlow, who had the position of Consul General at Algiers.

The history of the statement is rather interesting. This 1797 treaty, like the treaty with the Dey of Algiers of 1795, had been bought, and the procedure of its execution was quite unusual. The treaty was written in the Arabic language, and any original English text on which it may have been based no longer exists. The price paid for the treaty is recorded as 40,000 royal duros, 13 watches, 5 seal rings, 140 ells of cloth, and 4 garments. Another section listed the Americans as still obliged to pay such things as 25 barrels of pitch and 4 anchors. Final adjustment on this matter was not completed until April 10, 1799, when the United States paid the equivalent of $18,000.

Four documents are in the Department of State file of this treaty. The first is the original treaty in Arabic. The other three are translations, each different. One of these, the Barlow translation, is extremely erroneous, but it has stupidly been trustfully and universally accepted as the just equivalent of the Arabic, and it is printed in the Statutes at Large and in treaty collections generally. This has been done even though evidence of the erroneous character of the Barlow translation has been in the archives of the Department of State since around 1800.

The article of dispute is Barlow's No. 11, which reads:

As the Government of the United States of America is not in any sense founded on the Christian religion—as it has in itself no character of enmity against the laws, religion or tranquillity of Musselmen—and as the said States never have entered into any war or act of hostility against any Mehomitan nation, it is declared by the parties that no pretext arising from religious opinions shall ever produce an interruption of the harmony existing between the two countries.

Now what is most extraordinary and wholly unexplained is the fact that this statement does not exist at all in the Arabic text, and therefore in the treaty. The eleventh article of the Barlow translation has no equivalent whatever in the Arabic, but apparently no one knew better at the time. In fact the Arabic text opposite that article is a letter, crude, flamboyant, and unimportant, from Hassan Pasha of Algiers to Yussuf Pasha of Tripoli.

As hostilities were begun by Tripoli in May, 1801, after threats for a year, the actual terms of the treaty became of little importance. But the fictional Barlow translation has remained to blur the record and provide atheists with a quotation to use for their ignoble purposes. The attempt of these atheists of the National Liberal League to tie this absurd quotation to the great George Washington simply demonstrates how desperate their movement has become.

At the present time Manners and Stevens are suing Postmaster General Arthur Summerfield and District of Columbia Postmaster Roy M. North because the Post Office Department has barred such foul material from the mails. I predict that their suit will get nowhere now that the mendacious nature of their quotation has been revealed. We must guard against attempts to abuse the great men of American history.

The Mexican Contract Labor Program

EXTENSION OF REMARKS
OF
HON. TORBERT H. MACDONALD
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. MACDONALD. Mr. Speaker, there has been considerable misunderstanding of the policies of the Department of Labor in connection with the Mexican contract labor program, particularly since this Federal agency must draw upon State agencies for assistance in enforcing the terms of the law.

Recently an exchange of correspondence between the Assistant Secretary of Labor in charge of this program and the Secretary of the United States Section, Joint United States-Mexican Trade Union Committee, has come to my attention. In my opinion, this correspondence does much to clarify the official Government policies in this matter. With the permission of the parties concerned, I am inserting this exchange of correspondence in the RECORD in the hope that it will help to remove some of the misunderstandings which exist concerning the relationship of the State agencies to the Department of Labor:

JUNE 16, 1955.

Hon. ROCCO SICILIANO,
Assistant Secretary of Labor,
Department of Labor,
Washington 25, D. C.

DEAR MR. SICILIANO: The enclosed copy of Mrs. Widman's letter of June 8 to Messrs. Brockway and Burkett deals with, and supplements, the complaint concerning the establishment of wage rates in the Salinas-Pajaro area which I brought to your attention in a separate letter a few days ago.

The obvious question it immediately raises—and to which I do not request an answer at this time unless you care to comment upon it—is: What is the Labor Department doing to see that its compliance officers have a uniform understanding of departmental, congressional, and international agreement regulations pertaining to the administration of Public Law 78, and what further steps does it take to see that there is a uniform application of these rules? This question is merely rhetorical, because I realize that it involves administrative procedures which we are prepared to acknowledge should properly be left up to the Department of Labor insofar as they do not hamper the operation of the law. I ask it only to suggest that this is a matter which you might want to look into for your own information should you decide that my previous questions warrant investigation.

There is, however, a second question that occurs to us which we believe we should have an answer to if we are to fully understand the administration of this law. This is, in cases where there is a disagreement between the State officials and those representing the Department of Labor, what steps are taken to see that the Labor Department views prevail? I ask this question in this way, because it is clear that Public Law 78, and the present intent of Congress, place the responsibility on the Secretary of Labor and not the State agencies.

If the facts stated in Mrs. Widman's letter are true, it is clear that the policies of the California department of employment to which your compliance officer refers run counter to the clear intent of Public Law 78, and in such circumstances it would appear to be the responsibility of the Secretary of Labor to see that State policies of this kind do not apply insofar as the Mexican labor program is concerned. At least, through the provision of the law requiring the Secretary of Labor to make certifications, he must certify that such conditions do not exist, and there is no exception for conditions which may be brought about by policies of State agencies which differ from those of the Labor Department.

Best personal regards.

Sincerely yours,

MILTON PLUMB,
Director of Legislative Information, CIO.

JUNE 8, 1955.

GLENN BROCKWAY,
Regional Director, Bureau of Employment Security, San Francisco, Calif.

WILLIAM BURKETT,
Director, California Department of Labor, Sacramento, Calif.:

This letter is written in regard to Complaint No. 4 S–P filed by our union on May 3, 1955. We pointed up the fact in this complaint that the majority of the resident work-

ers in the Salinas-Pajaro area are kept in the 82½-cent jobs in lettuce while the 87½-cent jobs are performed by the contract nationals.

Our position is that it is obvious that resident workers are not getting the highest paid jobs in the area. Mr. J. F. Ahearn, United States-Mexican Service representative in the Salinas area takes the position that "I have reviewed it very carefully and note that it constitutes a complaint of the operational policies and procedures of the California Department of Employment here in Salinas. There is nothing in this letter which falls within the purview of Public Law 78."

But the intent of Public Law 78 was not to create a situation where resident workers were performing the lesser paying jobs while contract nationals performed the higher paying jobs. Yet this is exactly the situation in lettuce in the Salinas-Watsonville area. To state that there is nothing in this situation within the purview of Public Law 78 is to state that Public Law 78 is then not designed to protect resident workers' prior rights on higher paying jobs.

Mr. Ahern suggests that we contact Mr. L. Braun of the Salinas Farm Placement Office. We have done this in another situation regarding rights of residents as to choice of crop and job selection, and find that Mr. Ahern representing USES and Mr. Braun representing the Farm Placement Office are confusing as to what is exactly the interpretation of Public Law 78 and how it is to apply. We have filed complaints on several what we believe to be violations of residents' rights and find each time a confusion between the two local departments. We have written to Mr. Brockway and was answered by Mr. Norton that it seemed to him a simple matter to apply the little green pamphlet which spelled out the prior rights of resident workers. Yet our complaints and this letter points out the fact that it is not a very simple matter because of the differences in interpretation of the "little green pamphlet."

It is necessary that each of your departments having jurisdiction over clarifying of Public Law 78 sit down with your employees and do so immediately and advise us if our interpretation of Public Law 78 is wrong or right in regard to the rights of resident workers.

Very truly yours,

ROSALIE D. WIDMAN,
Field Representative, UPWA-CIO Field Local.

UNITED STATES DEPARTMENT OF LABOR,
Washington, July 12, 1955.

MR. MILTON PLUMB,
Director of Legislative Information, Congress of Industrial Organizations, Washington, D. C.

DEAR MR. PLUMB: This is in reply to your letter of June 16, with which you sent Mrs. Rosalie D. Widman's letter of June 8, to Messrs. Glenn Brockway and William Burkett.

I am very much concerned that field representatives of the Bureau of Employment Security have a full understanding of the policies, procedures, and regulations pertaining to the Mexican labor program. To this end there is continuous on-the-job training and periodic formal training for all field representatvies. Regional supervisors strive for the uniform application of policies, interpretations, and procedures in their respective regions. Our headquarters staff coordinates this activity by field visits, training conferences, and the review of reports and correspondence. We are thus constantly on the alert for deviation from the uniform and correct application of the provisions of Public Law 78 and the international agreement.

The Department of Labor does not itself have adequate facilities or funds to carry out all the administrative aspects of this program. Accordingly the Secretary has entered into agreements with the States, as authorized by Public Law 78, whereby certain State facilities and services are utilized in carrying out his responsibilities under that law. Administrative action under these agreements must of course conform to the Federal requirements and any misunderstanding or error is promptly corrected when brought to our attention.

I have instructed our Regional Director Glenn Brockway to confer with Mrs. Widman and make a thorough investigation of the complaints made in her letter. The results of this investigation will be transmitted to me and any remedial action disclosed as necessary will be taken.

Sincerely yours,

ROCCO C. SICILIANO,
Assistant Secretary of Labor.

Address by Philip B. Perlman to the Annual Meeting of the American Optometric Association, Milwaukee, Wis., July 9, 1955

EXTENSION OF REMARKS
OF

HON. GEORGE H. FALLON

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. FALLON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Philip B. Perlman to the annual meeting of the American Optometric Association, Milwaukee, Wis., July 9, 1955:

More than a quarter of a century has passed since the Supreme Court of the United States, in the case of *Roschen* v. *Ward*, decided that the State of New York had power to prohibit the sale of eyeglasses at retail in any store, unless a duly licensed physician or optometrist were in charge and in personal attendance. The Supreme Court held that such a measure was within the proper exercise of the State's police power to safeguard the health, the safety, and the welfare of its people. The decision affected all of the 48 States. It marked one of the milestones along the road toward the goal of making available to the public the services of qualified professionals, and toward the elimination of unauthorized and unethical practices through which the unscrupulous have used and are using the need for visual care to victimize the public.

You have now passed another milestone—a very important one. I assume all of you are more or less familiar with the Oklahoma case of *Williamson* v. *Lee Optical, of Oklahoma, Inc.*, decided by the Supreme Court of the United States on March 28 last. The case, as you know, involved the validity of an act passed by the Oklahoma Legislature, several parts of which were struck down by a Federal district court as in violation of the Constitution of the United States. The attorney general of the State of Oklahoma appealed to the Supreme Court. So did Lee Optical, of Oklahoma, and other plaintiffs. They complained that other parts of the Oklahoma law should also have been held to be invalid, so there were 2 appeals and 2 cases in the Supreme Court, growing out of the 1 suit to prevent the Oklahoma law from being enforced.

It was at this point that Mr. William T. MacCracken, Jr., who has represented you so long and so successfully at Washington, developed the idea that I and my firm might be useful in presenting this association's views to the Supreme Court. That gave me the opportunity to meet and to work with your general counsel, Mr. Harold Kohn, who carries around in his brain a storehouse of information about optometry in all its phases, and the laws and regulations and rules and court decisions affecting the practice and optometry. My partner, Mr. Ellis Lyons, made a detailed study of the facts and the law involved in the case, and became convinced that the law not only was good but was valid in every respect. Then he convinced me, and then we set out to learn all that we could about optometry and how it is practiced.

Mr. Kohn came to Washington and answered a lot of questions, many I suspect being rather foolish, and Mr. MacCracken worked on us almost daily, trying overnight to make us, especially me, expert on the subject. I say especially me because it was agreed that if arrangements could be made to obtain permission for us to participate in the argument of the case, I was to do the arguing.

The suit was between the Lee Optical, of Oklahoma, Inc., and others, against the Attorney General and all the county attorneys of Oklahoma. We were not parties to the case, and had no right even to file a brief, except with the consent of the parties, unless the Supreme Court itself granted permission. These restrictions do not apply to the attorneys general of the States, and briefs supporting the validity of the Oklahoma law were filed by the attorneys general of Arkansas, California, Kansas, Mississippi, and Pennsylvania. The other side wanted the attorney general of Oklahoma to give permission for a brief on behalf of the Guild of Prescription Opticians of America, and he agreed on condition that they do likewise for a brief on behalf of the American Optometric Association, Inc. And that is the way we got into the case. Mr. Mac Q. Williamson, the attorney general of Oklahoma, then gave me one-half of the time allotted for argument to Oklahoma, and that is the way in which your representative was permitted to present an oral argument to the Supreme Court in a case in which we were neither plaintiff nor defendant.

Of course, although this meant more work for Mr. Lyons and me, it meant more work for Mr. Kohn and Mr. MacCracken too. They had to make sure that the Justices of the Supreme Court asked no questions of me which would, so to speak, catch me with my diapers down. And so they redoubled the effort to give us a brief but intensive education in what an optometrist does, and why.

Mr. MacCracken even arranged for an afternoon session with a Washington optometrist, Dr. Evart Warren, and in his offices we were told and shown exactly what an optometrist does when he refracts eyes, and when he decides on the strength of the sphere, the strength of the cylinder, if there is a cylindar, where the axis should be, and all of the other data necessary to determine the content of the lenses and the position in which they should be worn.

We had learned from the testimony about the lensometer, but now we saw and were given demonstrations of many other instruments and devices helpful in the production of lenses to counteract faults in vision. We saw, standing perfectly still, how one lens can appear to move objects to the left, another lens to the right, but it wasn't until we had all our diopters straight, without too much understanding of the mysteries of multifocal lenses, bifocals and tribocals and such, and what optometrists and patients are supposed to do about them, that we were allowed to stagger out of Dr. Warren's office, with Mr. MacCracken's approval, primed at long last to locate and discuss the greatest possible intolerance, or imbal-

ance or anything else that might be wrong with the arguments made by those who wanted to destroy the Oklahoma statute. The law, as it came from the legislature and was signed by the Governor, looked all right to us, and we were then sure that anyone who saw flaws in it was suffering from myopia or some other defect of vision, not to say understanding.

The great day of argument before the Supreme Court came at last, and the educational work done by Mr. Kohn and Mr. MacCracken had its effect. There were many questions from the Justices on the points decided adversely by the lower court: First, the power of the legislature to prohibit any person not a licensed optometrist or ophthalmologist to fit lenses to a face or to duplicate or replace into frames lenses or other optical appliances, except upon a prescription written by an Oklahoma licensed ophthalmologist or optometrist; second, the power of the Oklahoma Legislature to exempt sellers of ready-to-wear glasses; third, the power of the Oklahoma Legislature to prohibit the solicitation of the sale of frames, mountings or any other optical appliances; and fourth, the power of the Oklahoma Legislature to prohibit any merchandise retailer from renting or subleasing space or otherwise permitting persons engaging in eye examination to occupy space in his retail store.

There were other reasons why some people objected to the Oklahoma law, but attention was centered around those I have mentioned, with special emphasis on the provision requiring a prescription before an optician is authorized to fit lenses to a face or to duplicate or replace lenses. The plea was made that the Oklahoma law was designed to increase the professional opportunities of the optometrists and to decrease the business done by opticians in the State of Oklahoma. But the Supreme Court unanimously rejected all of the arguments against the validity of the Oklahoma law and reversed the adverse actions of the lower court. In brief, the Court decided that the Oklahoma Legislature had ample authority to enact the law.

It should be stated, however, that the decision does not mean that the Supreme Court declared that every provision of the Oklahoma law was a necessary provision or even a good provision. The Court was careful to point out, in answer to arguments in opposition, that "the day is gone when this Court uses the due-process clause of the 14th amendment to strike down State laws, regulatory of business or industrial conditions, because they may be unwise, improvident, or out of harmony with a particular school of thought," and the Court said that "it is for the legislature, not the courts, to balance the advantages and disadvantages of the new requirement."

I state these propositions to you because it seems clear that the decision by the Supreme Court imposes additional responsibilities upon the American Optometric Association. You have undertaken to bring State and local organizations of optometrists together, to the end that you may plan, and continue to plan together, to raise the standards of your profession higher than ever before; to weed out the incompetent and the unethical and to assure the public of service of the best quality, performed by optometrists not only of the required ability but who are equipped with such high character and understanding as to make them a credit to their profession.

The history of your profession during the past 10 or 20 years is a truly marvelous one, especially in light of the difficulties and the obstacles you have met and are still meeting. The progress you have made is but an indication, it seems to me, of the greater destiny still in store for you. But you must not relax your efforts. It was the optometrists of Oklahoma who educated the legislature of that State, and who took the lead in the preparation and urging the passage of legislation which should eliminate from that State most of the evils in the field of visual care still prevalent in so many other places. When an optician or any commercial enterprise not qualified to perform refractions is permitted to advertise eye examinations, it usually means that he or it is employing on a salary or percentage of some kind the services of a physician or an optometrist, or, as we have discovered, persons who should not be permitted to give advice or prescribe remedies for faulty vision. There was testimony in the Oklahoma case indicating that an osteopath in the service and pay of an optician was issuing prescriptions to unsuspecting patients.

Your success in Oklahoma may be the occasion for you to review again the many and diverse laws on the statute books of all the States in the Union. I am thinking of a review of each and every provision, and the writing of new provisions in the light of the experience you have had, designed to produce a complete and up-to-date piece of legislation which would put visual care in the hands of qualified professionals only, and through which abuses existing in different sections of the country could be terminated, and every area of the field of visual care be removed forever from the grasp of the avaricious, the unethical, the charlatan and the plain, unvarnished faker.

The public has a right to be protected and safeguarded against those who are so much interested in the profits from sales that they engage in practices injurious to the health, the safety and the general welfare of the people. This association is fully equipped to assert and exercise its moral leadership against those who invade the rightful domain of its members. I do not know what steps you are contemplating, and much of what I am suggesting may be either irrelevant or unnecessary, but my recent contacts with the subject induce me to believe that this may be a good time to intensify your educational campaign for the general public in order to inform people how to avoid dangers and pitfalls and injury to themselves whenever examinations of the eyes are needed. I say you are fully equipped to exercise your leadership because, so far as legal questions are involved in your activities, I have never met more able informed and dedicated men than your general counsel, Mr. Harold Kohn, and your Washington counsel, Mr. William P. MacCracken, Jr.

The Oklahoma case should emphasize to all of the members of this association what your officers and your counsel know full well, and that is that you should, all of you, take a continuing and lively interest in what your legislative bodies, national, State, and municipal, are doing. Legislation in the field of visual care affects you directly in the practice of your profession, but legislation on a multitude of other problems also affects you in varying degrees.

You now know some of the major problems involved when an association such as yours, whether in the professions or in the commercial world, champions the adoption of codes or regulations or laws to enforce high standards of conduct, in an effort to bring order out of confusion, and to give the public the value in services and goods it has a right to expect. There are a multitude of organizations in this country engaged in similar endeavors.

You have learned, if you did not realize it before, that such activities require that your proposals, after the most intensive consideration, be reduced to writing, and that whatever legislation may be advisable or necessary be carefully prepared and introduced in the appropriate body. Thereafter, there is the work of arguing for the passage of the legislation, whether it be a municipal council or board, or a State legislature or the Congress of the United States. And there are hearings to be attended and amendments to be proposed, or to be accepted or resisted. And, after all this is done, it may happen that the legislation will fail or be vetoed and the work done all over again at some future session. Or, if it is enacted into law there may be attacks on its validity, and the courts will be called upon to consider whether every word, clause, sentence, or section of the law is a proper exercise of the authority vested in the legislative body which enacted it. If there are adverse decisions in lower courts, there is the problem of whether to seek new legislation or whether to fight for the law under attack, and to carry appeals to higher courts, even, as you have done, to the Supreme Court of the United States.

Legislation of especial interest to the professions and to business enterprises is usually arrived at in this way. And, just as the legislation in which you are particularly concerned affects tens or hundreds of thousands of others, so legislation sought and obtained by other organizations affects you. Also there is the legislation proposed by executive and legislative branches of government for the general health, safety, and welfare of the people, for the strengthening of the national economy, and for all of those policies designed to enable us to maintain our leadership of the free peoples of the world. I outline this situation because your experience in seeking beneficial legislation of the character you are advocating should make you appreciate the fact that the greater interest you take, not only in the legislation which affects your profession, but in all other public questions, including the personnel of legislative bodies, the better citizens you will be. And it goes without saying that the better citizens you are, the better practitioners you will be.

We pride ourselves upon the dignity, the worth of the individual. We believe that the state—the government—exists for him, and that he is not and will never be in our society the slave of the state. A great contest is being waged to preserve the dignity, the liberty, and freedoms of the individual. That contest is being fought at home as well as abroad. You can, you must, play whatever part you can, in that great struggle. The elimination of abuses and evils achieved by the Oklahoma law and the similar legislation for which you are working tends to cleanse and strengthen our Nation and to arm it to face and overcome its enemies—the enemies of freedom and of peace on earth and good will toward men.

And as I reflect with you upon the seemingly insoluble problems of this troubled world of ours, I recall the words of that great jurist who graced the Supreme Court of the United States for so many years—Justice Oliver Wendell Holmes—when he said:

> If I am right, it will be a slow business for out people to reach rational views. But as I grow older, I grow calm. * * * I do not pin my dreams for the future to my country or even to my race. I think it probable that civilization somehow will last as long as I care to look ahead—perhaps with smaller numbers but perhaps also bred to splendor and greatness by science. I think it not improbable that man, like the grub that prepares a chamber for the winged thing it never has seen but is to be—that man may

have cosmic destinies he does not understand. And so beyond the vision of battling races and an impoverished earth, I catch a dreaming glimpse of peace.

A Solution for the Problem of Juvenile Delinquency

EXTENSION OF REMARKS
OF
HON. FRANK CARLSON
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Tuesday, August 2, 1955

Mr. CARLSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "A Solution for the Problem of Juvenile Delinquency" by Homer Rodeheaver, of Winona Lake, Ind.

Homer Rodeheaver, who is known to millions of our American citizens as a great song leader, song writer, and publisher, has established the Rodeheaver Boys' Ranch on the St. Johns River in Florida, where they gather boys from broken homes, and where they are given proper discipline and the loving care of men and women who are interested in building character and manhood for the future.

Mr. Rodeheaver makes the interesting suggestion that we might well follow this pattern in many sections of the Nation by using deactivated military camps for this type of care and training of youth. It is an interesting suggestion and I commend the reading of his article to the Members of the Senate.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A SOLUTION FOR THE PROBLEM OF JUVENILE DELINQUENCY

We hear the statement frequently that "youth is on the march." That is right, they certainly cannot stand still. The trouble is they are marching in the wrong direction because the signs have been turned around. They did not put up the signs, they did not create the society in which they have to live. We older people did that. We are responsible. Let us take a good look into the future. Ordinarily statistics are very uninteresting. Statistics and records show the trend of our country. They should be shocking to everyone who loves God, home, and native land. Juvenile delinquency is increasing far more rapidly than any other movement in our country.

Let us take a good, square look into the future and see where we are going. We read the headlines in the paper but very few of us pay any attention to them or very few of us analyze them carefully enough to see what is happening in our country.

Here is a quotation from an editorial in one of our great newspapers. "The entire Nation is justly alarmed at the unsuspected magnitude of this fascination some teenagers have for immorality and crime. Something is being done to save these young lives but it is not nearly enough. It is not enough because too many parents feel that juvenile delinquency is no concern of theirs." Then this paper went on to give a report from the police of just one night in one large city, telling the shocking stories of teenage narcotic addiction, sex orgies, thefts, brutality, sordid forays into the vice dens of the community. This same story has been told in many newspapers about many cities, but very few people seem to be alarmed.

Dr. Martha Elliott, the head of the Children's Bureau of the Department of Health, Education, and Welfare, said in 1952, 385,000 children were in the juvenile courts of our country, charged with some crime or some form of serious juvenile delinquency. She said this juvenile delinquency was increasing at a rate of 10 percent a year.

The most recent statistics show us that the number of juveniles brought to court has doubled in the last 13 years. This last year's total was 435,000 brought into juvenile courts. One statistician says that at the same rate of increase, the estimate of juvenile court cases in 1960 will be 540,000. Dr. Elliott puts it at even a greater number than that. This means that 1 out of every 25 children will have been brought into juvenile courts by 1960.

The United States has 19 million youngsters between the ages of 10 and 18. More than a million of them are in some sort of trouble with the police each year.

The Federal Bureau of Investigation brings us another startling statement, based on a survey of 200 cities. The crime rate of adults went up only 1.9 percent last year but among adolescents under 18, the rate rose by an estimated 7.9 percent, nearly 8 percent. The proportion of crimes committed by youngsters shows an increase in murder, burglary, auto theft, stolen property, rape, weapon carrying, liquor law violations, and assaults.

Three years ago when I talked to J. Edgar Hoover, the head of the Federal Bureau of Investigation and one of the most vital important officials of our Nation, about this question, he told me the age at which the greatest number of men were being arrested for crime that year was only 17, the greatest number of women only 18. When I asked him the reason for all this youth criminality, he replied, "It is the lack of religious training in the American homes."

Our psychiatrists used to say the time to train the children was between 12 and 20 years of age. They have moved the time back now and say we must start not later than 3 years of age if we expect to direct their lives and their thinking in the right channel.

Recently our legislators in Washington have been alerted and they have sent groups out to investigate the reason for the rapidly increasing juvenile delinquency.

The first reason is the lack of religious training in the American homes. That lays it right back into the lap of every individual who has not been giving their children religious training; into the lap of the men and women who have been sending their children to Sunday school instead of taking them. Too many homes are just places to eat and sleep and to house the television set with no religious training or family altar in the home.

Second, they say the churches of the land are not giving enough attention to gathering and giving the right kind of religious training to the children. This, of course, applies to adults as well and there is no cure for that except just an oldtime revival of religion. The fathers and mothers must be made to feel a personal, individual responsibility. Every judge to whom I have talked tells me that if he had the privilege of bringing in the parents instead of the children and giving them the penalty, he would have some chance at the problem.

The September 6, 1954, issue of Newsweek gives us some startling statistics. This article is headed, "Our Vicious Young Hoodlums, Is There Any Hope?"

So far every survey brings us the startling facts about the causes of many of the crimes but none have presented any cure. I believe I know a cure. Of course, we would all say, "Yes, the right kind of religious training." However, that must start in the home and then be carried on in the church. How are we going to alert the fathers and mothers and the ministers of the churches to redouble their efforts in this direction? Without very positive religious experience there is little hope for any boy or girl who has to remain in an unwholesome, ungodly, non-Christian atmosphere. We must find a way to take them out of that atmosphere and surrounding.

I have been in many fine homes where the parents do not seem to understand their children and much less do not care. I often wish I could take some of those children and place them in a good, well-managed orphanage where they would get practical, helpful, religious training.

There are many incidents where children have been taken from a bad environment and placed in a new and better environment and in nearly every instance, the boys and girls have made good.

Down in Florida on the banks of the beautiful St. Johns River, 14 miles south of Palatka, there is such a place. It is called the Rodeheaver Boys' Ranch. We have established it in the nature of a ranch because the large majority of boys are fascinated by the idea of a ranch. Nearly every boy, even 5 or 6 years old, wants a pair of cowboy boots for his Christmas present. Here we take boys from broken homes, boys who have never had the proper discipline from a father and very few of them have ever had the affection of a mother. Many of them are from homes where the father has deserted the mother and she cannot take care of the children and work to support them at the same time. Every boy we have is from a broken home and everyone of them is getting the right kind of discipline and training. It doesn't take long to change them when they get in touch with people who love them and who know the importance of taking care of a boy.

Our plan is to expand this ranch until we get a 100 or 150 boys. Instead of trying to make it too big, where they cannot have the personal attention of their leaders, we would like to go into every other State of the Union and get the people there to start another ranch like ours. The boys do like the idea of the ranch. They like the ranch life and they have more wholesome fun out there than the boys do in the big cities. Then being out away from the big cities, they are not tempted to roam the streets at night where the vast majority of boys get into trouble.

Our present reformatories, jails, and penitentiaries are not curing crime. Judge Ben Irving Cooper of the Court of Special Sessions in New York City said in an article in the Reader's Digest not long ago, that in 14 years he had sentenced 15,000 teen-age children to some term in the jail, reformatory, or penitentiary. Following their records carefully through, at the end of the period of their sentence, he found that 3 out of 5 of them had gone on to greater crime and some of them finished in the electric chair. At the same time, he believes that 80 percent of these children could have been saved if they had been given probationary help.

A ranch like Rodeheaver Boys' Ranch can assist in solving the problems of boys who have been neglected and deserted. Too many times boys of this type get into trouble. Quite naturally when they are thrown into a reformatory or jail with boys with criminal tendencies, the trend of human nature is to go down instead of up. We would like to see enough ranches started to take care of the boys from broken homes, who are unfortunate through no fault of their own. This other crowd is a greater problem and I believe I know a solution to this problem. In nearly every section of the country there are a great many Army and CCC camps which cost our Government millions of dollars to take care of the boys during the days of the war and before. Now they are lying vacant—not being used. They are fully equipped. Their streets are paved. They have kitchen and dining room equipment and plenty of

dormitory space. There is room around them for farm and ranch activities. Many of them have shops where boys could be trained in some vocation.

Instead of continuing the apparently futile plan which certainly is not working, let the Government organize a teen-age army. No, not universal conscription but a teen-age army to take in these boys with criminal tendencies who are constantly getting into trouble with the courts, bring them together in these Army camps under the training of intelligent Army leaders. Establish a school which they will have to attend and get the kind of training they need, a church for every denomination which they will have to attend. Give them the practical training and discipline they have never gotten in their own homes. Give them the military training they need which will build them up physically and mentally. With the right kind of surroundings they will be built up morally and spiritually as well. When the time comes that we will have to augment our present Army personnel, we would have between four and five hundred thousand well-trained young men. As they come to the proper age for armed service, already trained young men, already given discipline and having had the basic training that every soldier has to go through, we would have one of the greatest armies that has ever been enlisted in the history of our country.

We hope, of course, that the Army will not be necessary but if it should be, we would have them ready. Even more important is the fact that they could be sent out through the country as fine, well-trained, well-disciplined workmen into the shops, the stores, the offices, and the places of business and professions of every kind. Our universities of medicine, law, and trade would find them able to take their places in the great schools of the Nation.

The right kind of men with unusual ability and personality that is necessary could be selected from our Army, Navy, and Air Corps for the training of these boys. For some, it would require some hard-boiled Army sergeants who had problems of this kind in their days of service in the Army. There would be schools and churches established in these Army camps, just as in the days of our Regular Army training.

They tell us that 600,000 boys and girls dropped out of the eighth grade this last year. One of the greatest reasons given for delinquency was that these boys had not had the right kind of scholastic training even through the eighth grade. In most cases, the parents lacked control over their own children. They couldn't make them get up in the morning or attend school. In this teen-age Army camp they could not refuse to go into the schoolroom at the proper time or get up when the reveille bugle sounded. They could not refuse to obey their teachers and when the time came for them to go to their churches for religious training, they would not say, "No, Sergeant, I don't believe I want to go this morning." There would never be any question about it. They would learn the finest type of discipline the world has ever known.

Instead of having 435,000 boys locked up in some reformatory or jail, where the big majority are learning more clever crimes, don't you agree with me that it would be better to put them in a great Army camp like this. In a little time they would learn the importance of discipline and after they go into the world and become the fathers of the next generation, they would know how to give proper discipline to their children.

One other very important thing in connection with this idea of a teen-age Army is the boys in various cities who are forming gangs and doing all sorts of destructive crimes. If they knew that when caught they were going to be inducted into this teen-age Army for a year or maybe 2 years, it would cut down on this percentage of juvenile delinquency tremendously. The Army camps should be so conducted that they could have baseball, football, and all kind of sports. As they are developed the boys would have a great pride in having been a part of this great organization that is developing fine soldiers and some of the finest, well-trained citizens of the United States.

Of course, the cost of saving a boy should be the last thing considered. Even from the economical standpoint, it would be much cheaper to put 435,000 boys in the camps of this kind, than to put them into reformatories and jails where it is costing all the way from $1,500 to $2,500 a year for each conviction. This plan was tried out in a measure back a few years ago when the CCC camps were organized. They worked very successfully and helped a lot of boys. It has much greater possibilities because the Government would not have to go to the great expense of building these camps. They are already waiting for boys to step in and begin their training.

We are proving this in our ranch for boys down in Palatka, Fla. Because boys are boys and the same treatment and method will work with human nature everywhere, I know this is a plan that will solve, at least to a great degree, the problem of juvenile delinquency with the least possible cost and with the least possible regret, disappointment, and disgrace to many fathers and mothers throughout the land. If you know of a better plan, let us know about it. If you think this is a workable, plausible, possible plan, talk to the authorities of your community about it and we will see if we cannot create enough public sentiment to get it started before it is too late.

Unless something is done by 1960, 1 out of every 25 boys and girls will have to be dealt with by the judges and officials of our juvenile courts. Wouldn't this be a much better plan?

Bartering Human Lives

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Daily News of August 2, 1955:

BARTERING HUMAN LIVES

All decent men will rejoice at the release of 11 American airmen by Red China and pray that other Americans held in China can be released soon.

But this is no time to be thankful to the Chinese Communists or to engage in the folly of thinking they have changed.

We recommend Ludwell Denny's dispatch from Geneva, on the page preceding this one, in which he reports on the baldfaced lies which the Chinese are using at this conference.

It doesn't take much reading between the lines to realize how cleverly the Chinese Communists have been bartering with the lives of Americans in Chinese jails.

Why did Red China release these men? Because the United States agreed to enter direct ambassadorial talks with Red China in Geneva with sort of half promises of even higher level talks.

What price did Red China pay for these talks? So far only the release of 15 prisoners of war of the United Nations command—men who never should have been held after the Korean armistice.

If the only way of getting these men freed was to agree to such bartering, then we must try to reconcile ourselves to such a compromise. The American Government properly has made their release a major task of its diplomacy.

But let us not sugar coat what we had to do. Far better to face the unpleasant facts—that we are dealing with barbarians—than to kid ourselves into believing the Communists suddenly have got religion.

Secretary of State Dulles says release of the fliers came about "without the United States making any concessions or giving any promises as the price of the release."

But item 2 on the agenda of the Chinese-American talks at Geneva—to discuss other practical matters at issue between the two sides—is the concession, or price.

Both the Chinese and Russian Communists lately have been reaping a harvest of good will by trading in stolen goods, by giving back things they never should have taken, by stopping actions civilized nations never would be guilty of.

Isn't it about time the Communists gave up something besides stolen goods? When they do we will be more optimistic about the genuineness of their peace talk.

Pornographic Materials and Juvenile Delinquency

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Tuesday, August 2, 1955

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a brief summary of the hearings and the results of the investigation by the Subcommittee on Juvenile Delinquency of the Committee on the Judiciary, on the relationship of pornographic materials to juvenile delinquency.

There being no objection, the summary was ordered to be printed in the RECORD, as follows:

Recently the Subcommittee To Investigate Juvenile Delinquency held hearings on the relationship of pornographic materials to juvenile delinquency.

One of the most shocking discoveries we made was the fact that the pornography business in the United States grosses nearly half a billion dollars each year. We found that much of this business flourishes because of inadequate Federal legislation.

The ease with which pornography is reaching children was brought home to us time and again. Business lists taken from convicted pornographers demonstrated that their nasty trade flourishes in every section of the country. These men, who operate virtually as traveling salesmen in filth, take advantage of certain loopholes in Federal law, as well as weak enforcement of existing laws by some local communities, to run small sums of money into large profits.

In Los Angeles, one candid witness told us she made $1 million from a $600 investment. All of this money was amassed by sending lewd pictures through the mails.

Even if convicted, most of these pornographers have little to fear. Penalties are so light that they can be written off as overhead.

The Post Office Department prepared a display for our Washington hearing which illustrated the wide extent and the character of the mail-order operation in pornography. The subcommittee learned that a good deal of this material is sent through the mails to

children. Letters from worried and indignant parents pour into our office daily, complaining about material and advertisements sent to their homes through the mails. The Post Office Department also receives thousands of complaints about this situation.

Post-office authorities are vigilant in their efforts to stop the pornographer's operations. When they detect an individual sending obscene material through the mails, his mail can be stopped. However, the operators of this business told us themselves, that they merely go out of business at one address and start up again at another address under a different name. Then the entire process must start over again. After the pornographer's operations from a new address are detected and halted, he merely moves to a new location.

At our New York and Washington hearings, post-office officials indicated to us that tighter Federal laws are needed by them to curtail the sending of lewd matter through the mail. Therefore, after study of the problem, the subcommittee recommends that the first of the two bills I am introducing today be adopted.

Under this measure, the Postmaster General could detain, for 10 days, the mail of persons suspected of violating existing Federal laws against sending lewd and obscene matter through the mails. This bill spells out in detail the safeguards necessary to protect the civil liberties of those concerned. No mail may be detained for more than 10 days without action being taken under existing law. Only if a petition is filed by the Post Office Department can the restraining order be continued.

The second bill provides graduated penalties for convicted pornographers, which are considerably more severe than under existing statutes. For example, under the new bill, a convicted second offender faces a prison term of not less than 3 years. Under existing law, a prison term is not mandatory.

This measure also tightens the law on pornography for the District of Columbia, and penalties are made more stringent. It also affords the judge in the District of Columbia the choice of applying either a more severe fine or a longer prison sentence than heretofore. This was recommended to us by those who administer the law in the District of Columbia.

A good illustration of the necessity for these more severe penalties is provided by the case of a pornographer who was apprehended in Washington with 80,000 feet of negative and positive film in his possession. He was freed on $300 bail. Naturally, he did not return to face trial. His film can be used over and over again and to produce other prints. His total operation can run into hundreds of thousands of dollars. Had he been convicted, his fine would not have been in keeping with the size and nature of his operations. The small fine of the present law is no deterrent to a man with so large a business.

The public demand for congressional action is great. I hope we can act on these bills this session.

Housing Amendments of 1955

SPEECH

OF

HON. JESSE P. WOLCOTT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. WOLCOTT. Mr. Speaker, of course, the most controversial part of this conference report is on public housing. But there are many other things in the bill which are distasteful to many, including the President of the United States himself. On the question of public housing, let it be clearly understood that the conferees have brought back to you a bill which calls for 45,000 public housing units in 1 year without any questions being asked, without any limitations, without any criteria, without any formula tying these public-housing units in with slum clearance and urban development. Now the President said, in substance, as has been declared on the floor of this House, and I shall read his position on it:

> The low-rent public-housing legislation requested by the administration, unlike the provisions of S. 2126, would be limited to meeting the relocation needs of families of low-income displaced by slum clearance and urban redevelopment projects or by other Government action. The legislation proposed by the administration would authorize the continuation of the public-housing program, but would retain present requirements which make public housing a part of the Government overall program to help cities eliminate and prevent slums and urban blight.

That provision, in keeping with the President's recommendation, was written into the 1954 act, under which we have been functioning for the last year. Under it, over 29,500 units of the 35,000 units we authorized for the fiscal year, 1955, have been contracted for. There are about 6,000 of them left. The President's program does not call for 35,000 units for 1 year or 2 years without that formula, and therein lies the difference between the President's program and the program as brought back to the House by the conferees.

The President does not want public housing without tying it in with slum clearance and urban renewals. He wants only the authority to house those persons who may be displaced by slum clearance and urban renewal.

The President does not want many other things in this bill. The President does not want the provisions in respect to trailer camps. He does not want the independence of the Home Loan Bank Board, because of administration problems. He does not want the provisions of this bill in respect to facility loan programs because that facility-loan program contained in this conference report bypasses the Committee on Appropriations. They go directly to the Treasury for financing, and you will have absolutely no say henceforth about whether they indulge in this program or not. We provided for facility loans in the 1954 act, and it is just and reasonable that the provisions of the 1954 act be continued in that respect. It has worked out splendidly. There is no reason why this Congress should be bypassed to make direct Treasury financing of facility loans.

Mr. FERNANDEZ. Mr. Speaker, will the gentleman yield?

Mr. WOLCOTT. No, not at this time.

Now, we create a new assistant to the FHA Administration. The Administration does not want it. And with a staff, which it does not want or need. It is in this conference report. There are a great many budgetary problems in this conference report that we have not given too much consideration to.

In respect to public housing, our files are full of information as to vacancies in public housing. We all perhaps have a file full of newspaper clippings of material, wherein public-housing agencies are advertising—advertising for occupants—can you imagine that? Advertising to people to come into public housing units. The outstanding one that I have tells about the merits of renting public-housing units in New Orleans. The Public Housing Authority asks people to come in and apply, and tells them that they can get rent as cheaply as $15 a month. Other places say to the Federal Government, through the press, "We do not expect to have any workable programs. If we are going to have a workable program, we would rather build our own public-housing units."

There are numerous cases where localities themselves do not want public housing because of the expense they are put to. Of course, they would want to turn it over to the Federal Government and let the Federal Government take the responsibility, take Federal money and build those houses.

Mr. DONDERO. Mr. Speaker, will the gentleman yield?

Mr. WOLCOTT. I yield.

Mr. DONDERO. In the city of Pontiac, Mich., in my district, the city commission did not pass a motion or a resolution. They passed an ordinance prohibiting public housing within the city of Pontiac.

Mr. WOLCOTT. Many other municipalities have done the same.

Mr. FISHER. Mr. Speaker, will the gentleman yield?

Mr. WOLCOTT. I yield to the gentleman from Texas.

Mr. FISHER. I will ask the gentleman even though the number of public-housing units authorized in the conference report is considerable lower than the original Senate figure, if the House conferees have not in effect completely surrendered on this subject of public housing in this conference?

Mr. WOLCOTT. I think on five different occasions throughout the last 5 years this House has refused to provide for any public-housing units. We surely surrendered in that respect, because the one time that we did provide for them, last year, we added requirements tying them in to slum clearance and urban development.

Mr. FISHER. I notice in the CONGRESSIONAL RECORD today that when this conference report was taken up in the Senate yesterday the Senator who was in charge of the Senate conferees made the statement that—I quote:

> Ninety percent of the conference report is the Senate bill.

Does not the gentleman think that finally, somewhere along the line, after all these years, the will of the House should be maintained to some extent in these conferences?

Mr. WOLCOTT. I agree with that.

Mr. THOMAS. Mr. Speaker, will the gentleman yield?

Mr. WOLCOTT. I yield to the gentleman from Texas.

Mr. THOMAS. May I inquire of the gentleman whether or not provisions which have heretofore been carried in the Independent Offices appropriation bill, namely, limitations on public-housing units, are repealed in this conference report?

Mr. WOLCOTT. My understanding is that they are repealed. There is no limitation; the sky is the limit. The only limitation on the number of public-housing units that can be built is the 45,000; and I understand there is another 43,000; I am not just clear on that, but I think the total number of public-housing units that can be built under this will be in the neighborhood of 90,000.

Mr. THOMAS. Has the leapfrogging provision been repealed? And has the provision against Communists living in these units been repealed?

Mr. WOLCOTT. Let us take them one at a time. The leapfrog provisions are left in the bill.

Mr. NICHOLSON. Mr. Speaker, will the gentleman yield?

Mr. WOLCOTT. I yield to the gentleman from Massachusetts.

Mr. NICHOLSON. In the public housing preamble it states that the number of units shall be limited to the number of persons displaced in slum clearance programs, and sets up $100 million to take care of gas, electricity, and other things.

It goes even further, Mr. Speaker, and the majority of the House managers accepted the Senate provision that permits FHA insurance of mortgages up to $500,000 on trailer camps.

Mr. WOLCOTT. That is right.

Mr. NICHOLSON. Yet the preamble of the bill states that this is to make homes for people If a trailer camp is a home, all right, I would vote for it, but I do not think it is.

Mr. WOLCOTT. It is the first time we have adopted the concept of making FHA mortgage financing available to potentially vacant properties, because you can move a trailer off a trailer camp and you have no house left there; so virtually under this we are making FHA financing available for vacant property.

Mr. KEATING. Mr. Speaker, will the gentleman yield for a question?

Mr. WOLCOTT. I yield.

Mr. KEATING. I wanted to clarify what the President's position is with regard to the public housing feature apart from the number of units involved. Am I correct that his position is that we have reached the point in this country where any public housing should be coupled only with the clearance of slums or an urban development program?

Mr. WOLCOTT. That is the President's position.

Mr. KEATING. And in this conference report am I correct that there is no such linking up of those features?

Mr. WOLCOTT. There is absolutely none.

Mr. KEATING. It has been completely eliminated?

Mr. WOLCOTT. Yes.

Assisting the Handicapped Is in the National Interest and Merits Cooperation From All Segments of American Society

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 6, 1955

Mr. DONOHUE. Mr. Speaker, I should like to include an excellent article entitled "Jobs for the Handicapped," which appeared in the July 1955 issue of the American Federationist, authored by Thomas C. Healey and Stephen E. McCloskey, president and secretary, respectively, of the Boston Central Labor Union.

The articles follows:

JOBS FOR THE HANDICAPPED

(By Melvin J. Maas, major general, U. S. Marine Corps (retired); chairman, President's Committee on Employment of the Physically Handicapped)

In the complex field of job placement for the handicapped the employer, to be sure, has the basic responsibility. However, the labor unions of the Nation can make a major contribution to the program by stimulating a more widespread attitude of fair play in regard to providing equal job opportunities for the impaired.

Unions as a whole have done an excellent job in this field. More emphasis on this policy in the future, however, would further enhance opportunities for handicapped workers to obtain productive employment and to lead dignified, useful lives.

The American Federation of Labor has made a major contribution by clearly defining its policies in the booklet, Jobs for the Handicapped Through Union-Management Cooperation. The five contract clauses regarding the handicapped recommended to local unions, if generally included in collective bargaining, will stand as an eloquent testimonial of the A. F. of L.'s enlightened approach to the problems of the impaired worker.

The proposal that disabled veterans be reinstated in jobs within the limits of their abilities, with retention of accumulated seniority, including military service time, indicates the fine sense of fair play embodied in the recommendations.

The provision that a worker who cannot perform his former duties after injury be transferred to another job for which he is qualified, or which he can be trained to perform, equal consideration for the handicapped after determination of the physical requirements of all job openings, and preemployment examinations only to determine the physical abilities of the worker, plus determination of suitability of the job for the worker by a joint committee, are all farsighted policy recommendations and tend to place the handicapped in a more equitable position with his nonimpaired fellow workers.

No less important is the recommended clause whereby an employee takes his seniority with him when assigned to another department because of physical disability.

It is heartening to see the power and prestige of the American Federation of Labor placed solidly behind such policy. It is my fervent hope that all locals will strive to see that these clauses are included in contracts wherever possible.

There is much for union members to consider in the newly accelerated program for vocational rehabilitation which came into being last August by act of Congress. The vocational-rehabilitation amendments of 1954 provide for an expanded Federal-State program whereby the number of persons rehabilitated and made employable annually would be increased from about 60,000 in 1954 to 200,000 by the end of 1959.

What does this mean? It means that if the number of employable handicapped people is tripled in the next few years, the problem of placement increases in direct proportion. I have frequently said publicly that to rehabilitate these additional thousands annually and not provide jobs for them would be perpetrating a grave injustice on these workers and a hoax on the taxpayer.

It is not a question of "Will it be done?" It must be done. And if the placement job is to be done properly, management and labor must cooperate to the fullest extent.

We must face the realities. Either these workers get jobs or they become charges of the community. Take a man off the public-assistance rolls, give him a job, and he becomes a taxpayer. Multiply the single case by thousands and you can realize the impact on the economy. In the long-range view, this program has a direct bearing on profits and wages, so it becomes a problem involving the general welfare of all. It is a challenge that goes beyond unionism. It is a basic economic problem, and all unions and individual members of unions can share in the responsibility.

Major accent in the national program to hire the handicapped has always been placed on employer acceptance of the principle that such action is good business. To get jobs for the handicapped, it is basic that the man who does the employing is the man who should be sold first.

But there is another factor which all members of labor unions well might ponder. Any handicapped person, once he has broken through the sound barrier of employer resistance, still has another invisible wall ahead. That is employee acceptance.

This is the subtle but frequently the greatest hazard in the problem of placing the handicapped in productive, useful work. If his fellow workers avoid him, dislike him, for no other reason than that he is handicapped, his plight is a sore one. It is doubtful if he can perform as a capable worker in such a hostile environment. Treated with resentment or slighted on every occasion, he cannot perform to the maximum of his abilities. That is the problem of employee acceptance.

Fortunately, natural feelings of human kindness and compassion rule the greater number of American workers, like all other Americans. But it is doing the handicapped a disservice to ignore the fact that prejudices of this sort, mostly unfounded, do exist in cerain areas of the industrial life of our country. One man doesn't like to work next to a blind man. Another objects even to a facial disfigurement.

It is a carryover from the medieval days when any sort of impairment was considered sufficient reason to ban a person from normal social intercourse. It is basically the result of selfishness, oversensitivity, unfounded resentment, or a combination of all three. It can be brutal.

In his first resistance, an unimpaired worker may fear that a handicapped worker may injure the man next to him or do harm to himself. The facts are that handicapped workers, as a whole, are safe workers. The accident rate among them is lower because in their vocational training heavy accent is placed on the safety factor. I have also been told by insurance firms prominent in the field of workmen's compensation that they have never heard of a case where the actions of a handicapped worker caused injury to another person on the job.

The case is rather for the handicapped instead of against them. I have had many foremen tell me that the presence of handicapped workers in the shop has had the tendency to make other workers safer in their work habits. A man with one arm is a constant reminder to the non-handicapped fellow worker of the potential danger of accident. Also, by his conduct the handicapped workers sets an unconscious example for others.

In overcoming such prejudice and ignorance of the facts, the individual, nonhandicapped worker can play an important, personal role. If he looks for the man instead of the impairment, the rest is easy. It is a well-established fact that most people who live day by day in company with all manner of handicapped people rarely are conscious of the handicap. Joe becomes one of the boys. He reacts naturally to treatment that makes him just like others and not apart from them. In my own case, many times people have told me:

"Mel, I forget most of the time that you are blind."

Thus, if the union members on the job will accept Joe or Tom or Dick or Harry as one of their own, those workers with deep-set prejudices will rapidly lose them entirely. I know. I've seen it work. It is an attitude which, if projected throughout the rank and file of labor unions, would in not too long a time produce miracles in fellow well-being and also that happy end-result—greater and more efficient production.

Unions can also play a key role in local programs. They can take part in State and community activities devoted to finding employment opportunity for the handicapped. Being at the grassroots, locals can translate into reality the contract clauses outlined by your federation.

In this connection I would like to emphasize that I do not believe handicapped workers should receive any special concessions such as not paying dues or not conforming with union regulations. I do not believe they expect it or want it. The handicapped worker should accept his job and his union responsibilities on the same basis as the nonhandicapped.

It is in the field of providing equal job opportunity that consideration should be given. Once that climate has been created, the handicapped should accept equality both for its advantages as well as its responsibilities.

Admitting the existence of exceptions, I am convinced that the average handicapped worker is a conscientious, able worker who wants no special privilege. And I am equally positive that the great majority of the rank and file of organized labor have normal feelings of compassion and understanding. The more universal we can make this attitude, the nearer we are to our goal.

I recall with pleasure a typical instance where unions demonstrated their humanitarianism.

In 1951 Nils Josefson, an electronics engineer, conceived the idea for a company known as Paraplegics Manufacturing Co., Inc., in Franklin Park, Ill. A number of paraplegic veterans pooled their resources and leased a building and named Josefson president.

The project would have had rough sledding had not help come from an unexpected source. The building was badly in need of repair and renovation. Out of a blue sky the A. F. of L. Cook County Trades Council came forward and provided free labor to recondition the plant.

The donation, figured at regular wages, exceeded $15,000. The plant is in active operation today and employs more than 80 persons, a large number of them seriously handicapped. I consider this action by the Trades Council to be in the best tradition of American labor.

The President's Committee on Employment of the Physically Handicapped has for many years noted the outstanding achievements of the American Federation of Labor in the hire-the-handicapped program. During the last A. F. of L. convention it was my personal pleasure to present the distinguished service certificate, highest award of our committee, to George Meany.

Presented in the name of the president, it was our way of saying "thank you for a job well done."

Mr. Meany's response, upon receiving the award on behalf of the American Federation of Labor, should be an inspiration, I believe, to every member of the A. F. of L. He said:

"I accept this citation, not in a personal way, because the contribution I have made to this work is very minute. I accept it in behalf of the organizations which go to make up the American Federation of Labor, international unions, central labor unions, local unions, State federations, and all the way down the line. It is at that level, the local level, that this cooperation is given.

"I agree with General Maas that not only is this a good thing to do from the sympathetic, human standpoint of view, but it is good business.

"I went to an exhibit last spring and saw a group of outstanding examples of physically handicapped men actually at work, in some of the most intricate types of work, and doing a very good job, turning out a job insofar as time and quality are concerned that is comparable with anyone who was working at the same operation and who is without any physical handicap.

"So I am very happy to accept this citation on behalf of the American Federation of Labor and to express to General Maas our complete and continued cooperation in this work in the future."

In summary, individual members of unions can make important contributions to the success of the hire-the-handicapped program by calling the attention of employers to accomplishments of handicapped workers in the shop.

There is one on-the-job activity in which each can do his share. That is by using the oldest means of communication—word of mouth—to increase the understanding in his or her community of the value and known benefits that accrue from rehabilitating impaired workers and giving them an opportunity to earn a productive livelihood.

All union members can make a study of the needs of the handicapped in their own home towns and work as individuals in helping to provide opportunities for filling the needs of the future.

I recall the story of a young soldier who was addressing a huge war bond rally in a stadium in Seattle during the war. He was trying to show how the combined efforts of a large number of people can produce a tremendous result. He was trying to persuade everyone to buy at least one war bond.

"Let's consider the light from one match to represent the price of a single bond," he said. "Now, will every man in the stadium light a match?"

His audience complied, and the stadium glowed like a thousand Christmas trees. He had made his point.

The individual contribution of union members in helping the hire-the-handicapped program will work the same way. If each member of the American Federation of Labor will, in some small or large way, perform one act during 1955 to further the hire-the-handicapped program, the cumulative effect will be colossal.

Voting and Attendance Record of Hon. Gerald R. Ford, Jr., of Michigan

EXTENSION OF REMARKS

OF

HON. GERALD R. FORD, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. FORD. Mr. Speaker, under leave to extend my remarks, I include a report of my voting and attendance record during the 1st session of the 84th Congress.

The record includes all rollcall votes and all quorum calls. The description of bills is for the purpose of identification only; no attempt has been made to describe the bills completely or to elaborate upon the issues involved.

The purpose of this report is to collect in one place information which is scattered through thousands of pages of the RECORD. I want to be able to provide any interested constituent with a simple compilation of my voting and attendance record.

It will be noted that out of a total of 147 rollcalls I missed on only two occasions for an attendance record of 99.3 percent. The footnotes at the end of the compilation will indicate the reason for the absences and how I would have voted if present.

Voting and attendance record, Representative GERALD R. FORD, JR., 5th District of Michigan, 84th Cong., 1st sess.

Roll-call No.	Date	Measure, question, and result	Vote
	1955		
1	Jan. 5	Quorum call	Present.
2	do	Election of the Speaker (Rayburn; 226; Martin, 198)	Martin.
3	Jan. 25	H. J. Res. 159: Authorizing the President to employ the Armed Forces of the United States for protecting Formosa, etc. (Passed 409 to 3)	Yes.
4	Jan. 27	H. R. 587: To provide that persons serving in the Armed Forces on Jan. 31, 1955, may continue to accrue educational benefits under the Veteran Readjustment Assistance Act of 1952. (Passed 366 to 0).	Yes.
5	Feb. 8	H. R. 3005: To Extend Universal Military Training and Service Act and the Dependents' Assistance Act for 4 years. (Passed 394 to 4)	Yes.
6	Feb. 16	H. R. 3828: To adjust legislative and judicial salaries; Congressmen to receive $22,500 plus $2,500 for expenses. (Passed 283 to 118)	Yes.
7	Feb. 17	Quorum call	Present.
8	do	H. Res. 142: Motion to stop further debate on the question of a closed rule on H. R. 1. (Defeated 207 to 178)	Yes.

Voting and attendance record, Representative GERALD R. FORD, JR., 5th District of Michigan, 84th Cong., 1st sess.—Continued

Roll-call No.	Date	Measure, question, and result	Vote
	1955		
9	Feb. 17	H. Res. 142: To permit 5 hours of debate and amendments from the floor on H. R. 1. (Defeated 193 to 191.)	No.
10	do	H. Res. 142: Closed rule on H. R. 1 to prohibit amendments from the floor. (Passed 193 to 192.)	Yes.
11	Feb. 18	H. R. 1: To recommit to Committee on Ways and Means with instructions to amend to require the President to comply with recommendations of the Tariff Commission except when national security is involved. (Defeated 206 to 199.)	No.
12	do	H. R. 1: Final passage to extend the authority of the President for 3 years to enter into trade agreements for reduction of tariffs. (Passed 295 to 110.)	Yes.
13	Feb. 23	Quorum call	Present.
14	Feb. 24	Quorum call	Present.
15	Feb. 25	H. R. 4295: To recommit to Committee on Ways and Means in order to delete provision calling for a $20 credit against individual income tax for each personal exemption in tax year 1955. (Defeated 210 to 205.)	Yes.
16	do	H. R. 4592: Extending existing corporate normal-tax rate and certain excise-tax rates and providing $20 credit against individual income taxes for each personal exemption. (Passed 242 to 175.)	No.
17	Mar. 1	H. R. 3828: An adoption of conference report setting judicial and legislative salaries: Congressmen to receive $22,500. (Passed 223 to 113.)	Yes.
18	Mar. 10	Quorum call	Present.
19	do	H. R. 4720: To increase the compensation of members of the Armed Forces. (Passed 399 to 1.)	Yes.
20	Mar. 16	Quorum call	Present.
21	Mar. 18	H. R. 4903: Amendment to restore $4 million for the United Nations technical-assistance program which had been deleted by a point of order. (Passed 174 to 107.)	Yes.
22	Mar. 21	Quorum call	Present.
23	do	H. R. 4646: To suspend the rules and pass the bill increasing postal employees' salaries on an average of 7.5 percent. (Defeated 302 to 120.)	Yes.
24	do	Quorum call	Present.
25	do	H. R. 4957: To suspend the rules and pass the bill directing a redetermination of the national marketing quota for burley tobacco for 1955–56. (Defeated 260 yeas to 151 nays, a ⅔ majority being necessary.)	Not voting.[1]
26	Mar. 22	Quorum call	Present.
27	do	H. Res. 170: To disapprove of the disposal of some of the Government-owned synthetic rubber plants. (Defeated 283 to 132.) (Effect of my vote: Permits sale of plants to private companies.)	No.
28	Mar. 23	Quorum call	Present.
29	do	H. Res. 171: To disapprove of the disposal of some of the Government-owned synthetic rubber plants. (Defeated 276 to 137.) (Effect of my vote: Permits sale of plants to private companies.)	No.
30	Mar. 24	Quorum call	Present.
31	Mar. 28	Quorum call	Present.
32	Mar. 29	Quorum call	Present.
33	Mar. 30	H. R. 4295: To accept conference report extending corporate and excise taxes for 1 year and deleting the $20 income tax credit for each taxpayer and his dependents. (Passed 386 to 8.)	Yes.
34	do	H. R. 5240: Amendment to restore a provision limiting to $1 per month the fee to educational institutions for reports on veterans. (Defeated 226 to 156.)	Yes.
35	Apr. 13	Quorum call	Present.
36	Apr. 20	Quorum call	Present.
37	do	H. R. 4644: Amendment to the postal pay raise which would increase the annual rate for certain classes of employees; raised the overall increase from 7.5 to 8.2 percent. (Passed 224 to 189.)	No.
38	do	H. R. 4644: Motion to recommit to Committee on Post Office and Civil Service. (Defeated 287 to 125.)	Yes.
39	do	H. R. 4644: On final passage of the bill as amended to grant a postal pay raise of about 8.2 percent. (Passed 324 to 85.)	No.
40	Apr. 21	Quorum call	Present.
41	do	H. R. 4393: To provide for construction and conversion of certain modern naval vessels; calls for a $1.3 billion, 4-year navy shipbuilding program. (Passed 373 to 3.)	Yes.
42	Apr. 27	Quorum call	Present.
43	May 3	Quorum call	Present.
44	May 4	Quorum call	Present.
45	May 5	Quorum call	Present.
46	do	H. R. 12: Amendment to remove peanuts as one of the basic commodities in the farm price-support program. (Defeated 215 to 193)	Yes.
47	do	H. R. 12: To recommit to Committee on Agriculture. (Defeated 212 to 199.)	Yes.
48	do	H. R. 12: To restore the 90 percent of parity supports on 5 basic crops and fix the minimum level for support of dairy products at 80 percent of parity. Final passage. (Passed 206 to 201.)	No.
49	May 9	Quorum call	Present.
50	do	S. 1 and H. R. 4644: To recommit the conference report on the postal pay raise bills (8.8 percent increase) to the conference committee. (Defeated 275 to 118.)	Yes.
51	do	S. 1 and H. R. 4644: On final passage of conference report on postal pay raise bills (8.8 percent). (Passed 328 to 66.)	No.
52	do	H. Res. 223: To authorize consideration of the bill to permit statehood for Hawaii and Alaska. (Passed 322 to 66.)	Yes.
53	do	Quorum call	Present.
54	May 10	Quorum call	Present.
55	do	Quorum call	Present.
56	do	Quorum call	Present.
57	do	H. R. 2535: To recommit to committee the bill authorizing statehood for Hawaii and Alaska. (Passed 218 to 170.)	No.
58	May 11	Quorum call	Present.
59	do	Quorum call	Present.
60	May 12	Quorum call	Present.
61	do	Quorum call	Present.
62	do	H. R. 6042 (Department of Defense appropriations): To strike out provisions requiring approval by congressional committee before the armed services may move any permanent facility. (Defeated 202 to 184.)	No.
63	do	H. R. 6042: Final passage of defense appropriations bill. (Passed 382 to 0.)	Yes.
64	May 17	Quorum call	Present.
65	May 18	Quorum call	Present.
66	May 19	Quorum call	Present.
67	do	Quorum call	Present.
68	do	Quorum call	Present.
69	May 23	S. 727: To increase the salaries of judges for the District of Columbia. (Passed 282 to 32.)	Yes.
70	May 25	Quorum call	Present.
71	do	H. Res. 224: To create a select committee to investigate the White County (Ind.) Bridge Commission. (Passed 205 to 166.)	No.
72	do	H. R. 2851: To make agricultural commodities owned by the CCC available to needy persons in areas of acute distress. (Passed 343 to 1.)	Yes.
73	May 26	Quorum call	Present.
74	do	S. 727: To recommit to conference committee a bill which would raise salaries of District of Columbia judges to an amount greater than previously voted by the House. (Passed 170 to 165).	Yes.
75	do	Quorum call	Present.
76	do	H. R. 5881: To recommit to committee the bill which provided for Federal compensation in non-Federal reclamation projects and for participation by non-Federal agencies in Federal reclamation projects in order to limit the scope of the bill to 17 Western States instead of all 48 States. (Defeated 229 to 62).	No.
77	June 1	Quorum call	Present.
78	do	H. R. 3990: To authorize the Secretary of the Interior to investigate projects for conservation, development, utilization of the water resources of Alaska. Motion to recommit bill to Committee on Interior and Insular Affairs. (Defeated 278 to 79.)	Yes.
79	June 7	S. 2061: To increase salaries in the postal service by an average of 8 percent and to provide for reclassification. (Passed 409 to 1)	Yes.
80	June 8	H. R. 5923: To authorize an appropriation of $57,730,000 to complete the Inter-American Highway. (Passed 353 to 13)	Yes.
81	June 13	Quorum call	Present.
82	June 14	Quorum call	Present.
83	do	H. R. 1: On acceptance of conference report on the Trade Agreements Extension Act of 1955. (Passed 347 to 54.)	Yes.
84	do	H. R. 6227: To provide for the control and regulation of bank holding companies. (Passed 371 to 24.)	Not voting.[2]
85	June 15	Quorum call	Present.
86	do	H. Res. 210: To authorize an investigation of the Federal Open Market Committee of the Federal Reserve Board. (Defeated 214 to 178.)	No.
87	June 16	Quorum call	Present.
88	June 20	S. 67: To increase salaries of civil-service employees by about 7.5 percent. (Passed 370 to 3.)	Yes.
89	do	H. Con. Res. 109: Authorizing the appointment of a congressional delegation to attend the NATO Parliamentary Conference. (Passed 348 to 31.)	Yes.
90	do	H. R. 6295: To raise the per diem allowance for subsistence and travel expenses for Federal employees from $9 to $13. (Passed 320 to 41.)	Yes.

Footnotes at end of table.

Voting and attendance record, Representative GERALD R. FORD, JR., 5th District of Michigan, 84th Cong., 1st sess.—Continued

Roll-call No.	Date	Measure, question, and result	Vote
	1955		
91	June 21	H. R. 4663: To authorize the Secretary of the Interior to construct, operate, and maintain the Trinity River division, Central Valley project, California, and to authorize an appropriation of $225 million therefor. (Passed 230 to 153.)	Yes.
92	June 22	Quorum call	Present.
93	...do	H. R. 6040: To recommit to committee the customs simplification bill with instructions to strike out sec. 2, which would make export value the primary basis for assessing ad valorem duties. (Defeated 232 to 143.)	Yes.
94	June 23	H. Con. Res. 149: Expressing the sense of Congress that the United States in its international relations should maintain its traditional policy in opposition to colonialism and Communist imperialism. (Passed 367 to 0.)	Yes.
95	June 27	H. R. 6992: To extend for 1 year the existing temporary ceiling on the public debt of $281 billion. (Passed 267 to 56)	Yes.
96	...do	Quorum call	Present.
97	...do	H. R. 6829: To authorize certain construction at military, naval, and Air Force installations. (Passed 316 to 2)	Yes.
98	June 28	Quorum call	Present.
99	...do	H. R. 3005: To recommit the conference report to committee. (Defeated 171 to 221)	No.
100	...do	H. R. 3005: To extend the Universal Military Training and Service Act and the Dependents Assistance Act for 4 years and to extend for 2 years the Doctors-Dentists Draft Act. (Passed 388 to 5).	Yes.
101	...do	Quorum call	Present.
102	June 29	Quorum call	Present.
103	...do	S. 727: To recommit the conference report on the bill which adjusts the salaries of the judges of the courts of the District of Columbia. (Defeated 157 to 227.)	No.
104	June 30	Quorum call	Present.
105	...do	S. 2090: To authorize appropriations totaling $3,285,800,000 for carrying forward the mutual security program. (Passed 273 to 128.)	Yes.
106	July 1	Quorum call	Present.
107	...do	Quorum call	Present.
108	July 5	Quorum call	Present.
109	July 6	H. R. 3210: To recommit the bill which would authorize the State of Illinois and the Sanitary District of Chicago to test, on a 3-year basis, the effect of increasing the diversion of water from Lake Michigan into the Illinois Waterway. (Defeated 74 to 316.)	Yes.
110	July 7	S. 2090: To adopt conference report authorizing $3,285,800,000 for the mutual security program. (Passed 262 to 120.)	Yes.
111	July 11	Quorum call	Present.
112	...do	H. R. 7224: Appropriating $2,638,741,750 for mutual security during the fiscal year 1956. (Passed 251 to 123.)	Yes.
113	July 12	Quorum call	Present.
114	July 13	H. R. 6766: Conference report making appropriations for the AEC, TVA, and certain agencies of the Departments of Interior and the Army. (Passed 315 to 92.)	No.
115	...do	H. Res. 295: To provide for the consideration of H. R. 7080, a bill to provide benefits for the survivors of servicemen and veterans. (Passed 376 to 24.)	Yes.

127	...do	Quorum call	Present.
128	...do	Quorum call	Present.
129	...do	H. R. 7000: To agree to the conference report on the Reserve Forces Act of 1955. (Passed 315 to 78.)	Yes.
130	July 26	H. Res. 314: To provide for 3 hours debate on H. R. 7474, the Federal-State highway construction bill. (Passed 274 to 128)	Yes.
131	July 27	Quorum call	Present.
132	...do	H. R. 7474: To recommit this highway bill to committee and to substitute therefor the administration bond financing proposal for highway construction. (Defeated 193 to 221.)	Yes.
133	...do	H. R. 7474: Final passage on the highway construction bill increasing certain taxes. (Defeated 123 to 292.)	No.
134	July 28	Quorum call	Present.
135	...do	H. Res. 317: To provide for 3 hours of general debate on H. R. 6645, to amend the Natural Gas Act. (Passed 272 to 135.)	Yes.
136	...do	Quorum call	Present.
137	...do	H. R. 6645: To recommit to committee the amendment to the Natural Gas Act. (Defeated 203 to 210.)	Yes.
138	...do	H. R. 6645: The Harris bill to amend the Natural Gas Act to remove from control of the Federal Power Commission natural gas producers and gatherers. (Passed 209 to 203.)	No.
139	July 29	Quorum call	Present.
140	...do	S. 2126: To adopt the Wolcott substitute for the Senate housing bill. (Passed 217 to 188.)	Yes.
141	...do	S. 2126: Final passage with the Wolcott substitute inserted in the housing bill. (Passed 396 to 3.)	Yes.
142	Aug. 1	Quorum call	Present.
143	...do	H. Res. 299: To grant to the Small Business Committee an additional $35,000 for operating expenses. (Passed 231 to 134.)	No.
144	...do	S. 2576: To strengthen the power of the District Commissioners in relation to the Capital Transit Co. and to authorize repeal of the franchise of the company. (Defeated 215 to 150, a ⅔ majority being required to suspend the rules.)	No.
145	...do	Quorum call	Present.
146	Aug. 2	Quorum call	Present.
147	...do	S. 2126: To adopt conference report on Housing Act of 1955. (Passed 187 to 168.)	No.

[1] En route to Michigan to keep an appointment. If present, would have voted "no."

[2] En route to Michigan to keep a speaking engagement. If present would have voted "yes."

The Story of TVA: More Abundant Life at the Expense of the Taxpayers

EXTENSION OF REMARKS
OF
HON. CHARLES A. HALLECK
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. HALLECK. Mr. Speaker, I would like to call to the attention of the House a recent publication, the 1955 Tennessee Valley Yearbook, which contains features of special interest to the Members, and to the public in general, in light of current discussions of public versus private power development in this area.

The yearbook is obviously designed to extoll life in the Tennessee Valley and to lure new industries to the region.

With that purpose I certainly have no quarrel.

Nor do I have any objections whatsoever to a desire on the part of the citizens of the Tennessee Valley to enjoy a more abundant life. That is the common goal of every American.

But I am getting a little fed up with the methods that are being used to expand the advantages of the Tennessee Valley at the expense of the rest of the country, including the taxpayers of the Second Congressional District of Indiana, in whose welfare I have a special interest.

We have heard a lot of irresponsible talk about the Dixon-Yates contract including shameful attempts to cast reflections on the integrity of the President of the United States in connection with this program to build a $100 million powerplant with private instead of public funds.

The President has now ordered the contract canceled for the good and simple reason that the city of Memphis has agreed to build the needed plant itself. Had such assurances been given earlier, there would have been no necessity for the Dixon-Yates arrangement, and contract termination expenses, whatever they may be, would have been spared the Federal Government.

Meanwhile, however, a desperate attempt is being made by public-power advocates, an attempt generated, if I may use that term, by extreme TVA partisans,

to create the impression that there was something dishonorable about the Government's dealings with the Dixon-Yates group.

The purpose of these efforts is to create, if possible, a political issue by discrediting President Eisenhower and the Republican administration.

The attempt is doomed to failure. The Dixon-Yates contract was a good one, honestly arrived at, which would have benefited the Government, the people of the Tennessee Valley, and the taxpayers of the whole country.

If there is an issue at all, it is that the trend toward the socialization of electric power in this country has been halted under a Republican administration and that the demands for further subsidization of one small segment of our population at the expense of the rest of our people have been successfully resisted.

The Congress has refused, and rightly so, to spend another $100 million of public funds to build a new steam generating plant at Fulton, Tenn., which would further subsidize the production of low-cost electric power, about which the 1955 Tennessee Valley yearbook speaks in such glowing terms.

So far, the Congress has invested $1.5 billion for the development of this vast power empire. This money is either collected from taxpayers all over the country, or it is borrowed.

Three percent interest on $1.5 billion is $45 million a year, a further subsidy of the TVA being borne by all our taxpayers.

Interest on the proposed $100 million steam plant at Fulton would be another $3 million a year.

That means a cost of $48 million annually to the Nation's taxpayers, in addition to the money invested.

No wonder the Tennessee Valley can offer power benefits to business, industry, agriculture, and homeowners far beyond benefits available to the rest of the country.

The first advertisement in the yearbook, a full-page affair, should be of particular interest to sections of the Nation which have lost industries in recent years.

Sponsored by the industrial committee of 100, Chattanooga Chamber of Commerce, the ad indicates that 7 new industries have invested $127 million in that community since 1948 and have invested $57 million in industrial expansions during the same period.

The advertisement is an invitation to other industries to avail themselves of the benefits of low-cost power—subsidized by the Nation's taxpayers.

A second full-page advertisement further extols the virtues and benefits of life in Chattanooga, although the sponsorship of the advertisement is not listed.

The city is described as "the Electrical Center of the South," with "the highest average annual kilowatt-hour residential consumption—9,050 kilowatt-hours—of any city of equal size or larger in the world."

The advertisement goes on to point out that—

> Power, low-cost power and plenty of it is what the people of Chattanooga demanded in 1939 when they established the publicly owned electric power board of Chattanooga.

The following statement will be interesting to the rest of the taxpayers of the country who have helped to foot the bill for this low-cost power:

> Through 1954 our customers have saved $96,191,795 (based on private power rates in 1939) in electricity costs with rates that are less than half the national average. They have used this power to enjoy better living on farms, in homes, to increase production in business and industry.

Who do you suppose made it possible for the customers of the electric power board of Chattanooga to save more than $96 million on their electric bills?

It was the taxpayers of the entire country, who supplied the $1.5 billion invested by the Congress to develop first hydroelectric power and then steam-generated power as the demand grew for cheap, subsidized electricity.

I must say the copywriters were a bit loose with the facts in another part of the advertisement when they state that "all appropriations for electric-power development are repaid to the National Government with a 6-percent-interest payment."

TVA pays no interest to the Federal Government and it does not pay normal taxes.

In fact, the editor of the Yearbook, in a presentation on page 35 of the publication, states that TVA has paid to the Federal Treasury $123 million on the original investment.

Compare that with the $1.5 billion of public money which the Federal Government has invested in TVA to date.

According to another full page advertisement sponsored by the electric power board of the city of Nashville:

> More than 22,000 homes are heated solely by electricity in the Nashville-Davidson County area—largest unit of electrically heated homes in America.
>
> Nashville folks live better with cheap, abundant electric power—

Says the advertisement.

> Life in Nashville is lighter and brighter because of cheap, convenient electric power.
>
> We earnestly advise any industry considering the establishment of a new southern factory branch, plant, or distribution warehouse to come to Nashville, where you will receive the finest electric service in the entire Nation.

The advertisement concludes with this slogan:

> In Nashville we say "Electricity: Biggest bargain in your budget."

It should be, with the rest of the Nation helping to pay for it.

I want to give credit where credit is due.

Not all of the people of the Tennessee Valley area are happy about relying on Federal handouts.

Following a recent appearance which I made on television to explain the background of the TVA development and the administration's policy with regard to further expansion of power facilities in that area, I received a number of letters and telegrams from all over the country from people who agreed with that policy.

Some of these communications were from the Tennessee Valley region. One, postmarked from Knoxville, comments in part:

> I heartily agree with your views on TVA on Today program this morning. All honest people agree with you. * * * I buy my own shoes with no help from 41 States.

Even the editor of the 1955 Tennessee Valley Yearbook recognizes that a situation exists which should not continue, pointing out on page 37 of the publication that—

> Sooner or later we must live within our income; we should repay to the United States Treasury the full cost of TVA for the good of our souls.

Cutting through the smokescreen of misrepresentations, innuendoes, false charges, and sly insinuations, the issue can be defined as whether the taxpayers of the country are going to be required to underwrite the continued expansion of public power for a favored section of the country, whether that expansion shall continue until we have completely socialized the power industry in America, or whether we are going to realize that "cheap" public power is a myth, an illusion created by the fact that many are paying for the benefits of a few.

It is time we heeded the logic of President Eisenhower who wrote, in a letter to the Honorable STERLING COLE, of New York, at that time chairman of the Joint Committee on Atomic Energy:

> My general thinking on the subject is this: it seems to me that all arguments for the construction by the Federal Government for the additional steam plant ignore this one and very important truth. If the Federal Government assumes responsibility in perpetuity for providing the TVA area with all the power it can accept, generated by any other means whatsoever, it has a similar responsibility with respect to every other area and region and corner of the United States of America.

No one quarrels with the original purpose of the TVA: to promote flood control, navigation and recreation in the area and to dispose of the surplus power generated incidentally.

But we have now arrived at the point where more than twice as much power is being generated by auxiliary steam plants as is being generated by the hydroelectric installations.

President Eisenhower also wisely pointed out in his budget message earlier this year that—

> To the greatest extent possible, the responsibility for resource development, and its cost, should be borne by those who receive the benefits.

The President has also suggested that studies be made looking to legislation which will provide "that an adequate rate of interest be paid to the Treasury on appropriated funds invested in power facilities in the Tennessee Valley Authority."

I think that proposal is sound.

It is time that TVA stands on its own feet.

It is time that the people of this region show an appreciation of the advantages already given them, meeting their obligations to the rest of the Nation's taxpayers by reimbursing the United States Treasury at an equitable rate.

I am glad the people of Memphis have decided to proceed with the construction of a powerplant to supply their own needs.

As long as they are willing to invest their own money, pay interest on the funds they borrow, pay back the principle and work out the manifold problems of such an enterprise without coming to the Federal Government for subsidies, I say more power to them.

Results of Questionnaire Mailed by Hon. John F. Baldwin, of California, to Residents of the California Sixth District

EXTENSION OF REMARKS
OF
HON. JOHN F. BALDWIN, JR.
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. BALDWIN. Mr. Speaker, this spring I issued a questionnaire to each family of registered voters in my district. The response to this questionnaire was tremendous, and the replies have been most helpful to me. The tabulation of the questionnaire is summarized below:

1. Are you in favor of the United States defending: (1) Formosa and the Pescadores Islands? Yes, 79 percent; no, 15.2 percent; no opinion, 5.8 percent. (2) The islands of Quemoy and Matsu off the coast of China? Yes, 45.5 percent; no, 41 percent; no opinion, 13.5 percent.

2. Should we grant more foreign aid, 10.5 percent; less foreign aid, 49 percent; or the same amount as during the past year, 30.4 percent? No opinion, 10.1 percent.

3. Should there be an expanded program of Federal aid for school construction? Yes, 76.9 percent; no, 19.5 percent; no opinion, 3.6 percent.

4. Do you favor the military reserve program recommended by the President to supplement the present selective-service program? Yes, 73.7 percent; no, 16.5 percent; no opinion, 9.8 percent.

5. In view of the Post Office Department deficit:

(a) Do you favor raising the first-class postal rate to 4 cents? Yes, 50 percent; no, 42.4 percent; no opinion, 7.6 percent.

(b) Do you favor raising the air-mail postal rate to 7 cents? Yes, 58 percent; no, 34.5 percent; no opinion, 7.5 percent.

(c) Do you favor raising second- and third-class postal rates? Yes, 68.4 percent; no, 25.7 percent; no opinion, 5.9 percent.

6. Should Communist China be admitted to the United Nations? Yes, 15.3 percent; no, 78.5 percent; no opinion, 6.2 percent.

7. (a) Should Alaska be granted statehood? Yes, 81.6 percent; no, 13.7 percent; no opinion, 4.7 percent.

(b) Should Hawaii be granted statehood? Yes, 82.1 percent; no, 13.3 percent; no opinion, 4.6 percent.

8. Do you favor the President's recommendation that the Federal Government reinsure private and nonprofit health insurance plans? Yes, 57 percent; no, 30.9 percent; no opinion, 12.1 percent.

9. Should the minimum wage be increased to 90 cents, 21.8 percent; $1, 34.6 percent; $1.25, 21.1 percent; or left at 75 cents, 17.9 percent? No opinion, 4.6 percent.

10. Should the Taft-Hartley Act be amended, 38.3 percent; repealed, 14.2 percent; or left as is, 39.4 percent? No opinion, 8.1 percent.

11. Should the Federal Government put the Dixon-Yates contract into effect, 25.8 percent; or cancel it, 26.9 percent; or do you have no preference on it, 47.3 percent?

12. Although the budget is not balanced, do you believe there should be a cut in income taxes this year? Yes, 28.9 percent; no, 68.1 percent; no opinion, 3 percent.

13. Should the voting age be lowered from 21 to 18 years? Yes, 36.8 percent; no, 60.6 percent; no opinion, 2.6 percent.

14. What type of farm-price supports do you favor? Flexible (75 percent to 90 percent), 59.2 percent; rigid (90 percent), 7.3 percent; none, 25 percent? No opinion, 8.5 percent.

15. If you are a Federal Government civilian employee, do you favor extension of social-security coverage to all Federal Government employees? Yes, 24.3 percent; no, 10.7 percent; no opinion, 65 percent.[1]

16. Should tariffs be lowered, 32.5 percent; raised, 10.4 percent; or left as they are, 42.6 percent? No opinion, 14.5 percent.

[1] Question not applicable because of non-Federal employment.

It Is a Myth Scientists Can Make Progress Only in an Atmosphere of Complete Freedom—Communist Scientists Are Outstripping Us in Some Fields Although Working in Complete Secrecy

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. JUDD. Mr. Speaker, under leave to extend my remarks, I include the following challenging article by David Shea Teeple, who is a former Assistant to Louis L. Strauss, chairman of the Atomic Energy Commission. It is reprinted from Human Events of July 30, 1955:

SCIENCE, SECRECY, AND SECURITY
(By David Shea Teeple)

At the present time we are in the midst of a full-scale onslaught on the United States security program. There is every reason to believe that the attack will be successful and that further revisions to weaken the program are inevitable.

Led by the usual groups, with the addition of some strange bedfellows, the liberal segment of the American press is thundering denunciation of the infringement of the security program on the civil liberties of the American people. Security through progress and not through secrecy seems to be the keynote of the present attacks.

Those who have had experience with security programs will not dispute that they infringe on civil liberties. To require an investigation of an individual before he can be employed or retained in employment is to set into motion a chain of events which is bound to violate personal privacy, probably the most precious of civil liberties.

The only justification for any security program is the recognition of an existing danger to the society. In order to protect and perpetuate the social entity, the people by law authorize temporary infringements upon the civil liberties of the individual citizen. The suspension of the right of habeas corpus, in certain instances as provided by the Constitution, is the more obvious example of such a temporary relinquishment of a personal right.

Admittedly the administration of any security system is an extremely difficult assignment. As free people we should be constantly critical of a security program. We should be ever vigilant to see that there is a necessity for the program and that the results obtained from the program justify the sacrifices made.

There is one facet of the present assault on the security program which seems to be specious in nature. Since it is the most widespread and persuasive criticism, it deserves very close examination.

The statement has been made, and repeated by responsible persons over and over again, that secrecy, security, and science are irreconcilable. Dr. Karl T. Compton, one of the leading men of science and holder of many important Government positions, stated in 1949 that:

"Unfortunately, secrecy and progress are mutually incompatible. This is always true of science, whether for military purposes or otherwise. Science flourishes and scientists make progress in an atmosphere of free inquiry and free interchange of ideas, with the continual mutual stimulation of active minds working in the same or related fields. Any imposition of secrecy in science is like application of a brake to progress."

Prof. Walter Gellhorn in a book entitled "Security, Loyalty, and Science," subsidized by a Rockefeller Foundation grant to Cornell University, states:

"The hope for science in this country and for the Nation's security is that the public at large will shed its fears, grow in understanding, and cease credulously accepting assertions that safety lies in secrecy. Secrecy is antithetical to the spirit of science. It is socially hurtful. Only for brief periods can it be practiced without destroying the scientific superiority it is intended to preserve."

Dr. Vannevar Bush in Modern Arms and Free Men gives an example of the stifling effect of secrecy and security in the following words:

"Why were they [the Germans] so far behind [in atomic-bomb research]? Bombing and the destruction of needed industrial facilities account for some of the lag. Limited availability of critical materials accounts for some. But the real reason is that they were regimented in a totalitarian regime. * * * The whole affair was shot through with suspicion, intrigue, arbitrary power, formalism, as will be all systems that depend for their form and functioning upon the nod of a dictator. It did not get to first base in the attempt to make an atomic bomb."

We have been told that the lifeblood of science is the open interchange of information within the scientific fraternity. It is frequently said that the very existence of a security program in Government has prevented our scientists from entering into Government work and has further resulted in a lack of desire on the part of our young men and women to pursue courses of scientific education at our colleges and universities.

Almost all of the scientific journals have attacked the security program and have warned the American people that progress and secrecy are irreconcilable. The American public has accepted this thesis because it is in accordance with our heritage and tradition.

Upon close examination, however, it will not hold water.

Even the most caustic critics of our present security program will admit that ours is mild and extremely well balanced in comparison to the Soviet system. The absolute police state with compartmentalization, classification, and secrecy exists within the Soviet Union and has existed under that system for the last 30 years. If the major premise of these critics of the security program is correct, how can we account for

the astounding series of exposes to which we have recently been subjected? For example:

1. Mr. Allen W. Dulles, Director of the Central Intelligence Agency and, therefore, presumably knowledgeable, stated on June 1, 1955, that:

"In the field of science the Soviets have made rapid progress and their accomplishments here should not be minimized; least of all by those who are directly concerned with our national security. * * * It is well to note that the Soviets are now turning out more university graduates in the sciences and engineering than we are—about 120,000 to 70,000 in 1955. In round numbers, the Soviets will graduate about 1,200,000 in the sciences in the 10 years from 1950 to 1960, while the comparable United States figures will be about 900,000."

He further states that scientific and technical education in the Soviet Union today presents a challenge to the free world.

The education editor of the New York Times, Mr. Benjamin Fine, in commenting on Mr. Allen Dulles' remarks, says that the caliber of training which the Soviets receive is rapidly approaching ours and, in some respects, may even surpass it.

2. Dr. John R. Dunning, dean of Columbia University School of Engineering, referring to Russian technical training, says, "We have almost lost the battle for scientific manpower."

3. On May 18, 1955, Brig. Gen. Woodbury M. Burgess, Deputy Chief of Staff for Intelligence of the Continental Air Defense Command, said, "The Russian Air Force is currently at least as good as ours, possibly better." He added that he was afraid that "the Russians are ahead of us in the effort to perfect the guided missile."

4. The Defense Department has announced that the Soviets have developed a turbo-prop bomber and an all-weather jet fighter incorporating radar and other electronic equipment. The announcement implies that the Soviet radar network may be at least as good as ours, if not better. According to some supposed experts, the Russians have a jet engine twice as powerful as any we possess. Senator SYMINGTON, former Secretary of the Air Force, has stated repeatedly that the Soviets are not only challenging us in the development of big bombers but probably leading us in the development of the intercontinental guided missile.

Senator HENRY M. JACKSON, Democrat, of Washington, a member of the Senate Armed Services Committee and chairman of the Military Application Subcommittee of the Joint Congressional Committee on Atomic Energy, is very disturbed about the rapid progress the Soviet Union is making in the field of airpower. In a letter to the Secretary of Defense dated June 27, 1955, Senator JACKSON states:

"Six years ago American air-atomic might was incontestable * * * yet the Soviets broke our atomic monopoly in 1949—years before the expected date. * * * What concerns me * * * is my fear that if the present trends continue the Soviets will be demonstrably ahead of us in airpower—both quantitatively and qualitatively—5 years from now. * * * The Soviets have been narrowing the technological gap between our two nations with awesome speed."

The Senator then addressed a series of questions to the Secretary of Defense concerning the development of Soviet airpower, continental missiles, and intercontinental ballistic missiles, and requested that the Secretary's reply be as "explicit and categorical as possible, since the very survival of our Nation may hinge upon remaining decisively and unquestionably ahead of the Soviets in this field."

5. The President of the United States admitted in June 1955 that we have grossly underestimated the Soviets in the past. Newsmen covering his press conference gathered the impression that there was no reason to believe that the Soviets would not continue to forge ahead until they gain air superiority in the immediate future.

6. To further shock the complacent, Mr. Erik Bergaust, of Aero Digest, recently writes that the Russians have been hard at work on photonic rockets (propulsion created by light beams). If successful, this would be the optimum power source for flight above the atmosphere and in space. According to Mr. Bergaust, this is a subject largely neglected in the United States.

7. The optimism of those who felt that secrecy would strangle science in the Soviet Union was rudely dispelled by the rapid development within that country of the atomic bomb and hydrogen bomb.

It should be clear from the recitation of the above examples (there are many more) that scientific progress is not stifled by secrecy or security provisions, despite what security critics say to the contrary. Even Dr. Bush's criticism of the German's lack of progress in atomic energy, upon examination, is faulty; to say that the Germans did not develop the atomic bomb because of the Nazi regime is to leave unexplained the method whereby they developed the V-2 and the Snorkel submarine under the same tyrannical and regimented society.

To complete the record, mention should be made of the fact that the development of the atomic program of the United States was carried out under the most rigorous of security precautions. Although there were the usual complaints from the scientists, the fact is that under the security restrictions of the Manhattan district scientific developments were compressed into a period of several years, which under normal circumstances might have taken many decades. This example alone should be convincing proof that the thesis concerning secrecy and science is erroneous.

While the United States scientists have published tens of thousands of papers on past and present scientific developments, there has been practically nothing emanating from the U. S. S. R.

Obviously, if there was only one scientist in the world, there would be no need for publication of research findings. By the same token, optimum progress could be made in world science if all scientists in every country published all of their findings. However, great advantage accrues to the Soviets under the present one-way-street arrangement.

It is admitted that even the scientists and engineers in Russia must qualify in communism as well as in science. They are as regimented, indoctrinated, and controlled as it is possible to be in a police state. If the critics of our security system are correct in their major premise, Russian science should be primitive. Yet one of the realities of our times is that Russian science, far from being backward, poses a threat to our very existence.

As stated before, any security system is an infringement on personal rights and should be constantly examined, reevaluated, and revised to protect the liberties of our people. It would be foolhardy and dangerous, however, to accept as valid a criticism of the security program which has no basis in fact. In the light of reported Russian scientific progress, where are the facts to prove the contention that secrecy, security, and science are irreconcilable? Perhaps in the still of the night American scientists should give some more thought to this question before they accept as axiomatic a statement which might not only be inaccurate but possibly dangerous to the future of western civilization.

Perhaps those who continue to urge that we tell all, while the Soviets tell nothing, are unknowingly contributing to their own destruction.

The Seamy Side of TVA

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. DEROUNIAN. Mr. Speaker, under previous leave to extend my remarks, I include the following enlightening article by Henry Hazlitt as it appeared in the August 1, 1955, editorial of Newsweek:

THE SEAMY SIDE OF TVA
(By Henry Hazlitt)

One wonders whether the hue and cry that Democrats have raised over an alleged Dixon-Yates scandal is intended to divert public attention away from the failure of TVA and from the deceptions practiced to put over and extend that and many other socialized power projects.

In the 218-page report of the Hoover Commission, and in the 1,783-page report of the tack force under Admiral Moreell on which the final Commission report was in large part based, we now have a mine of material exposing some of the misleading estimates and unkept promises by which Congress and the taxpayers were induced to undertake many public-power projects. There is not space enough here to cite more than a few random examples from the Hoover Commission report.

Among these are the persistent underestimates of Government engineers concerning the real cost of these projects. "In the field of reclamation the original estimated cost of the 90 projects (outside the Missouri Basin) was $1,580 million, and in 1952, the estimated cost at completion was $3,317 million. The cost of the reclamation portion of the Missouri River Basin project was estimated in 1944 at $350 million. In 1953, the same work was estimated at $3,717 million, an increase of about 343 percent." Only a small percentage of these increases was owing to soaring prices.

"A report to the House Committee on Public Works, rendered by its subcommittee to study civil works, in December 1952, states that the TVA reports its costs had exceeded its estimates by only 3.1 percent. But an examination of a 1936 report of the Authority showed that later estimates for Kentucky Dam exceeded the original by 93.6 percent; for Fort Loudoun Dam, by 74.7 percent; and for Fontana Dam, by 137.7 percent."

In a group of Bureau of Reclamation proposed projects the construction costs of irrigated land averaged $509 per acre for land that had an average market value of less than $150 per acre even with the full water supply.

Under the Constitution, Congress has authority to control navigable streams and floods, but no discoverable right to build hydroelectric powerplants. This has led to the development of the shrewd doctrine that hydroelectric power may be developed and sold by the Federal Government to the extent that it is incidental to flood control and navigation. It has also led, as the Hoover Commission report points out, to a bookkeeping allocation of all the costs possible to flood control and irrigation rather than power.

The Hoover task group laid down certain criteria for determining the real success or failure of Federal power projects: They ought to earn 3 percent interest annually to insure return of Federal borrowing costs. The investment should be properly amortized. The projects should pay local taxes equal to those of private utilities. Earnings of Federal projects should

include an amount equal to the Federal tax exemptions, based on the tax payments of private utilities. With such an honest yardstick, the TVA would show a deficit of $30 million in the fiscal year 1953 and an accumulated deficit up to that time of $100 million. The principal groups of Federal projects would show a cumulative deficit of $332 million.

The Hoover Commission points out that the Federal taxpayer is subsidizing these projects. Less than 10 percent of the total population will be directly benefited even when the programs are completed. This means that 90 percent of citizens are forced to subsidize an arbitrarily favored 10 percent. The task group estimates that the Federal projects are selling power on the average at about 50 percent below its real cost.

Finally, while hydroelectric powerplants were built under the pretense that they were merely incidental to navigation and flood control, the TVA has now embarked upon an expansion of its power-generating capacity beyond hydroelectric plants by the building of steam plants.

The moral indignation of the zealots for socialized power at the Dixon-Yates contract seems misplaced.

Panama Canal

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1955

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

PANAMA CANAL

Representative DANIEL J. FLOOD,
The House of Representatives,
Washington, D. C.

MY DEAR SIR: I received tear sheets from the CONGRESSIONAL RECORD Appendix of July 12 and mailed a copy to the Panama American. There is a great deal of local enthusiasm for the support you have been giving to the non-Panama Canal segment of the Canal Zone community.

Until very recent years the armed services were sent to the Canal Zone to defend the canal from hostile action. Under the present-day policy of the GAO, Father Confessors to the Panama Canal Company, the defensive role has been more or less superseded. Today the armed services are a Government cow stabled in the Canal Zone to be milked by the Panama Canal Company for the sake of showing a bookkeeper's profit on operations. Uncle Sam takes money out of his pocket to buy defense for the canal, but before guns or bombs can be bought the Panama Canal Company gets its very considerable share of the budget. There is a heavy charge for sending military dependents to Canal Zone schools, there is the almost frightening charge per person for treatment in the Canal Company's hospitals—in fact, the military can scarcely use the sidewalks without being in danger of having to pay the canal people a couple of bucks for the right.

I told you in a recent letter that the Governor claimed that the canal did all the employing of local labor for the Armed Forces as well as the Panama Canal Company. Since then a definite campaign has been underway to do that very thing. It seems fantastic. The idea probably represents to the master minds of the canal an opportunity to get additional income from the armed services. In this connection, it should be noted that anything the Canal does costs more than the same job would cost when done either privately or by another Government agency. Only in the last few months the armed services were compelled to turn their garbage-collection machinery over to the Panama Canal Company. This service was operated by the Army at an annual cost of $90,000, prorated to the 3 services. Under the present arrangement inferior garbage-collection service is performed by the Canal Company for $105,000 per year.

This sort of thing is happening all the time. The people you refer to (as quoted in the CONGRESSIONAL RECORD clipping) as "later-day marvels" are doing so many marvelous things in the way of bookkeeping legerdemain that we who live here are only a little less astounded than were the Japanese when the first atom bomb fell.

Why? Why? Why?

EXTENSION OF REMARKS
OF
HON. CARL ELLIOTT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. ELLIOTT. Mr. Speaker, under leave to extend my remarks, I include a speech by L. J. Howell entitled "Why? Why? Why?" delivered by him on May 25, 1955.

Mr. Howell is an outstanding teacher of vocational agriculture. He lives at Reform in the Seventh Congressional District of Alabama.

I commend his speech to the reading of the membership:

WHY? WHY? WHY?

(By L. J. Howell)

This is a rapidly changing world—why? In less than 350 years the United States has come from a small shipload of men to 165 million free American citizens—the greatest nation on earth. We have enough automobiles for everyone to be on the highways at one time.

We have more labor-saving devices and a higher standard of living than any other people in the world. Why?

We have free enterprise, free speech, freedom of religion, press, radio and television. Why? Freedom of franchise places the political power in the hands of the common people.

All of these inalienable rights exercised by the votes of the liberty-loving people have made it possible for free thinking, public education, invention, and scientific research. But all of these factors are not the real reason.

In the beginning of our Nation, and all down the 3½ centuries, our Presidents, the Congress, our governors, and our legislatures have always invoked Divine guidance. "If God be with us, who can be against us." and as long as our people put God first in their affairs, we shall always win.

We believe in all the mentioned freedoms and one more—freedom from fear. We do not believe in aggression or oppression; but we will keep our Nation prepared to oppose them. We believe in progress and happiness of our people and all other peoples.

WE HAVE PROGRESSED. WHY, HOW?

We were all farmers in the beginning—Adam, Eve, and their sons; likewise, as a human race, we were all farmers in this great country in our beginning as a nation. Necessity, the mother of invention, has caused many changes. Production of food, fiber, and shelter is and always will be primary. Every one depends upon the farmer first. Our Nation has gradually changed from an agricultural nation to a highly industrial nation. As progress has been made in the fields of agriculture, so has progress been made in the different lines of industry.

Agriculture depends upon industry, improved machinery and better means of transportation of farm commodities to the markets of the world. All nonfarm workers depend upon the farmer for food, fiber, and shelter.

FEWER FARMERS AND MORE OF OTHERS

In 1787, the year when the 13 Original Colonies or States met in Philadelphia in a convention to organize the United States and draw up our Constitution, how many farmers were there? Practically all of them were farmers. At that time 19 farmers made a living for themselves and one nonfarm person.

In 1920 each farm worker produced enough for himself and seven other people. Now, each farm worker, according to figures given out by Mr. Benson, Secretary of Agriculture, produces enough food for himself and 18 other people.

In 1920, 34 years ago, there were 13.4 million farm workers; now, there are only 8.5 million farm workers. These 8.5 million farm workers feed themselves and in addition feed 156,500,000 nonfarm people. After all of these are fed, there still has accumulated a huge surplus of food and fiber in this country.

Our horse and mule population has dwindled from 25.7 million to only 5 million. Four million nine hundred thousand farm workers have left the farms. There are 20.7 million less horses and mules to feed than in 1920. This means that there are more than 60 million more acres of land to divert to production of human food. Much of this land has been used for grain production; much of it to pasture. Now, 8½ million farmers are making 30 percent more food than 13.4 million did 34 years ago.

WHY? WHY? WHY?

Why all the above changes? As already stated, education has played a great part. When people are educated, their desires for a higher standard of living are increased. People read more, travel more, see more, make more money per hour of labor; therefore, want more and actually buy more of what industry has for them.

Research has discovered new drugs, new insecticides, new disease preventives, as well as antibiotics for both man and animals; better balanced foods and feed for man and farm animals. Many new inventions have reduced drudgery and increased production per man-hour of labor.

Some other reasons for increased production of food and fiber per man-hour of labor; knowing proper kind and amount of fertilizer requirements; use of hybrid seed corn; better varieties of other field crops, fruits, and vegetables; soil conservation and soil improvement.

Farmers are making twice as much food as they did 34 years ago; and why? Some more reasons given in numbers of different kinds of implements used in production and transportation. Thirty-four years ago, there were only 246,000 farm tractors, now there are 4.6 million farm tractors; then 139,000 trucks, now, 2,650,000 trucks; then, 10,000 corn pickers, now, 640,000 corn pickers; then, 4,000 combines, now, 950,000 combines; then 55,000 milking machines, now, 730,000 milking machines.

Today, the average farmer in the United States is making 2.4 times as much food per hour of time as he did 34 years ago. Electricity—yes, electric power has been one

of the greatest factors both in the home and on the farm. Cheaper power for all, farm, factories, and office buildings; results—better health and more happiness.

Well, the above is not all of the story Why? Why? Why? Suppose you take up from here and carry on. This story was started many years ago—it will continue as long as man lives. Inquiring minds spell progress. Why?

Dangers of Russian Peace Moves

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. PATTERSON. Mr. Speaker, recently it has been my great honor and pleasure to meet possibly the last of the Polish intellectuals to flee Poland before the invasion of that country by the Russian armies, the Reverend Dr. Andrew J. Krzesinski, doctor of philosophy and doctor of theology, an eminent philosopher, an author of many books in various languages, and a Polish patriot who battled from their inception, nazism, communism, and other movements hostile to the ideals of western culture.

There is neither space nor time to detail here the numerous intellectual achievements of the Reverend Dr. Krzesinski. Suffice it to say that he has been a member of the faculty of the University of Warsaw, a professor of philosophy of the University of Cracow; that he has traveled widely in Palestine, Egypt, and the principal countries of the Far East, where he lectured in all the great universities and conferred with their leaders including Gandhi, Nehru, and others playing an important part in the political and social life of those lands.

These studies and contacts, including a visiting professorship of philosophy in the University of Montreal and other universities on the American continent have qualified the Reverend Dr. Krzesinski to throw light upon the cataclysmic events afflicting the world today.

Since he is a recognized authority, not only on philosophy but also on the subject of culture and civilization, I have asked the Reverend Dr. Krzesinski to give to this Congress the benefit of his vast knowledge and experience as to the dangers to the free world of the current Russian peace moves, which I have the honor of presenting, as follows:

Many people in the United States of America and in Great Britain think that the smiles and the kindness of Soviet Russia's representatives are a sign of their good will and of their real desire for an international peace. Such an opinion is not justifiable. It is based on a superficial knowledge of Russian communism, for the essential goal of Soviet Russia is to dominate the entire world. The persons ruling Soviet Russia and their tactics may change, but the political goal remains the same. It is unchangeable.

Let us not forget that Soviet Russia's representatives started to smile and to be genteel not until their great efforts to stop the rearmament of Western Germany and its ratification by the French Parliament seemed futile.

Then suddenly they changed their tactics, and have been trying to obtain indirectly what they could not obtain directly. The smiles and the kindness in this respect have to be helpful. And we must confess that with these new tactics they have been very successful.

First, the treaty of independence and neutralization of Austria is for them very advantageous. They have to receive great amounts of money which mostly comes from the United States of America, and the whole Austrian territory has to be free of the Allied armies. When the suitable time comes, they will, in this country, not find any military resistance from the part of the Allied military forces, and the whole Austrian territory would be taken within a few hours.

Second, at the Geneva Conference, with smiles and assurances, public as well as confidential, they provoked in the United States of America and in Great Britain some kind of relaxation and hopes for an international peace. The whole system of defense in these countries has been slackened and weakened, when, at the same time, in Soviet Russia and in its satellite countries very great efforts have been made to strengthen and discipline the armies, and to increase their war potentiality to the highest degree.

Soviet Russia's representatives do everything possible to stop the rearmament of Western Germany, to unite it under their own terms, with Eastern Germany, and to neutralize the reunited Germany in the same way as they did Austria.

At the same time, they try to neutralize France, Italy, and all other countries of Europe. In this way they are preparing themselves to be succesful when they are ready to attack the free countries of Europe, of America and other continents. All such neutralized countries deprived of allied armies would be invaded within a few days without great Communist military losses.

The illusion of an international peace provoked by smiles and kindness of Soviet Russia's representatives are for the whole free world very dangerous.

If Soviet Russia's rulers would have a real peace, they must prove it with facts not only with smiles. The only way of proving it is the restoration of freedom and complete independence to Poland, Czechoslovakia, Hungary, Rumania, Bulgaria, Lithuania and to all other countries invaded and enslaved by them.

This would be the first step for a real international peace.

Another step would be disarmament under an international control.

Unless Soviet Russia's rulers, with such steps, prove the sincerity of their desire for an international peace, we must be prepared for the worst, and not allow ourselves to be guided by illusions.

Outstanding Performance of Metropolitan Police During Transit Strike

EXTENSION OF REMARKS
OF
HON. WILLIAM G. BRAY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 30, 1955

Mr. BRAY. Mr. Speaker, I have heard many favorable comments about the fine courteous job the police are doing in Washington during the transit strike. They have handled the traffic in an admirable manner, and in spite of their greatly increased duties and the hot weather, they have remained friendly, courteous, and efficient. I think I am only voicing the general feeling of all of us that theirs is a work that is being well done.

Increased Rates of Compensation for Veterans and Reinstatement of National Service or Government Life Insurance

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. FLOOD. Mr. Speaker, I rise in support of increased rates of compensation for dependents of veterans with service-connected disability and reinstatement of national service or Government life insurance. You will note that eligibility requirements have already been decreased from 60 percent to 50 percent disability by Public Law 339, 81st Congress, Sixty-third Statutes, chapter 900, section 4.

H. R. 5574 would enable some to obtain national service life insurance. It should be pointed out that under its provisions they would have to pass a health test. It is doubtful if veterans with 50 percent or more disability could pass such test. I, therefore, endorse H. R. 3664 under which such veterans would not be subject to a health test.

THE DISABLED VETERANS AND THEIR DEPENDENTS—ARE THEY ON EQUAL FOOTING WITH THEIR FELLOW CITIZENS?

Mr. Speaker, I want to call the attention of the House to a situation concerning our disabled veterans which is deplorable. Every man wants to see that his wife and children do not lack the necessities of life and that they have all of the good things which he can secure for them. Yet our totally disabled veterans lie in hospitals faced with the knowledge that they can do little or nothing to provide their families with even the bare necessities of life. Still other veterans with 50 percent or more disability find that they can only work part time at only the lowest paid jobs and are hardly able to provide even the necessities let alone the one or two small luxuries which we all expect as a matter of course.

In 1948 with the enactment of Public Law 877, 80th Congress, Congress recognized that the veteran with 60 percent or more disability needed help in supporting his family and provided additional compensation for his dependents as follows for totally disabled veterans with a proportion of the amounts for the partially disabled with 60 percent or more disability:

Wife, no child	$21.00
Wife, 1 child	35.00
Wife, 2 children	45.50
Wife, 3 or more children	56.00
No wife, 1 child	14.00
No wife, 2 children	24.50
No wife, 3 or more children	35.00
Each dependent parent	17.50

On October 10, 1949, in Public Law 339, 81st Congress, the Congress included veterans with 50 percent or more disability.

Having recognized the principle that the seriously disabled veteran needs and deserves help in supporting his family, we have promptly forgotten it. In spite of the fact that the cost of living has increased year by year, these rates have not been increased. It is true that for the veteran himself we have passed increased pensions, now amounting to $181 as compared to $115 at the end of World War II. But Mr. Speaker, it is now time to step back and take a look at the whole situation which includes the veteran and his family. While we have been preoccupied with increasing his pension, he has been forced to devote an increasing amount to the support of his loved ones. By failing to increase the rates for his dependents since 1948 we have actually failed of accomplishment of our objective, that is, to place our disabled veteran in the same competitive position with respect to his fellow citizens, as if he too had not been called upon to make the sacrifice he did made in the service of his country.

At this point I am going to quote from a letter I received from a disabled veteran in my district. I am sure each of you gentlemen have received from time to time many letters of a similar nature. I quote:

I have been more than "considerably under the weather" for some time which necessitated another stomach operation during the latter part of March, performed in the veterans' hospital in Erie. That was the third such operation, all service-connected, of course, from World War II.

* * * * *

Fourteen dollars a month is hardly sufficient to buy the milk for one child. In my case, my wife and I are separated, my children are with my father and I get the amount of $24.50 for 2 children. The rent (excluding clothing, allowances, medical or dental bills and miscellaneous) is $70 per month—and I receive but $24.50. Both are in school, so you can see what it does to my check. This is a general problem and certainly not confined to the undersigned.

Our disabled veterans are proud men. They do not want a handout. They only want to compete on an equal footing with their fellow citizens. We must see to it that inadequate aid for his dependents does not rob the veteran of the benefits more generously provided by the Congress for the veteran himself.

DISABLED VETERANS—REINSTATEMENT OF NATIONAL SERVICE AND GOVERNMENT LIFE INSURANCE LOST THROUGH NO FAULT OF THEIR OWN

Mr. Speaker, I have already made a statement respecting the need to increase the rates for dependents of our disabled veterans with 50 percent or more disability. There is one more aspect of the disabled veterans' problem to which I wish to call your attention.

Veterans with 50 percent or more disability have a very hard struggle, because of their disability, to find and keep steady employment. Every one of them at times finds himself faced with unemployment, either because he is unable by reason of his disability to obtain other than a temporary or part-time job or because of the necessity of further hospitalization. Mr. Speaker, during those periods of unemployment, our seriously disabled veterans and particularly those with families and dependents find that it takes every penny that they can scrape together and more to keep going and to keep their families going. As a result many of our disabled veterans have been forced to give up their national service life insurance for the simple reason that they just did not have the money to continue the premiums and still continue to furnish their families with the necessities of life.

I have, as I am sure you have also, received letters from disabled veterans in my district who would like the chance to obtain this insurance again. They, however, are prevented from applying by the provisions of section 619 of the National Service Life Insurance Act, see United States Code, section 38, page 820, which prohibits the issuance of such insurance after April 25, 1951. I feel that this section should be amended to give our disabled veterans, who have lost their insurance through sheer necessity and through no fault of their own, another opportunity to obtain such insurance. In addition, I feel that our veterans who have suffered disabilities in our country's cause should not be discriminated against in obtaining such insurance by being required to pass a health test.

Undoubtedly, some of our veterans whose disabilities are slight could pass such a test. Those, however, who have suffered most, whose disabilities are the greatest, could not possibly pass such test. They would be precluded by the very sacrifice which they have made for their country from obtaining the insurance. I therefore feel that section 619 should be amended in such a way that the disabled veteran would not be penalized by his disability. I therefore endorse H. R. 3664.

Our Water Resources

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. BROOKS of Louisiana. Mr. Speaker, on May 31, 1955, the 42d annual convention of the National Rivers and Harbors Congress was held at the Mayflower Hotel in Washington, D. C. The highlight of the convention was a banquet with representatives from 46 of the 48 States of the Union present and representatives from Hawaii, Puerto Rico, and Alaska. At this session was read a most interesting and important message from the President of the United States, dealing with the utilization of our water resources. Under unanimous consent, I reproduce this message herein for the information of the Members of this Congress:

THE WHITE HOUSE,
Washington, May 27, 1955.

The Honorable OVERTON BROOKS,
President, National Rivers and Harbors Congress, Washington, D. C.

DEAR OVERTON: I should prefer to convey personally to the National Rivers and Harbors Congress my congratulations and best wishes on the occasion of its 42d annual convention. Since, however, I cannot be there, I have asked my Secretary, Mr. Shanley, to bring my cordial greetings to everyone in attendance.

The problem of assuring our people of adequate water has become of utmost importance to every one of us. In my remarks to your group a year ago, I mentioned that the administration was embarking upon an effort to coordinate and increase the efficiency of the many Federal activities which impinge upon this problem. Since then a special advisory committee on water-resources policy has been hard at work, and I have received regular reports on its progress. I am satisfied that its recommendations—soon to become publicly available—will constitute a valuable basis for the improvement of our national water-resources policy. While many improvements can be made by administrative action, major changes will, of course, require congressional action. There will thus be ample opportunity for public review of basic revisions in national policy.

The tremendous proportions of this task are well known to your congress. No organization at any level of government or outside the Government can perform the task alone. The best efforts of all groups, at the local, State, and Federal levels, working in harmony toward the common goal, will be required. I know that in this undertaking the National Rivers and Harbors Congress will continue to play a significant and valuable role.

Sincerely,

DWIGHT D. EISENHOWER.

Supplemental Income for Recipients of Old-Age Assistance

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I herewith include Senate Joint Resolution 10 adopted on June 27, 1955, by the Senate of the 69th General Assembly of Illinois:

Senate Joint Resolution 10

Whereas the Federal social-security law permits recipients of old-age and survivors insurance benefit payments to supplement these benefits by earning up to a specified amount in covered employment without a loss of such benefits; and

Whereas such provision encourages those who can do so to engage in productive employment; and

Whereas the Federal law governing grants to States for old-age assistance does not allow such supplementary earnings without a loss of benefits; and

Whereas the basic purpose of the two programs—old-age and survivors insurance and old-age assistance—is the same, namely to safeguard against old-age dependency: Therefore be it

Resolved by the Senate of the 69th General Assembly of the State of Illinois (the House of Representatives concurring herein), That we respectfully request the Congress of the United States to make provisions which would permit recipients of old-age assistance to supplement their old-age assistance benefits by earning an amount equal to that permitted recipients of old-age and survivors insurance benefits without a loss

of such benefit, by and with the consent of the legislatures of the respective States which have State old-age assistance plans; and be it further

Resolved, That a copy of this resolution be sent by the secretary of state to Senator PAUL H. DOUGLAS, Senator EVERETT M. DIRKSEN, and to each Member of the House of Representatives in the State of Illinois.

Adopted by the senate June 27, 1955.

JOHN WM. CHAPMAN,
President of the Senate.
EDWARD H. ALEXANDER,
Secretary of the Senate.

Concurred in by the house of representatives June 30, 1955.

WARREN T. WOOD,
Speaker of the House of Representatives.
FRED W. RUEGG,
Clerk of the House of Representatives.

Averaging Taxable Income

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. CURTIS of Missouri. Mr. Speaker, I have today introduced a bill, H. R. 7837, to provide greater equity in our tax structure by permitting the averaging of taxable income by individuals over a 6-year period.

It has long been recognized that the bunching of income creates one of the most serious inequities under our present tax system. Individuals who experience a concentration, or bunching, of income in 1 year are taxed much more heavily than those who reecive the same income over a period of years.

Our tax rates are generally based on the principle of ability to pay. But this basic principle is violated when an individual is subjected to rates, ranging as high as 91 percent, which bear no relation to his ability to pay if that ability were determined realistically over a period longer than 1 year.

This injustice is prevalent throughout the American economy. The farmer who struggles along on a small income for many years and then has one big crop is taxed in the good year as if he had been earning that level of income consistently. The same is true of the small-business man whose enterprise suddenly becomes successful. It also applies to the professional man, the performing artists, the writter, or the employee whose efforts over many years are rewarded with increased compensation.

In planning our tax laws, we should recognize that our economic system is highly dynamic. Our tax sturcture should take account of this fundamental fact and allow an appropriate adjustment to those whose income fluctuates sharply from year to year. The present rate structure more or less assumes a static level of income and penalizes those who by their extra efforts, increase their income at a sharply accelerated pace. In many areas of business enterprise, the effect of the present system may be to act as a deterrent to increased output within a single year because of the extra heavy taxes which will be incurred.

The problem of averaging income has been approached tentatively at several points in the Internal Revenue Code but there is no overall provision which is generally applicable. For example, sections 1301–1304 allow an individual who performs services over a period of 36 months or more to spread the income received there from over the 36-month period. These provisions, however, apply only if 80 percent or more of the income is attributable to the services received in 1 taxable year.

Another averaging provisions, section 72 (e) (3), applies to the proceeds of endowment policies or face amount certificates which are paid off in 1 year. The recipient of the income may spread it over a 3-year period.

The 1954 code added section 481 (b), relating to inventory adjustments, which permits the amount of the adjustment to be included in the taxable income of the year of receipt and the 2 preceding taxable years.

The new estates and trusts subchapter of the 1954 code contains a so-called 5-year throwback rule in section 666, which has some of the characteristics of averaging with respect to the recipient of a distribution of accumulated income.

This brief summary by no means covers all of the provisions of existing law which attempt in some fashion to ameliorate the rigidity of the annual accounting concept. There are many other provisions, such as the installment-sales provisions and the capital-gains sections, which are concerned in part with the same problem.

However, all of the present provisions are geared to one or more specific situations. There is a fundamental need, as I have indicated, for a provision which is applicable to all taxpayers regardless of their occupation and the source of their income.

Many leading tax writers and practitioners have recognized the inequity and gone on record in favor of the principle of tax averaging. The main obstacle has been the lack of any sound, workable proposal which would permit averaging of income without causing excessive administrative complexities.

The bill which I have submitted, and which is intended primarily as a basis for study and analysis, provides a very simple form of averaging. An individual who has a substantial increase in income in any one year would be allowed to spread the increase over the taxable year and the 5 preceding years. His tax on the increase would be computed on the lower rates applicable to the preceding years.

The bill limits the adjustment to cases in which there is an increase of more than 50 percent over the income of the past 5 years. Minor fluctuations in income do not need or warrant the adjustment.

As an illustration, assume that a small-business man averages $5,000 for 5 years and in the 6th year has a $20,000 income. He would qualify for the adjustment with respect to the excess of $20,000 over $7,500—150 percent of the average income for the past 5 years. The $12,500 would be spread over a 6-year period for the purpose of computing the maximum tax in the year of receipt.

A tax averaging proposal of the type which I have described is both simple and flexible. The 5-year period moves forward constantly. Any individual who has a marked increase in taxable income would be able to qualify for the adjustment by reference to the 5 prior years of income experience.

I should like to emphasize that the proposal does not exempt any portion of taxable income or allow a preferential rate to any individual or group. It simply provides for a more realistic application of the progressive rate structure to irregular fluctuating incomes.

The proposal for tax averaging would be of benefit to millions of farmers and small-business men. It would remove some of the penalties of our present rate structure for entertainers, athletes, and others whose income characteristically fluctuates widely from year to year. The adjustment would tend to equalize the tax burden of those with irregular and those with stable incomes and provide greater incentive for maximum contribution to the economy. It would also reduce the constant pressure for many special tax relief provisions.

Resolution to Prevent Reduction in United States Marine Corps

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution by the House of Representatives of the General Court of Massachusetts requesting the Congress of the United States to prevent a reduction in force of the United States Marine Corps. This resolution was sent to Hon. JOHN MCCORMACK, of Massachusetts, and by him to me because of my activity in behalf of the Marine Corps.

Resolutions Memorializing Congress To Prevent the Reduction in Force of the United States Marine Corps

Whereas the Secretary of Defense has proposed a reduction in the force of the United States Marine Corps; and

Whereas the United States Marine Corps has established an outstanding record as part of the Armed Forces of the United States; and

Whereas any reduction in force of the Marine Corps at this time would be detrimental to the best interests of the United States of America: Therefore be it

Resolved, That the House of Representatives of the General Court of Massachusetts urgently requests that the Congress of the United States take such action as may be necessary to prevent a reduction in force of the United States Marine Corps; and be it further

Resolved, That a copy of these resolutions be sent by the secretary of the Common-

wealth to the President of the United States, to the Secretary of Defense, to the presiding officer of each branch of Congress, and to each of the Members thereof from this Commonwealth.

Adopted: House of Representatives, July 18, 1955.

LAWRENCE R. GROVE,
Clerk.

Attest:

EDWARD J. CRONIN,
Secretary of the Commonwealth.

General Ridgway Is a Man To Be Listened To

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. TEAGUE of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an Associated Press article covering the letter of General Ridgway, Army Chief of Staff, addressed to Secretary of Defense Charles Wilson challenging the basic military policy of the present administration. I note, Mr. Speaker, that the Secretary passes off the warning of the Nation's leading soldier as not very important. This statement pinpoints the problem. Politicians, and not military men, are deciding the vital questions of military requirements.

RIDGWAY CRITICISM OF ARMS POLICY TOLD

WASHINGTON.—The Pentagon has ripped the secrecy label off a letter by Gen. Matthew B. Ridgway sharply challenging the basic military policy of the Eisenhower administration.

In one of his last official acts as Army Chief of Staff, General Ridgway lashed out with particular vigor at what he described as the administration's overemphasis on air-nuclear weapons—atomic and hydrogen bombs.

General Ridgway addressed his letter to Secretary of Defense Charles E. Wilson, who ordered it made public July 15 after its contents had leaked into print.

In its strictly military phases the letter was essentially a restatement of criticisms General Ridgway had voiced piecemeal and in less pointed terms for months before he retired June 30.

But the paratroop general gave his contentions new emphasis by putting them all together in a compilation and relating one argument to the others.

SOVIET TREND NOTED

The 10-page study of the relative military positions of the United States and its free world Allies versus the Soviet bloc made two main contentions:

1. The Communists are pursuing their worldwide aggressive course along lines not likely—and probably not intended—to bring nuclear weapons into play.

For that situation, General Ridgway said, the free world needs "an immediately available joint military force of hard-hitting character in which the versatility of the whole is emphasized and the preponderance of any one part is deemphasized."

2. Some time between 1958 and 1962 the Communists will have developed such nuclear weapons and delivery capability that "the United States nuclear-air superiority will have lost most of its present significance."

In that situation General Ridgway foresaw a nuclear stalemate, either through mutual destruction if the weapons are used or through their cancellation because neither side will employ them for fear of what the other will do in retaliation.

The letter, which had been classified "confidential" at the Pentagon, was released on orders from Mr. Wilson, who was at Quantico, Va., for his annual conference with military and civilian chiefs of the Armed Forces.

NOT VERY IMPORTANT

Mr. Wilson acted in response to inquiries by newsmen after the New York Times had quoted extensively from the letter in the July 15 edition. The Times said it had been given access to the material by "competent sources."

In telling newsmen of his order to the Army to give the letter out, Mr. Wilson commented laconically:

"I don't think it's very important."

President Eisenhower put it a little differently at a news conference some months ago. Questioned then about General Ridgway's objections to administration plans to reduce Army strength, Mr. Eisenhower said General Ridgway was expressing a "parochial" (narrow) view.

Memorandum to President Eisenhower on the Condition of the Ukrainian People in the Soviet Union

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. JUDD. Mr. Speaker, I have received from Dr. Lev E. Dobriansky, professor of economics at Georgetown University and national chairman of the Ukrainian Congress Committee of America, a memorandum prepared by Mikola Lebed, secretary general for foreign affairs of the Supreme Ukrainian Liberation Council, on the occasion of the recent Geneva Conference. This memorandum was submitted to the President and deals with the captivity of over 40 million Ukrainians in the Soviet Union.

The Supreme Ukrainian Liberation Council is the political representation in the free world of the Ukrainian underground forces in Ukraine, which is the largest non-Russian nation in Eastern Europe. It depicts the unyielding resistance of the Ukrainian people to Communist imperialism and colonialism. Because of its informative contents,I ask that this memorandum be included in the Appendix of the RECORD:

JULY 12, 1955.

The Honorable DWIGHT D. EISENHOWER,
President of the United States of America, The White House,
Washington, D. C.

MR. PRESIDENT: In behalf of the Supreme Ukrainian Liberation Council, the governing body of Ukrainian underground forces in Ukraine, I have the honor, in connection with the forthcoming Geneva conference and the presently conducted peace offensive by Moscow, to bring to your kind attention the following:

1. The present policy of the Soviet Government which, among others, has made the Geneva Conference possible, should be recognized as a temporary strategic diversion which does not in any manner alter the basic objectives of communism and Russian imperialism. This policy is the result of: (a) a failure of the line of general attack on all fronts pursued by the Soviet leadership immediately after the termination of World War II which had to be abandoned approximately at the time of Stalin's death; (b) following the death of Stalin, the people of the Soviet Union, who had always desired freedom, perceived a possibility of its realization and the Soviet leadership was compelled to give this matter its reluctant consideration; (c) the dictatorship has thus far not succeeded in becoming authoritatively stabilized; (d) internal difficulties of an economic nature constitute a major contributing factor to this changed strategy of the Soviet leaders; (e) every opportunity to gain some measure of freedom has been seized upon by the non-Russian peoples with particular alacrity, as witness the East German rebellion, Czech insurgence, Ukrainian underground activities, or the Vorkuta riots, to cite just a few examples.

2. The present Soviet leaders expect their policy of concessions to solve for them, at least in some measure, their main difficulties such as those of an internal nature, i. e., those enumerated under (b), (c), (d), and (e); forcing the West to abandon its military bases located at an uncomfortable proximity to the nerve-center of Moscow; neutralization of those countries which are not as yet fully committed to the Soviet camp; and by talks with the West to create an impression upon the enslaved nations of the Soviet Union that the West approves the presently existing status of enslavement and hence there is no point to their struggle against the Kremlin.

3. This does not mean that the present Soviet leadership has abandoned its long-range objective of world domination. It does mean, however, that it is committed to a most vehement pursuit of a policy of coexistence which, in view of its nonrelinquishment of basic objectives, will have to be a coexistence of a competitive nature.

4. In spite of the above-mentioned strategic diversion of new tactics adopted by the Soviet Union, its leadership does not preclude the possibility of achieving the long-range objective by means of preventive war (cf. recent articles by top military men of the Soviet Union, like General Korniyenko and Marshals Rotmistrov and Vasilevsky). These latter tactical propositions indicate that the military theories of the late Marshal Boris M. Shaposhnikov and General Svechin on the necessity of integration of the work of the General Staff with that of political leadership is being put into practice. The existence of such integration is evidenced by the following facts: (a) Intensification of military preparedness through a re-emphasis on heavy industry; (b) assurance of the Soviet Union's security through establishment of a neutralized zone along its borders in Europe and Asia; (c) moral disarmament which would weaken potential enemies by undermining their willingness to sacrifice a high standard of living in favor of armaments; (d) strengthening of Soviet intelligence work in the West by means of expanding cultural and economic relations with the West.

An effective realization of these concepts requires time. To gain this precious time the Soviet Union is now staging "the most spectacular peace movement on record" with "electrifying overtures and unheard of concessions" (quotations from a speech by M. Z. Manuilsky delivered to the graduating class of the Lenin School of Political Warfare in Moscow, in 1931).

5. The dangers of these concepts of Soviet policy (competitive coexistence and preventive war) could be considerably minimized, or even rendered completely ineffective if the West would take full advantage of natural partners within the Soviet Union.

The internal front in the U. S. S. R. has never been liquidated, and the partner facing the West in Geneva is not merely Premier Bulganin nor his Government, but the multitude of peoples of the U. S. S. R. Thus far, the West has these peoples as its partners behind the Iron Curtain, bound to the West by ideals, whereas the Soviet leaders have to gain partners within the orbit of the West only by means of the establishment of fifth columns consisting of traitors to their own lands and civilization.

6. Whether or not these real and potential partners of the West within the Soviet Union will be able to play the role of allies is entirely up to the political leadership of the West. Thus far there are no indications that the West intends to go through with a formal diplomatic renunciation of the goal of liberation of the satellite countries, and the difference between the satellites and non-Russian Soviet republics such as Ukraine or Byelorussia being only geographic, there is no valid reason for the West to abandon these real and potential allies within the Soviet Union itself. If such an abandonment were to be considered, it would have fatal repercussions in the areas behind the Iron Curtain. This could throw the nations of the U. S. S. R. into the arms of the Kremlin against their will, an incident of history which would be a repetition of what had already happened before, during the Nazi-Soviet war. It would mean that the West approves the Kremlin's rule over these nations as its integral colonies and would dampen their will to resist the Kremlin. Thus a major part of the Soviet Union's internal troubles would be eliminated and these nations would be forced to look for the best offer from the Kremlin. Moreover, this would strengthen Bolshevik propaganda which works without cessation to convince the nations of the U. S. S. R. that the West has no other intentions toward them except to turn them into capitalist colonies.

7. Ukraine occupies a peculiar position among the nations of the U. S. S. R. In order to subdue Ukraine, which Stalin considered to be the central knot of world revolution and Russia's main economic base (Izvestia, March 14, 1918, and Pravda, October 10, 1920) Soviet Russia had to wage war against the Ukrainian National Republic for 3 years, from 1917 to 1920. Communist Moscow countered Ukrainian opposition by applying alternately unconcealed terror and tactical concessions. The premeditated famine of 1932–33 alone took over 7 million Ukrainian lives. And yet, World War II found Soviet Russia facing old and new difficulties in Ukraine. Ukrainians in the Red army surrendered in droves and the Ukrainian Insurgent Army (UPA) conducted a fight for complete national independence. In this situation Stalin admitted at the time of the Yalta Conference that "his position in the Ukraine was difficult and insecure" and asked President Roosevelt to agree to admit Ukraine to membership in the U. N. "for Soviet unity" (Edward R. Stettinius, Jr., Roosevelt, and the Russians at the Yalta Conference). With the objective of gaining Ukraine's adherence to the Soviet-Russian concept of attacking the West, Moscow permitted the Crimea to be annexed to Ukraine in 1953 and is waging uninterrupted psychological warfare, attempting to convince the Ukrainian people that the West is their enemy and that Ukraine's only chance is to stay together with Moscow. On the other hand, any Ukrainian opposition to Moscow is called subservience to the West.

In this situation it seems to be indicated, in raising the problem of the satellites at the Geneva Conference, for the West to find means which would permit it to assume a definite attitude toward the problem of Ukraine, whose struggle for freedom is also in the interests of the West. The particular point of emphasis here is that such a clarification of the attitude of the Western Powers toward the problem of the enslaved nations within the U. S. S. R. should give the Ukrainian people reasons to believe that the West has no intention of approving their enslavement by the U. S. S. R. by any treaty or agreement to be concluded with the Soviet Union, and that the free world is ready to aid the Ukrainian liberation movement both morally and politically.

In conclusion, it is respectfully suggested that:

The West should not be deceived by the diversion which is the basic strategy of Russia in today's changed form. Peace talks have not altered the real long-range objectives of the Kremlin.

The West must continue vigilant, increasing its strength and weakening that of the enemy to avoid the mortal danger of being taken by surprise.

The enslaved nations of the U. S. S. R. expect the Geneva Conference to make the position of the West toward the problem of their eventual liberation entirely clear, therefore an indicated strategy on the part of the West is to nurture allies within the Soviet Union itself, such as Ukraine and other enslaved nations of the U. S. S. R.

Respectfully,

MIKOLA LEBED.

Eighty-Fourth Is Cooperative Congress—"Cold War" Failed To Materialize

EXTENSION OF REMARKS
OF
HON. JAMES M. QUIGLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. QUIGLEY. Mr. Speaker, confirmation of what some of us have been saying about the splendid cooperative record of the 84th Congress came this morning in editorial comments published by two independent newspapers, the Washington Post and Times Herald and Labor's Daily.

It is pertinent to point out that both editorials begin with very similar unqualified statements.

The most notable fact about the first session of the 84th Congress is that President Eisenhower's fears of a "cold war" between the White House and Capitol Hill did not materialize—

Said the Post and Times Herald.

Mr. Willard Shelton, writing in Labor's Daily, said that—

It may fairly be said that the first session of the Democratic 84th Congress kept many of its promises—

And he then goes on to praise the cooperation we gave the President in matters of foreign relations, which was the promise we made when campaigning and the promise we have kept.

Under leave to revise and extend my remarks, I include portions of the editorial from Labor's Daily and the entire editorial from the Post and Times Herald.

[From the Washington Post and Times Herald]

COOPERATIVE CONGRESS

The most notable fact about the first session of the 84th Congress is that President Eisenhower's fears of a cold war between the White House and Capitol Hill did not materialize. The President's remark was made, of course, in the heat of the 1954 campaign, and he himself later acknowledged that his choice of words had been unfortunate. Actually there has been a large degree of cooperation between the Republican President and the Democratic Congress. On a number of issues, especially in the field of foreign policy, the Democratic majorities have given the President more support than members of his own party.

On such vital questions as the Formosa resolution, the Paris treaties and the Austrian treaty party differences were not discernible. Both parties were also firmly behind the President's efforts at Geneva. While his foreign-aid program was trimmed, it came through with a large part of what he had requested. Authority was also given to enter into reciprocal trade agreements for 3 more years. According to the Congressional Quarterly, majorities of both partics in the Senate stood with the President on 31 of the 33 issues on which votes were taken.

Credit for this sensible and constructive policy of working together for the national interest goes in considerable measure to 4 men. President Eisenhower consulted with the leaders of both parties and in general kept partisanship in the background. Senator GEORGE, chairman of the Foreign Relations Committee, played a role similar to that of Arthur H. Vandenberg in the Truman administration. His wise counsel and initiative helped to keep the administration looking forward in foreign affairs. And Majority Leader LYNDON B. JOHNSON, who missed the last month of the session because of a heart attack, consistently placed the national interest ahead of party interests in marshaling his forces. In large measure, the same can be said of Speaker RAYBURN.

In the field of domestic policy, the President was less successful in getting his program enacted. Congress defeated his highways bill as well as the Democratic substitute. The aid-to-education bill and statehood for Alaska bogged down in controversy.

Also postponed were revision of the Taft-Hartley Act, the Refugee Act, and the Walter-McCarran Act. The Colorado River bill was put aside in the House to avert defeat. On the other hand, Congress passed a military Reserve bill that had at one time appeared to be doomed, extended the draft for 4 years, and renewed the Defense Production Act. It raised the minimum wage to $1 an hour, and the President is likely to accept this despite the fact that it exceeds his recommendation. It increased the pay of its own Members as well as that of judges and executive personnel.

Congress corrected the investigative excesses of the previous session, but it effected no general reform of the procedures of investigating committees. The improvement was largely in the shift of control to more responsible committee chairmen. Senate investigations led to cancellation of the Dixon-Yates contract and put Secretary of the Air Force Talbott on the spot, but otherwise they have made little impression on administration policy. Congress sensibly turned over the loyalty problem to a Commission on Government Security.

Although they control both Houses of Congress, the Democrats did not offer a formal legislative program. In the House there was a drive for a $20 income-tax cut, for restoration of farm price supports at 90 percent of parity, and for further liberalization of social-security benefits. These measures were clearly aimed at establishing a record for the 1956 campaign, but they were killed or put aside in the Senate. The Congress as a whole is entitled to generous thanks for keeping partisan considerations at a minimum. It has notably minimized the fear of divided control over the White House and Congress and has shown that men of good will under separate banners can work to-

gether when public-spirited leaders point the way.

[From Labor's Daily of August 2, 1955]

RECORD OF THE EIGHTY-FOURTH

(By Willard Shelton)

It may fairly be said that the first session of the Democratic 84th Congress kept many of its promises.

On the overriding issue of foreign policy, the Democratic Congress freed President Eisenhower from dependence on his own Republican leaders. This may lose another election for the Democrats next year, since Mr. Eisenhower has a remarkable capacity to claim the credit, but that cannot be helped.

On the foreign policy issues the Democrats voted as their consciences required, and if it happens to assist the President politically, the safety and security of our people still commanded that they vote that way.

In the field of domestic policy, the Democratically controlled committees kept their promise to kill the Dixon-Yates contract.

The President pretends he canceled out the private-utility deal because he was finally assured, in an atmosphere of good comradeship, that the city of Memphis would build a powerplant.

This is nonsense: Memphis said all along that it simply would not accept Dixon-Yates power. The deal was killed because unendurable proofs of scandal in the handling of the contract were being piled up against the administration.

The personages involved include "assistant president" Sherman Adams, in the White House; former Budget Director Joseph Dodge; present Budget Bureau Director Rowland Hughes; J. Sinclair Armstrong, Chairman of the Securities and Exchange Commission; Brig. Gen. Herbert Vogel, Eisenhower's appointee as Chairman of the Tennessee Valley Authority; Administrator Lewis L. Strauss, Eisenhower's Chairman of the Atomic Energy Commission.

Not until the full record detailing the actions and conduct of each of these personages has been exposed will the Dixon-Yates story be complete.

In the legislative field—taxes, farm program, unemployment compensation, social security, housing, and education—the record of the 84th Congress is mixed.

The House, generally speaking, did a good job for the people. It passed a bill to repeal the Benson flexible farm price support policy; another bill to liberalize social security; another bill to cut income taxes at the bottom, where they should be cut.

* * * * *

There were fewer giveaways in the first session of the 84th Congress, and a new minimum wage law was passed, better than the President proposed.

The Small Family Farmer

EXTENSION OF REMARKS

OF

HON. HOWARD H. BAKER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1955

Mr. BAKER. Mr. Speaker, in the days of our fathers a certain type of hired man on the farm was described as "a great woodchopper in summer, a great hand with a scythe in winter."

The majority party in this session of Congress professes great concern for the welfare of the family farm. They almost seem to resent the idea that anyone, other than they, can, or will, or should help the low-income farmer.

They have blithely tried to restore the high, rigid price supports which have been clearly seen to help most of the larger and more prosperous farmers. Their motto seems to be: "Billions for the rich, not even millions for the poor."

The request for $30 million, plus certain enabling legislation, to start a rural-development program has fallen upon deaf ears. Truly, there are those who are "woodchoppers" for the small family farmer in the summer of helping the large farmer. They, too, can "swing a scythe" for the small family farmer in the winter of economy or the rush of adjournment.

Congressional Quitters

EXTENSION OF REMARKS

OF

HON. RUSSELL V. MACK

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. MACK of Washington. Mr. Speaker, most newspaper editors continue bitter over the incredible developments that allowed politics to kill highway legislation during the recent session of Congress. Most editors think a compromise plan would have been possible, one of part taxes and part bonds.

An effective editorial expressing this viewpoint was published last week in the Oregonian at Portland, Oreg. It follows:

CONGRESSIONAL QUITTERS

The almost incredible development is that rather than shorten their 5 months' vacation—at the new salary they voted themselves, $22,500 a year plus perquisites—Members of Congress are preparing to go home without doing anything about the vital national highways program.

The Democratic leadership of Congress laid a fat egg on that issue. It should heed President Eisenhower's advice to reconsider the sweeping plan he proposed, with its bond-financing feature. Or it should revise the Democratic program, billed as "pay as you go," to win the necessary votes. It would only require a few days more in Washington.

For Senate and House to adjourn with nothing done to meet the urgent national need for stimulated highway construction would be a push in the face the American public does not deserve. It would, in addition, be a Democratic political boner of the first magnitude.

On the basis of the Clay report, President Eisenhower informed Congress that a grand total of $101 billion must be spent on the 40,000-mile system of national highways. This program was boiled down in Congress to an administration bill for expenditure of $38,500,000,000 in Federal and State money in 10 years, with a Federal bond issue of $21 billion to provide extra funds. Experts estimated the increased use of highways for business and pleasure would repay the bonds without additional taxation.

The Senate came out with a half-baked measure to provide more money for primary, secondary, and urban roads—but included neither bond authorization nor increased taxes. Democratic leaders of the House, also rejecting the bond proposal, produced a measure to spend $48,500,000,000 on highways in 12 years, and to raise $12,400,000,000 of the Federal share from a 1-cent increase in the gasoline tax plus harsh taxes on truck tires, recapping materials, tubes, and diesel fuel.

But the House buckled under the pressure of a blitz lobbying drive by the trucking industry, although automobile owners would have paid about three-fourths of the new taxes. This week the House defeated both the administration bill and the Democratic leadership's Fallon bill by substantial margins. The President immediately appealed for reconsideration, the intimation being that he would take the Democratic measure, or a compromise, if he couldn't have his proposal.

In the face of this record of ineptitude and disregard of the public welfare, Speaker SAM RAYBURN has the temerity to say that the highway program is dead for this year, "and probably for next year, too." He is "shooting" for adjournment.

A reasonable compromise between the pay-as-you-go and higher taxes position of the Democrats and the bonding plan of President Eisenhower could be reached in a few hours if the Democratic leaders wanted it. The people would go along with a 1-cent gas tax boost plus some bonding to obtain a program adequate to the Nation's needs. For Congress to quit cold on this matter is unforgivable.

Richard S. Reynolds

EXTENSION OF REMARKS

OF

HON. BURR P. HARRISON

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. HARRISON of Virginia. Mr. Speaker, under leave to extend my remarks in the Appendix, I include an editorial which appeared on Monday, August 1, 1955, in the Richmond Times-Dispatch, Richmond, Va.

Throughout his life, Richard S. Reynolds was an individual of ingenuity and enterprise. He was an outstanding example of the progressive American businessman, capable not only of achieving success for himself, but also of making a substantial contribution to the industrial and economic progress of his country.

Mr. Reynolds will be sincerely missed by the many who admired his genius and, particularly, by his countless friends in Virginia.

The editorial follows:

RICHARD S. REYNOLDS

The imaginative gift which caused Richard S. Reynolds to write poetry in his few leisure hours, also made him one of the foremost industrialists of his time. For it was that same quality—imagination—that enabled Mr. Reynolds to expand the Reynolds Metals Co. into a serious rival of the Aluminum Company of America.

Mr. Reynolds' death came after a period of failing health, but not before he had made a huge success of his aluminum business. Along the way, he had also made great contributions to the success of the tobacco industry, when in his younger days he was an employee of his uncle, R. J. Reynolds, in Winston-Salem.

But Mr. Reynolds' achievements, like those of most successful men, would not have been possible, if he had relied solely on sudden inspiration or haphazard bursts of energy. He probably worked harder than anybody in

his organization, and spent a vast amount of time traveling from one plant to another. This stocky, genial man was likely to turn up at any of his plants at almost any hour of the day or night.

When the Reynolds Metals Co. established its headquarters in Richmond in 1938, it was a valuable industrial acquisition to the city. Since then, the company's operations, both here and throughout the United States, have expanded hugely. Reynolds Metals is now one of the Nation's major enterprises.

It has been important to the economy of Richmond and Virginia. In addition the company and its late founder have contributed generously to many charitable and civic enterprises.

The passing of Richard S. Reynolds removes a leader in a generation of men who contributed importantly to the present industrial preeminence of America. Because of such able, tireless, ingenious executives, the United States was the decisive factor in winning two world wars, and its people enjoy by far the highest standard of living on the globe.

Refugee Relief Act Amendments

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. SCOTT. Mr. Speaker, it is regretable that the Democrat leadership of both Houses of Congress—in control of all committees—completely ignored the President's request for vitally important amendments to the Refugee Act of 1953, notwithstanding pledges of the Democrat Party to make needed revisions in the laws concerning admission of qualified persons. Both the Senate and House majority leaders failed to act, notwithstanding the efforts of Senator WATKINS to get action in the Senate and of Mr. CRETELLA, of Connecticut, and of myself in the House.

The President asked for these essential revisions on May 27 last. I introduced a revision bill on January 5, 1955, and I later introduced H. R. 6733, which specifically provided for carrying out the President's request by amendment of the act in order to permit the entry of bona fide immigrants. I requested a hearing on H. R. 6733 from subcommittee No. 1 of the House Judiciary Committee and was advised on June 10 that my bill was before this subcommittee. On July 5 the subcommittee chairman notified me:

We have not scheduled any hearings on legislation designed to amend the Refugee Relief Act of 1953.

The reason given was that Senator WATKINS' bill would be brought before the full Senate Judiciary Committee. However, Senator WATKINS' efforts to carry out the President's wishes were whipsawed in the Senate, as were mine in the House, by the Democrat leadership in both bodies.

The difficulties which will face bona fide qualified applicants in the future will continue, thanks to the broken promises of a Democrat Congress, which also failed to keep its promises on education, health, and labor legislation. All of these measures to help people had been urged by the President, and all are very much in accord with the President's middle-of-the-road policy.

Congress and the Highway Program

EXTENSION OF REMARKS
OF
HON. THADDEUS M. MACHROWICZ
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. MACHROWICZ. Mr. Speaker, the Hearst newspapers for the past 3 years have been compaigning continuously for better roads for this country. It was their awakening of an enlightened public opinion that brought the highway problem to the attention of this Nation and to the Congress.

Their opinion of the failure of the House to enact any highway legislation is of patricular value because of all of the publications in this country they understand the highway problem best.

Therefore, I would like to insert in the RECORD two editorials that were published in all of the 15 Hearst newspapers from coast to coast on Saturday, July 30, and Sunday, July 31. The first is entitled "Disgraceful Performance" and the second "Why Is a Congressman?"

In my opinion, these editorials express exactly what the sentiments of the Nation are on Federal highway legislation. I commend them especially to those Members responsible for the failure of the House to act on this vital problem.

The editorials follow:

DISGRACEFUL PERFORMANCE

The performance of the House of Representatives in voting down any form of Federal-highway legislation was sickening.

In 12 hours of action in 2 days on the House floor, Congressman after Congressman expressed his great concern at the slaughter on our highways and the great economic loss the American people were suffering.

The need for a Federal-highway bill, they kept saying to each other, is not in question.

Then when their names were called, they voted down any form of Federal aid at all.

Some of them, when the final vote was announced, laughed aloud, as though they had done something amusing.

Up in the galleries, enjoying this display, were the lobbyists who today are being held responsible for the defeat of the various bills.

Many of them represented industries and associations that have fought for good roads for many years, but who found that they didn't really want them if they were going to cost any money.

The lobbyists won a battle, but they lost the war, because they represent industries that cannot survive unless the highways of America are made adequate within the next few years.

Down on the floor the Congressmen were running the lobbyists' errands and deserting their own party leadership.

Today many of them have the decency at least to be somewhat ashamed of themselves.

And the lobbyists are telling everybody that they really were for a road bill and that they didn't expect that Congress would become so panicked under lobby pressure that nothing would result at all.

If these gentlemen are to be accepted at their word—and that is a gigantic "if"—then we agree with Republican House Leader MARTIN that President Eisenhower should call a special session of the Congress and make it sit in Washington until it does its duty.

There is nothing funny or politically smart about sabotaging a Federal highway bill.

About 200 Americans died in our chaotic traffic while these Representatives of the people were issuing pious statements and finding a way to save their own political hides.

Now let them act like the statesmen they pretend to be.

Let them forget their miserable and petty differences.

Let them sit down together with their eyes off the galleries and do the job the American people are demanding of them.

And let them sit there until they do.

WHY IS A CONGRESSMAN?

If you don't want to think about the traffic jams you'll be in today as you and your family try to take a ride in the country, you might think about Congressmen.

As you notice the ambulances and wreckers and State police cars heading toward the latest highway disaster, notice also what went on last week in Washington.

Congressmen of both parties, stampeded by lobbyists representing industries that make good money from the use of the highways, voted down any attempt to get you out of the traffic chaos or to make the ambulance trips unnecessary.

The lobbyists and our Representatives all piously agreed that better roads are absolutely vital.

They also agreed that it was absolutely vital that somebody else pay for constructing them and that it was absolutely vital that everybody get reelected.

Realizing what they had done, after they had made sure they had done it, the Congressmen pointed at the trucking industry lobby as the villain.

And the truckers, after the bills were well sunk, issued statements that Congress should never have acted like that; that President Eisenhower was right when he criticized Congress and demanded reconsideration of its failure to pass a bill.

The same people who caused 100,000 telegrams to flood into Washington demanding the defeat of highway legislation, issued press releases that said the recipients of the telegrams must have misunderstand.

The 100,000 telegrams came from a tiny minority of the American business community.

We wonder what might happen if the American people sent in telegrams themselves, preferably after a frustrating, dangerous day on the roads the Congressmen refused to improve.

In fact, why don't you do it right now?

We don't know whether you mean as much as a lobbyist does to your Congressman, but we're pretty sure a lot of you acting together mean more, much more.

Why not let your Congressman know what you think about the House action last week and tell him to start all over again right now and pass a bill?

And tell him to stay in Washington until he does.

Biggest Mistake Congress Made

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1955

Mr. MACK of Washington. Mr. Speaker, the failure of the present Dem-

ocratic Congress to pass a highway bill was a disappointment and a disgrace.

The Nation needs more and better roads to save lives and to prevent the crippling of citizens. Experts estimate the economic savings on hospital and medical bills, on wear and tear on equipment, in time on commercial vehicles, and through lower insurance rates at $4,300,000,000 annually. These economic savings would more than pay the cost of building the needed highways.

Concerning the failure of Congress to pass highway legislation, the Democrat and Chronicle, of Rochester, N. Y., in disgust said editorially:

Lack of action on a highway program is a disgrace. The national-road situation will grow worse before Representatives and Senators get back to Washington next year. The delay is inexcusable and a black mark on the Congress.

The Tuna Industry

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. WILSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following telegram from the American Tunaboat Association:

SAN DIEGO, CALIF.

Congressman BOB WILSON,
House Office Building,
Washington, D. C.:

Tuna producers have asked assistance under United States trade policy which promises not only to expand trade but that no domestic industry will be sacrificed in attaining that end. Despite serious injury no aid has been forthcoming. This condition was wantonly disregarded and worsened by the recent trade agreement with Japan. Record imports of frozen tuna, refusal of the United States Government to take remedial action, decline in number of canneries buying domestic fish, decline in deliveries of such fish by the tuna clipper fleet by over 23,000 tons this year compared to 1954, extended delays in unloading and inability of the major portion of the fleet to get sailing orders, have resulted in a decision by the association to reduce the price on yellowfin and skipjack tuna by $40 a ton effective on fish caught by vessels departing after August 1. The new prices are the lowest since the OPA. They mean still further reductions in wages to our fishermen. Unless a vastly greater volume of tuna is now purchased by domestic canners this action may hasten the demise of the fleet. Unless the United States Government sees fit to implement its trade policy to the end that a domestic industry shall not be put out of business, this action will likewise be unavailing. There are few, if any, other industries that because of imports have declined in production, prices, profits, wages, employment, and their share of the domestic market, all of which trends must be reversed if the industry is to survive. United States trade policy as it has been recklessly and grossly misapplied to the tuna fishery now makes it clearly possible for the Japanese to take over the entire United States market. Producers will fight this discriminatory treatment by every honorable means as they believe our Government should honor not only its commitments to the Japanese but to a domestic industry as stated and restated by the administration.

HAROLD F. CARY,
American Tunaboat Association.

People Who Live in Glass Houses Shouldn't Throw Stones

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. THOMPSON of New Jersey. Mr. Speaker, in recent years, the Republican Party has made much of the so-called mess in Washington which they have attributed to the Democrats. The events of more recent date, however, would seem to point up the moral in the old saying that, "people who live in glass houses shouldn't throw stones." The Mulligan letters, so wonderfully reminiscent of another Republican scandal of some years back, is only the most recent example of the Republican "mess" in Washington. This whole situation is very aptly summarized in an editorial which appeared in the Trentonian on August 1, 1955, and I should like to include this editorial as a part of my remarks. The editorial follows:

IT MUST BE CONTAGIOUS

Thirty months ago, Republican crusaders burdened with mops, pails, and much detergent marched triumphantly into Washington. They were pledged to clean up the "mess" it took their Democratic predecessors 20 years to create.

They plunged into their janitorial chores with a furious delight and dedicated activity.

First they went after the security risks. Came McCarthyism and the famous administration security "numbers game."

After much accusation and vilification in which hundreds lost their jobs and reputations on hearsay evidence, many objects of the numbers game were cleared and went back to work with scarcely an apology.

But it reached such a crescendo of madness that a roar of protest was heard from ex-Republican Senator Harry Cain, once an arch reactionary and now head of the Subversive Activities Control Board. He protested at length over the malevolent irresponsibility of the security program.

Next came the Dixon-Yates deal, ordered by President Eisenhower himself. The combine was to set up an atomic powerplant to pay back the Tennessee Valley Authority the power drained by Atomic Energy Commission installations.

This one touched off a hot fight, and out of the wash came the fact that a banker, working as a consultant for the Budget Bureau, advised the Government on the deal. Conveniently, his firm was doing the financing.

It didn't take any of Defense Secretary Charles Wilson's bird dogs to scent the pronounced fragrance of this deal, so Ike canceled it. He gave as his reason that the city of Memphis was planning to build its own powerplant and wouldn't need any from TVA.

Next came Madam Hobby, who comes from Texas where they do things real big. She left us words that will long be remembered: "Nobody could have foreseen the demand for the Salk polio vaccine."

Thereupon, the vaccine inoculation program program was, to borrow from the Republican lexicon, a mess.

Now comes l'affaire Talbott. This one involves Air Force Secretary Harold Talbott. He is a partner in a management efficiency firm that suddenly became prosperous after he was named to his high post. It seemed he gave it a little help by soliciting business from companies engaged in defense work. Conveniently, he used his official stationery.

Harry Truman got hung with the mink coat, deep freezer, and fancy vacation shakedowns that his subordinates pulled.

And since sauce for the goose is sauce for the gander, we think these latest bobbles legitimately and fairly can be hung on Ike.

It all goes to show that neither side has a mortgage on political morality, although this later gang showed far more sophistication and went after bigger stakes than did their predecessors.

But it seems that these janitors, in charge of cleaning up the mess they say they found, brought in some ringers. And they're mired down in some pretty sticky muck of their own making.

The Veteran's Right To Compete in the Air-Transportation Field

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. TEAGUE of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article on North American Air Lines:

THE VETERAN'S RIGHT TO COMPETE IN THE AIR-TRANSPORTATION FIELD

I should like to talk about how to be for the veterans and for free enterprise—up to a point.

In the closing days of World War II people in Government began to realize that one postwar byproduct of the fantastic air armada we had created to win the war would be a number of veterans who wanted to make their lives in aviation. Accordingly, certain regulations were passed which made it possible for veterans to own and operate commercial airplanes.

At this same time, in spite of the wartime boom in air travel, most of our major airlines were operating in the red, and making up their deficits by receiving public funds in the form of subsidies and mail-pay contracts. The reason was that the major airlines had always sold air travel to the public on a luxury basis. Fares were so high that only well-to-do people could afford to fly. Nobody had ever gotten through to the airline executives with Lincoln's famous words, "The Lord must have loved the poor people, He made so many of them."

Thanks to the new regulations permitting veterans to own and operate airplanes, a new and dynamic force came into commercial aviation. One group of veterans invented something they called aircoach. The idea was to sell air travel at fares everybody could afford. From the very first the response was tremendous, and the uproar was tremendous. The executives of our sick major airlines said aircoach was bad for the industry. They said it couldn't be done profitably, they said they couldn't even dare to try it; they asked for higher fare and bigger subsidies to blot their red ink.

But their breast beating and pessimism didn't stop the veterans operating under the Government's regulations that permitted them to fly commercial airplanes. They went ahead and advertised aircoach to the public. They sold millions of people on the idea that they could fly in safety and comfort for a lower fare.

North American airlines, the largest of these groups of veterans, flew over 600,000 passengers more than a billion passenger miles, with a perfect safety record, never received a nickel in Government subsidy, bought and paid for their own airplanes, and made a profit.

All this at the time when the major airlines executives were crying up a storm in congressional hearings that the only thing that could save our airlines was higher fares and bigger ladies to scoop up the taxpayers' money.

About 4 or 5 years ago, the major airlines finally got the word. By this time the public was educated to aircoach travel, airlines received thousands of phone calls asking whether they operated aircoach flights, and they were finally forced to put on a few flights. Well, glory be, they couldn't handle the business. Even though their fares were still higher than North American's fares, the public went for low-cost air travel as if it were a tax refund.

Today, with oversas plane traffic carrying more passengers than all the ships, more than half of it is aircoach, more than a third of all domestic travel is aircoach, and the percentage is growing all the time.

Our airlines are healthier than they have ever been in history, because they have finally found the North American way of reaching a bigger market by charging a lower fare.

Now, how does the Government thank the veterans who courageously pioneered in this new kind of air travel, who led the sick airlines back to health, who brought the speed and comfort of air travel to millions? Have these veterans had a new oak leaf cluster added to the decorations they won while serving their country in the war? Have they gotten an official letter to the effect that this achievement was beneficial to the air-transport industry and the public? Here is the big surprise: The Government's gratitude is expressed as follows: They are trying to put the veterans out of business. Trying is a mild word for it. They are using every means in their power to set these veterans down on the ground, to deprive them of the use of their airplanes, to execute our companies as ruthlessly as a guillotine blade chops off a head.

What's their excuse. Not public safety. Remember, North American has flown 600,000 passengers a billion passenger miles with a perfect safety record, and no airline can surpass that record.

Their excuse is that North American has grown so much that it is in competition with the major airlines. Our question is, Who's competing with whom? Who started aircoach and who educated the public? Now that majors belatedly put aircoach on, they want the people who invented it to disappear.

The sad part of all this is that their gun barrels are only incidentally trained on NAA and the courageous veterans who developed air coach. Actually, they are taking dead aim on the public's pocketbook. NAA is the one big reason why air-coach fares on the major airlines aren't booted 20 percent in the next month or two. Do the majors want to raise the fares? Their intentions are clear. Recently they got themselves a blanket dollar-a-ticket increase which has cost the traveling public a hundred million dollars since it was passed. Only North American refused to increase the fares. Draw your own conclusion about why they want this stable, soundly operated airline out of business.

Here's the present picture. The CAB, which authorized our operation in the first place, is now surprised at what creative free enterprise has accomplished. They shouldn't be that surprised. It was the same kind of doggedness and ingenuity that flew the Hump, that broke the Berlin blockade, that got soldiers to the Far East in the Tokyo airlift when the Korean crisis broke. But they are surprised and, on behalf of the monopolistic group of major carriers who might as well own the air between our great cities, they are now trying to take back the authorization they gave to the veterans of our air battles of World War II.

Shall big business own the air?

Shall these veterans be callously deprived of their right in the new kind of travel they invented?

Will you be forced to pay more for air travel?

If the present decision of the CAB to revoke North American is not set aside, these things will happen—and the public will be the loser.

One-thousandth Anniversary of the Christianization of the Ukraine: A Tribute

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. RODINO. Mr. Speaker, on many occasions Canadians and Americans join in mutual celebrations of events important to both nations. It is fitting that they should do so particularly on this celebration commemorating the Christianization of the Ukraine 1,000 years ago, because both nations have substantial numbers of their citizens whose ancestry is traced back to the Ukraine.

In the history of the world the acceptance of Christianity by what is now called the Ukrainian people has had the greatest significance. Christianization of the Ukraine had a two-fold effect upon the Ukrainians: It brought them into the Christian family; and secondly, it created a bridgehead for the dissemination of Byzantine culture into the heartlands and distant borders of Eastern Europe. With its Cathedral of St. Sofia, Kiev, the capital of ancient Ukrainia, became a religious and cultural center, rich in art, architecture, and literature. Within a relatively short time Kiev became one of the most prominent outposts of Byzantine civilization. From this medieval Kievan state Christianity spread throughout the vast areas east of what is called today the borderlands of Western Europe, and as the eastern branch of Christianity enveloped this area, it diffused with it the Byzantine civilization in all its brilliance and grandeur. In this manner the entire area, formerly inhabited by pagan barbarians, was brought into the Christian family and into the Byzantine civilization.

The 1,000th anniversary commemorating the Christianization of the Ukraine takes on a special meaning today when one calls to mind the unfortunate fact that the Ukrainian people have been overwhelmed and suppressed by one of the greatest pagan forces of the age, Russian communism. However dismal the future prospects of Ukrainians may seem, it ought to be the hope of every freedom-loving person that in this 20th Century as in the 10th a new movement will take root in the depths of the Ukrainian soul which with equal force and influence will spread eventually throughout the Soviet empire, a movement which will bring to the Ukrainian people a new era of religious, cultural, economic, and political freedom. A people who have done so much for the betterment of humanity deserve nothing less than that.

The Small-Farm Family

EXTENSION OF REMARKS
OF
HON. CLIFFORD G. McINTIRE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. McINTIRE. Mr. Speaker, the low income farm family is again largely forgotten by Congress. They are being denied even the small fund requested by the Secretary of Agriculture to help get the new rural-development program underway.

April 27 President Eisenhower sent to Congress the study and recommendations showing how low income farm families can be helped. He said:

> We must open wider the doors of opportunity to our million and a half farm families with extremely low incomes—for their own well-being and for the good of our country and all our people.

To implement the program Congress was asked to appropriate $3 million and to provide $30 million for additional loans to small farmers.

Congress would have gone home denying any of this help for the small family farm had not Senator AIKEN and Senator THYE spoken out in protest. As a result, there will be $15 million additional to loan to small farmers. All the rest was denied.

Senator AIKEN said:

> I believe it will be too bad if the Congress does not go along with the President's proposal and undertake by legislative action to afford needed relief to the million and one-half families—comprising probably 6 million or 7 million persons—who today are living on farms, but do not have the means of a decent livelihood, and in many cases do not have educational opportunities, particularly vocational-education opportunities. If they leave the farms and find work elsewhere, they cannot command high wages, because they are not trained. They are trying to make a living on farms which are so small that even if they received 300 or 400 percent of parity for the crops they produce, they still would be unable to make a decent living.
>
> So, Mr. President, I should like to see the Senate today vote to restore the cuts in the appropriation which were made originally by the House, and subsequently agreed to by the Senate committee.

June 7 and 8, leaders from 27 States met in Memphis, Tenn., to plan how best to push forward with the new rural-development program for low-income

farmers. They are moving ahead with plans, hoping Congress would provide the funds to get at least 60 pilot operations going in the 1,000 counties where low income farm families are concentrated. Now they must be told Congress would not make this possible. The low income farm families have again been largely forgotten.

Who Is Responsible for Our Inadequate Airpower?

EXTENSION OF REMARKS
OF

HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. DORN of South Carolina. Mr. Speaker, I am only one of the Members of this Congress who are increasingly appalled by intelligence of Soviet air strength, and our own relatively inadequate airpower. We have been assured by the Secretary of Defense that the Russians were building only a defensive force, comparable presumably to the police force of any civilized state, but even the Secretary of Defense has now acquiesced in the decision of Secretary Talbott and General Twining to increase procurement of long-range B–52 bombers for our Air Force by 35 percent. This was presumably because the Secretary was belatedly convinced that intelligence concerning the new Russian long-range heavy bomber, the T–37, was correct.

What we know about the T–37, and what we hope the Secretary also knows, indicates that the Soviet rate of aircraft production is about twice that of ours. Planning of our B–52 intercontinental jet bomber, the chief weapon of our long-range bombing Air Force, began in 1947, and construction began 2 years later. Planning of the Russian equivalent, the T–37, began probably 4 years ago, and actual construction less than 3 years ago. These alarming figures emphasize what even our own Air Force leaders have been telling us, that Russian technology is forging ahead of ours.

A recent article by Prof. Barton Leach of the Harvard Law School and the Harvard Graduate School of Public Administration, examines some of the reasons for our failure to build adequate air power; that is, for the failure of the American people to demand it. Recognizing that airpower is expensive, Dr. Leach still complains that we approach airpower from the dollar sign of its cost insteadof from an appraisal of its value. The fabulously expensive B–36 has performed its mission, and can only perform its mission, if it never has to drop a bomb. Its value is the assurance it gives us of peace. Its visible sign is a strong and healthy America enjoying peace.

For 8 years, however, we have juggled with figures of Air Force wings and Air Force personnel to serve political ends. Currently we are expecting the Air Force to increase wing strength 14 percent with a manpower increase of one-half of 1 percent. I am proud of the record of my Democratic colleagues in bucking President Truman and President Eisenhower impartially when they sought to reduce the size of our Air Force.

I wish the people of America and my colleagues here had today the instinctive understanding of airpower that the British had of seapower. In an age of seapower, that understanding made the British a great nation. Today, appreciating the fact that the air age is now half a century old, and the atomic age has been with us for a decade, the British are showing equal understanding of airpower, and are giving adequate attention to the problems attendant upon its build-up. Perhaps it is, as Dr. Leach suggests, primarily a problem of leadership. If it requires "men of war leader stature with a wartime sense of responsibility and urgency" to give us the airpower necessary to our defense, and our survival, we of this Congress are abdicating our leadership.

Mr. Speaker, by consent of my colleagues to extend my remarks, I insert in the RECORD a telling appraisal of our failure by Dr. W. Barton Leach. It is a long article, but a readable and a stimulating one, which appears in the May 1955 issue of the Annals of the American Academy of Political and Social Science.

The article follows:

OBSTACLES TO THE DEVELOPMENT OF AMERICAN AIRPOWER

(By W. Barton Leach)

"Airpower is the dominant factor in modern war"—this is the common currency of strategic discussion. But in this second decade of the atomic age, 5 years after the first Soviet nuclear explosion, the theoretical dominance of airpower has not been realized in American force in being. It is well that we should examine the political, economic, professional, and administrative pressures that have repeatedly reduced and delayed the realization.

Actually the above quotation is incomplete. In its usual form there is an additional word: but. The but may appear in the same sentence, the following paragraph, three pages later, or next week's press conference. Yet appear it will. "Airpower is the dominant factor in modern war * * * but we also need a navy second to none and an army adequate to fight all kinds of war, large and small; * * * but since there is no single year of crisis we must build in an orderly way for the long haul; * * * but the aircraft we buy must be the ones we need, not those that will be obsolete before we get them; * * * but in building our military power we must not undermine our economy and thus allow communism to achieve its greatest triumph without firing a shot; * * * but," and so forth.

These but clauses are always unimpeachable verities. And each in its own way is a factor retarding the growth of national airpower. Thus far the but clauses have had far too much success. Landpower and seapower, at least since 1951, have had forces in being at the levels approved as the Nation's strategic need. This has never been true of airpower since V–J Day. Instead the country has been assured that "new emphasis is being placed on airpower" and "our airpower is greater than ever before in peacetime history." But the standard of evaluation must be the strategic requirements of the present, not the gross inadequacies of the past.

A QUESTION OF DEFINITION

In this article United States airpower is defined as the United States Air Force—not because of its name or any theoretical concept that airpower must be unitary but because of the military tasks that have been assigned to the Air Force, that it is organized and prepared (given the means) to perform, and that will not be performed at any significant level of effort except by the USAF. To avoid oversimplification some discussion of this definition now follows.

Broader terms have recently come into fashion in defining airpower. National airpower, it is said, is not only the Air Force but also the air elements of the Army, Navy, Marines, and Coast Guard, our civilian airlines, and our incomparable aircraft industry.

Such a definition can be of some occasional use in pointing out the multiple uses of the air space in modern war. But it blurs the focus and can lead the unthinking to equate the organizations listed in the definition and conclude that a deficiency in the Air Force is cured by abundance elsewhere. It offers an anodyne for the agony of decision—the hard task of putting first things first, second things determinedly second, and third things out the window. It lets one say, "Of course, we all agree that airpower is the dominant factor in modern war. But all these things are airpower. So we can give something to everybody—they are all so sincere and persuasive—and let each build airpower in his own way." This is surely the pathway to self-delusion, perhaps to disaster.

If we are to surmount the perils that face us we would be well advised to sharpen the focus of our definition as follows: United States airpower is military airpower in being to (1) deliver massive attack upon any enemy anywhere as ordered, (2) defend the United States against enemy air attack, (3) provide tactical airpower, the air component of the ground-air fighting team, and (4) provide global airlift of men and materiel for all military purposes.

These four military tasks are primary missions of the United States Air Force. With regard to each of them certain plus values may be contributed by others, but it is well that these should be precisely understood to avoid false inferences that if the Air Force is not given the means to do these jobs someone else will do them.

Massive attack

The massive attack capability—the deterrent to big war and a major war-winning factor if big war comes—is the job of Strategic Air Command. This does not mean that SAC hugs a monopoly to its bosom. It does mean that no other military force has the capability of delivering massive attack at the required level of intensity and continuity. Further, no other military force has indicated any willingness to accept firm responsibility for any defined part of the job. This appears to include carrier-based aircraft, which must be considered a plus value available fortuitously if at all.

Air defense

The air defense of the United States is the job of Air Defense Command insofar as fighter aircraft and early warning systems on land are concerned. The Army contributes antiaircraft fire, especially ground-to-air missiles such as Nike. The Navy contributes seaward extensions of the radar early warning lines. Possible contributions of fighter aircraft by the Navy and Marines must be considered indeterminate plus values, unlikely to materialize owing to the necessity of building an air defense system around firm commitments, assigned responsibilities, and integrated training. If ADC does not have the means to provide fighter defense of the United States, this country has no fighter defense.

Tactical air support

Tactical air support of ground troops, protection against enemy air attack, interruption of the flow of enemy supply and reinforcement, attack upon battlefield targets, is in a somewhat different category. Basically it is the job of Tactical Air Command and the overseas tactical air forces. But the 3 Marine air wings (equivalent in total to about 9 TAC wings) do much the same kind of job, tending to specialize in attacks upon battlefield targets. Marine air and TAC units are usable together, the presence of the former reducing plane for plane the requirement for the latter, as in Korea. In some circumstances, notably, as in Korea, where the battlefield is near a coastline and the enemy does not employ submarines and attack aircraft, carrier-based aircraft may fill a need for tactical air forces. But this plus value is limited in quantity and, more important, in continuity. Nothing approaching a plane-for-plane reduction in land-based air requirement is produced by the carriers; under the best circumstances the air complement of a carrier replaces less than half its number of land-based aircraft (Marine or USAF). Field Marshal Montgomery has made it clear that tactical use of carrier-based aircraft has no significant part in North Atlantic Treaty Organization plans.

Air logistics

The air logistics mission is basically the job of Military Air Transport Service (a joint command operating USAF and USN aircraft, the former in much greater quantity than the latter) and the troop-carrier units of TAC. There are supplementary sources of airlift, notably the Fleet Logistic Air Wings, the civilian airlines, and private transport aircraft. However, it is well to note that in a genral crisis—as contrasted with such local crises as the Berlin blockade and the Korean war—there will be multiple demands for airlift, and a transport unit that is itself overtaxed will not have resources to send to the aid of its equally overtaxed neighbor.

Summary of USAF responsibility

To summarize: As to massive attack capability and continental air defense against enemy attack, American air power is for practical purposes synonymous with the United States Air Force. As to tactical support of United States ground troops American air power is synonymous with the United States Air Force to about the same degree that American land power is synonymous with the United States Army—the Marines add air wings and divisions to each. On each of these three missions carrier-based aircraft may provide plus values when the fighting starts, but do not reduce by as much as a single wing the USAF requirement. As to military airlift the picture is more complex, but the USAF must carry the major burden.

Thus, obstacles to the growth of the United States Air Force are obstacles to the growth of American air power in a straight-line relationship. Put it this way: If obstacles to the development of the United States Air Force are removed, the Nation will have the air power it needs. Otherwise not.

DEVELOPMENT OF USAF BEFORE AND AFTER 1951

Prior to 1951 the national need in air power had never been determined, much less programed by the Department of Defense. The Finletter Commission and the Brewster-Hinshaw Committee, reporting respectively to the President and Congress, had stated a peacetime requirement of 70 wings as of 1948. But the Joint Chiefs of Staff had annually been restricted to the exercise of dividing among their services a progressively reduced total defense budget—$15 billion, then 14, 13, and 12. This, in the days of Secretary of Defense Louis Johnson, was known as "cutting fat without cutting muscle." It is useless to bemoan the inadequacy of the resulting forces and the invitation to trouble they presented; the Korean war is its own best witness. But it is worth while to point out the folly of starting with a dollar sign and restricting our military professionals to the job of dividing the pot. This could happen again, and it could have the same result.

In 1950–51 this country was apprehensive, and rightly so. In September 1949, we detected the first nuclear explosion in the Soviet Union. And in June 1950 the Korean war showed us what happens when we drop our guard. So, for the first time since V–J Day, the Chiefs of Staff were directed to state what forces the country needed—all forces, land, sea, and air. The process was started in January 1950 and completed in a National Security Council decision on October 1, 1951. The agreed and approved requirement was 21 divisions for the Army, 409 major combat ships for the Navy, 3 divisions and 3 air wings for the Marines, and—here mark well—143 wings for the Air Force to be achieved by June 30, 1954, and to be manned by 1,200,000 military personnel. These forces represented relatively small percentage increases for the Army, Navy, and Marines, but more than a doubling of the Air Force. For the first time military and civilian planners, accorded full opportunity to state the military need, had given real substance to the precept that "Air power is the dominant factor in modern war."

As all know, 143 wings never materialized and 1954 disappeared as a target date. The hard facts of the fiscal year 1953 budget produced a stretchout to 1955. Then in the Truman budget for fiscal year 1954 another stretchout to 1956 was programed. The Eisenhower budget for fiscal year 1954—the only one that really counted for that year—cut $5 billion out of the Air Force, adopted an interim 120-wing program, and left the whole thing to a re-examination by the new Chiefs of Staff, all of whom were to be changed in the summer of 1953. The new Chiefs, operating with a problematical freedom of action, found that security, airwise, could be attained with 137 wings to be achieved by 1957 and to be manned by 975,000 military personnel. The manpower figures are striking: someone discovered that with "better utilization of manpower" the Air Force could get, in 1955, 120 wings with 970,000 men; in 1956, 127 wings with 975,000 men; in 1957, 137 wings with 975,000 men (sic).

That is where matters stand today. What happens now will depend upon how insuperable the obstacles, herein described, prove to be.

THE OBSTACLES

Obstacle 1. The Air Force is in process of growth, having never achieved its planned strength: When a policymaker wants to reduce total defense money and manpower—and this is a constant state of mind—it is far easier to cut back planned future force than to disband existing military units, scrap existing weapons, and discharge personnel already on the job. The fact that the planned future force is indispensable and the existing present force dispensable is not always a sufficient reason for building the former at the expense of the latter. The reluctance of Secretaries of Defense to accept split papers from the Joint Chiefs of Staff and to insist on JCS agreement loads the dice in favor of the status quo; if unanimity for change is unobtainable the situation tends to remain unchanged—existing forces stay; new forces are reduced, delayed, or both.

Obstacle 2. Airpower is expensive: Aircraft cost a lot and become obsolete fast. Take for example the B–36, the 10-engine intercontinental bomber. It cost $3 to $5 million a copy, and it will probably pass into the junk pile before it ever sees action. Many find it difficult really to accept the principle that the B–36 has performed its mission—and can only perform its mission—if it never has to drop a bomb. Sir Winston Churchill can say, "It is certain that Europe would have been communized and London under bombardment some time ago but for the deterrent of the atomic bomb in the hands of the United States." But this concept of an international revolver-in-the-cop's-holster is elusive. A battleship or a carrier is different. You can see it, even visit it on the Fourth of July. A division is different, too; it marches—with guns. But a B–36 flies above visual observation, nobody is permitted to board it, and its crew is unimpressive in a parade.

Obstacle 3. Air power is the victim of a cultural lag: The end of the last paragraph could be the beginning of this, for they are related. Anyone will find ways to afford expensive things if he understands them well enough to be convinced of the need. Men now of mature age were boys when military force meant soldiers and sailors, ships and guns; these early impressions leave their mark—"the anachronistic power of saber and broadside." Few have ever operated an aircraft; fewer still have flown in combat. Fortunately at the time but with unfortunate consequences now, Americans have never had the experience of living or fighting under skies controlled by an enemy. In the great debate of 1951, the subject was "troops to Europe." Discussions of rearming Germany deal with "12 divisions." If airpower is mentioned at all in these contexts it is in the second or third paragraph, and perhaps between parentheses. This is not ignorance; when reminded, all acknowledge that we must have air power—too. Rather it is a lack of instinctive understanding, that quality of the recesses of the mind that goes deeper than knowledge. Why does this lack of understanding persist? That leads to—

Obstacle 4. The military commentators were brought up in the older services: Compile a list of writers and broadcasters on military affairs arranged in the order of their influence on national thinking. Then see how far down the list comes the first who can wear silver wings on his chest. Wings on the chest are not requisite to a realistic belief in airpower; both in this country and in England some of the firmest supporters of the Air Force have never flown a plane, and this includes some writers of national reputation. But too often the military writer, long familiar with the problems and command personnel of the older services, speaks in understanding, vivid terms of big ships and infantry tactics, reserving the but clauses and the confidence-sapping doubts for air operations.

Some readers of this article may be surprised that the present writer voices dissatisfaction with the development of United States airpower. Readers of the daily press could easily get the impression that current policies lavishly nourish the Air Force while starving the other services. Some military critics feel a poignant sympathy for the "squeeze" upon the Army, Navy, and Marines produced by lowered budgets and manpower levels. But as to the Air Force they tend to focus on the single fact that Air Force manpower and money are programed at slightly increasing figures, ignoring the "squeeze" implicit in a directive to increase wing strength from 120 to 137 (14 percent) with a manpower increase from 970,000 to 975,000 (one-half of 1 percent). All forces are squeezed by current policies—the surface forces by being directed to operate existing (or slightly lower) forces with men and money lower than existing levels; the Air Force by being directed to operate much larger forces with men and money increased only slightly. If a military writer recognizes the squeeze in the former case and not in the latter, his readers (who may well

include key Members of Congress) are to that extent given an unbalanced analysis.

Obstacle 5. The Air Force lacks representation in the Office of the Secretary of Defense. The key civilians in OSD are the Secretary, Deputy Secretary, and nine Assistant Secretaries. None of the men now holding these poistions has any Air Force background—and this has been true, with a single exception, since the first Secretary of Defense took office in 1947. The Army is only a little better off. Men with an orientation toward the Navy have consistently held most of the important posts, a legacy from the days when Secretary of Defense Forrestal simply imported his staff from the Navy Department. The all-important office of the Comptroller of the Department of Defense is essentially a Navy office containing no responsible personnel with Air Force background. These civilian officials are not prejudiced against the Air Force, nor are they unwilling to learn. But an instinctive understanding of Air Force problems is not in their blood; they do not naturally seek the association of Air Force people; and when the chips are down it too often happens that the Air Force gets the short end of those very important decisions that are controlled by the staff of the Secretary of Defense. Attention has been repeatedly called to this imbalance of personnel, but appointments continue to be made which perpetuate it.

The single exception above referred to was Robert A. Lovett, Deputy Secretary, then Secretary of Defense from late 1950 to January 1953. Mr. Lovett, a naval aviator in World War I, served as Assistant Secretary of War for Air in World War II. It was during his regime in the Department of Defense that the 143-wing Air Force was authorized and the precept of equal division of money between the services temporarily discarded. But Mr. Lovett had not been out of office 3 months before the Office of the Secretary of Defense had shelved the 143-wing Air Force and cut $5 billion from the Air Force share in the fiscal year 1954 budget—all without consulting the Joint Chiefs of Staff, the statutory "principal military advisers" of the President, the National Security Council, and the Secretary of Defense. It is unlikely that this could have happened if men with Air Force background had been included in OSD personnel, particularly in the Comptroller's office.

For the most part OSD has been staffed with able men. But ability is not enough. A Supreme Court comprising the nine ablest lawyers in the country would not be acceptable if it turned out that all nine came from the Wall Street firms. Nor can any President choose a Cabinet without reference to geographical distribution and diversification of career background. Those who are led, governed, or judged must have confidence that all aspects of a matter under decision are understood and objectively evaluated.

Obstacle 6. The congressional relations of the Air Force are inferior to those of the other services: In Great Britain the military services have no such relationships with Parliament as are commonplace between United States services and the Congress, and as an abstract proposition much can be said for the British practice. However, any such reduction of military-legislative contacts must take place across the board. If the Corps of Engineers, the Marines, the Reserve Officers Association, and the Navy have the number of watchful supporters in Congress they now enjoy, another service lacking such supporters will surely not be treated as "the dominant factor in modern war." The record of the Air Force in this matter is spotty. There have been periods when stanch support came from both parties in both Houses of Congress—for example, when in 1951 a greatly expanded Air Force was jointly sponsored by Senator Henry Cabot Lodge, Jr., and Representative CARL VINSON. There have been other periods, notably in the budget proceedings of early 1953, when Air Force support came from a few Democrats alone. More than a score of Air Force veterans were then in Congress; yet during this 1953 episode when General Vandenberg was subjected to a bullyragging never before inflicted upon a senior general officer and when $5 billion were being cut out of the Air Force budget, no Republican veteran of the Air Force came to its support and some delivered denunciatory speeches on the floor. At the present time any observer of the Hill can identify Democrats who, with a firm understanding of airpower, have backed the Air Force against all comers including a Democratic President and Secretary of Defense. But, among the Republicans, it is difficult to find those who can be counted Air Force supporters in the same sense that a dozen in the House of Representatives and a half dozen in the Senate can be counted Navy-Marine supporters.

Obstacle 7. The Air Force is really the silent service. Its senior commanders do not write books and articles. As to the war in Europe there are books by Eisenhower, Bradley, Montgomery, Patten, and a host of junior commanders, but none by Spaatz, Doolittle, Vandenberg, Eaker, Twining, Norstad, Weyland, Anderson, or Quesada—and as a result, 10 years after, several of these names are not even remembered by the public. No Air Force officer has recounted the strategic bombing effort that brought Japan to its knees—the first time in history when air power was a principal factor in causing a nation to surrender before its homeland was invaded and while its armed forces were intact. The same pattern appeared in the Korean war—some 10 books about the Army, 5 about the Navy, 4 about the Marines, and 1 about a single squadron of the Royal Australian Air Force. But not one book about the United States Air Force. Those responsible for the development of national air power have not made use of the basic instrumentalities of information and enlightenment to get the public behind them.

Obstacle 8. The Air Force has been the most serious victim of stop-and-start planning: Air Force wings have been successively programed at 66, 55, 48, 95, 143, 120, and 137—all in a period of about 6 years. No business in the world could operate under these conditions, nor can any Government department. Dislocations are frequent, and when they appear, those who have been responsible for the forced reprograming often take the lead in criticizing the Air Force for the difficulties caused by the reprograming itself. Base construction has first been held up and then ordered forward on a crash basis. Everyone knows that money and time cannot be saved concurrently. Yet when the waste appears, the flood of criticism breaks forth. Sooner or later someone says, "If the Air Force can't use money any better than this, then we should cut their appropriations," as if the money were going to the generals for their personal use.

Obstacle 9. The Air Force appears reluctant to state its full case. The overriding national priority of the air-atomic power of Strategic Air Command has survived for a long time as these things go. But it has been under steady attack, and the integrity of SAC has not always been assured. Under these conditions the Air Force is understandably hesitant to make claims for additional force that might have to be satisfied out of SAC planes, money, and men. Let us suppose for the moment that, as serious commentators have suggested, the difference between adequate and less-than-adequate strength in the Continental Air Defense Command represents an additional $3 billion a year for 5 years. The Air Force in deciding whether to request such a sum must ask itself where the money will come from. Certainly not from an addition to the total defense budget. Secretary of the Treasury Humphrey is much too influential to permit any such dislocation of plans for a balanced budget and a 1950 reduction in taxes. Certainly not from the Navy, which is much too firmly entrenched in positions of power in the Department of Defense. How about the Army? The Army has already been programed for a cut of some 300,000 men, and serious resistance in Congress and in the press has appeared. A further Army cut would not seem likely. So it appears that the funds would have to come from the Air Force. A cut in Tactical Air Command would be resisted by the Army, which could logically point out that a smaller army will need greater supporting airpower to make up for its own reduced firepower. So, by a process of elimination, one suspects that the cut would come out of Strategic Air Command. Still fresh is the memory of that episode in 1948–49 when the Air Force, having performed the incredible feat of airlifting all supplies for Berlin through an entire winter, was congratulated—and told to pay most of the bill out of its own pocket. Some of that money came from SAC, and the same thing could happen again if big additional investment was required in Continental Air Defense Command. Strategic Air Command is no "mania of the bomber generals" but SAC's ability to fight and deter is their responsibility, and they cannot look with indifference on a threat to its integrity.

OBSTACLES AND LEADERSHIP

Obstacles are things to be overcome, or to be proffered as excuses.

The obstacles here listed pose problems of leadership—some at the national level to be met by the President and Congress, some at departmental level to be met by the Secretary of Defense, and some at Air Force level to be met by its civilian and military leaders. All of them put heavy demands upon determination and courage. Persuasive reasons for inaction or delay sprout in every file cabinet and blossom in every staff conference.

But airpower is an instrumentality to be enrusted to men of war-leader stature with a wartime sense of responsibility and urgency. Under these conditions each of these obstacles, and all of them together, can be overcome.

Pork-Barrel Congress

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. JACKSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wausau, Wis., Daily Record-Herald of July 27, 1955:

PORK-BARREL CONGRESS

Terms such as "economy" and "balanced budget" are among those most commonly tossed around in congressional oratory.

They sound good, but in the case of many of the lawmakers they are rather meaningless. That fact was strongly pointed up recently by Representative MELVIN R. LAIRD in commenting upon congressional action on the civil functions appropriation bill.

Laird noted that the House added $420 million in non-budgeted civil works projects to the amount originally recommended by the administration, and the Senate added another approximately $1.5 billion. Congress approved a conference report which included $1.8 billion of commitments not

contained in the administration's budget estimates.

Why?

As LAIRD pointed out, many projects were added, not on the basis of merit, but purely for political expediency by coalition of Republicans and Democrats who wanted to "bring back the bacon" to their home districts.

The dismal record of Congress in that regard led Laird to label it "the greatest pork-barrel Congress" and he noted that many of those who fought so hard for the pork-barrel appropriations are among the loudest advocates of a balanced budget.

LAIRD, we're happy to be able to report, strongly opposed the pork barrel drive. Too bad there aren't enough like him in Congress, lawmakers who practice what they preach about economy and a balanced budget.

A Better Record

EXTENSION OF REMARKS
OF

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. THOMPSON of New Jersey. Mr. Speaker, this session of the Congress is about over and we have made the record as complete as we can for this year. The end of the session always is of great interest to the public and comment in the press is always considerable. Having read many of the editorials appearing in various papers in the past few days, I think I can safely say that the Nation's editors regard this session as being unusually productive, both as far as useful legislation is concerned and in respect to the degree of cooperation between the White House and the Congress.

It was predicted by many of these same editors before the session got underway that the Democratic Congress would not be willing to go along with the President's ideas simply because they would be Republican ideas. As the record clearly shows this has not been the case. Indeed, in many instances, the Democrats have saved measures sponsored by the President when his own party refused to go along. This, it seems to me is indicative of the best type of responsible party leadership and I feel proud of the record of the Democratic Party in the Congress.

This record has met with grateful response in the Nation's press. I should like to include an editorial from one of the papers in my district as a fine example of this type of comment. The editorial from the July 30, 1955, edition of the Trentonian follows:

A BETTER RECORD

It may have escaped general attention, but it should be noted that the record of this Congress is pretty good.

Several major measures have been taken care of with reasonable dispatch, particularly the foreign-aid bill, the military Reserves legislation, and the highway construction and housing bills. Also there is the minimum-wage law, a customs simplification act and a military-survivor benefits statute on which progress has been made Unfortunately, the school construction program ran into a snag but not because there was any difference of opinion on the need for it. In addition, New Jersey is particularly proud of the fact that Congressman FRANK THOMPSON got the ball rolling on a national cultural center in Washington.

So it can safely be said that the accomlishments of this Congress have been many and noteworthy. Some will wonder why so much has been done in contrast to last year. Well, we think one answer is that Members of Congress spent less time investigating and more time legislating.

The Imports Danger

EXTENSION OF REMARKS
OF

HON. ROBERT T. ASHMORE

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. ASHMORE. Mr. Speaker, I recommend that every Member of Congress interested in the welfare of our cotton farmers and the future existence of our great American cotton-textile industry read a recent editorial published in the Greenville News, Greeneville, S. C., entitled "The Imports Danger."

The editor of my hometown paper, one of the leading newspaper publishers of the Southeast, gives very interesting and forthright analysis of the conditions and circumstances now confronting the cotton mills in this country. The extemely low margin of profit over the past several years has made it almost impossible for these mills to operate successfully. When the textile mills curtail or close down, both laborers and cotton farmers are vitally affected. The laborer fails to earn a livelihood to support his family and the producer of cotton is injured by resulting lower prices and loss of market. Two-thirds of all the cotton grown in the United States is purchased by the textile mills in this country. So the problems of the cotton farmer and the cotton manufacturers are so interrelated that one cannot profitably exist without the other.

In view of the tremendous reductions in tariffs on imported cotton goods recently agreed to by the State Department at the Geneva Conference—GATT—I feel that it is imperative for the President to establish quota limitations on such goods for the future protection of our textile industry and cotton producers. I commend the following editorial to your attention:

THE IMPORTS DANGER

In light of the textile industry's prolonged price depression, its struggle to keep mills running and people working despite present stepped-up imports of foreign goods, and in view of fears that things will get much worse after new tariff cuts become effective in September, it seems high time official steps were taken to keep close tabs on the situation.

States whose economic wellbeing depends on the textile industry might profitably make use of a plan just now instituted in North Carolina. The governor created a special, three-man commission of top public officials to make a continuing study of the effects of United States trade policies on industry operations, employment, agricultural conditions and the general economy of North Carolina. Factual information gathered in this manner should help guide those in Washington whose authority in trade matters has a direct bearing on jobs and living standards in the South.

Contrary to an impression voiced a good deal of late the textile industry has no margin of profit with which to combat foreign imports. Textile profits have been so slim for several years that there is no room in the profit margin to lower prices.

Official Government figures prove this. The data comes from the Securities and Exchange Commission and Federal Trade Commission. They report that industry profits, after payment of taxes, for the past year averaged less than 1 cent per dollar of sales. Profits on stockholders' investment in the same time averaged only 1.8 percent. So whichever way you measure industry profits, the answer is the same. They are low and considerably below the average for all United States business and industry.

The insidious thing about the new tariff cuts, negotiated for Japan's special benefit, is that imports from low-wage Japan will hang a Damocles sword over American markets and American mills. Japanese goods, made at one tenth of American labor cost, will cause a constant drag on American prices, wage rates and industry operations. A ceiling will be set on progress, on earnings of American employees and investors alike resulting in forestalling textile plans for new equipment and new plants; a damper on confidence in the future.

Thinking ahead to the long-range aftermath of such a forlorn trend of events, the outlook appears grave. Obviously there is one effective answer to the problem: the setting up of quota controls so as to limit the inflow of foreign goods. Efforts are reported under way in Washington to that end. Meanwhile, the gathering of all pertinent facts on this problem, as they relate to this State, would seem imperative without delay.

Hon. John Patrick Higgins, Chief Justice of the Massachusetts Superior Court

EXTENSION OF REMARKS
OF

HON. RICHARD B. WIGGLESWORTH

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. WIGGLESWORTH. Mr. Speaker, I deeply regret to learn of the passing of Chief Justice John Patrick Higgins.

Born in Boston in 1893, educated at Harvard, Boston University, and Northeastern College of Law, he was destined to serve his State and the Nation, in the Navy during World War I; in the Massachusetts House of Representatives from 1929 to 1934; in the Congress of the United States from 1935 to 1937, and as chief justice of the Superior Court of Massachusetts to which high office he was appointed in 1937.

He had a distinguished career.

He also had great human qualities.

He will be greatly missed by his wide circle of friends.

I have personally valued his unfailing friendship over the years since we served together in the Congress.

I join in the heartfelt sympathy to all those close to him.

Sale of A-Power Bears Watching

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 30, 1955

Mr. MULTER. Mr. Speaker, the following article, written by Thomas L. Stokes, which appeared in the Washington (D. C.) Evening Star on July 30, 1955, is deserving of our attention:

SALE OF A-POWER BEARS WATCHING
(By Thomas L. Stokes)

About this time a year ago, when Congress was rushing pell-mell to adjourn and go home as it is now, a significant battle was fought in the Senate of which we now are having an echo.

A band of Senators resorted finally then to a filibuster against the administration bill for private development of atomic energy until they were able to write into it certain provisions to protect the public and consumer interest. In the case of this new source of energy they were determined to prevent the exploitation that was revealed by Government investigations a quarter of a century ago in the case of electric energy.

Among the protective clauses was a guaranty of preference for nonprofit groups—municipalities and other public agencies as well as rural electric cooperatives—in the sale of atomic energy from publicly owned projects, such as is already required by law in the case of electric power from public hydroelectric projects.

We thought that was all fixed and settled. But not necessarily, evidently.

Now for the echo. For that we take you to the town of West Milton, N. Y. You probably saw photographs in your newspapers of an event there. Chairman Lewis L. Strauss of the Atomic Energy Commission throwing a switch which started the flow of 12,500 kilowatts of electricity from an AEC installation into a private utility system, the Niagara Mohawk Power Corp.

This was an epochal event. For it was the first peacetime use of electrical energy from an atomic installation. To give a human touch that the usually stern-visaged Chairman Strauss is not sure of providing, there was an added stunt for the news photographers. This was a shot of a housewife at nearby Ballston Spa, a Niagara Mohawk customer, cooking a hamburger on her electric stove with the atomic power.

What was wrong with these pictures was spotted immediately by a group several hundred miles away in Chicago—the board of directors of the Cooperative League which happened to be meeting there. And lucky it is for us that such groups are on guard.

Members of the board are thoroughly familiar with the law passed a year ago by Congress and they knew also that two cities which have municipal electric plants, Illion, N. Y., and Holyoke, Mass., as well as the Delaware County Rural Electric Cooperative at Delhi, N. Y., had applied for power from this first AEC reactor months ago, way back in January.

Under the law they are entitled to preference. They didn't get it. Niagara Mohawk is getting the power at 3 mills a kilowatthour. The reactor, which is a model of one installed in the United States submarine *Sea Wolf*, produces enough power to supply a city of 20,000 people.

The cities and the co-op would need some way to get the power to them. Rather than build transmission lines to West Milton, they had decided upon the alternative of having it "wheeled" to them over lines of Niagara Mohawk. They offered a reasonable fee to the private utility for this service. But they were turned down—and it's easy to see why, with the company getting the power for itself so cheaply.

In a resolution it drafted, approved, and sent to Chairman Strauss here in Washington, the Cooperative League's board of directors said that, under the law, the AEC itself should have hired Niagara Mohawk to wheel the power to the nonprofit groups which had applied for it under the preference guaranty. The co-ops and the cities then would have been charged for the service when they were billed by the AEC for the power. The board bluntly accused the AEC of violating the law.

What the Cooperative League is chiefly concerned about is the danger of a precedent being established which, it said in its resolution, "far outweighs the economic importance of the electric energy involved."

This might seem to be an exaggerated concern unless you know the eagerness of powerful private utilities to get their hands on this new source of energy, and how great now is their influence here in Washington.

You may recall that the AEC, under Chairman Strauss' direction, was the "broker" in the Dixon-Yates deal involving TVA which finally exploded in the face of the administration with the contract being canceled when it was shown to be the first step in a planned campaign to liquidate the great public multipurpose water resources program.

Because of AEC authority over atomic energy, that agency will bear constant watching to protect the public interest in private development of this new energy source.

One Way for the Russian Leaders To Prove the Sincerity of Their Announced Intention To Cooperate for Peace

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1955

Mr. DONOHUE. Mr. Speaker, I am pleased to include a very timely article entitled "Peace?—Then Let's Start Practicing It," which appeared in the July 29, 1955, issue of the Worcester (Mass.) Evening Gazette.

This thoughtful writing points out how comparatively simple it would be for the Kremlin leaders to give concrete evidence of their sincerity to cooperate for peace by curtailing the barbaric attitude and actions of the satellite nations by ordering them to stop such savage brutality as they displayed in the recent shooting down of the Israeli airliner by Bulgarian guns.

The editorial follows:

PEACE?—THEN LET'S START PRACTICING IT

If the new rulers of Soviet Russia really want to help create an era of international good will, they can begin by getting the word to their satellite nations.

Bulgarian antiaircraft guns shot down an Israeli airliner this week, killing 58 persons. The plane's usual course was along the Yugoslav border, but for some reason it had crossed to the Bulgarian side. Perhaps the pilot had lost his way temporarily on the route to Greece, or maybe he assumed, carelessly, that cutting across the corner of Bulgaria would not matter.

Whatever the reason, this murderous act of the Bulgarian military against a civilian airplane was inexcusable. Bulgaria is not at war with anyone, least of all with little Israel. And hardly a civilian plane crosses Europe these days without having citizens from a half dozen countries aboard it, as this one had—Americans, British, Russian emigrees, and so on.

Unhappily, this incident typifies the mentality which created the Communist Iron Curtain, and which has perpetuated the virtual state of war between East and West. It is the mentality of barbarians: Shoot to kill and investigate later.

There is no way to evade Moscow's responsibility for this. It was Moscow's policy originally. It was Moscow's power and her absolute control over the satellites which made the policy effective.

Recently the Soviet government has been puting on a dramatic display of sweet reasonableness. It has been sending Russian delegations to America, and inviting American groups to Russia. Its bosses indulged in much backslapping and toasting at Geneva. Some of them are talking about making state visits to London and Washington.

Do they mean it, or is it just an act?

If they mean it, then it is high time they told their lackeys in Bulgaria and elsewhere to stop shooting down innocent women and children merely because some airliner pilot strays over the Iron Curtain border for a few minutes.

Such killings are utterly stupid and useless. But the Government at Moscow started them, and it will have to stop them.

This would require no more than a half dozen words from the Kremlin: "Don't let it happen again."

Until that order is put into effect, we shall all reserve judgment about the current Russian smiles and soft talk.

Road Map Needed

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial from the St. Louis Post Dispatch of July 29, 1955. The editorial entitled "Road Map Needed" follows:

ROAD MAP NEEDED

Americans aware of the serious gap between supply and demand in our road system will support President Eisenhower thoroughly in his appeal to Congress to reconsider road legislation.

The House defeated the administration highway plan by 224 to 193 and then defeated a Democratic substitute by the even greater margin of 292 to 123. As a result, Mr. Eisenhower said he was "deeply disappointed." He added:

"The Nation badly needs good roads. The good of our people, of our economy, and of our defense, requires that construction of these highways be undertaken at once."

Nobody, including all the congressmen who voted against highway legislation, can deny this. And if these Congressmen are as interested as the President in getting action on a road program, they will take advantage of his offer of a compromise. For Mr. Eisenhower said that contention over the method

of paying for roads should not deny the Nation the roads.

His program, first offered Congress, suggested a special Federal corporation to issue road bonds outside the Federal debt limit. The House substitute proposed a penny increase in the 2-cents-a-gallon Federal gas tax and increased levies on trucks, tires, and tubes. There was little difference between the two plans as to the roads to be built or total expenditures.

Many Congressmen opposed the administration plan because special bonds would be costly and devious in terms of increasing the national debt without seeming to increase it. And as it turned out, the powerful truckers' lobby fought the House substitute because of the increased taxes proposed. House Democratic Leader McCORMACK observed, "The answer is, Everybody wants a road bill and no one wants to pay for it."

The answer to that is, The Nation needs a road bill and cannot have it without paying for it. Bonds will only postpone and increase the payment. But if major tax increases are not politically possible, then Congress has to find a program which it feels the public will support.

That program might lie somewhere between the defeated plans, or in a scaled-down version of them. If Congress will not accept a 10- or 12-year proposal for $38 to $42 billions in expenditures, it might settle on a somewhat less ambitious 5-year plan such as the Gore bill which the Senate approved. And if Congress cannot approve either special bonds or sharp tax increases, it might agree to regular Treasury bonds plus a limited tax increase.

Highway legislation is must legislation, both to the President and, we think, to millions of motorists and the American people. It should not be put off until an election year, when politics could crack all the proposed pavement.

What is needed now is a legislative beginning that will get the highway expansion under way. Obviously the only way this Congress can begin is to compromise. President Eisenhower has given the legislators a good road map in the right direction.

The Highway Program

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. MACK of Washington. Mr. Speaker, Congress may take a vacation but death on the highways takes no holiday. Congress should stay in session until it passes an expanded highway bill or it should come back in special session to do so.

Public demand for a highway program is growing and will continue to grow. Here is an example of the type of telegram I and, no doubt, other Members are receiving:

HON. RUSSELL V. MACK,
House Office Building,
Washington, D. C.:

Cities of State hope Congress will not adjourn without enacting expanded highway program of vital importance to all cities and towns of Washington.

ASSOCIATION OF WASHINGTON CITIES,
G. W. BURNS,
Mayor of Yakima, President.
CHESTER BIESEN,
Executive Secretary.

The organization that sent this telegram to me is composed of the mayors, clerks, and city officials of practically all of the incorporated cities in Washington State.

Article by Rev. James A. Bryant Entitled "Has Your Home a Room To Pray In?"

EXTENSION OF REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. WILLIAMS of Mississippi. Mr. Speaker, the Reverend James A. Bryant, former resident of my district and at present pastor of the Wisconsin Avenue Baptist Church, Washington, D. C., is the author of an excellent short article which appeared in the American Weekly of July 31 entitled "Has Your Home a Room To Pray In?" Under leave to extend my remarks, I am happy to include the Reverend Bryant's article, as follows:

It was D-day plus 30. The Fighting Fourth Infantry Division, in which I was a chaplain, had been under constant fire since landing at H-hour on Normandy Beach. Now the pressure was on. The bombs were hailing down. Everybody ducked for cover.

I went for a foxhole. As I crouched there, knowing that scores of us would not be alive when this assault was over, I wondered how many were prepared to meet their Maker. It was then the thought came to me, and I said a simple prayer.

I don't remember the words, but I know I promised God that if I emerged alive I would devote the rest of my life to reviving the old-fashioned idea of altars in the home.

I've been at it ever since, and I am happy to be able to report that there has been progress. Today in 70,000 American homes at least a corner is set aside for God. Our goal—mine and that of the hundreds who have enlisted in this project—is that 5 million homes eventually will have a spot where a small table and an open Bible serve as the center of family worship and prayer.

It hasn't been easy because there are so many scoffers, particularly among the young. I recall an instance in one of the first homes in which our message stuck. Two teen-age boys in the household sneered openly when their hard-working parents designated a portion of the living room for worship.

One night, after they presumed everyone was in bed, they sneaked out of their room to keep a date with some other boys and a hot-rod. The sound of low voices halted them and they stopped a moment to listen.

Their father and mother were praying together. They admitted they had failed in the upbringing of their sons and they asked God to take over. The boys crept back to bed. A few nights later they joined in the family prayers. One of them is now studying for the ministry.

Maybe I had hopefully envisioned scenes like this when I made my vow in the foxhole. Anyhow, when I came out alive I didn't wait long to get started. The next day I began to write letters to leaders of every denomination.

The responses were enthusiastic and mail-call became an inspiring spiritual experience for me on one battlefield after another.

After my discharge I toured the country for 8 months, speaking in a different church each night. Soon I was no longer alone. Volunteers in many communities organized to help with the work. Today, a decade later, 45 teams of men and women from dozens of denominations travel and speak to all who will listen. We call our organization the Christian Home League.

When our forefathers were battling the wilderness and churches were largely for city dwellers, worship was a warmly personal matter and the home was usually its setting. But even in the atomic age, families that pray together stay together.

I know of a young couple in the South who were headed for divorce. The wife was seeking escape in alcohol and the husband seemed powerless to help her. One of the Christian Home League teams suggested a home altar. "It's probably futile," the husband said, "but what have I to lose?"

Each night, whether his wife was sober or not, he led her into the living room and they prayed together. For months there was no reaction but then, gradually, the tippling lessened. It's a happy household now.

I can say honestly that I have never known a marriage to fail where there was an altar in the home. And there can be other dividends, too. The two most ardent workers on one of our teams in the midwest are a father and mother whose daughter's life had been given up by doctors. The girl recovered almost miraculously after they set up a home altar and prayed.

It may be apocryphal, but I like the story of the little girl whose father had rejected the home-altar idea "because church is the place to pray."

"What's the matter, Daddy?" she asked. Aren't you and God as good friends on Monday as you are on Sunday?"

Manpower Cuts in the Army Are Endangering National Security

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Friday, July 29, 1955

Mr. TEAGUE of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article by Mr. Don Whitehead, of the Associated Press, which appeared in the July 17th edition of the Washington Post and Times Herald, having to do with the reduction in the Army's manpower. I am concerned, Mr. Speaker, that we are ignoring the hard lesson we learned in World War II and Korea. In my opinion we have reduced our Army manpower below a safe and reasonable point.

The article follows:

ITS STEPCHILD ROLE WORRIES THE ARMY

(By Don Whitehead)

The gray-walled Pentagon is a divided military household these days, with the Army—senior member of the Armed Forces family—feeling like a spanked and rejected stepchild.

An immediate factor in this somber mood is the impending reduction in the Army's manpower, a step which the Nation's top generals had sharply opposed. Cutting even deeper, however, is the Army's concern over the lack of clear agreement within Government circles as to the exact role the soldier would be assigned in case of nuclear war.

Army men feel that their famous 5-star comrade in arms, President Eisenhower, yanked them rather roughly into the woodshed in the course of approving the manpower cutbacks. Gen. Matthew Ridgway, who on June 30 stepped down as Army Chief

of Staff, publicly opposed the reductions before the House Appropriations Committee.

President Eisenhower, questioned on this position at a subsequent news conference, described it as "parochial"—meaning narrow and limited.

In Pentagon circles, however, one hears that the opposition went beyond the views of any single individual, such as Ridgway or his successor, Gen. Maxwell D. Taylor. It was the thinking of the men who make up the Army's top command.

The cutbacks emphasize that, despite the opposition of the generals, the administration has decided to base the Nation's security and military policy more on nuclear weapons and less on manpower.

It underlines, too, the historical fact that the Army itself is marching into the shadow of airpower. Nuclear weapons and airpower have had such an impact on military thinking that some quarters even believe a war would be over before an army could swing into action.

Representative CLARENCE CANNON, Democrat, of Missouri, chairman of the House Appropriations Committee, voiced this viewpoint recently when he said that the next war would be over in 3 or 4 days—"at the most a week"—and the Army and Navy wouldn't have time to get into full action. CANNON added: "What could we do with 3 or 4 more divisions? We wouldn't possibly use them."

But the Army doesn't agree. It questions whether the nuclear weapon would be as decisive a factor as it is being painted. It insists that the foot soldier would be needed in atomic war just as he was needed in past wars—and in even greater numbers.

Nobody is speaking out loud at the Pentagon about the situation. The Army appears resigned to seeing its forces cut to 1,027,000 men by June 30, 1956, from the present level of 1,270,000. General Taylor has steered clear—at least in public—of the controversy.

There's no sign of a "generals' rebellion" brewing, such as the "admirals' revolt" in 1949, when the Navy went to war against the Air Force's B–36 strategic bomber program and fought successfully to have its own carrier program. But beneath the surface acceptance there is resentment, sharp disagreement, even dismay over the military policy taking shape under the Eisenhower administration.

Army men say privately that the administration's concern over a balanced budget is overshadowing military requirements. They argue that this is creating an unbalanced military situation in which too much reliance is being placed on machines and nuclear weapons to win a decision in war.

One officer summed up the Army's thinking in this manner:

"Our military policy today is following the line which was advocated by the late Sen. Robert A. Taft—that is, to put a balanced budget and the so-called dynamic and expanding economy above all else.

"The Truman administration, after the Korean war began, put the military requirements first and decided to worry about the budget later. This administration has reversed the policy and gone to the other extreme in emphasizing a balanced budget.

"We had no choice in fixing the Army manpower level in the New Look. Ridgway was given a budgetary framework and told to fit the Army forces into that frame. It wasn't a question of our requirements.

"The present policy puts less reliance on manpower and greater emphasis on machines and atomic weapons. This policy is cheaper. It's more popular politically. And it holds forth the questionable promise that victory can be achieved with one weapon—the nuclear weapon.

"We happen to think that if there is a war, big or little, the foot soldier will be needed just as badly as he has been in past wars, although we certainly don't intend to try to match the Communists on a man-to-man basis.

"We are not asking for balanced forces in the sense of dividing up the approximations evenly. We think the emphasis should be on airpower. That is all right. But with the cuts, we believe we are losing our own mobility."

Another Army argument is that by cutting back the Army, the United States is giving allies an impression that we won't stand beside them and fight with troops to repel aggression. One Army man commented: "We're saying in effect, 'You will have to do your own fighting on the ground—but we'll be along later to liberate you.'

"This policy of liberation isn't going to keep friends. If a country must make a choice between neutralism and liberation—it is likely to be neutralism."

On the other side, the Army's arguments have been opposed by Defense Secretary Wilson, Adm. Arthur Radford, Chairman of the Joint Chiefs of Staff, and retiring Army Secretary Robert T. Stevens. They have been backed by the military prestige of President Eisenhower.

Wilson and Radford told Congress that the Armed Forces were being shaped for a readiness which this country could afford to maintain for an indefinite period of time. Radford said this span may be 10 years or it may be 50.

Both men agreed that more reliance is being placed on nuclear and other modern weapons and less on manpower. But even so, they argued, the strength of the Armed Forces has increased tremendously, with the Army having 80 percent more firepower than it had in World War II with conventional weapons.

Radford said that the manpower cuts had come as no surprise to him because they conformed to the New Look review made by the Joint Chiefs of Staff 2 years ago. And he added that the long-range defense program had been evolved only after the most searching review of the Nation's military requirements for security.

Stevens gave the Army no support. He said the pullback of American troops from Korea, increased Army firepower, and greater military strength in the free nations do not make it necessary to change this program at the present (to avoid the cutback in Army strength).

And Charles Finucane, Under Secretary of tthe Army, said the Army at its present strength "has twice as many men in it as it had at the outbreak of the Korean war; the Army today has more material and is better equipped to fight, and has a higher degree of training than ever before in peacetime."

In addition, he said, the Army was "ready and willing" to take care of any brush-fire war.

The cleavage in military thinking isn't so astonishing as it might seem (considering the impact of nuclear weapons on war plans. With this new and terrible power available in case of war, some old concepts become distorted and some military terms lose their old meaning.

For example, there has been considerable talk of nuclear bombs being used as "tactical weapons". In World War II and even in the Korean war, tactical weapons were conventional bombs up to 1,000 pounds, artillery, rockets, mortars, and so forth.

Secretary of State Dulles spoke recently of "small" atomic bombs being used for pinpointing tactical military targets such as airfields, bridges and supply dumps. Actually, the "tactical weapon" of today can be an atomic bomb as destructive or even more destructive than the bomb which wiped out Hiroshima.

The Army's 280-millimeter atomic cannon fires a shell that's almost equal in destructive power to the Hiroshima bomb, which had the explosive equivalent of 20,000 tons of TNT.

It is the realization in high places of the power of nuclear weapons that has caused the uncertainty over the role of the foot soldier. The Army is crying that infantrymen will carry the drudgery of ground fighting in any future war just as they have done in the past. But the cries have been muffled from above in the drive for air and atomic supremacy over Russia.

A Tribute to Free Enterprise in Behalf of Its Obligation to the Community

EXTENSION OF REMARKS
OF
HON. FRANK J. BECKER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. BECKER. Mr. Speaker, most of my colleagues will agree with me that we, and Congress, are called upon from time to time to lend our high offices to the furtherance of various projects which are at best highly commercial in nature.

However, when a large commercial organization shows a consistent policy of engaging in civic activities designed for the general public's good, I think we would be derelict, to say the least, were we to ignore such an organization purely because it is of a commercial nature. I refer specifically at this time to another of the fine examples of public service carried out by the P. Ballantine and Sons Breweries, of Newark, N. J.

My colleagues may remember that 5 years ago, when each of us was concerned with the vast and disturbing problem of civilian defense in our various constituencies, P. Ballantine and Sons were quick to evolve a program of mobile emergency disaster relief in the area surrounding the company's home office in Newark, N. J. They may recall that this became a model for other large organizations to follow, and that we took cognizance here in Congress of that public mindedness. At the time this organization outfitted fleets of trucks as emergency disaster units, manned by drivers trained for civilian defense work, and placed them at the call of the New Jersey civil defense director. It was, perhaps, as I suggest, a venture in the commercial interest; but it was also a gesture of invaluable aid to the community, and one which we here in Congress should have and did laud.

Several years later, in 1953 to be exact, when the National Symphony Orchestra here in Washington was in danger of having to be disbanded because of the lack of public support, P. Ballantine again rushed into the breach and rendered incalculable assistance in the preservance of this admittedly fine musical organization. By presenting a successful summer musical festival here in Washington, this company contributed to saving the National Symphony Orchestra and continuing its excellent concert programs. I submit that this was

a public service of a type which, although admittedly containing its commercial overtones, was not duplicated by any of the many private interests also concerned with the welfare of the National Symphony.

Now, once again, my attention has been called to another public-spirited gesture on the part of Ballantine. I refer to the membership drive now being conducted on behalf of the American Legion.

I am sure I do not have to remind my colleagues of the necessity for maintaining a strong and virile veterans organization such as the Legion. For many ex-servicemen it is their one link with their Government in matters concerning our national defense and the creation of a vigorous and always prepared America.

And now, in furtherance of that aim, the American Legion has instituted a vast membership drive. American Legion members have been engaged in signing up new members for their organization, including renewals of memberships which may have become inactive, through the stimulus of a contest supported by the Ballantine Co.

As I am an active member of the American Legion, I think it is not outside our province to give due recognition to the advantages to be gained from such gestures, and to extend our thanks to P. Ballantine & Sons, as well as to any other organization similarly motivated.

Mr. Talbott's Split Personality

EXTENSION OF REMARKS
OF
HON. JAMES M. QUIGLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. QUIGLEY. Mr. Speaker, the difficulties involved when a man in high public office attempts to be two different personalities are discussed in a column by Walter Lippmann published in the Washington Post and Times Herald. Mr. Lippman refers to the case of Secretary of the Air Force Harold Talbott, who is another shining example of the high ethical standards of this administration.

Other examples which come readily to mind are the early "four per center" scandal and the Dixon-Yates deal.

The column by Mr. Lippmann follows:

TODAY AND TOMORROW
(By Walter Lippmann)
THE OFFICIAL AND THE PARTNER

The mystery of the Talbott case is how he managed to act so foolishly, and the best explanation would seem to be that he has been two men, public official and private promoter, inhabiting the same body. The Secretary of the Air Force and the Mulligan partner have lived and worked side by side in the Pentagon, each more or less uncontrolled by the other. The Secretary did not serve the partner corruptly. But neither did he rule the partner properly.

There is no evidence, I believe, that Mr. Talbott used his power as Secretary of the Air Force to induce or compel defense contractors to give profitable business to the Mulligan firm. There is no evidence, that is to say, that he meant to act corruptly. On the contrary, the evidence, including his own admission of his mistakes, shows that the Secretary was not really aware of what the Mulligan partner was doing. Had he realized it, had he been acting consciously and corruptly, he would have taken the trouble, as a competent villain would, to cover his tracks. The last thing he would have done was what Talbott actually did do, which was to promote his private business from his office in the Pentagon and with the help of Air Force personnel and on Air Force stationery.

There is no obvious explanation of such extraordinary foolishness. There is no doubt that he has been proud and happy to be Secretary of the Air Force, and that he is deeply attached to his and honorable office. There is no doubt that he is a rich man to whom $60,000 is not important money, and that it could buy him nothing remotely so precious as his public office. There is no doubt, on the other hand, that his Mulligan activities, once they were known, were obviously bound to ruin his public career. There is no doubt, moreover, that his activities will hurt badly the Mulligan firm itself.

The whole performance makes no sense except on the theory that Talbott was two men, and that when the Mulligan partner was in charge of his body, the Secretary of the Air Force was sleeping and unconscious. For no Secretary of the Air Force who was functioning at all could have supposed that it was right to promote from his office in the Pentagon, a profitable private business on the fringes of the national defense. In this case the Secretary did not veto the partner's activities. Neither did he hide his activities. So I say that the public official must have been suppressed and asleep.

The question, then, is why the Secretary of the Air Force did not govern the promoter, why he did not enforce the standards of public behavior upon the private businessman. There is here a great and persistent ethical question which has been discussed since the days of the Greek moralists. Can a man who knows what is right do wrong—can he knowingly give in to his appetite, say for the Mulligan profits? Socrates held that no one acts against what he knows to be right—that men act wrongly from ignorance.

But Aristotle disagrees with Socrates, pointing out that a man may do what is wrong if his convictions about what is right are confused and weak, not clear and strong. In this deplorable case we must, I believe, side with Aristotle and say that as compared with the avarice of the Mulligan partner, the moral convictions of the Secretary were confused and weak.

It has been pointed out that the Talbott case poses the problem of the workability and the fairness of the old statute about conflict of interests. There is, of course, such a problem and it is a very difficult one. But the Talbott case bears only indirectly, in my view, on that problem, for no matter how much the statutes were liberalized, it could never be stretched to the point of tolerating the use of a public office to promote a private business that is closely related to the public business. The law might be revised, for example, to permit a man to keep his old securities and to receive the dividends. But nobody would suggest that it could be made lawful for him to use the facilities of public office to enhance the value of his securities.

The essence of the problem of conflict of interests, is that only the most elementary rules can be fixed in the law; that all the rest lies in what Lord Moulton once called "the domain of manners," which includes "all the things that a man should impose upon himself from duty to good taste." It is possible to say in the law that an official must not make a private profit out of his public actions. But it is not possible to set down in the law just how he must decide the more complicated issues where his private interest, though it is involved, cannot be measured in dollars and cents. His moral duty is to decide every question on public grounds alone, regardless of whether this hurts or helps him, his family, his partners, his friends, or his political party. But here, not the law but only an instructed conscience can help him make the decision.

In the case of a high and conspicuous public official, who must not only do his job but cannot help setting an example, the sovereign rule is never to give his private interests the benefit of any doubt. Talbott seems not to have understood that rule.

Though I think it has no bearing upon the Talbott case, which is quite simple and obvious, the wider problems of the conflict of interests need to be reexamined and reconsidered. They are a complicated cluster of problems. One of them, though only one, arises from the fact that for many business executives the holding of a public office is not a new career but an interlude in their normal careers. The question is whether a temporary public servant can be expected, or should be required, to reorganize his private affairs as if he were a Federal judge or a foreign security officer or a civil servant in a lifetime career. Many men refuse the temporary public assignment because they are unwilling to make the big personal sacrifice which the existing rules now demand. And, on the other hand, insofar as the temporary officials are intending to return to their old business, can it truly be said that there is not, in the intent of the statute, a conflict of interests?

We must, I think, ask ourselves whether, except in the emergency of war, it is good public policy to rely so much on temporary officials. For myself I do not think it is. For no matter how able the business executive, it will take him a long time to learn the public business. The Pentagon has seen a continuing stream of civilian officials, coming in with no knowledge of the Pentagon and going out just about when they have acquired some knowledge. Does not the public business of national defense require civilian as well as military officers who make the national defense the work of their lives?

Sometimes I wonder whether the President is not mistaken in thinking that a trained private executive and a trained public official are interchangeable. For, instead of building up a corps of high career officials, he seems to be trying to get along with men borrowed temporarily from the official hierarchy of the private corporation.

Richard B. Vail

EXTENSION OF REMARKS
OF
HON. RICHARD W. HOFFMAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. HOFFMAN of Illinois. Mr. Speaker, it was with a deep sense of personal loss that I learned of the untimely death of Dick Vail, whose friendship I valued highly. He was a man whose many fine personal qualities endeared him to all who knew him, a charming person with whom it was a pleasure to be associated.

But he was a great deal more than that, and it is these additional qualities

which make his death a public as well as a private loss. Richard B. Vail was devoted to the principles of republicanism, of democracy, to those qualities which have made America great. He was an ardent anti-Communist and performed a significant service to his country through his participation in the work of the House Committee on Un-American Activities in the 80th Congress. He saw clearly the danger to the strength of this country which lay in the growing power of the Federal Government, and he opposed vigorously, both as a Member of the 80th and 82d Congresses and as a private individual, the impending threat of the trend toward socialism.

Dick Vail was a Christian gentleman, whose deep and real kindness was evidenced by frequent and generous contributions made quietly and privately to many needy individuals and organizations. He was a man who never knowingly injured another, and who was scrupulously fair to all.

His death is a great loss to the people he served, to his friends, and to his family. I should like to extend to his sisters, Emily and La La, and his brother, Walter, my deepest sympathy.

Religious Services at West Point Academy Should Be Conducted by Regular Army Chaplains

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1955

Mr. DONOHUE. Mr. Speaker, I should like to include at this time two articles pertaining to the manner in which religious services are currently afforded the cadets attending West Point.

The first article is an editorial entitled "West Point Chaplain," which appeared in the June 17, 1955, issue of the Catholic Free Press; the second article is a letter written to me under date of July 29, 1955, by the secretary of the Atlantic district of the Lutheran Church, Missouri synod.

Both of these writings advocate action of the United States Senate to harmonize the policy of religious practice at West Point in accord with that now prevailing at our other Academies of the Navy and Air Force, thus preventing infringement upon the religious rights of any West Point cadet and providing equal status for the chaplain representatives of all religious faiths.

The articles follow:

WEST POINT CHAPLAIN

The United States Senate should make a thorough review of the West Point chaplaincy situation before acting upon a recent bill filed by Senators RICHARD B. RUSSELL, Democrat of Georgia, and LEVERETT SALTONSTALL, Republican of Massachusetts, chairman and ranking minority member, respectively, of the Senate Armed Services Committee. This measure would increase the salary of the chaplain at the United States Military Academy and provide for an assistant chaplain.

By a tradition that predates the present controversy over separation of church and state, the chaplain at West Point must be a member of the Protestant Episcopal Church and a civilian. Nominated by the President, the minister is confirmed in office by the Senate. The official Sunday service at the United States Military Academy is of an Episcopalian character.

There are indications that some members of the Armed Services Committee are seeking a long look at the curious relic of denominationalism in the Armed Forces, tradition or not. At West Point, the present practice is to excuse Catholic and Jewish cadets from the Sunday service at the Academy chapel. Two diocesan priests, assigned to West Point by the archbishop of New York, provide the spiritual care of Catholic cadets in a Catholic chapel built at the Academy several years ago under an act of Congress.

At the United States Naval Academy at Annapolis, two chaplains, a Catholic and a Protestant, are assigned from the ranks of Regular Navy chaplains. A similar policy has been announced for the new Air Force Academy in Colorado.

It seems only just that the West Point chaplaincy be filled from the ranks of Regular Army chaplains and that the denominational character of the appointment be avoided as an infringement upon the rights of the cadets. The priests assigned to West Point over the years by the archdiocese of New York have done admirable work in behalf of the Catholic cadets, but it certainly would be more in keeping with Army policy and present American practice to provide equal status for representatives of the Jewish and Catholic faiths.

ATLANTIC DISTRICT,
LUTHERAN CHURCH, MISSOURI SYNOD,
Closter, N. J., July 29, 1955.

Hon. HAROLD D. DONOHUE,
House Office Building,
Washington, D. C.

MY DEAR MR. DONOHUE: The Atlantic district of the Lutheran Church, Missouri synod, comprises the area of New England, New York, and New Jersey. The Lutheran Church—Missouri synod numbers 5,000 congregations in its membership; the Atlantic district numbers 230. Delegates from the 230 congregations in convention assembled June 27–30, 1955, at Bronxville, N. Y., passed the following resolution:

"Whereas the Lutheran cadets attending West Point Military Academy are required to attend religious services conducted by a clergyman not of their denominational affiliation; and

"Whereas this may constitute an invasion of conscience; and

"Whereas this requirement conflicts with the practice of the Lutheran Church—Missouri synod, which practice is substantiated by the Bill of Rights: Therefore be it

"*Resolved*, That this convention respectfully request the President of the United States and the Congress to support such legislation as will harmonize the religious practices at West Point Military Academy in this matter with the other service academies; and be it furthermore

"*Resolved*, That the district secretary convey a copy of this resolution to the President of the United States and to all Congressmen representing the Atlantic district area."

May you give this matter your valued consideration.

Sincerely,

CARL M. ZORN,
Secretary.

Agriculture Storm Signals

EXTENSION OF REMARKS
OF
HON. JAMES M. QUIGLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. QUIGLEY. Mr. Speaker, under leave to revise and extend my remarks, I include a press release from the National Live Stock Producer, one of the leading livestock magazines.

The release relates to an article in the August issue by H. M. Conway, market research economist, who warns that agriculture may be heading for hard times similar to those which happened the last time Republicans controlled the administration and were content with predicting good times based solely upon activity by coupon clippers and stock-market speculators.

Once again we have an administration which is content with the status quo, and which speaks of the necessity of the adjustments which the farmer must make. Unfortunately these adjustments always seem to be downward.

The press release follows:

CHICAGO.—Watch out for a repeat of the 1930's in agriculture, warns H. M. Conway, market research economist, in the August issue of National Live Stock Producer, the Nation's leading livestock publication.

Conway points out that hog prices are averaging 77 percent of parity and lambs 78 percent. In terms of the cost of products the stockman buys, the livestock industry has a purchasing power of between 75 and 80 percent of normal.

For agriculture as a whole, the value of the farm dollar is 85 cents, a level that eventually wrecked a generation of farmers during the 1930's.

It is possible that the present economic situation may be helped by a continued upward industrial and inflationary trend. That would not correct the cause, says Conway, but only aggravate and temporarily delay pending adjustments.

In addition to the growing price spread between the producer and consumer, the livestock industry is being faced with delayed retail price adjustments.

This has been quite significant in the case of hogs during the early part of this year. A more serious situation is in prospect for the late summer and fall. It may also extend to cattle.

The result will be a still greater price spread because retail prices will be too high to move the meat supply to consumers at a normal rate.

Hogs will be hit extra hard because more costs are involved processing and distribution.

Livestock producers and feeders are faced with a renewed and growing disparity between agriculture and industry and by a temporary delay in the downward adjustment of retail prices to the prevailing demand and supply of meat.

Such conditions were faced in the early 1920's and 1930's but during the past 2 decades they have been largely offset and obscured by the general uptrend in commodity values—a reflection of industrial prosperity and extreme inflation.

Fundamentally, nothing has ever been done to correct the cause of these conditions so it is now expedient for livestock industry to recognize the situation and move the supply

of meat to consumers on a normal price basis during the next 6 months.

As to the welfare of the livestock producer, such economic conditions are often more serious than droughts or overproduction.

Davy Crockett

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. DOYLE. Mr. Speaker, when you presented my 9-year-old grandson, Danny Doyle Stanton, from California, the gavel of the day the other afternoon after the House adjourned, one of the reasons I made it my business and pleasure to learn about the legislative experiences of Davy Crockett, former Member of this House of Representatives.

For, Mr. Speaker, my own grandson, Danny, who is visiting his "nanna" and me until Congress adjourns, almost daily insisted that he wanted to know "what kind of a Congressman Davy Crockett was." Not only he asked me, but other children from the great 23d District of California, and adults, too, asked me. So I found out. I knew you would be pleased to see some of the public response my effort received.

Here is an article handed me by our distinguished colleague, GORDON CANFIELD, of Paterson, N. J. It appeared in the Paterson Morning Call of August 1, 1955:

FINDS DAVY CROCKETT SERVED THREE TERMS IN UNITED STATES CONGRESS

(By Pat Paterson)

Now all you loyal Davy Crockett fans will be able to wear your coonskin caps with new dignity.

It's authentic, right from the archives of the Congressional Library: David Crockett did serve three times in Congress, 1827–31 and 1833–35.

This valuable information was dug up at the request of Congressman CLYDE DOYLE, of California, who has been besieged by Crockett admirers of all ages to confirm the current hero's service as a representative from Tennessee.

Crockett's record in Congress, while not spectacular was admirable. There is no reference to his "patching up the crack in the liberty bell" but he did go down the line for his constituents getting quite a few of them on the military pension list, clearing up titles and land grants, and establishing post roads. He came the closest to gaining national prominence when he offered a resolution on February 9, 1830, to abolish West Point Academy and "the appropriations annually made for its support be discontinued."

His suggestion must have stirred up quite a rhubarb in the capital because farther down in the record it is noted that Crockett submitted another resolution calling for the reprint of "6,000 copies of the report of the Secretary of War in relation to the Military Academy at West Point."

"MIGHTY HUNTER"

There seems to be no record of his having "kilt a bar when he was only three" but he is described as a "mighty hunter," although "a poor farmer, indolent and shiftless."

Crockett's tragic love life, in the words of today's popular ballad, reads a little differently in the brief biography compiled for Congressman DOYLE by Norman D. Burch, of the Congressional Library's history and general research division.

Crockett's first brush with love came when he was 18, and it hit him so hard he conceded to attend school to win the favor of his lady love. He went for 6 months, but when she turned him down, he tossed in his books.

His broken heart was mended a few months later by one Polly Findlay, who turned over a dower of two cows with calves. Crockett did his share by borrowing $15 and renting a piece of land with a horse thrown in. Polly died in 1815 leaving with him three children. But a few months later he married again, this time the widow of a fellow soldier who added two children of her own to Crockett's three.

Without education, polish or culture he managed to get himself elected a magistrate, a justice of the peace, and a full colonel of a militia regiment organized in his district. Next he was elected to the legislature, although at the time his knowledge of public affairs was so limited he did not even know the meaning of the word "judiciary." He boasted of rely on "natural sense instead of law learning."

He prided himself on his lack of education, correct spelling appearing to him as something "contrary to nature" and grammar as "nothing at all" * * * despite "the fuss that is made about it."

STARTED AS JOKE

Crockett's congressional candidacy started off as a joke, but he took it seriously, and he carried on a campaign that ran second only to Paul Bunyon for tall stories. He was ridiculed and laughed out but he won the race, was reelected for a second term and then after an unsuccessful run was elected again. He was defeated on his next try for reelection by an upsurge of Jacksonian sentiment in his district.

"When he came home his politickin' done," Crockett took up his rifle and went off to join the forces fighting for Texan independence. He went down in the final assault at the Alamo.

But for the imagination and enterprise of a team of modern song writers and disc jockeys, Davey Crockett would have remained just a shadowy figure in the early history of the Nation, instead of a brand name for Tee shorts, pup tents, coonskin caps, and all the other gear that today's small fry clamors for.

There are those who have sneered at the current Davey Crockett hysteria, and even so powerful an organization as the UAW–CIO has termed him a reactionary, an enemy of labor, but thanks to Congressman DOYLE, the record has been set straight and Davey Crockett has emerged in true perspective as: "A brave soldier, an able scout, and an expert rifleman * * * generous and openhanded, frank and upright, of a sterling independence of spirit and blessed with bubbling good nature and an exceptional degree of self-confidence," a self-made man who loved, served, fought and died in the typical American way * * * and followed his star right into the West."

As you know, I placed his record as a Congressman in our CONGRESSIONAL RECORD within the last few days.

And here, Mr. Speaker, is the treatment of my subject in the New York Times for August 1, 1955:

THE LIGHTER SIDE OF AN EXPIRING CONGRESS

(By Arthur Krock)

WASHINGTON, August 1.—The work of Congress, as reflected in the daily news, leaves the impression that the legislative grind goes on hour after hour, unrelieved by pleasing distractions. This impression is the strongest, and nearest to the fact, as Congress races toward the adjournment of a session. But even last week, when issues of great importance were being disposed of by action, deferral, or rejection, the legislators indulged themselves in several relaxing activities.

These covered a wide range. The Senate twice entertained groups of guests who took a bow. The House listened to a Member's account of the value of holding grassroots conferences in their districts during the recess. It was also the privilege of the House to receive from another Member, undoubtedly for the first time, a complete history of the legislative record of the Honorable Davy Crockett of Tennessee.

HONORED GUESTS

Senator ALAN BIBLE, of Nevada, opened the social activities in the greatest deliberative assemblage on earth. After notifying the Vice President of the absence of a quorum, and thus obtaining one, he emceed as follows:

"Let me call the attention of the Senate to the fact that today we are particularly honored by having with us a group of fine young Las Vegas high-school students, the Rhythymettes. They are a precision drill team without equal anywhere in the United States. I should like to direct the attention of all my colleagues to the section of the gallery to the left, where the Rhythymettes are seated; and I ask that they stand and take a bow from the Senate of the United States."

Of course, it was the Senate that took the bow and the Rhythymettes who performed it. But, according to the official transcript, "the designated guests of the Senate rose and were greeted with applause by the Members."

FROM DOWN UNDER

The amenities thus established, it was the turn of Senator CLINTON P. ANDERSON, of New Mexico. "I should like to present," he said, "some distinguished visitors from Australia." They were the Minister of Supply, the Chairman of the Australian Atomic Energy Commission, and the Ambassador to Washington. With an admirable sense of proportion, the Senate not only applauded louder and longer than it did for the Rhymettes. The Members also rose in their places.

Meanwhile in the House, Representative PAUL F. SCHENCK, of Ohio, was explaining how he would employ the recess to win friends and influence people in his constituency, the plain implication being that his colleagues would be well-advised to do likewise instead of going fishing. "Our Third District of Ohio," he said, "is located in the great and beautiful Miami Valley. The people of this district have made many outstanding contributions to the health, welfare, and progress of our Nation and the world. * * * It is the birthplace of aviation."

His aim, said SCHENCK, was to be "of service" to every constituent with a Federal problem, and he had discovered that the "face-to-face conference" helped him to serve them "in a much more effective manner." He would, SCHENCK told the House, beginning September 6, from 9 a. m. to 4 p. m., hold these meetings with his electorate in eight of the towns in his political domain. For this hint of the higher salesmanship the Ohio statesman received grateful applause.

KING OF THE WILD PENSIONER

But as a public service, the more unselfish because clearly the group most interested is not of voting age, the lighter moment supplied by Representative CLYDE DOYLE, of California, easily bore off the laurels. He was, he said, now in a position to answer

his own grandchildren's questions about the congressional career of Davy Crockett and also "enable every Member of this great legislative body to do the same." Through DOYLE the House learned that when Davy sat in the 20th, 21st, and 22d Congresses, from the next of which President Jackson's voting friends unkindly displaced him, the king of the wild frontier did these things, among others:

Offered a resolution looking to the placement of a national armory on Big Shoals Creek.

Paved the way for pensions for Andrew Dewberry, William Walker, and many other veterans of the Revolution and the War of 1812.

Sought an inquiry into the "expediency of having a survey of a rout [sic] for a canal from Muscle Shoals to Bolivar, Tenn.; into the expediency of putting George W. Shell "on the pension role as an involede" [the spelling was Davy's]; proposed the abolition of the West Point Military Academy, and unsuccessfully contested the election in which he was defeated.

When DOYLE's colleagues get home, they will now, thanks to him, be able to relate these stirring tales, which Disney overlooked, to their coonskin-capped progeny.

Who's Overruling Whom?

EXTENSION OF REMARKS
OF
HON. JOHN V. BEAMER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. BEAMER. Mr. Speaker, the enclosed editorial from the Indianapolis Star of July 5, 1955, is significant. It really should have been inserted before the recent favorable action by the House on amendments to the Natural Gas Act.

Under unanimous consent, I insert it in the Appendix of the CONGRESSIONAL RECORD:

WHO'S OVERRULING WHOM?

The proposal to exempt natural-gas producers from price regulation by the Federal Power Commission has passed the first congressional hurdle. It has been approved by the Commerce Committees of both House and Senate. Indianapolis and other Indiana communities which use natural gas have an interest in the passage of the bill, as it will have direct bearing on adequate future gas supply at reasonable cost.

Meanwhile, opponents of the measure, who have little to support their position other than a mania for Federal controls, have been trying to stir up sentiment with an argument that the exemption bill is an attempt to "overrule the Supreme Court." This is utter nonsense.

From the language of the 1938 Natural Gas Act, it seems quite obvious to the lay citizen that it was the intent of Congress to exempt independent natural-gas producers from FPC control. But the Supreme Court decided last year that the act does not mean what it says, and that all gas entering interstate commerce is subject to FPC price control from wellhead to distributor. If there is questionable use of authority here, it is in the Supreme Court decision, which has the effect of making law.

The making of law is the province of Congress. There is no question whatsoever of the right of Congress to make a law, and to change a law at any later time. The FPC was created by Congress and has—or ought to have—no jurisdiction other than that specifically given to it by Congress. Congress can alter that jurisdiction at any time, or abolish the FPC at will. It is empty-headed demagoguery to talk about "overruling the Court" in relation to a proposal to put the intent of Congress into such plain language that the Supreme Court cannot fail to understand it.

A Businessman Looks at Agriculture

EXTENSION OF REMARKS
OF
HON. JAMES M. QUIGLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. QUIGLEY. Mr. Speaker, Secretary of Agriculture Ezra Taft Benson, who delights in adjusting farm income downward, has a pet suggestion that farmers should not lose their ability to sweat.

I do not know how long it has been since Mr. Benson has been around farmers in any spot other than some air-cooled office in Washington, but I can assure him that Pennsylvania farmers have not forgotten how to sweat; in fact they along with all farmers, are not only sweating, literally, now during the heat wave, but they are sweating figuratively as they try to live under the adjustments which have brought about declining prices and higher costs.

One of best analyses of the farm problem I have seen is by a businessman, Ira K. Dutweiler, chairman, agriculture committee, Lebanon County Chamber of Commerce. Mr. Dutweiler's analysis has been printed in the monthly publication of the Lebanon County chamber.

The article follows:

WHAT'S THE ANSWER ON AGRICULTURE'S PROBLEM?

(By Ira K. Dutweiler)

It is generally conceded that at present agriculture is the weakest link in the national economy. It therefore seems logical that a thorough diagnosis of its present condition and the cause thereof, is absolutely essential before intelligent recommendations can be made for improvements.

For years I have heard one of the poultry experts from Penn State annually make the same recommendation. "Competition is getting keener, and only farmers operating most efficiently and pulling their belts a notch tighter, will survive this year." This prediction was only too correct, but some of us are wondering why farmers shall pull their belts a notch tighter every year, until their tongue sticks out so far it is getting tangled up with their shoelaces, while at the same time industry and labor are loosening up their belts a notch each year, and receiving greater remuneration annually for less hours of work.

In the midst of the country's greatest prosperity, practically only agriculture's income is going down.

While industry and labor are enjoying the greatest income ever received, neither agricultural leaders not Government agricultural officials have anything to offer or predict for agriculture except more declines in income for the present, while talking about long-range programs for the future.

It can be noted, however, that industry's and labor's long-range programs are planned by leaders who have produced successful and prosperous results for 1954 in 1954. Perhaps it would be a good idea for agriculture to copy the same idea, and to insist that its leaders in and out of Government solve 1955 problems in 1955, before they start talking about long-range programs. What good is a long-range program for a small farmer who has a note coming due September 1, 1955? What will his banker say when the note comes due, and all the farmer can give him is a promise of a long-range program at some indefinite future time?

The agricultural problem is difficult to solve because it is difficult to understand. Much reading and study is required. You must understand the functions and operations of government, the economics of agriculture, and the relation of one to the other and the effects of one or the other.

Many farmers who are using all the latest and most improved implements and machinery for operating their farms are advocating economics of the Daniel Boone era, and they just don't fit.

The average family size farmer who works long hours out in the open is usually physically so fatigued by night that he is asleep before he gets through with the local personal news and does not read anything economically enlightening.

In a general way farmers realize that every time an increase of wages is granted to the steel, etc., workers, the cost of the things they buy is bound to go up, but very few have any idea that anything can be done about it. I cannot find any prominent agricultural or Government leader who has gone on record in favor of tying the prices farmers are to receive for their crops to the rise and fall of industrial and labor prices.

It is unfortunately only too true that the vast number of farmers' knowledge of the economics of Government and agriculture is limited to the political harangues shortly before elections, when statements are made, which I think the late Wendell Willkie stated had better never been made.

The Soviet Farm Delegation

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. BOSCH. Mr. Speaker, through the newspapers, periodicals, and newsreels, we have been reading and hearing accounts of the visit of the so-called Soviet farm group to the Iowa farm belt. The avowed purpose of this trip is the observation of the techniques and industry of the American farmer. This group has been showered with the traditional hospitality of the American people.

No one has objection to a welcoming of delegations to observe the progress under free enterprise as enjoyed by the American people, but many are wary of the actual reports which will be made according to the dictum and rules laid down by the rulers in the Kremlin.

In this regard, Mr. Speaker, the American Friends of Russian Freedom have issued a statement which I am sure will be of interest to all my colleagues. Under leave to extend my remarks, I include this statement:

The Soviet farm delegation touring the corn belt of Iowa has been met in a spirit of warmhearted cordiality, typical of American hospitality to strangers. To this no one can object.

But the rules of hospitality do not require that we Americans close our eyes and our minds to the grim realities of the Communist dictatorship—and in particular to the cruel ordeal of Soviet farmers under the Kremlin's regime of terror.

Because a portion of our public and our press seem to have forgotten these realities and gone overboard in know-nothing sentimentality, the American Friends of Russian Freedom considers it necessary to call attention to some basic facts:

1. The Soviet delegates are not farmers—or peasants, to use the Soviet term—but Government officials of high rank, traveling under the viligant control of MVD (secret police) agents within the delegation and attached to the delegation. They do not represent the Soviet peasants. They represent the regime deeply hated by nearly all Russian peasants, and the Red agricultural system against which the peasants have fought with heroic desperation. The men we are entertaining are the jailors and slavemasters over the farmers in whose name they have the effrontery to speak.

2. In showing hospitality to the Red delegation, Iowans are eager to convey friendship for the Russian people, rather than sympathy for the Soviet dictators. They know that the people of the U. S. S. R. are not our enemies, that they are the first and worst victims of the totalitarian setup. Unfortunately too few of our editorial writers and speechmakers have made this essential fact sufficiently clear.

Already, it is evident from a study of Soviet newspapers, the Kremlin is misrepresenting our hospitality as an expression of friendship for the Soviet Union. It is vitally important that this falsehood be punctured. No doubt should be left that Americans continue to look with loathing upon the bloodsoaked Soviet regime and upon the system of collectivization it has imposed by unlimited terror upon the Soviet peasantry. We must draw a sharp line between the people of the U. S. S. R. and their despotic masters.

3. The Soviet peasants, still the great majority of the population, have paid with millions of lives for their relentless resistance to collectivization. Driven into so-called kolkhozes against their will, they have consistently refused to cooperate in their own enslavement. Not only the economic fallacies of collectivization but the active and passive opposition of the farmers has made agriculture the weakest link in the Soviet chain of power.

The great majority of the 15 or more millions in the Soviet slave-labor camps consist of recalcitrant peasants. Resentment against forced collectivization, more than any other single grievance, caused millions of Soviet soldiers to desert to the German invaders in the last war.

In writing or speaking about the Red farm delegation, this background must not be ignored. After 38 years of brutal tyranny, the Soviet peasants continue to fight for land and freedom. To forget this, in a mood of exuberant hospitality, is to give aid and comfort to their tormentors.

4. Upon their return to the Soviet prison land, the Soviet delegates, we may be sure, will not report the truth to the people of the country. They may feel obliged to allude to the remarkable technology of American farming. But they will not dare reveal that our farmers enjoy superior standards of living, and that this is due to our free economy. Indeed, how much they say publicly and how they say it will not be decided by themselves but by the Kremlin bosses, who cannot in the nature of the case admit the superiority of our system of freedom.

These are the hard facts. The American people must not overlook them. Ways and means must be found to inform the Russian people that we have not forgotten their ordeal and their aspirations to be as free as Iowa farmers.

Mexico a Land of Progress

EXTENSION OF REMARKS
OF
HON. CHARLES A. WOLVERTON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. WOLVERTON. Mr. Speaker, realizing that the U. S. News & World Report, under the guidance and direction of David Lawrence, editor, has, as a result of his leadership and care as to the content of the articles appearing in the magazine, become on of the outstanding and influential magazines in the United States, it seems appropriate where misinformation, or, inaccurate information, has inadvertently gained entrance to its columns that such should be corrected.

It is with this intention that I include as part of these remarks a copy of a letter addressed to Mr. David Lawrence, editor, by Hon. Antonio J. Bermudez, director general of Petroleos Mexicanos, popularly known as Pemex, calling the attention of Mr. Lawrence to misstatements or, at least, inaccurate statements contained in an article appearing in the June 17, 1955, issue of U. S. News & World Report, which, in part, relates to the production of oil in Mexico. The letter of Senator Bermudez seeks to clarify the situation so that an entirely true and correct understanding of the matter may be had.

To fully understand the degree of credence to be attached to any statement made by Senator Bermudez it is necessary to know something of the character, ability, and honesty of purpose that underlies, influences, and actuates him in his every act, both public and private. All through his life, in his every activity of a private or public character, he has shown a strong attachment to his country and an overwhelming desire to advance the welfare of his people. It is fortunate for Mexico and likewise of our own country that Mexico has in its public service two such outstanding men at President Ruiz Cortines and Senator Antonio J. Bermudez. Each has gained the high regard and respect of their fellow citizens for the honesty, integrity, and ability they have shown in the service of their country. It would be well for our Nation to recognize to the fullest extent the high caliber of these two men, their dependability to stand for right and justice, and, be glad to be associated with them in promoting the mutual welfare of our respective nations and their people.

With this short statement as to the writer of the letter to which I have referred, I now make it a part of my remarks. It reads as follows:

MÉXICO CITY, *June 20, 1955.*

Mr. DAVID LAWRENCE,
Editor, U. S. News & World Report,
Washington, D. C.

DEAR MR. LAWRENCE: With reference to the article about México in the issue of U. S. News & World Report of June 17, 1955, I want to give you my impression of the information which refers specifically to Mexican oil.

Without an iota of a doubt in my mind and after carefully reading your report, I firmly arrive at the conclusion that it does not reflect the real status of our petroleum industry, and for this reason I want to make the following comments:

It is mentioned that México's production is much smaller than that of the State of Texas, which by itself is a 19.6 percent of the world's oil production. Texas is the most prolific oil area in the world and its production is higher than that of any country outside of the United States, in fact, it produces almost 50 percent of the whole U. S. A. output.

The comparisan of our 1954 production with that of the 1920's, omits the essential fact that México's peak oil production, obtained in 1921, was due to an extremely intensive exploitation of the oilfields, created by an emergency and therefore without technical support. Present exploitation policies, both in the U. S. A. and México, call for a much more conservative exploitation of oilfields in order to increase ultimate oil recovery. The soundness of our exploitation policy, and our exploration effort, is shown by the continuous increase of our proven reserves, in spite of the fact that yearly Mexican oil production, has more than doubled in the last 10 years.

You state that the Mexican Government has been reluctant to explore and drill new areas and that many of the reported new oilfields should be considered as extensions to old ones. Unfortunately I find this statement untrue, unfounded, and misleading; the truth is that the increase in production and reserves has been the result of a continuous exploration effort which led to the discovery and development of four new production provinces or districts.

During the first 37 years of this century, that is from 1901 to 1937, the foreign oil companies discovered oil and gas in 4 provinces: (1) Pánuco or Ebano, (2) Old Golden Lane, (3) Poza Rica, and, (4) Isthmus (southern Veracruz). Pemex during its 17 years of life has discovered oil and gas in 4 new provinces or districts just as important; (1) Northeastern Mexico (Reynosa), (2) New Golden Lane, (3) Veracruz Embayment (Angostura), and, (4) Tabasco. These new districts discovered by Pemex are, so to speak, still in their infancy, subject to a great deal of development. However, they are just as important as the 4 discoveries made in 37 years by the foreign oil companies, since even in its present initial state of development they contribute to about 40 percent of our oil production. Old oilfields contribute 44 percent, and extensions to old ones the balance of 16 percent of the total production.

It is true that Petróleos Mexicanos, as any other oil company, devotes part of its exploration effort to find extensions of existing oilfields. As a result of this work it has been possible for us to maintain production in the old producing districts. However, the main aim of Petróleos Mexicanos' exploration has been directed to the study of new areas and the discovery of new oil and gas fields in the above-mentioned new provinces or districts, where the first commercial production was obtained by Petróleos Mexicanos. This is a proof that successful exploration work has been done in widely separated areas and shows that both management and technical skill of the Mexican people are capable of discovering and developing the oil and gas reserves of the country.

In addition to our successful effort to increase production and reserves, which is the foundation of a sound oil industry, there has been also a continuous improvement and increase in our capacity to refine and market all kinds of petroleum products; at present we are able to process and distribute within our country a much greater volume of the various oil products, and of a far better quality.

It would afford us pleasure to supply you with information on Mexican oil. I can readily see that a magazine of such wide circulation and great prestige as the U. S. News &

World Report can only misjudge things through lack of proper information.

May I ask you several pertinent questions? Do you honestly believe that a report like this is constructive? Do you believe that it contributes to friendship and understanding between our neighboring countries? Your high ideals and responsibilities as editor of an outstanding publication that influences so many people are fulfilled by such a report?

As this letter comes to an end I wish to extend you a cordial invitation to visit our oil industry. It would be constructive if you would accompany yourself with outstanding expert technicians specializing on oil, so that you get a true picture of our oil industry.

I would show you what we have done, what we are doing, and what we intend to do in the near future.

Hoping to hear from you, and thanking you in advance for your attention to this letter, I am

Cordially yours,

ANTONIO J. BERMÚDEZ.

Seventy-fifth Anniversary of the First Electrically Lighted City in the World, Wabash, Ind.

EXTENSION OF REMARKS

OF

HON. JOHN V. BEAMER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. BEAMER. Mr. Speaker, Wabash, Ind., will celebrate the 75th anniversary of the first electrically lighted city in the world on September 14–17. Elaborate plans are being made for this event which coincides with the national plowing contest that will be held in Wabash County during this same week in September.

For this reason, I insert the following letter from the National Carbon Co., Cleveland, Ohio, in the Appendix of the CONGRESSIONAL RECORD:

THE CARBON ARC

(Prepared for use in connection with the diamond jubilee, Wabash, Ind.)

While the first carbon arc was lighted about the beginning of the 19th century, its commercial application awaited the invention of a practical dynamo for generating electricity. Charles F. Brush invented such a dynamo in Cleveland in 1876 and at the same time, designed and demonstrated on the Cleveland public square the first practical commercial arc light. (High-power costs had previously forced the abandonment of an earlier Parisian wet-cell powered installation.)

In March 1880, the then little city of Wabash, Ind., purchased a 4-light plant from Charles F. Brush for $18,000 and became the first municipality to demonstrate the utility of the new light. Today we can scarcely appreciate the miraculous transformation that followed. Instead of groping uncertainly in the dark, Wabash residents walked securely in the brilliance of the four strategically placed arc lights—night had become as day.

The lighting of Wabash streets was an innovation, a tremendous contribution to the progress and welfare of society. Installations spread like wildfire until thousands upon thousands of arc lights shone brightly all across our country; the carbon arc light symbolized American lighting progress.

The light from the arc has never to this day been matched in brilliancy by any other similarly practical light source. But, although the carbon arc was the brightest light source, it was not the cheapest, and so substitutes began to appear as municipalities succumbed to cold-hard economics. In the early days, carbons were replaced daily, a costly task. Later improvements in both arcs and carbons, notably the development of the enclosed arc, increased the life of the carbon trip to approximately 100 hours. But gradually, after many years of successful operation, the carbon arc finally gave way to the improved incandescent lamp as the most important street-lighting medium. But while hundreds of thousands of street-lighting arcs were disappearing other arc lamps were finding new applications until today the carbon arc is a most important industrial tool which touches our lives in many ways.

Older readers will remember the nickelodeon—embryo of the far-flung motion-picture industry and also the beginning of a huge market for arc carbons. Every time we go to the modern motion-picture theater, we enjoy the large, bright, lifelike picture on the screen. How many of us are aware that all the light that makes this picture, blazes from the white-hot tip of a carbon about as big around as your little finger? And, that the picture on the screen in some cases is a million times as large as the original carbon cross-sectional area. But, motion pictures exhibition is just half the story. The carbon arc also makes motion pictures; studios depend on its brilliance to capture the true mood of every scene.

Now for another most familiar communication medium—the printed page. Much of our daily reading is possible because the unique qualities of the carbon arc entered into its production. The twin photographic advantages of high speed plus snow-white light quality yield infinitely finer monochromatic or natural color reproductions from photoengraved printing plates. In photolithography and other branches of the graphic arts industry, the high intensity carbon arc supplies the true white light necessary for perfect reproduction.

Have you ever wondered how the manufacturer can tell in advance how well a new paint will stand up under weathering? To test the material out of doors would require months and even years of exposure. Carbon arc, accelerated weathering machines speed up testing and give quick, accurate answers for paints, varnishes, enamels, lacquers, plastics, rubbers, roofing, building materials, awnings, and many other products.

Millions of people have gazed with awe at the magnificence of Niagara Falls brilliantly lighted on the darkest night. Behind this magic of turning night into day stands a battery of 24 huge carbon arc floodlights.

The sharp, white shafts of light which play across the blackness of the night at military demonstrations, premiers, expositions, or similar shows come from powerful carbon arc searchlights. The Armed Forces use the carbon arc for widely divergent purposes. Ocean liners and river boats alike depend on it. And beacons like the huge 6-foot diameter, high-intensity searchlight on Chicago's Palmolive Building are symbols of safety to aircraft pilots. This particular light, which is reported to project a 2 billion candlepower beam, is visible for over 100 miles.

In addition to these applications for the arc, there are others which, with or without our knowledge, daily affect our lives. Many of us have received therapeutic light treatments from carbon arc lamps. The same lamp, by a simple change of carbons, can supply any 1 of the 3 types of "tailor made," highly effective therapeutic light for the treatment of certain physical disorders. It can duplicate natural sunlight more closely than other artificial light source; it can supply specific bands of powerful ultra-violet radiation; or it can give off penetrating long-wave infrared rays. No other light source has this adaptability.

Foods and tobacco have been irradiated to produce a desired effect on the product in many plants throughout the country. Blueprints have been made for years under the enclosed carbon arc. And, the carbon arc in the spectrograph ferrets out the various elements in all types of chemical compounds and reveals the quantities of such elements present.

The days of the carbon arc for street lighting are past, but today the carbon arc touches our lives more than ever before. Spectacular, practical, its applications serve to make life better for all of us.

H. J. WALTER.

Others, Too, Lean on Price Crutches

EXTENSION OF REMARKS

OF

HON. HAROLD O. LOVRE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. LOVRE. Mr. Speaker, the cost of our price support program for agriculture has been publicized and dramatized to such an extent that one would believe that the farmer is the only one who receives support from the Federal Government. Just to keep the record straight, I would recommend that our antifarm propagandists read the following editorial which was taken out of the Daily Argus-Leader, of Souix Falls, S. Dak., for Sunday, July 31, 1955:

OTHERS, TOO, LEAN ON PRICE CRUTCHES

The Wall Street Journal suggests that the farmer has been leaning on price crutches so long that he can't handle himself without them.

Quite so, Mr. Wall Street editor. But why confine your comments to the farmer?

Why not say something about the eastern industrialists who have been leaning on tariff price crutches for half a century or more? Tell them to learn to get along without them. Also tell the other segments of our economy to throw away the crutches.

And remember, Mr. Wall Street editor, that the farmer didn't start this price crutch business. Your pals in eastern industry did—and they did it so long ago that you've virtually forgotten that they have crutches.

Check back in history a bit. The real agitation to do something for the farmers started in the twenties and the argument advanced then—a very solid one—was that industry was on price stilts and that the farmer needed some protection to place him on the same level. The contention was that "the farmer can't survive if he must sell in an open market and buy in a protected market."

That was the theme song when the famous McNary-Haugen bill was presented to Congress in the twenties. That was the gist of the argument in its favor. No one could provide a really sound answer against the farmer's contention then—and no one can do it today.

Start a campaign, Mr. Wall Street editor, to induce the eastern industrialists to abandon their price stilts. Then after you've accomplished that objective, come to the farmers and ask them to do likewise. But begin at home.

The farmer can battle his way in a free economy with no holds barred. He can take care of himself as well as anybody. But he has a right to expect the same economic rules for everybody.

An Address by Fleet Adm. Chester William Nimitz, United States Navy

EXTENSION OF REMARKS
OF

HON. FREDERIC R. COUDERT, JR.
OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. COUDERT. Mr. Speaker, at the request of a distinguished constituent, Charles Hann, commander general, Naval Order of the United States, I include the remarks of Fleet Adm. Chester William Nimitz at a dinner given in his honor by the Naval Order of the United States at the New York Yacht Club on March 12, 1954:

THE ORGANIZATION OF OUR GOVERNMENT TO WIN A WAR AND THE PEACE WHICH FOLLOWS THE WAR

(Address by Fleet Adm. Chester William Nimitz, U. S. Navy)

Charles Hann, Bill Halsey, Dick Conolly, Struble, Dubose, and Hillenkoetter. All through this large audience I see friends and shipmates of mine—Rex Belknap and Gus Read, former commanders general of the Naval Order of the United States; Paul Hammond, "Sandy" Cushman, and Gene Tunney, who, during the war, brought me a bottle of brandy, all crusted with dust. I put it away until I could use it for a notable occasion. Some weeks later the newly appointed Assistant Secretary of the Navy for Air came for a visit of inspection and I told the steward, "This is the time to get that Tunney bottle."

Well, he got the bottle, all encrusted with the dust of ages, which bottle Gene Tunney had found in some famous old wine cellar in France. We waited and waited with the glasses on the table, but no brandy. I finally called to the steward, "Where in the heck is that brandy?" He said, "We're having an awful time getting all of that dust off it." In a few minutes they came in with a glistening clean bottle.

I am grateful to Charles Hann and his Naval Order of the United States for this opportunity to greet so many of my friends. I could organize a Davis tennis cup team right here; there are so many of my tennis opponents present, not to mention a few horseshoe pitchers, with whom I played so often.

Just before the war I was Chief of the Bureau of Navigation. I probably signed the orders of many a man sitting here, calling him back to duty.

Well, we were having a terrific time. Those of us who were trying to forecast the future knew that the war was coming. President Roosevelt had given us all the money to be used for the building of ships but he would not let us take on additional men.

Paul Hammond came to Washington one day and said, "You fellows aren't going to have enough officers to man the new ships." And we said that we knew it. He said, "Come on; we'll go to the White House." We went to the White House and inside of 2 hours the V–7 training program was born. There he sits, Paul Hammond. [Applause.]

That's the way that program got started. At that time we had 15,000 Regular officers in the Navy including civil engineers, doctors, and supply officers. That's all we had, and we had new ships coming up for commissioning and we didn't know how we were going to man them. At the peak of our strength afloat we had 225,000 officers, a 15-fold expansion. That was made possible by the great response to the call for Reserve officers. And I know that many of you sitting out there were in the group which answered that call, to come and join the Reserve and help us win that war.

I suppose 200,000 officers came from civilian ranks. We had a truly civilian Navy. We didn't suffer from this extensive dilution. At first when we began to send these Reserves to the ships some of the old Regular officers began to complain that they did not have enough Regular people, and Admiral Kimmel almost had a hemorrhage out there in the Pacific. He used to send me a message nearly every day: "For God's sake, send me some trained people."

Instead of doing that we were taking trained officers away. The new ships were coming down the ways and we had to provide some experienced officers for them.

One day a young marine officer came in to say goodbye to me. "I'm going out to the Pacific. I've been working under your command here, way back in the recesses of this building. You don't know it but I was under your command, and I am going out. Do you want to send any messages out to your friends?"

I said, "No, I have nothing to send. I have nothing but trouble." Then I looked on my desk, and there were two telegrams. Then I said, "Wait, please take these two telegrams to Admiral Kimmel." I scribbled on them, "Dear Kimmel, read these and get a laugh and leave me alone for a little bit." Then I forgot about the incident. That was about September or October 1941. I asked, "Where are you going." He said, "I'm headed for Wake Island. I have been assigned to the defense battalion there."

In 1944, after the Marianas had been recaptured, our combat intelligence teams went ashore and picked up everything that appeared valuable and interesting. Later my staff intelligence officer came to me and said, "Here's something that has just come in that I think is extraordinary. We can't dope it out at all. It's got your name on it and was taken from the body of a dead Japanese officer on Saipan." He showed me the two telegrams I had given the young marine officer.

When Charles Hann wrote me in California that I was to make an address that was to be recorded and circulated—I must be frank and say that I wasn't prepared for anything so serious. I thought I was going to stand up here and continue the line of stories we have heard from the other speakers. I do, however, have something to say on a serious subject. It is the organization of our Government for the conduct of war, and then to win the peace. Both are very important subjects. We have often won a war but we have frequently lost the peace which followed the war.

But let us get back to some stories about manning the ships. The captains of ships used to give me hell, when I was Chief of the Bureau of Navigation, over sending them so many young Reserve officers. When I got out to the fleet at Pearl Harbor I was pleased when they would come to me and say they had a wonderful group of officers. They told me their Reserve officers were doing as well as the regulars. They said, "They are so good we can't tell apart." That was delightful music to my ears.

Starting with the American Revolution, which lasted about 8 years, of which 6 years covered very rugged and desperate fighting, during which we had no real organization for the conduct of the war at the seat of Government. We had a Continental Congress. We had a Commander-in-Chief, George Washington, who didn't know what defeat meant. He never, despite his many hardships and shortages, lost hope. Most of his supplies had to come from the enemy, brought in by privateers who just went out and captured enemy ships. The only organization for the conduct of war at that time was George Washington and his military staff.

The Continental Congress was being pushed around from place to place and if it had not been for the providential appearance of the French fleet in Chesapeake Bay under Admiral DeGrasse, which prevented Lord Cornwallis from being reinforced down at Yorktown, God knows how long the war might have lasted, and only the Lord knows whether we would ever have won it. It was that very brief control of the sea that prevented the British from supporting their principal army or from evacuating it.

Our military situation was most desperate and it was that providential appearance of Admiral DeGrasse with the French fleet that made possible our winning the Revolution. Washington had with him a French army of about 5,000 men under General Rochambeau. However, it was the control of the sea and the resulting hoplelessness of the situation for Cornwallis that made possible the winning of the Revolution, and the independence of this country.

I am sure that in this room there are some men who, like myself, have been impatient with the French people and the French government for their failure to agree with our idea of cooperation. Then I try to remember that if it had not been for the French fleet in our Revolution we would not be in the position we are now. How and when do we pay off that debt? Whenever you feel critical of the French people, just remember that they came to our aid in a decidedly critical period in our history and that their fleet made the difference between victory and defeat.

The War of the Revolution was our longest war. All our other wars were of shorter duration. The Civil War lasted 4 years. The Spanish-American War, a matter of months; World War I, for us a matter of months. It wasn't until we came to World War II that we again went through a long war.

Up to the present the organization of the Government of the United States for the conduct of military operations was more or less haphazard. George Washington conducted the war with his staff, with not much help from the Continental Congress. Students of the Civil War know that Lincoln had little help in winning the Civil War from his Cabinet. Lincoln is the only President of the United States, who, as Commander in Chief of the Armed Forces, exercised such command in the field. He was in command of the forces which recaptured the navy yard at Norfolk.

There was little or no organization for war either in his Cabinet or in other agencies in the Government. Lincoln's Cabinet was not only of little help to him but its members were at odds with one another. The Secretary of War, Mr. Stanton, with Lincoln's approval, organized a naval expedition to Pensacola, Fla., where secessionists had taken possession of the navy yard in January 1961. The Secretary of the Navy, Gideon Welles, didn't even know about it. You can readily imagine the lack of cooperation in that incident.

World War I was of such short duration that our planning arrangements had no real test. We had no statutory setup for the conduct of war, and certainly we had no effective plan for winning the peace. There was no statutory arrangement whereby the various responsible departments of Government, like the State Department, the War Department, the Navy Department, were called together to consider what our national policy shall be, for what we should aim. Should we join the League of Nations and try to control the peace with collective security, or should we return to isolation? We had no well-considered plans, and this state of affairs continued until we found ourselves in World War II.

But one thing I never cease to be proud of—our Naval War College—and I want Admirals Belknap and Conolly to hear this—I think that our Naval War College did a marvelous service for the country in preparing our naval officers for the campaign in the Pacific against the Japanese.

I was in the Naval War College class of 1923. During that year under Admiral Belknap's supervision the students studied the strategic side of the war that was to come some 18 years later. Also it was in that class that was evolved the circular cruising formation which was used so extensively and so successfully during our war against the Japanese. The Naval War College has unquestionably justified its existence and the money the Government has spent on it.

In World War II we had a rather long period of preparation behind the protection of the British Fleet, before the Pearl Harbor attack suddenly precipitated us into war. We were given the opportunity to study the organization of the British Government for war, with their chief of staff system; so it was natural that there should be set up in Washington the Joint Chiefs of Staff, consisting of the Chief of Staff of the Army, the Chief of Naval Operations, and General Arnold as head of the Army Air Corps. The Joint Chiefs of Staff were presided over by Admiral Leahy, the Chief of Staff to the President. There was also in Washington a Combined Chiefs of Staff, which coordinated American planning with that of our allies.

The military side of the conduct of war is only a part of it. The supply of ships, materials, and equipment was a most important part of our war effort. The OPM—and God knows how many more alphabetical agencies—was set up to control and coordinate the productive capacity of the country.

Over the years there had been a haphazard relationship between the Army and Navy. There wasn't even a Navy Department until 1798, when the Secretary of War McHenry decided that the War Department organization was getting too complicated by the handling of our Navy. He recommended, and the Congress legislated, that there should be a separate Navy Department. Our first Secretary of the Navy was Benjamin Stoddert.

After World War II had ended I came to Washington as Chief of Naval Operations. Mr. Forrestal had succeeded Col. Frank Knox as Secretary of the Navy. Secretary Forrestal used to tell me of his sense of frustration in attending Cabinet meetings. He said that the Cabinet never accomplished anything. He said, "Nobody transacts real business in the Cabinet; if a Secretary wants to get anything done he either comes early or stays late, to get the President's approval of his project."

Forrestal instructed me to get in touch with my opposite number, General Eisenhower in the War Department, to see if we could set up some sort of an agreement for the War Department and Navy Department to work more closely together. It was about this time that the President instructed Mr. Patterson, Secretary of War; Mr. Forrestal, Secretary of the Navy; Generals Eisenhower and Spaatz, and me as Chief of Naval Operations, to get together to plan for a merger or unification of the Armed Forces. It is of interest that in a recent issue of U. S. News & World Report, on a page labeled "Whispers," there appeared a paragraph which says, "Michael Rabb, Associate Counsel to the President, is getting the added title of Secretary to the President. Mr. Raab set up machinery to keep minutes of the Cabinet and to provide agenda and to make sure that Cabinet members are informed on questions which Mr. Eisenhower wants to discuss. In the past, no real record was kept of the Cabinet meetings." If he left out the word "real," he would be nearer correct.

Adm. Forrest Sherman and General Norstad were designated by the Navy and War Department to confer with appropriate Senators to write what became eventually the National Security Act of 1947, which has already been amended several times.

The National Security Act of 1947 in its opening paragraph states its purpose as follows:

"In enacting this legislation it is the intention of Congress to provide a comprehensive program for the future security of the United States, to provide for the establishment of an integrated policy of procedures for the departments, agencies, and functions of the Government relating to the national security, to provide three military departments (now the Air Force is being born) separately administered for the operation and administration of the Army, the Navy, including Naval Aviation and the Marine Corps, and the Air Force; to provide for their authoritative coordination and unified direction under civilian control of the Secretary of Defense; to provide for the separate strategic direction of the Armed Forces for their operation and unified control and for their integration into an efficient team of land, naval, and air forces, but not to establish a single Chief of Staff over the Armed Forces general staff; but this is not to be interpreted as applying to the Joint Chiefs of Staff."

The most important section of the National Security Act of 1947 is that which sets up the National Security Council as a statutory body composed of the President, the Vice President, the Secretary of State, the Secretary of Defense, the Director for Mutual Security, the chairman of the National Resources Board, which is another important agency set up by the act to blanket in the numerous agencies which were used to coordinate production in this country during the last war. Also included in the National Security Council are the secretaries and under secretaries of other departments.

The National Security Council has the responsibility (1) to assess and appraise the objectives, commitments and risks of the United States in relation to our actual and potential military power, in the interest of National security for the purpose of making recommendations to the President, and (2) to consider policies in matters of common interest to the departments and agencies of the Government concerned with the national security and to make recommendations to the President in connection therewith.

For the first time in our history we have a commonsense planning body set up by statute.

The National Security Council meets weekly, usually on Thursday, to consider a carefully prepared agenda. The President presides. For the first time we have an orderly consideration of the grave international problems which confront us. The act attaches to the National Security Council the Central Intelligence Agency, which has control of all the intelligence activities outside of the country and access to all intelligence data gathered by all agencies within our borders, such as the FBI and the intelligence agencies of our Armed Forces.

The National Security Council is by all odds the best agency in the country devised to win the peace after our combat forces have won the war.

If we had had a statutory National Security Council during World War II, it is more than likely that we would have avoided many of the problems which now plague our international relations.

Another important section of the National Security Act sets up the National Resources Board, which aids the President to coordinate the military, industrial and civilian, including mobilization. The act also legalized the Joint Chiefs of Staff and established the Defense Department, consisting of the Army, Navy, and Air Force. Thus was provided for the first time one Department of Defense, with a Secretary of Defense, who is the alter ego of the President in military matters.

The National Security Act of 1947, as amended to December 31, 1953, contains so many important provisions of interest to military men that copies should be available to members of the Naval Order of the United States. The act has been amended several times and no doubt will be amended in the future as the need arises. However, we have made an excellent start for the proper planning for war and peace.

Public Law 177 of the 80th Congress, June 25, 1948 (a copy of which I had not seen before March 12, 1954, when I discussed this matter before the Naval Order) establishes the order of succession to the Presidency. This is of more importance these days of new bombs of vast destructive power than when the National Security Act was passed in 1947. As of now the legal succession to the Presidency is as follows: The Vice President, the Speaker of the House of Representatives, the President pro tempore of the Senate, the Secretary of State, Secretary of the Treasury, Secretary of Defense, the Attorney General, Postmaster General, Secretary of the Interior, Secretary of Agriculture, Secretary of Commerce, and lastly the Secretary of Labor. You will not from the law of succession that the secretaries of the all-important military departments are not included. This—in my opinion—is wrong. Not only should they be included in the line of succession to the Presidency, they should also sit in the Cabinet. Those secretaries are important men, who between them spend over 50 percent of our national budget. Too much has happened to depress the importance of the military secretaries, that it is hard to get the right kind of men who are willing to serve in these important positions.

Now what I am about to say may be rank heresy, but I maintain that the military part of the Government, even when they have blundered, have always won the war. The same cannot be said for the civilian side of the administration. They have not always won the peace.

Now I have talked enough, Charley. It's an important but dry subject. Mr. Forrestal gave a great deal of thought to the matter of organizing the Government to conduct war and win the peace. He had a very orderly mind and he saw the defects of our old system. The National Security Act of 1947 is really an impressive monument to Mr. Forrestal's genius. We now have a statutory organization for planning that makes us less liable to make mistakes and we might accidently win a peace with it.

Make New England First in Nuclear Industrial Field

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following article from the Boston Globe, Boston, Mass., Monday, August 1, 1955:

MOVE FAST

New England should move fast to gain the full benefit of the initial advantages it enjoys in the race to develop nuclear-powered industry. That is the eloquent implication of the report made to the governors' conference by its atomic energy committee.

The advantages it cites are tremendous—a concentration here of scientific and technological facilities, and a large body of skilled workers. The very fact that electricity costs more in New England than elsewhere, because fuel must be transported here, both makes the situation urgent and creates an opportunity.

New England can honestly tell prospective investors that nuclear production of

electricity is likely to be economically feasible here much sooner than in many other parts of the country.

But this region must do more, and quickly. The report suggests tempting atomic industrial enterprise with tax benefits; another possible attraction would be the grant of land for sites. The governors' conference cannot come forward too soon with a concrete program capable of making this region first in the nuclear industrial field.

The 1901 Act Not Repealed

SPEECH
OF
HON. EDWARD H. REES
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1955

Mr. REES of Kansas. Mr. Speaker, there was some discussion among Members about the suggestion that the law of 1901 had been repealed by implication by the Cole amendment to the law of 1951, section 6, title I, Public Law 51.

In this connection I would like to place in the RECORD a letter from the gentleman from New York, Mr. COLE, to Mrs. CECIL HARDEN, chairman of a subcommittee of the Committee on Government Opertions of the House of Representatives, in connection with an investigation into the operation of package liquor stores by the armed services:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., August 1, 1955.

Mrs. CECIL HARDEN,
House Office Building,
Washington, D. C.

DEAR MRS. HARDEN: It has been brought to my attention that in the course of a hearing on the subject of alcoholic beverages before your committee, Capt. W. G. Chapple, of the Bureau of Personnel, Department of the Navy, made a statement to the effect that the sale of alcoholic beverages was authorized for the Department of Defense by section 6, Public Law 51, 82d Congress, approved June 19, 1951, and that later on in answer to a question by Staff Director Ward: "Do you have any real authority for saying that the act of 1901 has been superseded by the act of 1951, Captain?" Lieutenant Colonel Wise replies: "I will answer that. I think I speak for the entire Department that our Judge Advocate General of the Army has advised that they are of the opinion that section 6 of Public Law 51 does, by implication, repeal the so-called Canteen Act of 1901."

I introduced the amendment which became section 6, Public Law 51. The purpose of section 6 was not to in any way repeal existing law but to give the Secretary of Defense authority to make uniform regulations for all three Departments of the Armed Services and also to empower him to deal with the problem of alcoholic beverages not only in camps, stations, posts, and other places, but also in their vicinity.

Sincerely yours,

STERLING COLE.

The day previous to the introduction of the Cole amendment, I had myself introduced an amendment intended to supplement the law of 1901 and give the Secretary of Defense power to make regulations which would apply to all branches of the armed services, and in discussing it, the gentleman from North Carolina [Mr. BARDEN] stated:

I understand that the Canteen Act of 1901 is still in effect which regulates that and is Federal law.

So that the fact that the law of 1901 was still in effect was in the minds of the Members of the House when they were considering the Cole amendment.

My own amendment was as follows:

Following line 11, page 21, insert a new subsection as follows:

"SEC. 5. No person, corporation, partnership, or association shall sell, supply, give, or have in his or its possession any alcoholic liquors, including beer, ale, or wine, inside the confines of or within reasonable distance of any military camp, station, fort, post, yard, base, cantonment, training, or mobilization place which is being used at the time for military purposes; but the Secretary of Defense may make regulations permitting the sale and use of alcoholic liquors for medicinal purposes. The Secretary of Defense is authorized and directed to take appropriate action to carry out the provisions of this section."

In opposing the Bryson amendment which was directed to the program which was to be presented by the National Security Training Commission for members of the National Security Training Corps, the chairman of the House Armed Services Committee, Mr. VINSON, said:

The proper way to approach this subject is somewhat along the line of the amendment offered by the gentleman from Kansas, and probably to be offered today by the gentleman from New York [Mr. COLE].

It is apparent that in considering the Cole amendment, the House had in mind the terms of my amendment which were in harmony with the law of 1901.

United States Junior Chamber of Commerce Voice of Democracy Contest Winners

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. DOYLE. Mr. Speaker, here are portions of three speeches by winners in the National Voice of Democracy contest, annually sponsored by the United States Junior Chamber of Commerce, for high-school students.

It goes without saying, Mr. Speaker, that we of this great legislative body again find pleasure in commending this group of vigorous, vigilant young American citizens who put their time and talent and influence into this sponsoring event.

Also, I know we commend the winners. Yes, we also commend all those who entered this contest, whether they were place winners or not:

[From Judy Abramson, of Yuba City, Calif.]

The key to this democracy we possess is our faith in the dignity and the worth of each human life, and our determination that in every phase of our society we shall build from the bottom up—and not from the top down. The only true happiness is that which the individual creates for himself—and values—because it is his own. To fulfill his own ambitions and to satisfy the needs which are his own expression—that is the goal of each human being. And this can be accomplished only under democracy.

[From Joseph Maletzky, of Schenectady, N. Y.]

Today we are beginning to think of democracy not as a political institution, but as a moral ideal, and a way of living together. The early Christians had an appropriate saying—"We are all," they put it, "members of one another." We must, if our democracy is to succeed, believe as they did. We must realize that no one can stand alone. True, society recognizes a person as an individual with his individual liberties and freedoms, but only if the person recognizes society as a brotherhood of individuals. To be part of a democracy, one must fight the natural tendency to demand equality and freedom for oneself, and not for others.

[From Catherine Esther Styles, of New Zealand, now living in Minneapolis]

You people of America do not stand alone. Democracy extends further than America. Two thousand years ago the Christian doctrine proclaimed the equality of man. Belief in the equality of man means acceptance of all races, all creeds. Belief in democracy means belief in the equality of man. It means respecting the individuality of every human being.

The Meaning of One Word, "And"

EXTENSION OF REMARKS
OF
HON. MICHAEL A. FEIGHAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. FEIGHAN. Mr. Speaker, for some years I have opposed giving any American assistance to Marshal Tito's Communist regime in Yugoslavia. I have opposed such aid when both the authorization and appropriations bills were being considered by the House. The reason I took this action was because of my firm conviction that Tito is and remains nothing more than a Russian stooge, and that he will never be an asset to the free world because of his complete dedication to the cause of international communism. My efforts in the past have met with little success because Congress did authorize and did appropriate large sums of money and assistance to the Communist dictator Tito.

This year when the authorization legislation was in the Committee of the Whole, there was a great deal of talk about Marshal Tito refusing to allow American inspection over the manner in which he was utilizing American assistance in Yugoslavia. The opinion was generally held that Tito refused to allow us complete inspection opportunities, but most everyone hesitated to speak out on this matter because the Republican administration had put itself so strongly on record favoring aid to the Communist dictator, Tito.

I became particularly disturbed when I heard from reliable sources that Tito was allowing the Russians to ship military equipment and supplies across Yugoslavia and into Albania. There

were also stories going about relating to the prospect of the Russians cancelling all of Tito's debts to them previously incurred, and that Tito was negotiating with the Kremlin for the manufacture of MIG jet fighters in the industrial establishments of Yugoslavia, many of which were put on their feet by American assistance. These circumstances caused me to offer an amendment to the Mutual Security Act of 1954, chapter 4, section 142 (70). That subsection provided that no assistance could be furnished to any nation unless such nation agreed to allow "continuous observation and review by United States representatives of programs of assistance authorized under this title, including the utilization of any such assistance, or provide the United States with full and complete information with respect to these matters, as the President may require."

Now, it will be noted that under the 1954 act this subsection did not make mandatory continuous observation and review by United States representatives because the alternative was allowed for some nations to simply provide reports on how our assistance was being utilized. It was this escape clause which permitted the United States representatives to give Tito assistance even though he refused to permit continuous observation and review by them of the manner in which our assistance was utilized. I later learned that our military representatives in Yugoslavia had not been permitted complete freedom to inspect the military installations, airfields, defense highways, and other public roads, and railroad lines. Consequently, rather than offering an amendment to prevent any assistance to Yugoslavia which appeared certain of defeat in light of the Republican administration's support for aid to Tito, I offered an amendment simply to delete the word "or" and substitute the word "and." By the change of this one word Tito now must permit continuous observation and review of all programs of any such United States assistance, including the utilization of any such assistance, by representatives of our Government.

Shortly after the adoption of this amendment by Congress and the passage of the Mutual Security Act of 1955, a disagreement between the Dictator Tito and representatives of the United States was revealed in the press. While State Department sources denied the disagreement was over the new requirement that Tito permit observation and review by United States representatives or no assistance could be given him, it is clear that this is an issue which has not been resolved. Shortly thereafter stories appeared in the Yugoslav press about Tito negotiating with the Kremlin for the manufacture of Russian MIG fighter planes. This means that the factories of Yugoslavia would be tooled up to support the Russian Communist war machine in the event of a shooting war with the free world. In the last few days stories have been appearing to the effect that Tito finds himself in an excellent bargaining position between United States interests and the Kremlin. In effect, he is telling us that unless we give him what he wants, and under such conditions as he alone determines, he will simply turn to his Russian brothers for assistance and military support. This form of blackmail is even cruder than that employed by Hitler.

This latest maneuver by Tito should cause us to take the position that if he accepts one single bit of military assistance, whether in the form of contracts with the Kremlin or as outright gifts from Moscow, United States aid should be terminated completely and abruptly. It also demonstrates the absolute necessity for the United States to secure the right to, and to enforce continuous observation and review of all those programs in Yugoslavia having to do with military defense because if we support any phase of their defense program, it is necessary for us to know every phase of such program.

There should be no doubt as to the congressional intent with respect to the amendment to section 142 (10) of the Mutual Security Act of 1954, which was adopted. That amendment was directed at correcting the scandalous situation with respect to our dealings with the big faker Tito, but it should likewise be applied to all nations who receive any form of assistance from the United States.

When this matter comes before Congress next year, we will expect a full report on all United States assistance to Yugoslavia, including what sort of business he is doing with the Kremlin and what he has done with any United States assistance granted to him under the conditions imposed by section 142, subsection (10) of chapter 4, title 1.

Any assistance given to Tito without first securing the right to continuous observation and review or failure on the part of any United States representatives to fully carry out these requirements will constitute a flagrant violation of the law. Congress will want to know whether or not this law has been violated. In order to avoid misunderstanding when this matter arises again next year, the full impact of this law, as amended, should be impressed upon each and every American representative assigned to Yugoslavia.

Legislation of Interest to Veterans

EXTENSION OF REMARKS
OF
HON. WILLIAM G. BRAY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. BRAY. Mr. Speaker, in the closing days of the 1st session of the 84th Congress, I want to summarize the legislation that is of special interest to the veterans of the United States. The veterans' interests in this 1st session of the 84th Congress have come through in good shape. In the past, as you know, there have at times been difficulties. While we who are especially interested in the welfare of the veteran may never get all of the legislation that we believe should be passed, yet the vigilance of the veterans' organizations such as the VFW, the American Legion, and the Disabled American Veterans, coupled with a capable House Veteran Affairs Committee headed by "TIGER" TEAGUE, of Texas, has gone a long way toward fair and commonsense legislation for the veteran which the country as a whole believes is just.

The veterans' housing program is still making great progress but there are all too many localities where the lending institutions will not participate and the veterans in that locality are denied the opportunity of this most worthwhile legislation. While each year we appropriate money for direct loans to the veterans, this money is far short of the needs. The veterans' home-loan program has been of great benefit not only to the veteran, but it has helped him to attain and maintain a stability in the community that makes for good citizenship. In addition this program has not cost the American taxpayer.

There has been racketeering in this field of veterans' loans and there are many cases in which the veteran has not received the proper home for the money that was spent. I am happy to say that the Government has been making progress in the elimination and prosecution of the illegal chiselers who have been defrauding veterans.

Perhaps no phase of veterans' legislation has been of as great a benefit as the GI training. There are untold thousands of our veterans who have taken their place in the business, professional, and agricultural industries because of the GI training. This training would have ceased even for those in service if Congress had not succeeded in extending the GI training for all veterans in service prior to January 31, 1955. However, veterans entering the service after that date will not have the benefit of GI training unless new legislation is passed. In the early days there was fraud, and in many instances the veteran and the Government did not receive proper benefit for the money spent, but thanks to the constant effort of congressional investigations, the Veterans' Administration, and the Justice Department, most of these wrongs have been stopped.

One of the most critical problems facing the veteran today is the scarcity of veterans' hospital facilities. The Veterans' Administration is operating 176 hospitals. There are many of these hospitals that are of temporary construction and must be replaced in the near future. Applications for hospitalization come in at the rate of more than 2,000 per day. Outpatient care for service-connected cases run approximately 190,000 per month. The Veterans' Administration is presenting to the Bureau of the Budget a plan for the replacement of the temporary hospitals. However, even if all of these temporary hospitals were replaced, it would not take care of veterans' hospitalization needs.

If all the veterans' hospitals were properly located, the situation would not be so critical. Unfortunately many veterans' hospitals have been built at locations where there are not sufficient veterans' hospital needs to justify their location. Other hospitals have been built

where there is not sufficient medical personnel to staff them. Today unless the hospital is located in a very large city or is close to a large medical center, the hospital cannot be properly staffed and utilized. I sincerely believe and hope that in the future veterans' hospitals will be located where needed and in the communities that can properly staff these hospitals. In the future we must take heed of the mistakes we have made in the past on veterans' hospitalization.

Indiana is especially short on hospital beds, yet it is one of the fairly few locations in the country where there is adequate medical facilities to staff such a hospital. These facts have been and are continuing to be brought to the attention of the proper authorities.

Last year Congress insisted that a Veterans' Administration hospital make the most effective use of all available beds and apparently progress is being made in this direction.

The Appropriations Committee this year was apparently fair and reasonable in the veterans' appropriations.

I believe Members of Congress and the public generally are becoming more familiar with the needs of the veteran. The veterans preference in civil service has remained unchanged in this session of Congress. Legislation was introduced and passed by the Armed Services Committee, giving the veteran the right to an additional copy of a certificate in lieu of discharge if needed by the veteran without extra cost to him. This legislation was blocked before final passage, but I am certain that it will be passed when Congress meets again in January.

Minor changes were made in various regulations of the Veterans' Administration, but there were few individuals involved in these changes. There has been considerable legislation introduced that will be acted upon when Congress meets for the 2d session of the 84th Congress in January.

We as veterans realize that nothing could injure the veterans' cause more than for demands to be made for the veteran that are unfair. We also realize that the greatest gift our country can give to the veteran, and to all Americans, is peace in a strong America—and an America that preserves the freedom and dignity of man.

Certification of Drugs

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. FASCELL. Mr. Speaker, much attention has been focused recently on our national health programs, particularly with respect to government approval of new drugs for public use.

Mr. Frank Cusumano, president of Bio-Rama Drug Co., one of the outstanding in the country, expressed the following remarks to me, which I feel are worthy of the careful consideration of my colleagues:

Most of us are well acquainted with the measures, and the methods taken at every level of our Government, in protecting our health and welfare. Nevertheless, we hesitate to accept these mesaures as the optimum in protection. Adequate in many respects, much is left to be desired—particularly at the Federal level, admittedly the level which should be serving as an example. The present control measures, although functioning smoothly in many respects, are not sufficiently broad to guarantee the needed protection. We need only consult our daily newspapers for support of this contention—the polio-vaccine episode an extreme case in point.

Medical science is to be congratulated on its advances of the past generation. Diseases which formerly demoralized the populace are now under control or eliminated. With no intention to distract from the role played by the medical profession, this in no small part was due to the new drugs placed in their hands. For each of these new drugs, though, we must depend on our medical scientists to tell us that immediate or long-range damage, often more severe than the disease condition itself, will not follow its use. And more important, if the drug falls into the category of highly active complex substances, we must depend on the same group to assure us that the quality is that purported. It is here we needed the added insurance that comes from efficient, nonbiased supervision by the Federal Government. In our opinion this can best be handled through a pretesting or certification system similar to that now in use for insulin, colors, and antibiotics.

The term certification is perhaps in need of legislative clarification, for it apparently means different things to different individuals. The large manufacturer with his well-equipped laboratories and his staff of experts regards certification as an expensive ancroachment on his rights of free enterprise and hurls invective at it as being insidious attempts on the part of the Federal Government to assume authority. To the average clinician it means the added assurance of testing by an unrelated, unbiased group of experts. To you and I—the ultimate consumer—it may mean the difference between health and sickness or even between life and death. We respect the rights of all, for that is the basis upon which our country was founded. We do not, however, favor the barter of health, happiness, and the right to live for the maintenance of hypothetical rights of selected groups.

We do not propose expansion of existing certification—we propose, subject to careful study and deliberation, the establishing of a comprehensive pretesting system of certification for any medicinal agent found important enough to warrant. By comprehensive, we insist it should be complete in all phases, bringing all medicaments, whether they be drugs or biologicals, under an integrated certification system under the direct control and administration of medical men especially trained to recognize and avoid the hazards before they become actuality.

The medical profession and pharmacists strongly recommend that the Commissioner of Food and Drug Administration should be a medical doctor.

The Harris Bill

EXTENSION OF REMARKS
OF
HON. JOHN V. BEAMER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. BEAMER. Mr. Speaker, under unanimous consent I wish to insert in the Appendix to the CONGRESSIONAL RECORD the following telegram:

We understand the Harris bill passed the House by a majority of six votes and that the Republican members of the Indiana delegation supported the bill 100 percent.

Since we believe that this legislation is definitely in the public interest for the people of Indiana, we want to thank you most sincerely for your support.

WARREN BUCHANAN,
Chairman, Public Service Commission of Indiana.

Congress Kills Highway Hopes

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. MACK of Washington. Mr. Speaker, the Detroit News editorially places the blame for the defeat of the highway bill right where it belongs and that is on the Democratic Party.

The Democrats played politics with the highway legislation and that is what killed it. The Democrats voted down the President's plan for financing the proposed expanded highway program with a bond issue. On rollcall, 216 Democrats voted against the President's bonding plan and only 5 Democrats voted for it.

Then, the Democrats turned around and voted down their own substitute for the Eisenhower plan by which they would have imposed new taxes to get money to build highways. They voted this plan of their Democratic leaders down, 128 Democrats voting against it and only 94 for their own proposal.

Obviously a majority of the democrats do not want the President's bonding plan. They do not want the tax finance plan of their own Democratic leadership. In short, they do not want a highway bill.

On the defeat of the highway bill the Detroit News said editorially as follows:

CONGRESS KILLS HIGHWAY HOPES

Congress has turned its back on State and local governments which for more than a year, have been keying their plans to the promise of an expanded Federal highway program. It has rejected both President Eisenhower's pay-as-you-ride proposal and the opposition bill to finance construction from increased automotive revenues.

Speaker RAYBURN blamed lobbyists for defeat of national highway legislation this session. He is contradicted by the House record which identifies the urgently needed highway program as a casualty of pulling and hauling for political advantage.

The opposition was determined not only to hand the President a defeat but to claim credit for any highway bill passed. In control of the House, it was able to beat the Eisenhower plan for long-term financing through present revenues 224–193. But the Democrats then were unable to sell their own plan for new auto revenues to finance a road program on a pay-as-you-go basis to wiser heads in their own party. It was beaten 292–123.

The impact of Congress's action is immediate. Though Detroit will be able to complete that portion of its expressway program now under construction, planning for

the Hastings, Grand River, Vernor, and Southfield expressways is shadowed by uncertainty. Michigan, which just raised its gasoline tax to 6 cents, has its hopes for increased partnership with the Federal Government shattered.

Since it first was submitted to the annual conference of governors and approved there, a year ago, Mr. Eisenhower's plan for rehabilitating and modernizing the Nation's highway system has held the imagination of the motorists and the auto industry. Politics has now brought it to naught.

Speaker RAYBURN says it is doubtful if Congress will act in 1956—an election year—on emergency road legislation. He is mistaken. Congress will find its present decision against the best interests of the Nation in the matter of highways too heavy a burden to carry to the polls.

A Handbook for Southerners

EXTENSION OF REMARKS
OF

HON. L. MENDEL RIVERS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1955

Mr. RIVERS. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I recommend an editorial by one of America's most distinguished newspapers, the Charleston (S. C.) News and Courier, entitled "A Handbook for Southerners." This should be a handbook for Americans, as well.

However, I respect those timid souls throughout the country who continue to stand by and see the Supreme Court of the United States wilfully, wantonly, and flagrantly ignore and violate the Constitution of the United States in its senseless, heedless, and contemptible program of forcing integration of the races.

A HANDBOOK FOR SOUTHERNERS

W. E. Debnam, whose book called Weep No More My Lady was a sensationally popular statement for the South in 1950, has done it again. He has written a manual on race for Southerners. His target is the Supreme Court's ruling that white and Negro pupils go to the same public schools. He hits the mark. Again he has taken the title from Stephen Foster's song. Then My Old Kentucky Home Good Night contains the answers that many Southerners already know, plus some that may not be familiar. They are thoroughly documented. Let no one be misled by the breezy style of this little book. It is packed with power.

Debnam's pamphlet—pamphlettering is an historic and respectable form of propaganda—should be on sale at every book store, every news stand, every drug store counter in the South. (It is needed more in the North, but we have no hope that it could be safely circulated in the open there.) Southerners should buy it, read it, and send it to someone beyond the Mason-Dixon curtain.

Like its predecessor, Then My Old Kentucky Home Good Night was printed privately. Though Weep No More My Lady sold 210,000 copies—a best seller by anybody's yardstick—and still is selling, no publisher would undertake the sequel.

"They turned it down," Mr. Debnam writes in his preface, dated June 17 at Raleigh, "for the simple reason that no national publisher is even the least bit interested in any book that attempt to set forth the Southern viewpoint on matters racial. It's true that they do publish certain books by authors from the South, but in every instance accepted manuscripts are either an attack upon the South and its way of life or an apology.

"This book is no apology. With dignity with all of fairness to both races, we attempt to set forth in the pages that follow a clear and factual explanation of why it is a tremendous majority of southerners are opposed to forced racial integration in our public schools and why they are determined that, regardless of that Supreme Court decision, it shall not come to pass."

To the shame of Southern publishers, Debnam's book did not find a publisher in this region. So he hired a printer in Releigh and published the book himself. He charges $1 for it, plus 10 cents mailing charge. We think it's the best dollarten's worth any Southerner is likely to find this summer, even in the July department store sales. For that reason we are giving free advertisement to it on our editorial page.

We suggest, we urge, that every reader obey that impulse. Send $1.10 today to Mr. Debnam, 1313 Williamson Drive, Raleigh, N. C. Better still, buy two copies. Keep one for yourself and give the other to somebody else—preferably a doubting Thomas.

DISTRIBUTION OF THE CONGRESSIONAL RECORD

To the Vice President and each Senator 100 copies; to the Secretary and Sergeant at Arms of the Senate, each, 25 copies; to the Secretary, for official use, not to exceed 35 copies; to the Sergeant at Arms, for use on the floor of the Senate, not to exceed 50 copies; to each Representative, Delegate, and Resident Commissioner in Congress, 68 copies; to the Clerk, Sergeant at Arms, and Doorkeeper of the House of Representatives, each, 25 copies; to the Clerk, for official use, not to exceed 50 copies; and to the Doorkeeper, for use on the floor of the House of Representatives, not to exceed 75 copies; to the Vice President and each Senator, Representative, Delegate, and Resident Commissioner in Congress there shall also be furnished (and shall not be transferable), 3 copies of the daily RECORD, of which 1 shall be delivered at his residence, 1 at his office, and 1 at the Capitol.

PRINTING DOCUMENTS AND REPORTS

Documents and reports of committees with the evidence and papers submitted therewith, or any part thereof ordered printed by Congress, may be reprinted by the Public Printer on order of any Member of Congress or Delegate, on prepayment of the cost thereof (U. S. Code, title 44, sec. 162, p. 1940).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. The money derived from such sales shall be paid into the Treasury and accounted for in his annual report to Congress, and no sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Printing and binding for Congress, when recommended to be done by the Committee on Printing of either House, shall be so recommended in a report containing an approximate estimate of the cost thereof, together with a statement from the Public Printer of estimated approximate cost of work previously ordered by Congress within the fiscal year (U. S. Code, title 44, sec. 145, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on Printing, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 193[illegible]).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

DISPOSITION OF EXECUTIVE NOMINATIONS

January 5 through August 2, 1955

Postmaster nominations, totaling 1,490, disposed of as follows:	
Confirmed	1,131
Withdrawn	12
Rejected	3
Unconfirmed	344
Army nominations, totaling 5,805, disposed of as follows:	
Confirmed	5,804
Unconfirmed	1
Air Force nominations, totaling 3,910, disposed of as follows:	
Confirmed	3,594
Unconfirmed	316
Navy nominations, totaling 16,496, disposed of as follows:	
Confirmed	16,432
Unconfirmed	64
Marine Corps nominations, totaling 11,256, disposed of as follows:	
Confirmed	11,256
Civilian nominations other than postmasters, totaling 1,729, disposed of as follows:	
Confirmed	1,680
Withdrawn	3
Unconfirmed	46

Summary

Total nominations received	40,686
Total withdrawn	15
Total rejected	3
Total unconfirmed	771
Total confirmed	39,897

*These figures on measures reported include all placed on calendar or acted on by Senate even if there was no accompanying report. A total of 1,305 reports has been filed in the Senate; a total of 1,632 has been filed in the House.

**This figure does not agree with the total difference between bills reported and bills passed, because resolutions and bills placed on the House Calendar without having been formally reported were not included in figures of measures reported to the House; the difference in the case of Senate figures is due to uncounted bills "laid on the table" or "indefinitely postponed."

Appendix

NOTICE

The last issue of the daily Congressional Record for the first session of the Eighty-fourth Congress will be published not later than Thursday, August 25, 1955. It is requested that copy and proofs of speeches withheld for revision, or extensions of remarks as authorized by either House, be submitted to the Government Printing Office or to the Congressional Record Clerk, Statuary Hall, Capitol, before that date.

By order of the Joint Committee on Printing.

CARL HAYDEN, Chairman.

Accomplishments of 1st Session of 84th Congress

EXTENSION OF REMARKS

OF

HON. SAM RAYBURN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. RAYBURN. Mr. Speaker, I have served in 22 Congresses. In my opinion, this is one of the most fruitful sessions of Congress that I have ever served in.

The work of the 1st session of the 84th Congress has been such that all Democrats in the Congress and outside the Congress should be, and I feel sure are, proud of it.

I also think that the American people are going to endorse and applaud this great record that we have made.

It is a record of constructive legislation, legislation necessary to advance the Nation's welfare. It affects every American and is forward looking to the future of the United States.

The list of accomplishments is long. It represents long and hard work by Members on problems dealing with all the world, this Nation's leadership in global affairs, down to measures lifting burdens on individual citizens.

I am content to rest on this record. If, however, the President's own party had cooperated with him in a better way, then we might have had a greater record.

We Democrats have not hated Eisenhower, as many Republicans and so-called Democrats hated Roosevelt and Truman. The Democrats in this Congress have voted as if a Democrat had been in the White House.

We Democrats did our work as Americans and not as partisans.

We acted as Americans in giving the President power and the legislation he asked to strengthen our foreign policy.

On domestic issues, this session of Congress enacted legislation beneficial to the economy of the country.

President Eisenhower embraced so much of the Roosevelt and Truman programs previously enacted by Democratic Congresses that it was not difficult to expand and renew laws to extend them.

As to certain domestic proposals, this session did not have time to consider a few items. We have another session of the 84th Congress in which to act. We hope by January the President will have his party in line to make our job easier.

We Democrats probably will do many more things the President has overlooked—things that we Democrats believe should be enacted for the betterment of the Nation.

We Democrats gave the Congress an opportunity to vote on the President's highway program. It was rejected. The Republicans in the House did not even vote to get a highway bill to conference with the Senate. If the President will do a little road work with his own party on the highway program during the recess of Congress, his chances of getting a highway bill will be enhanced.

We Democrats had difficulty in getting housing legislation the President requested. Republican opposition made it difficult, and I think the people of the country know it.

On the broad aspects, I feel that the Nation's defense, internal and external, its economy and security were both protected and advanced by this session of Congress. I am proud of the patriotism displayed by the Democratic Party in its consideration of the Republican administration's proposals. Without being boastful, I can say with frankness that it is the opinion of a majority of the thinking people of this country that the Democratic leadership in Congress, even with a Republican administration, conducted itself and the business of the Nation in a masterful manner. I refer not only to the House leadership but also that of Senator LYNDON B. JOHNSON and Senator EARLE CLEMENTS in the Senate.

Certainly, the 1954 political campaign claim of the President that a cold war between the Republican administration and a Democratic Congress would begin if the Democrats won Congress, has been belied. If there has been any cold war between Congress and the Republican administration, it has been conducted by Republicans in Congress. A look at the record of Republican votes would convince the most skeptical.

At the outset of this Congress, I said that the Democrats would perform in a patriotic manner; that the Nation's security is paramount with us; that the Democrats always acted first in the interest of the Nation. This we have done. Where we did not agree fully with the administration's proposals, we revised them and sought to enact policies which we believe are the best for most of the people, and not the best for a few of the people.

Frankly, if the Democratic leadership in Congress had experienced less Republican hindrance, I think we could have done a better job with the President's program. Most of the President's program was adopted from the previous Democratic administrations, and that, perhaps, explains the Republican rank and file opposition.

Time and again, we Democrats pulled Mr. Eisenhower's proposals out of the Republican fire. I cite extension of the keystone to the administration's and the Nation's foreign policy—the reciprocal trade program—as one example.

Republicans, in control of the 83d Congress, limited extension of this important program year by year, whereas this Democratic Congress extended the law 3 years and granted additional authority for a 15 percent tariff cut over the period, as the President requested. On a motion in the House to kill the entire program, 119 Republicans voted against the President and but 66 supported him. The Democrats put it over.

For campaign purposes in 1952 and again in 1954, the Republicans alleged the Democrats were soft on Communists. In this Congress, the Democratic Party supported every major proposal the President submitted to protect this Nation from Communist aggression. We authorized the President to use our Armed Forces to protect Formosa against Chinese Communists; the Mutual Security Act was extended; the Southeast Asia Defense Pact was ratified; we approved the freedom of Germany, and enacted other security measures applying externally as well as internally. Congress approved the International Finance Corporation to stimulate foreign trade and bring more friends to this Nation. A comparison of the Democratic votes against the Republican votes on these issues will show who stands where.

Our people want peace and protection. In a period such as this, it is not easy to arouse them to prepare for any

eventuality. Thus, this Congress was confronted with new problems of national defense for a period of coming years and a lack of enthusiasm for the steps necessary to secure defense.

Despite Republican isolationist opposition, the Democratic Congress extended the draft of civilians for military service for 4 years; established a long-range, new Reserve system for a ready standby armed force; renewed the Defense Production Act for a reserve of military production capacity; voted more funds for expansion of atomic power, and provided for new atomic warships and new defense construction at home and at our military and naval bases over the world.

On the internal security side, the Democrats pressed to enactment bills aimed at preventing sabotage through the use of atomic power; providing for severe penalties for disloyal and subversive persons and those convicted of seditious conspiracy and advocay of the overthrow of our Government. We also set up a commission on Government security for the purpose of strengthening our defenses against enemies among us—at the same time preserving our traditional American freedoms embodied in the Bill of Rights.

Since the Republican administration either deliberately ignored or failed to take notice of the condition of many of our people, we Democrats sought to improve the lot of the low-wage earner, the small-business man and the farmer. The Republican administration opposed the Democratic proposal for a $20 tax cut for each income taxpayer. Of 194 Republicans voting in the House on this issue, 173 voted against it.

In the face of strong administration opposition, the Democratic effort to supplant the Eisenhower-Benson flexible price-support program for the farmers with a 90-percent-of-parity formula was passed by the House. It is pending in the Senate. However, a bill increasing by $2 billion the authority of the Commodity Credit Corporation to purchase farm surpluses was passed, along with bills increasing planting allotments for cotton, durum wheat, and rice, and other bills reducing penalties for overplanting support crops where used for feed and seed. This Democratic Congress also extended emergency loans for drought-stricken cattlemen and secured passage of a bill for processing of surplus grains for use as food in unemployment relief in Kentucky, Pennsylvania, West Virginia, and other States.

The Democratic proposal for a minimum wage of $1 an hour prevailed over President Eisenhower's 90-cent-an-hour recommendation. Congress also raised wages of Government employees, including the judiciary and Congress, and increased pay and allowances of members of the armed services. It also raised and broadened veterans' benefits.

Over Republican opposition, the Democratic House passed a bill broadening the social-security laws to provide increased payments, cover more individuals, and to permit women to retire with social security at 62 years of age. It is pending in the Senate.

Disturbed by the growth of big business through mergers, this Congress increased penalties for violations of the Sherman Antitrust Act. It extended the 52-percent corporate income tax, and started studies to help small-business men to stay in business.

The Democrats cut $1.6 billion from the President's budget request, limiting the appropriations to $52 billion. Because the Republican administration has failed to carry out its 1952 campaign pledge to balance the budget, Congress was forced to extend the temporary increase in the national debt limit of $281 billion.

Congress defeated the Eisenhower highway program calling for a bond issue that would have cost the taxpayers $11 billion in interest. Democrats opposed this program on the ground that it would amount to an increase in the public debt to $48 billion. Led by Republicans, Congress also defeated the Democratic pay-as-you-go highway program which would have taxed the users of the highways. This proposal would have prevented an increase in the public debt and would have given the Nation a highway program to meet modern demands.

The President has received approval of around threescore of his proposals to the 84th Congress in this single session. I think that he has experienced cooperation from the Democrats in control far beyond expectations. At least, compared with the modicum of success he experienced with the Republican 83d Congress, I should think he would feel gratified. We Democrats know we have done a good job under the circumstances. If Mr. Eisenhower, as party leader, could exercise any control over the Republicans, we could do a better job in the next session.

Public Housing

SPEECH
OF
HON. CHARLES W. VURSELL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, July 29, 1955

Mr. VURSELL. Mr. Speaker, the American taxpayer already is on the hook for $4,700,000,000 to carry out provisions for public-housing units which have been approved by the Congress. If we pass the bill now before us it will add an additional $2,306,000,000 to the back-breaking debt now carried by the American taxpayer.

In short, passage of this bill today will increase the total commitment to over $7 billion over the next 40 years.

The so-called liberals and members of the Americans for Democratic Action do not tell you the real name—and the real purpose—of this evil monstrosity which is more popularly known as a socialized housing bill. The leftwingers are smart, cunning experts in mob psychology. They call this a low-cost housing bill designed to give shelter to the needy and the homeless. The fact is this is a high-cost housing bill and benefits only the privileged classes. If you bear with me a few minutes I will document that statement and any others that I make on this issue.

The purpose of socialized housing is political. There are today 457,000 public-housing units. Here live approximately 1,500,000 men, women, and children—complete wards of a beneficent Government which now owns their bodies and soon will own their minds.

The economic planners—those who are out to destroy the free-enterprise system—have not yet completed contracts for housing units already approved by the Congress and yet they have the gall to come here today with tear-jerking pleas for additional authority and, of course, additional money.

Using the figures of the housing authorities themselves, we can arrive at an average cost of these so-called low-cost housing units. That figure, for construction and land, is about $10,000 a unit. In practice, however, the figure is much higher. Under terms of its subsidy contracts the Government agrees to pay about 4½ percent a year based on the construction costs and this subsidy runs to a maximum of 40 years. The true cost of this scandalous waste, therefore, is 40 years multiplied by 4½ percent or 180 percent. You then multiply $10,000 by this 180 percent and you see that these units are costing the public $18,000. In all fairness, it cannot be said that $18,000 for an ordinary housing unit is low-cost housing.

In the bill before us we find the following items: 35,000 additional units for the coming fiscal year and another 35,000 units for the year after that—a total of 70,000. There is also an item of 10,000 public housing units for elderly families next year and another 10,000 for the year after that—a total of 20,000 for this item which was inserted to give this bill an emotional appeal that will make it difficult for honest men to vote against it. In the earlier days, the public housing advocates were crying about the welfare of children living in the slums which, they falsely claimed, were the breeding grounds for juvenile delinquency. The second-grade student of American history knows that some of our greatest men and women were born and raised in the slums. They also know that juvenile delinquents are found in the homes of our wealthiest people. At any rate, the public planners and do-gooders have changed their mournful pleas from children to elderly families, and I might add that this is one of the sliest bits of propaganda I have ever seen.

But today's bill, the one now under discussion, contains another item of about 15,000 housing units which was approved by the Congress last year but which the planners did not get around to using.

The bill before us calls for the construction of 105,000 units. Despite the fact that of the 35,000 units we permitted them to use last year, on May 23 of this year Mr. Slusser, head of the Housing and Home Finance Agency, testified before the House Banking and Currency Committee that he had actually put under contract only 142 units out of the total of 35,000 the Congress authorized last year.

Later, on June 27, Mr. Slusser informed my office that they had completed letting contracts on 20,000 in the past 30

days. I want to ask you this question: If it took 11 months to put 142 units under contract, how is it possible that Mr. Slusser and his organization became swift-footed enough to put 20,000 units under contract in a little over 20 working days? You know the answer as well as I do. If they have done it, they have done it with such speed and with so little consideration that it could only result in waste to the taxpayers. Doubtless, their purpose in blanketing 20,000 units supposedly under contract is to get the Congress to give them the authorization they are now asking for.

If it took 11 months to put 142 units under contract, why do they need 35,000 more units, or the 105,000 they are asking for in this bill? It is the old wreckless bureaucratic maneuvering.

Here and now I want to make my position clear on this subject. I am opposed to socialized housing in any form. It is dishonest, immoral, and repugnant to the American sense of decency and human dignity. Socialized housing degrades the human being and places him in eternal bondage to Government bureaucratics. Actually, it is offensive to the very people it was intended to help.

I do not know where the planners get their figures for construction of these new units. Why do they say 35,000 units for this year? Why do not they just pull the figure 350,000 or 3,500,000 out of the hat? It would make just as much sense as what they are doing.

Since World II, more than 9½ million privately financed dwelling units have been built and occupied in this country. This fact alone should be enough to call a halt to all of this public housing and it shows beyond doubt that private industry can do the job.

The social planners and the do-gooders with other people's money talk so much about slum clearance that you would think that they alone are opposed to slum clearance. As usual, they try to get across the notion that they have a monopoly on social virtue and that those who oppose public housing are not in favor of slum clearance. This is a bit of devious trickery in argument that not even a child would fall for.

Slum clearance is not a problem of the Federal Government. That problem can and should be solved by the States and local governments. To eradicate their slums, all the big cities have to do is enforce existing housing and sanitary codes that will take the profit out of slum housing. They have this authority. All they have to do is exercise it.

Here, I want to go into considerable detail about this bill to show how far afield it is from the original intent of the Congress when it enacted the first public housing bill in 1937. The sole objective, at that time, was to create shelter for the very needy and the destitute. The public planners have perverted this original intent to a point where public housing today is a luxury that only the privileged classes can afford.

The poor and the needy—and we shall always have them with us, despite our prosperity—are not qualified for public housing. They cannot afford the high rents which the Public Housing Authority charges in an effort to hoodwink the Congress into the belief that public housing is a sound and socially useful venture.

If public housing does not include the poor, if it does not contribute to the social welfare of the country, it has no justification whatever for existence.

Now, here is how it works and you can see for yourselves that the Congress never intended this sort of monkey business with public funds:

The city council sets up the local housing authority. When it approves such a local housing authority, the Federal Government provides for payment of a subsidy of about 4½ percent, for 40 years, based on development cost, to the local housing authority. This 4½ percent, taken from all of the taxpayers of the Nation, each year subsidizes about one-third of the rental cost to the occupants in the local housing authority.

In other words, none of the tenants is supposed to pay full rental; some pay two-thirds, others a little more or less, while the ordinary taxpayers who pay their own taxes or rent still are called upon by the Government to pay their pro rata share of the rent losses of those who live in public housing.

For example: In Detroit, a family of 2 adults and 3 children can earn as high as $4,500 per year net income, and still have other citizens paying part of their rent.

This is one reason that Walter Reuther and the big labor leaders are so vigorously supporting this public-housing legislation. It would be interesting to know the number of thousands of people who earn a high net income, while the other citizens of the Nation are forced to pay a part of their rental.

The public is being deceived in the thought that the really lowest-income group is being housed under this act. Unless they can afford to pay a certain amount per month, they cannot rent these houses. That excludes the lowest-income group which still have to get aid from the townships, counties, and local communities.

More of the lowest income groups could secure housing when the act was passed, but those managing this public housing have continued to raise the ceiling on how much people could earn net and still occupy these houses, with the rest of the people helping to pay their rent. They are now taking in the $4,500 and up to the $5,000 net-income groups and the poor people in greater numbers are excluded from renting these so-called low-cost houses. The people in the greatest need get the cold shoulder from these big-hearted do-gooders.

When this law was first enacted it was intended as a welfare measure to house the lowest income group. Now advocates and managers of this welfare program, to perpetuate their socialistic philosophy, and keep themselves in power, and probably to get the support of the big labor organizations, have continued to raise the limit one could earn and yet be a beneficiary of this public housing.

They provide cheap rent to those who are earning net up to $4,000 and $5,000 and live in public-housing units.

The facts are that it is not carrying out the welfare purpose established when this act was first written. It is a hoax. It is a deception. It is dishonest to the public that has to pay the bill and it is a dangerous policy for the Nation to continue to follow.

In 1952, the House voted to end public housing in 1953. The Senate, however, authorized a very limited expansion and the House reluctantly went along. In 1954, on two rollcall votes, the House rejected this program by a substantial majority. Then it went over to the Senate again, and the Senate reopened the program on a modest scale.

Now, the Senate acting on the bill first this time, has authorized over 600,000 units, of which they approve up to 210,000 units per year. When the House reluctantly went along last year, it served notice that the program must be brought to a close on June 30 of this year. This should be done.

I agree with my colleague the gentleman from Virginia [Mr. SMITH] that it is an evil program, and that the Members of this House cannot condone even a small amount of evil. This socialistic waste of the people's money, which, at the same time, destroys the morale of our citizens, who left alone would take pride in owning or renting the roof over their heads, should be completely stopped in this session. It is wasting the substance of all of our citizens, and will continue to waste away the incentive and pride of our citizens as well.

The real promoters of this so-called public housing have used every device to keep themselves in power. For many years, they have played on the emotions of our people by stating their purpose was to help the children in the lowest income group, and now, for the first time, they are making a shabby appeal to the old people by asking that 20,000 of these units be set aside for them.

Back of all of this, down deep in this organization they have two purposes in mind: One is to keep themselves in jobs of power, and the other is to wield a political power, and control, and influence over those who will and do occupy these Government-owned rental units. The more they can convince the citizen that they are dependent upon the Government, the more control they will have over his thinking and his life, and it will be easier to control him politically.

In conclusion, allow me, please, to drive home one important point about this bill. This is not President Eisenhower's bill. The leftwingers and the social planners have planted that notion in the minds of some who might be inclined to vote against the bill but will go along with it if they feel that the President is behind it.

The bill as it now stands is wide open for all sorts of abuse, waste, and even corruption. They have thrown aside all of the safeguards we previously had built into this type of legislation. Let me give you a few examples of what I mean:

The bill as it now stands permits Communists, Fascists, and all other members

of groups who would destroy our way of life, to take advantage of these low rentals. In other words, American taxpayers are now called upon to carry the freight of free-riding Communists and others who do not believe in our form of government. This to me is one of the most shocking features of this abominable bill. As Members of the House know, we had inserted a clause in previous housing bills—the so-called Gwinn amendment—which required certification by public-housing occupants that they do not belong to subversive organizations. Now, that is knocked out of the bill we are now debating.

Under terms of the present bill, the public housing authorities can ram down the throats of local groups a housing project that they do not want. Imagine that in a free country. Somewhere along the line the so-called Los Angeles amendment was stricken from the bill. That amendment provided a formula whereby a community does not have to accept a public-housing project after it decides by referendum to reject it. Now the local community must accept a public-housing project whether it wants to or not.

Senators Hear Walcott Give Advice to Youth

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mrs. KEE. Mr. Speaker, under leave to extend my remarks in the RECORD, I should like to include a report on the appearance of Jersey Joe Walcott before a Senate Labor Subcommittee studying juvenile delinquency. Mr. Walcott offered some wonderful advice to the young people of the Nation when he told them, "Living clean, serving God, and being good citizens will pay off." I think Jersey Joe is making a great contribution in the Nation's fight against juvenile delinquency.

The report of Mr. Walcott's testimony before the subcommittee appeared in the Evening Star of Washington, D. C., for Thursday, July 7, 1955, and is as follows:

SENATORS HEAR WALCOTT GIVE ADVICE TO YOUTH

Jersey Joe Walcott, the former world heavyweight boxing champ with a yen to help kids, earnestly offered this advice to the youngsters of the Nation yesterday: "Living clean, serving God, and being good citizens will pay off."

Three Senators listened just as earnestly, and at the end, Senator PURTELL, Republican, of Connecticut, said, "God bless you Joe, keep up your good work."

Mr. Walcott, heavyweight boxing champion of the world in 1951–52, is now a special officer working against juvenile delinquency for the Camden (N. J.) Police Department. He plays basketball with the kids and teaches them boxing.

Appearing before a Senate Labor Subcommittee studying four bills dealing with delinquency, Mr. Walcott started off: "If I am nervous, it is because this is a new role to me."

DEDICATED TO YOUTH

"I promised God when I finished fighting I'd dedicate my life to young people. And if I can inspire some boy to live the clean American way of living, then I am happy."

Joe's message was to the parents to teach their children and to love their children, because "persons like to know we're wanted."

"The more often I hear the words 'juvenile delinquency' the less I think they fit the situation," he said. "Actually, and to a larger extent, what we have to deal with is parent delinquency."

Mr. Walcott said he was born "on the wrong side of the tracks."

But when he and his brothers threatened to get out of hand, he said, "pa and ma stepped in and stopped the smart-aleck conduct before it had fairly started."

"Pa's actions were direct," he said, "they called for a trip out back to the woodshed and a dose of what, in those days, was called 'strap oil.' It was painful but effective. It taught us the result of wrongdoing. Ma never interfered, but when it was all over used to gather us by her side and explain why what we had done was wrong."

Speaking softly and nervously, Joe answered the questions the Senators rolled to him.

Does race, creed, or color play a part in delinquency

"It's up to the individual. If you have faith in God and the will to persevere, you can be successful, regardless of race or creed."

HUNGRY LOTS OF TIMES

Does segregation?

"It's heartbreaking sometimes, embarrassing sometimes. None of us, regardless of our particular race, asked to come here in any way * * * but when a person feels he's not wanted, then he gets bitter."

Does poverty?

"Lots of times I was hungry, but I never lost faith. I was 37 when I won the championship. After 21 years, God answered my prayers. We were poor when I was a boy. Lots of times at night I've seen my mamma sit up and cry because she couldn't feed us children."

Senator PURTELL said there should be more men like Mr. Walcott setting an example.

"You, Joe Walcott, are making a lot of stepping stones for a lot of people," he said.

Prophet of Atomic Seapower

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. PATTERSON. Mr. Speaker, on the day on which it appears that this Congress will authorize the construction of the atomic-powered peace ship requested by President Eisenhower, and also the first American nuclear-driven merchant vessel, I think it is fitting that this Congress should pay tribute to the man who foresaw these developments more than 4½ years ago, Mr. Joseph F. Kelly, of Ridgefield and Litchfield, Conn.

Mr. Kelly has been a prominent figure in the American shipping industry for the past 25 years. He served with the United States Maritime Commission during World War II; during the postwar period he was editor and executive vice president of Marine News; and presently he is a shipping consultant to the American maritime industry.

Unfortunately I cannot reproduce in the RECORD the illustrations of the nuclear marine reactor engine, the atomic pile that would drive it, and the atomic-powered passenger ship of the future in Mr. Kelly's prophetic story published in the January 1951 issue of Marine News, "The United States Pioneers in Marine Atomic Power."

But as a tribute to Mr. Kelly, I do wish to quote as follows the first of four prophecies of Mr. Kelly concerning the future of this country as a seapower in this atomic age:

THE UNITED STATES PIONEERS IN MARINE ATOMIC POWER—OUR GOVERNMENT, OUR SCIENTISTS, AND OUR INDUSTRY LEAD THE WORLD AND ARE THE FIRST IN ATOMIC MARINE DEVELOPMENT

(By Joseph F. Kelly)

A little over 450 years ago, just after the sailor from Genoa convinced his backers that the earth was round, the old world looked to the new world for riches and vast areas to conquer. Today the new world (U. N.?–One World?), looks to the United States to conquer and harness the great atomic forces in the interests of mankind, world peace, and productive industrial development. As a result from such harnessing of atomic forces, the United States Government and its loyal scientists are fulfilling this great responsibility with amazing speed and efficiency.

In this dawn of atomic-physics (the most exciting decade in world history) American shipping is at the threshold of the most phenomenal development in its long and illustrious history—the using of heat produced by atomic fission to generate steam that will travel through conventional steam turbines and drive the propellers of a vessel so powered.

Westinghouse Electric Corp. is well advanced in its work to develop atomic powered nuclear reactor engines to drive submarines. Similar engines after further development and tests will drive the surface vessel. This type of nuclear engine will give greater speed, range, and economy. These far-reaching developments are very significant at this time for their considerable naval implications, particularly because the nuclear engine can operate without atmospheric oxygen in undersea craft operations. This prodigious evolution would not only outmode the famous Snorkel, but would give the submarine greater speed and an unbelievable cruising range. With the tremendously increased power produced by a nuclear engine a submarine hull, having the right characteristics and design could exceed the speed of a surface vessel of equal power. Atomic power in the marine field will first be utilized in the submarines; then the warship, and finally in merchant vessels.

Research work preliminary to actual construction of the marine nuclear engine has been completed at a 400,000-acre midwestern station. The engine should be ready just after the launching of the first atomic undersea hull built in this country, which is scheduled to take place this spring. By next summer the American shipping industry should know the benefits of this development and the probable time when commercial application of atomic power will replace conventional coal- or oil-fired boilers. One of the most important problems in the application of atomic power for marine use is weight. Heavy shielding is necessary to protect engine rooms and crews from the dangerous neutron beams and gamma rays. The confinement of these rays and beams is at present under intense study and research work.

An essential part of the proposed engine, as it is of any atomic unit, will be the reactor.

PROBLEMS AND APPLICATION OF ATOMIC POWER

A reactor is the machine which converts atomic energy—or more accurately nuclear energy—into forms which can be turned to useful purposes. Reactors are large, complicated, expensive, and controversial. Nuclear reactors provide man with the most concentrated energy source thus far devised and, in imagination at least, have potentially unlimited possibilities. They have been proposed for uses ranging from performance of the world's drudgery to the powering of rockets for space travel. While some of the proposed uses of reactors are strictly figments of the imagination, reactors themselves are real. Reactors are made by so arranging an aggregate of fissionable material that a controlled nuclear chain reaction can be maintained. The chain reaction, in turn, depends on the detailed nuclear properties of materials.

In 1939 the process of fission in uranium was discovered. This discovery culminated an exciting decade in the field of physics during which much of the detailed structure and many of the mechanisms involved in the internal parts of the atom were deciphered.

Think of an atom as a miniature solar system with the nucleus in the center and the electrons circulating around it as planets. The atom as a whole is small, with a dimension of about 10–8 centimeters. The nucleus, the central core of the atom, is of course much smaller—about 10–13 centimeters in diameter. Within the nucleus is found most of the mass of the atom in the form of protons and neutrons, the protons having a positive electrical charge, while the neutrons as the name implies are neutral. You are reminded of these details for two reasons; first, to emphasize the fact that an atom is composed mostly of empty space; and second, to identify the neutron, which is basic to the operation of reactors of any kind.

Now try to visualize a uranium atom. It is mostly empty space, it has a heavy concentrated nucleus composed of 92 protons and about 140 neutrons, and circulating around this nucleus at relatively large distances are the planetary electrons. These electrons are the now familiar electrons of our ordinary electrical circuits and radio tubes and need not concern us further. Our interest is in the nucleus.

Suppose now, that a single neutron somehow gets loose and comes cruising into a uranium atom much like a comet coming into our solar system. If its trajectory carries it close to the uranium nucleus, attractive forces will set up something analagous to tidal waves in the nucleus. In the case of an actual collision, oscillations might conceivably be set up which could become strong enough to cause disruption by splitting the uranium nucleus somewhere near the middle. For our purpose, this is all there is to the mysterious fission process, and deliberately oversimplified to counteract, at least partially, the aura of awe, mystery, and magic which seems to plague the subject of atomic energy.

As previously stated the uranium nucleus contained 92 protons and 140 neutrons, i. e., an excess of about 48 neutrons. If we think of these particles, both protons and neutrons, as composing essentially a liquid droplet and then visualize the fission or splitting process, it is not too unexpected to find a probability that there are a few neutrons left over. This is in fact what occurs and makes possible the chain reaction. One stray neutron produces a fission releasing two or more neutrons, each of which in turn may collide with uranium nuclei and produce still more neutrons and so on ad infinitum. If this chain reaction is uncontrolled, we have an atom bomb explosion. If it is controlled, we have a reactor.

Complete Overhaul Called for in Public Assistance Program for Needy

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. ROOSEVELT. Mr. Speaker, I have today introduced H. R. 7848 proposing a sweeping overhaul of the public-assistance section of the Federal Social Security Act. The public-assistance section now makes Federal grants-in-aid available to the States for old-age assistance, aid to the blind, needy children, and totally and permanently disabled. As State legislatures are permitted to determine who can qualify for such aid and the amount granted, few if any of the programs in the 48 States are alike. It would appear that many of the State legislatures have gone back 350 years to the poor laws of Queen Elizabeth's time to harass and intimidate the needy of America. The poor laws of Queen Elizabeth have no place in the statute books of our States. England repealed them long ago. Now it is up to the United States Congress to do the same in our country, and my bill will give the States 2 years' time for their legislatures to meet and to accomplish this.

The manner in which we reward the needy of other countries and neglect our own is shameful. It is my belief that the time has come for our Nation to "grow up" and treat needy Americans not as "unwanted citizens" but with love and understanding toward those who have outlived their money or have become handicapped and unable to work.

These amendments will establish a "legislative intent" that public assistance shall be administered promptly and humanely, with due regard for the preservation of family life, and without discrimination on account of race, religion, or political affiliation; and that the assistance laws be liberally construed. In view of the fact that the House of Representatives has already passed a bill, now pending in the Senate, to lower the age from 65 to 62 for women to receive social-security benefits, I am proposing in my bill that this same privilege be extended also to women who are in need of old-age assistance at age 62.

Some features of the bill are as follows:

First. Since the Federal grants-in-aid to States for public assistance apply to the aged, the blind, dependent children and the permanently and totally disabled, the bill provides that the States cannot window shop on these programs but must adopt all of them.

Second. The program is to be administered by each State so as to insure uniform treatment of the needy in all its political subdivisions.

Third. No person receiving such public aid shall be deemed a pauper, and no warrant drawn in payment shall contain any reference to indigency or pauperism.

Fourth. A floor of $1,200 is established under the amount of personal property which a recipient is allowed to have. Household furnishings, etc., are allowed in addition to an insurance policy or burial arrangement up to $500 in value. Any amount greater than this would be considered in the $1,200.

Fifth. Prohibits any discrimination of sex.

These new provisions were added to a bill previously introduced by me which included:

(a) Raising the present ceiling of $55 to $100 monthly for each recipient wherein the Federal Government makes available funds to the States. The amount of Federal funds made available would be greater to States with low per capita income and match 50–50 the wealthier States. Additional Federal funds would be made available for the needy-children program.

(b) The aged and handicapped would be allowed to earn up to $50 per month and needy children up to $30 per month to supplement their assistance checks. At the present any amount which they earn is deducted from their monthly payment.

(c) Recipients may own a home of an assessed value, less all encumbrances, up to $5,000 free from the imposition of a lien. The ownership of a home will not be used as an excuse to deduct a so-called occupancy value from the payments to the needy.

(d) Elimination by some States of the practice of using the Federal law to enforce collections from the relatives of recipients.

(e) The prohibition against publishing the names of recipients will be restored to the Federal law.

(f) The value of any United States surplus food made available shall not be deducted from the recipient's aid.

(g) If a citizen in need does not meet State-resident requirements, the Federal Government would direct benefits until qualifying residence is established. I would like to point out that many of these realistic amendments in my new bill, H. R. 7948, had already been adopted by the State legislature in California. According to the latest official United States Government figures, there are 2,552,881 people on old-age assistance receiving an average of $51.85 per month; 103,045 blind persons are receiving an average of $56.74 per month; 2,253,174 needy children are receiving an average of $24 per month, and 229,893 physically handicapped people are receiving an average of $55.03 per month.

Commonsense and the Guaranteed Annual Wage

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, July 11, 1955

Mr. DONOHUE. Mr. Speaker, there has been much misunderstanding generally about the so-called guaranteed annual wage program so recently being

explored by industry and labor. There have been dire prophecies as to its disintegrating effect upon the economy on the one hand and rather extravagant predictions of its cure-all powers on the other.

It is therefore, of practical value and mental wholesomeness to read something about the subject which contains a little substance and commonsense. In that respect, I would like to include the following article, which appeared in the June 25 weekly issue of America:

IN THE WAKE OF THE FORD-GM CONTRACTS

The day General Motors agreed, at a 3-year cost of $150 million, to the same supplemental unemployment benefit plan which Ford earlier accepted, a nationally syndicated business columnist foretold the demise of our system of private enterprise. With an omniscience to which few economists pretend, he even listed the stages in our inevitable descent to disaster. The very modest payments which Ford and General Motors agreed to guarantee to their laid-off workers would, he pontificated: (1) Increase costs to consumers, (2) foster unemployment, (3) lead to stagnation, (4) bankrupt small firms, and (5) result in the socialization of United States business. Prophetic insight so detailed leaves us speechless. Were it not for the fact that other innovating steps of American business—health insurance, old-age pensions, automatic productivity wage increases—begot equally dire predictions, we might regret that Walter Reuther and the United Auto Workers have now won an increased measure of wage security for half a million workers in a traditionally insecure industry. Lacking omniscience, we cannot say for certain that the economic consequences of the UAW victory will not be bad. We can say only this: that in all innovations designed to improve the lot of workers, unless these are demonstrably unsound, we prefer to take our stand with the pioneers and groundbreakers—not all of whom are economic dunces. We refuse to underestimate either the good sense of labor in making demands or the ingenuity of management in meeting them.

Law and Order Breaks Down in Kohler and Sheboygan, Wis.

EXTENSION OF REMARKS
OF
HON. RALPH W. GWINN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. GWINN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a statement by the Committee for Constitutional Government, Inc., concerning the CIO strike against the Kohler Co., at Kohler and Sheboygan, Wis.:

Fomented by Walter Reuther from his CIO-UAW Detroit headquarters, the most costly and vicious strike in current labor annals has been seething for the past 16 months at the Kohler Co.'s plant in Kohler Village, Wis.

Right from its very start, on April 5, 1954, the purpose of this strike has been to promote and bolster Walter Reuther's position in labor circles by deliberately attacking the one company with the best wages and working conditions of any city in Wisconsin. The principle issue is the right to work without joining a union. Reuther denies that right. By now, it is clear that, after squandering over $5 million of the international union's funds to make Kohler Co. give in to that proposition, he has been decisively defeated.

As soon as the strike was called, Reuther sent Robert Burkhart, one of his aids, to direct a reign of terror imposed by union goons in the village of Kohler and in Sheboygan. In addition to the $5 million already lost to the CIO–UAW, $400,000 more each month has been committed to subsidies more than 2,200 who are still out.

The plant now operates at 85 percent of capacity. Many more new employees have been hired. Among 90 union leaders fired for violence and other misconduct, have been Allan J. Graskamp, president of the local, all members of the executive committee and all shop stewards.

All new employees hired during the strike will not be replaced by the strikers when and if they decide to return to work. Whatever the National Labor Relations Board may say about this, Kohler is fortified by the Supreme Court's opinion in *N. L. R. B.* v. *MacKay Radio and Telegraph Co.* (304 U. S. 333) that an employer " is not bound to discharge those hired to fill the places of strikers, upon the election of the latter to resume their employment, in order to create places for them."

Reuther's abject failure to humble the Kohler Co. has brought him great loss of face. His recent attempts to impose a guaranteed annual wage plan upon the automobile companies and his settlement for a "fake guaranteed annual wage", which in reality is but a nickel an hour pay boost, has further contributed to the shakiness of his position. Finlly, evincing actions of a man in desperation, he has launched what is in effect an illegal secondary boycott with the aim of depriving the Kohler Co. of its vital porcelain clay supplies, in an attempt to force the plant's shutdown when the prolonged strike failed to do so. This action—ignored or condoned or even abetted by various Wisconsin elective officials—has made a travesty of the law, just as, in the past 16 months, actions during the strike flouted the law at every turn.

The Kohler Co. is located in a village of the same name 3 miles from the city of Sheboygan. It was started here, grew here, and finally became the second largest United States plumbing-fixture maker, and producer of electric power units, gasoline engines, shells for the Army, and jet engine parts for the Air Force.

The company has not laid off a single employee in 17 years, even though the plumbing-fixture industry depends largely upon seasonally fluctuating residential building demand. Employees consistently have benefited from Kohler's policies. A generation before the steel industry had changed from the 12-hour to the 8-hour day on continuous operations, Kohler was on an 8-hour day. Wisconsin was the second State to enact a workmen's compensation law. Kohler not only worked for that law, but, of its own accord, put a similar compensation plan into effect nearly 2 years before the legislation was adopted.

The Kohler Co. has reduced the accident rate to about half that for the plumbing industry in general. Group life insurance at company expense was put into effect in 1917; group hospital and surgical insurance has been in effect since 1950; and these plans have revised and improved to meet changing conditions.

Kohler has one of the finest pension plans in American industry. It is fully funded and was established voluntarily by the company in 1948, before the CIO–UAW had negotiated pension arrangements in the automobile industry or in any other industry.

The village of Kohler has enjoyed worldwide fame as an outstanding example of a planned industrial garden community. Practically all families in Kohler own their own homes, and, contrary to CIO–UAW propaganda, they own in fee simple the land on which their homes are built.

Average weekly earnings of Kohler Co. employees have been much higher than the average for the entire plumbing industry, the State of Wisconsin, or any city in Wisconsin. In March of 1954, just before the strike was called, Kohler employees earned an average of $87.45 a week, against $65.52 for the nearby city of Sheboygan, $76.04 for the Nation's plumbing suppliers, $77.72 for Kenosha and $77.88 for Racine County—the latter two being big CIO–UAW Wisconsin strongholds.

To this quiet little Wisconsin community of workers with better homes, better working conditions, and superior earning power, the CIO turned its attention. Compulsory unionism was the major issue at the Kohler Co. The union at first demanded a union shop, then a modified shop, and finally a maintenance of membership clause.

But President Herbert V. Kohler rejected these demands. The union, as Kohler sees it, wants to preempt the functions of management. It wants to dictate hiring and firing, seniority rules, promotions and merit increases, and to substitute its own standard insurance and pension plan for those now in effect.

"In my conception," he says, "collective bargaining means just what the law defines it to be—attempting to arrive at an agreement on wages, hours, and other terms and conditions of employment. It does not mean joint management of the company. Nor does it mean that the union can say: 'These are our standard provisions. You must meet them.' "

So the CIO–UAW called its strike against the Kohler Co. on Monday, April 5, 1954, and 2,500 pickets were massed in front of the plant gates. Union goons, imported from Detroit, were ringleaders in outbreaks of picket-line militancy. For 54 days, the plant had to close because of illegal mass picketing. The mob lawlessness, inflamed by Reuther's union goon squads, led to a ruthless reign of terror. The four-man Kohler Village police force, augmented by deputies, could not cope with the rioters. And the Sheboygan County sheriff, Theodore Mosch, showed no desire to enforce the law. He has since been reelected with CIO support. Mayor Rudolph Ploetz, of Sheboygan has two brothers who are striking Kohler employees.

With the green light for lawlessness, the hoodlums' holiday lasted for months. Rioting and violence were the order of the day on picket lines. Despite their requests that the sheriff's deputies give them safe conduct through picket mobs, nonstriking employees attempting to go to work were repulsed, assaulted, and beaten. On the third day of the strike, Emil Mazey, secretary-treasurer of the CIO–UAW, second only to Walter Reuther in the union hierarchy, appeared on the picket lines, and employees were mauled, kicked, kneed, gouged, and punched when they tried to report for work.

Reuther's lieutenant, Robert Burkhart, of Detroit, drummed up the mobs to fever pitch, one of his first statements being: "Let's do everything we can to keep them away from the plant before they get to the picket line." This meant not only goon attacks upon nonstriking workers at the company's gates, but also undercover coercion and violence against loyal workers and their families in the streets and even in their homes at the village of Kohler and Sheboygan.

As Allen J. Graskamp, president of local 833 at Kohler, said on May 9, 1954: "We have tried to discourage people from going into that plant by peaceful means, but from now on the gloves are off."

Reuther's personal prestige was at stake, so heavily committed in fact, that he has

made two trips to Sheboygan to encourage the strikers.

Wisconsin has a criminal statute which authorizes a fine and imprisonment for preventing any person from engaging in lawful work. Sheriff Theodore Mosch became a hero to the union by his stalwart refusal to arrest goons who violated this law. "Thank God there is a sheriff here who will put Kohler in his place," Reuther told the strikers.

Another statute authorizes the Wisconsin Employment Relations Board to issue restraining orders against interference with the pursuit of lawful employment. After a hearing on May 24, 1954, the WERB issued an order permitting only peaceful picketing and forbidding coercion at the plant or in their homes.

Not only this order, but an injunction commanding compliance with it, issued last September 1 by Circuit Court Judge Arnold Murphy, has been persistently violated by the terrorists. Also, Circuit Judge Gerald J. Boileau took under advisement on last March 23 a civil contempt case against the international and local unions and 19 of their leaders, including Burkhart and Graskamp, who were charged with violating the court's injunction.

For 3 days, oral and motion-picture evidence of intimidation and coercion of nonstrikers at the plant and in their homes was presented to Judge Boileau, but he deferred his decision pending a ruling of the State's supreme court on the question of jurisdiction. The union had challenged the jurisdiction of the WERB and of the circuit court, insisting that the NLRB had exclusive jurisdiction in the case. The State supreme court upheld the jurisdiction of the WERB and of the circuit court on May 3, but Judge Boileau appeared to be in no hurry to enter his judgment.

Meanwhile, the union has shown no disposition to comply. It has committed more than 500 acts of violence and vandalism against nonstrikers.

Reuther has at last resorted to a new device.

On July 5, 1955, the Norwegian freighter *Fossum*, carrying a cargo of porcelain clay for the Kohler Co., attempted to unload but could not because operations were completely blocked by union mob violence. On "black Tuesday," as this day has become known, Mayor Rudolph Ploetz, of Sheboygan, did nothing to stem the continuous riot and use of force by terrorists, and finally he ordered the police to prevent unloading the freighter.

After allowing the crowds to run amuck, and after forbidding the vessel's unloading, the mayor was severely criticized but still insisted he did a good job of maintaining law and order on "black Tuesday." "I feel that law and order was maintained, as shown by the fact that we had no casualties in the dock area," Ploetz declared.

But the Chicago Tribune reported that Roman Grunewald, 36, a worker at Kohler Co. and father of four children, was severely beaten by goons. He was recognized in the street and brutally attacked, suffering broken bones and other severe injuries.

Repulsed at Sheboygan, the *Fossum* sought to discharge at Milwaukee. Fifty thousand CIO–AFL workers threatened a city-wide strike. Frank Zeidler, Socialist mayor of Milwaukee, and the harbor commission refused to permit the *Fossum* to unload at the docks which are municipally owned. The attorney for the chartering company, Paper Makers Importing Co., of Easton, Pa., announced he had instructions to seek to recover damages arising from delays in discharging cargo from the *Fossum* and other clay ships. Demurrage and other items had reached a large sum when Mayor Zeidler wrote to President Eisenhower suggesting intervention and after talking to CIO and AFL leaders, announced that they had withdrawn opposition to unloading the *Divina*, another clay ship, upon arrival at Milwaukee.

At Reuther's direction, AFL unions barred ships from Duluth, Minn., and Ashland and Superior, Wis., and, through Canadian affiliates, from Fort William and Port Arthur, Canada. Then both the *Fossum* and the *Divina* sailed to Montreal, where the CIO–UAW with cooperation of Canadian Congress of Labor unions established a picket line which AFL longshoremen refused to cross. Not until the Montreal harbor police expelled the pickets from the docks could the ships unload. At heavy expense, the cargoes were transshipped in 64 railway cars. Attempts to learn shipping schedules were circumvented, and the clay reached Kohler Village without further attack.

Walter J. Kohler, Jr., Governor of Wisconsin, had made no effort to enforce the State right to work laws. He is a nephew of Herbert V. Kohler, president of the Kohler Co., but has no financial or other interest in the company. When Sheboygan businessmen protested against the breakdown of law and order, Governor Kohler agreed to send National Guard units should new violence break out. He suggested arbitration but has abstained from enforcing existing law. He is vigorously supported by union labor.

The Kohler strike has been so revealing of union policies that businessmen could, we believe, study it with profit to gauge its implications for the future. The rising tide of irresponsible lawlessness of labor unions, coupled with pronounced lack of will on the part of many elective officials to do their duty is now apparent.

It was only the large per capital outlay for strikers' subsidies that made Reuther formidable to a medium-sized albeit sound company like Kohler. Reuther's aim was to show he could level any well-entrenched industrial company; to make Kohler an example; and then to hold the all-out money-plus-goon tactics threat to make company after company fall into line. If he has stumbled miserably over just one medium-sized company, think of how little chance he will have if determined American business leaders will fight back determinedly and forcefully.

The Committee for Constitutional Government pledges its every effort to fight this latest attempt at unconstitutional usurpation of power. For example, 4 days after "black Tuesday," when the Sheboygan dock riots were permitted to rage unchecked by Mayor Rudolph Ploetz, the committee dispatched this telegram to Governor Kohler, of Wisconsin, released it to all press associations, and distributed it to more than 5,000 civic leaders in Wisconsin:

TELEGRAM SENT TO GOV. WALTER J. KOHLER, JR., MADISON, WIS., BY COMMITTEE FOR CONSTITUTIONAL GOVERNMENT, INC., JULY 9, 1955

"It is past the 1th hour for undoing the damage caused by the default of duty by public officials in connection with the Kohler strike. Already, many in job-making private enterprise ask whether other States are not safer than Wisconsin from labor-union violence. But, far more important, a precedent is being set by Wisconsin's failure to maintain law and order that, spreading, may endanger constitutional government and our private-enterprise system.

"Labor-union monopolies have been built into a Frankenstein, a supergovernment, with $500 millions of annual, tax-free income. The bosses of these monopolies now seek to dominate local and State governments and reach for control of the Federal Government itself. To their other overpowering resources they add lawless violence with the connivance of public officials, as in the Kohler strike. In the end, the workers themselves, whom the labor bosses claim to be helping, may suffer most.

"In German and Italy, as Hitler and Mussolini moved to destroy parliamentary and representative government, their Storm Troopers and Black Shirts practiced just such violence to intimidate and destroy opposition of other groups, as lawless labor-union leaders in Kohler.

"The labor-union mob at Sheboygan, which Mayor Rudolph Ploetz failed to control, prevented the unloading of a ship with raw materials for the Kohler plant and caused the ship to seek refuge in another harbor. The great damage of this act can still be undone by courageous, immediate action on your part. Give your assurance of adequate protection against a repetition of such lawless violence in Sheboygan. Urge immediate return of the ship for peaceable unloading with protection, if necessary, by the State militia. Such action is in the line of your duty as Governor.

"We plead only for the maintenance of the basic principles that underlie our constitutional liberty and private-enterprise system. For your information we quote below a telegram sent yesterday to Mayor Rudolph J. Ploetz:

" 'The July 7, New York Times reports you as joining with lawless rioters to prevent unloading of ship carrying raw material for Kohler plant. Is this report correct? Is it not your duty as mayor to uphold law and maintain order? If your police force is inadequate, have you asked the Governor to send military aid? If not, why not? Will appreciate answer to these questions.

" 'When you, any mayor, or publicly elected representative accepts office, it becomes his supreme obligation to uphold fundamentals of our Constitution, to maintain law and order, and to prevent lawless action by one selfish pressure group to the detriment of other citizens. The issue of the failure of law enforcement by your administration will take on national significance as the country learns the facts. It will not tolerate for very long one-class or labor-boss, monopoly-biased rule by a public official.'

"COMMITTEE FOR CONSTITUTIONAL GOVERNMENT, INC."

All taxpayers and consumers, lawyers, clergymen, farmers, clerks, mechanics, physicians, housewives, etc., must now unite to offset the dangerous, swollen powers of labor monopolies. These must be kept from dominating public officials and the Government. All labor unions must be subjected—just as business has been—to antitrust laws. Inform yourself; arouse others to action to save our form of government.

COMMITTEE FOR CONSTITUTIONAL GOVERNMENT.

NEW YORK, N. Y.

The Military Reserve Service Problem

EXTENSION OF REMARKS

OF

HON. HAROLD D. DONOHUE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 30, 1955

Mr. DONOHUE. Mr. Speaker, the problem of enacting fair and equitable military reserve service legislation is one that challenges the conscience and the experience of the Congress. It is always, of course, a grave responsibility to pass upon legislation that so deeply affects the lives of the Nation's youth.

In accord with the President's recommendations and in respect of his authority, it seems clear that some form of such legislation is vitally needed.

It seems equally apparent that the Congress has a real obligation to exert every possible effort in preservation of the American tradition of noncompulsion in military service other than in time of extreme emergency.

Realizing the thought and deliberation that is being accorded this problem, I am pleased to include a thought-provoking article on the subject entitled "Order and Equity or Take a Chance?" which appeared in the June 30, 1955, issue of the Christian Science Monitor, analyzing various aspects of the matter and indicating that the largest measure of voluntaryism possible should be retained in any legislation adopted.

The editorial follows:

ORDER AND EQUITY OR TAKE A CHANCE?

This matter of military Reserve legislation needs to be put in the broadest perspective. It was snarled in committee because it was burdened with a desegregation amendment; it still faces opposition in Congress because of pressures from many sides—from those who mistakenly see in it the camel's nose of UMT; from GI's who see the picture only from their own personal distaste for continued training; and from the many others who are simply uninformed and confused.

The importance of a national "posture of strength" need not be labored. The present easing of tensions came about in part because of it; the trend could hardly be nurtured without it. And the necessity of manpower to this posture is recognized. Congress, without qualm, has renewed selective service for 4 more years.

Then what is the matter with leaving things as they are?

Not too much, perhaps, if it could be guaranteed that things would stay as they are, with no big-war emergency. Anything less than a full call upon selective service is inherently inequitable. Yet the present system is tolerable to individuals. Even though lack of an adequate Reserve requires disproportionately large standing forces, the Nation could probably carry the burden a while longer.

But what happens if an international explosion should demand mobilization? The Nation would be caught without sufficient ready manpower. Including the National Guard, only 30 percent of the present Reserve is much more than lists of names on paper, for enrollment in tactical units and training before of after active service are entirely optional.

Conversely, from the standpoint of the individual young man, if he had already served, he would be called back immediately in the Nation's imperative need for men with some experience.

What, then, might fill the need for an available, trained, and ready Reserve? The bill just reported out by the House Armed Services Committee represents as sturdy an attempt to fill defense specifications as will likely get through Congress. From reports thus far at hand it would—

Establish a minimum period of obligation for military service and training, including active and Reserve—somewhere between 5 and 8 years.

Build toward a Ready Reserve of 2,900,000 men by 1960, fulfillment of the duties of which would be compulsory, not optional.

Channel into this Reserve (1) men who have finished their service under the draft, (2) completed voluntary enlistments, and (3) those who before draft age have volunteered for a 6-month course or to begin Reserve training before active duty.

The length of Ready Reserve obligation would be adjusted according to the length and character of active service, first consideration to be given participation in combat.

This is no more than the briefest condensation of the most pertinent features, but enough perhaps to indicate that—

It should give the Nation a real, not a shadow, Reserve.

It should nail down the obligation to defend one's country, but at the same time make that obligation clear in advance so that a young man could take account of it in his plans.

It should preserve a large measure of voluntaryism, not as to whether but as to how the obligation to serve is discharged—thus avoiding the basic regimentation of UMT.

In sum, it would demand no more of the young men of America than would be demanded of them in any case by a war emergency, and much less of them in uncertainties and inequities, and it would exact much less of the Nation in the currency of unpreparedness.

Commander in Chief of the Army and Navy

EXTENSION OF REMARKS
OF
HON. RALPH W. GWINN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. GWINN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following address entitled "Commander in Chief of the Army and Navy," by George M. Montross, of Detroit, Mich.:

COMMANDER IN CHIEF OF THE ARMY AND NAVY

In the name of eternal vigilance it is time for the American people to give attention to the erroneous but quite prevalent idea in official circles that the Constitution gives the President, as Commander in Chief of the Army and Navy, complete control of the Armed Forces of the United States. This is an idea so at variance with the primary purpose of the Constitution to promote representative government and to prevent the dictatorship of 1-man domination, that our constitutional form of government is at stake.

When President Eisenhower last January asked Congress for authority to use the Nation's military for the defense of Formosa, the request was received by more than a few Members of Congress rather resentfully because they contended the President already possessed the power to take the action contemplated without specific congressional authorization and that he should exercise that power. These sentiments were expressed in debate on the floor of the House of Representatives by the Speaker, Mr. SAM RAYBURN:

"I do not think that any one who has ever studied our Constitution or the make-up of our Government denies that the President of the United States, as Commander in Chief of the Armed Forces, has this power. I quite agree with the gentleman from Texas [Mr. KILDAY] that this should not be taken as a precedent that the President of the United States, as Commander in Chief of our Armed Forces, under any and all circumstances, should feel it his duty to come before the Congress and ask for a resolution such as this; because, as the gentleman from Texas [Mr. KILDAY] expressed it so well, there will come times when 12 hours will be too long a time for the President to have to wait to act.

"If the President had done what is proposed here without consulting with the Congress, he would have had no criticism from me. But I fear, if this is taken as a precedent, and followed absolutely to the letter, we may find ourselves in very embarrassing and dangerous conditions."

Speaker RAYBURN and his colleagues of like mind would not deny that Alexander Hamilton had studied the Constitution, even before its adoption. In Federalist Paper No. 69, he denied that the President has this power:

"The President is to be Commander in Chief of the Army and Navy of the United States. In this respect his authority would be nominally the same with that of the King of Great Britain, but in substance much inferior to it. It would amount to nothing more than the supreme command and direction of the military and naval forces, as first general and admiral of the confederacy, while that of the British King extends to the declaring of war and to the raising and regulating of fleets and armies—all which, by the Constitution under consideration, would appertain to the legislature."

The accuracy of the Speaker's statement is denied by the Constitution itself in the following provisions:

"The Congress shall have power to declare war, grant letters of marque and reprisal, and make rules concerning captures on land and water.

"To raise and support armies, but no appropriation of money to that use shall be for a longer term than 2 years.

"To provide and maintain a navy.

"To make rules for the government and regulation of the land and naval forces.

"To provide for calling forth the militia to execute the laws of the Union, suppress insurrections, and repel invasions.

"To provide for organizing, arming, and disciplining the militia, and for governing such part of them as may be employed in the service of the United States, reserving to the States respectively the appointment of officers, and the authority of training the militia according to the discipline prescribed by Congress.

* * * * *

"The President shall be Commander in Chief of the Army and Navy of the United States, and of the militia of the several States when called into the actual service of the United States."

These provisions are stated in plain English and are readily understandable. There is no need for "interpretation"; the need is for the disposition to look for what they plainly say. It would be incongruous in the extreme for the President to possess complete control of the Armed Forces and at the same time for the Congress to possess the powers "to declare war," "to make rules for the Government and regulation of the land and naval forces," and "to provide * * * for governing such part of them (the militia) as may be employed in the service of the United States." The incongruity does not exist, except by a strained interpretation, because there is no conflict of authority as between the President and the Congress under the Constitution; it is simply a matter of fitting each in the proper place.

The term "commander in chief" is also applied to military commanders. At the time of General MacArthur's dismissal in 1951, one of his titles was "Commander in Chief, United States Forces, Far East." During World War II, Adm. Ernest J. King was Commander in Chief, United States Fleet. During his career, he had served under Rear Adm. A. S. Crowninshield, Commander in Chief, United States Vessels in European Waters; Rear Adm. Robley D. Evans, Commander in Chief of the Asiatic Fleet; Rear Adm. Hugo Osterhaus, Commander in Chief, Atlantic Fleet; Rear Adm. Charles S. Sperry, Commander in Chief, United States Atlantic Fleet.

This does not mean each commander in chief possessed unlimited authority over his

particular command, for each was responsible and accountable to his superior, the President. Similarly, the President, as Commander in Chief of the Army and Navy, is responsible and accountable to his superior, the Congress of the United States, because it is to the Congress that he must look for authority to use the military forces of the United States to engage in and carry on a war, for instance, and he is bound by any rule that the Congress may lay down by law for the government and regulation of the land and naval forces. As Commander in Chief of the Army and Navy, the President is at the head and a part of the land and naval forces which are thus placed under the control of Congress. He cannot be dissociated from those forces any more than our generals and admirals can be, and any restrictions applying to those forces must apply likewise to him.

Furthermore, in designating the President "Commander in Chief of the Army and Navy," the Constitution adds "and of the militia of the several States when called into the actual service of the United States," while the Congress shall provide "for governing such part of them (the militia) as may be employed in the service of the United States." The President is not given any more authority over the Army and Navy than he is given over the militia, and as to the latter the Constitution is especially specific that it shall be governed by the Congress at the same time that the President is its Commander in Chief.

When the Congress authorizes or directs military action, it is then that the President, as Commander in Chief of the Army and Navy, is to direct the military forces in carrying out the congressional mandate. This was the understanding expressed by Alexander Hamilton. Therefore, the President is Commander in Chief of the Army and Navy, subject to authority—much or little—that may be given him by the Congress. This is the logical and the only way the powers of Congress and the powers of the President as Commander in Chief of the Army and Navy can be reconciled without conflict, and it is not to be presumed that a conflict exists when actually the respective powers dovetail. Nor is it to be presumed, as Speaker RAYBURN and others of his persuasion must do, that the provisions "the Congress shall have power to declare war" and "to make rules for the government and regulation of the land and naval forces" are meaningless and therefore to be disregarded. It does violence to the Constitution to give a mere designation such overpowering significance as to overwhelm powers that are specifically vested in the Congress.

The Commander in Chief of the Army and Navy is often spoken of as though in that capacity he were an entity separate from the Presidency and with more power than he has as President. That concept is untenable because the Constitution says "the President shall be Commander in Chief of the Army and Navy" as one of his assignments, just as he is assigned the duty of making treaties according to a specific procedure. As such, the Commander in Chief of the Army and Navy is included within and subordinate to the Presidency. He does not leave one office and take up the duties of another as he deals with different subjects; he is always President regardless of the subject matter with which he is dealing.

The power of Congress to declare war must be taken to mean that Congress shall decide whether or not the United States, of its own volition, shall engage in war. It is fundamental that the Constitution does not authorize any one man, President or other official, to make such a decision, for that would represent dictatorship and the whole theory of the Constitution is to prevent dictatorship. Therefore the power of Congress to declare war must mean in these days, with undeclared wars occurring, that the people shall have the judgment of the more than 500 Members of Congress—their direct representatives—in such a vitally important matter and are not to be dependent upon the frail judgment of one who may occupy the Presidency. Nothing could be more distorted or of greater danger to the Republic than acceptance of the contrary view.

It is to be iterated and reiterated that the Constitution does not in the slightest degree sanction a President operating as a one-man government.

When the United Nations Charter treaty was under consideration by the Foreign Relations Committee of the Senate, the question was raised whether the President would be given authority to commit United States forces to any military action by the United Nations without first obtaining congressional authorization. In the course of the discussion, Senator Vandenberg was quoted as declaring:

"The President has the right to employ troops. It has been used 72 times in 150 years. We are merely writing into the charter the constitutional practices of 150 years.

"The President has had the right to use the Armed Forces in the national interest and that is a complete analogy with this charter."

This was saying that inasmuch as a power, even though not granted to him by the Constitution, had been exercised over a long period of time by the President, he had become possessed of it by virtue of the practice; that the Constitution is what the practice has been, not what it provides, which is strange doctrine indeed.

After Senate ratification of the United Nations Charter treaty, the subject of the authority to be given the President to commit United States military forces to United Nations military action in the maintenance of international peace and security, came under specific congressional consideration. This was in connection with a bill providing for United States contribution, along with other member nations, to Armed Forces under jurisdiction of the Security Council of the United Nations when special agreements had been made for the purpose. This bill when adopted provided authority for the President to commit United States forces to United Nations military action, only requiring the President to report his action to the Congress after each such occurrence. The fact of Congress dealing with the matter and passing the bill, under the guidance of Senator Vandenberg, who had by then become chairman of the Senate Foreign Relations Committee and who had previously contended the President already possessed the power without special congressional authorization, served to confirm in the Congress control of our land and naval forces. Yet it appears not to have been decisive, for we have the recent statements of Speaker RAYBURN and other Members of Congress to the contrary.

Those members may have been confusing in their minds a situation where the territory of the United States was involved with one in which foreign territory was concerned. In the case of an attack upon United States territory, of course, the President has authority to act immediately and even a military commander on the scene does not need to obtain authority from the President. When Pearl Harbor was attacked, Admiral Kimmel and General Short did not wait for instructions, they returned fire immediately, in accordance with the law of self-defense. That does not apply when foreign territory is involved. Whether or not Formosa was to be defended by the Armed Forces of the United States was not to be determined by the President or by any group of military men. It was a matter strictly for Congress to decide with all the seriousness of explicit duty. The philosophy to the contrary, expressed by the Speaker of the House of Representatives, is not that of the Constitution but of a dictatorship repugnant to the Constitution.

It is not reassuring when Members of Congress have so little realization of the duty imposed upon them by the Constitution to protect the people from the operation of one man's judgment when war is the issue. So far as those Members were concerned, their action in support of granting the authority requested by the President was purely perfunctory and without the serious consideration demanded by the very important proposal placed before them. In fact, Congress was dealing with a contingent declaration of war, to become effective at the President's discretion.

The effect on President Eisenhower of the congressional attitude may have been to discourage him from going to Congress in the future with a like request, in accordance with the Constitution, for he indicated in his message that, after all, he believed he possessed the necessary authority but was going to Congress out of an excess of precaution when he said:

"Authority for some of the actions which might be required would be inherent in the authority of the Commander in Chief. Until Congress can act I would not hesitate, so far as my constitutional powers extend, to take whatever emergency action might be forced upon us in order to protect the rights and security of the United States.

"However, a suitable congressional resolution would clearly and publicly establish the authority of the President at Commander in Chief to employ the Armed Forces of this Nation promptly and effectively for the purposes indicated if in his judgment it became necessary."

Even though President Eisenhower did put before the Congress the matter of defending Formosa and requested authority to do so, in accordance with the Constitution, his course in this respect was not satisfying because he did not fully believe it was necessary for him to consult the Congress. He did so as a matter of policy, not for the purpose of meeting a requirement.

When our Government is operated in a manner which does not conform to the Constitution, is operated upon a different pattern, then the form of government established under the Constitution is not functioning; it has been set aside and thereby overthrown.

Control of the military forces of the United States by one man, the President, is contrary and repugnant to the Constitution. If Members of Congress are not alive to this fact so as to maintain its dominance, the form of government established under the Constitution may be said to be overthrown in a vital respect because Presidents in the past have too often taken military action similar to that contemplated by President Eisenhower in Formosa without bothering to seek the consent of Congress and that body has remained quiescent.

It has been pointed out that Congress authorized the President to commit United States Armed Forces for the purposes of the United Nations, if "special agreements" to that end are ever made. Similarly, it could, and probably long ago should, have laid down certain rules pursuant to which the President might take action for the protection of citizens in foreign lands. It did not do so, however, so that every landing of United States troops in Central America, for instance, minor operations though they were, required separate congressional authorization. The use of United States military forces in Central America without such authorization was in each case a violation of the Constitution. More recently there have been violations that involved action in matters of vastly greater importance. "Great oaks from little acorns grow."

Liberty is not restricted to civil rights, upon which great stress is placed. It includes also freedom from the tyranny by which citizens in the Armed Forces have been involved in hostilities regardless of protective safeguards that the Constitution would place around them.

The founders of the Nation were well aware of the one-man governments then existing in Europe, under which the people were treated as mere pawns, subject to the whims of rulers, and were determined that, so far as lay within their power to provide, such a fate should not befall the people of the United States. Accordingly, they provided that decisions of important policy, such as engaging in war, were not to be made by one man, but that the people were to have the benefit of the individual judgments of their numerous representatives in Congress.

So long as public officials operate within the limits set forth in the Constitution, they are servants and the people retain control of their government; when, on the other hand, public officials ignore the safeguards that have been erected and operate outside those boundaries, they then transform themselves from servants into masters—dictators—and the people lose control of their government; a government of laws becomes a government of men.

Words uttered by Benjamin Franklin in the last moments of the Constitutional Convention deserve attention:

"I agree to this Constitution with all its faults, if they are such, because I think a General Government necessary for us, and there is no form of government but what may be a blessing to the people if well administered, and believe farther that this is likely to be well administered for a course of years, and can only end in despotism, as other forms have done before it, when the people shall become so corrupt as to need despotic government, being incapable of any other."

"Eternal vigilance is the price of liberty." The price has not been paid and is long past due.

The Basic Question of the Annual Wage and Employment

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 30, 1955

Mr. DONOHUE. Mr. Speaker, I would like to include a very timely article discussing the complexities of the so-called guaranteed annual wage, which appeared in the June 21, 1955, issue of the Christian Science Monitor, entitled "Straight Time or Compensation."

The editorial follows:

STRAIGHT TIME OR COMPENSATION

When, over 20 years ago, the Hormel Packing Co. started paying its regular production employees throughout the year, although they may have been actively employed but part of the year, it called its plan "straight time." In other words, the company took upon itself the responsibility for leveling out seasonal ups and downs as best it could and then filling in the remaining valleys with wages skimmed off the peaks.

It was not and it is not considered as paying workers for idleness or during unemployment. The beneficiaries are, in effect, simply employees "on leave." Someone outside the Hormel organization started using the term "guaranteed annual wage."

The Ford and General Motors agreements predicate the size of the companies' payments on the size of payments to be made available from State unemployment compensation funds. In probably 19 States, says Business Week, the laws would tailor the size of State checks to the amounts that might be paid under the Ford, GM, and similar plans.

The question raised here is fundamental: Are employees laid off because of production fluctuations to be considered employees "on retainer" within the limits of the plan? Or should they be deemed to have joined the jobless to be cared for by some kind of joint compensation funds to which the past employer makes a special contribution?

Ohio has refused to alter its law so that laid-off workers may receive company wages on top of full compensation. Employers and employer organizations who have set out to bring about similar action in other States may be, for the moment, thinking only in terms of slowing down a tide of GAW demands.

For Ford, GM, and the United Auto Workers the key State right now is Michigan. And between them the wanted changes in the State system can probably be effected. As for other States, it would be hard to believe that with the legal advice available to these three giants problems arising from laws or legislation can come as any surprise.

But the basic question remains. How it is approached will likely determine whether industry will direct its prime efforts toward stabilizing its own operations or toward legislatures to liberalize State unemployment funds.

Russians Kidding the United States, Lying in Their Teeth

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. DORN of South Carolina. Mr. Speaker, I have pointed out for many years that the fate of western Europe is being determined in the Far East, the Middle East, and northern Africa. If the Far East, the Middle East, and northern Africa fall to the Communists, Western Europe will go without firing a shot. The Communist plan is to develop the resources and exploit the abundant manpower of Asia. When the Communists fully develop Asia, western Europe cannot be held by the free world. The odds would simply be too great.

Communist pressure on Greece and Turkey and on Czechoslovakia, the Berlin Air Lift and Western Germany were all part of a carefully laid plan to divert world attention there while they were winning China which was the key to the world situation. The meeting at the summit in Geneva suited Communist plans because it again centered attention on western Europe while at the same time they are pushing their plans in the Far East. I predict even increased activity in this area. At the very moment of the Geneva Conference, Russia is making rapid strides to achieve supremacy in the air. With air domination over Western Europe, backed by the resources of Asia, there would be no alternative for Western Europe but to remain neutral or capitulate to the Communists.

I hope this administration will give the Far East priority in their programing and thinking. The situation is urgent. We must strengthen our real allies in the Far East such as South Korea, the National Government on Formosa and the Philippines. Japan should be offered every encouragement to fully rearm, build an Air Force, and assume leadership in the Far East. Nothing should be done to weaken the position of our tried and true allies, Chiang Kai-shek and Syngman Rhee. Only by these friends in the Far East possessing offensive power can we hope to forestall Communist pressure on Western Europe. If we ever recognize Red China and start uncontrolled free trade with this Communist ally, then the road will be open for Communist economic domination of Asia and the way open for further infiltration.

I commend to the House the following article by Victor Riesel which appeared in a number of newspapers but which was taken from the Greenville (S. C.) News:

RUSSIANS KIDDING THE UNITED STATES—LYING IN THEIR TEETH

(By Victor Riesel)

TOKYO, August 2.—Nicolai Lenin, the evil little genius who led the Russian Revolution, once said that communism's road to Paris was through Peiping and Calcutta—capture the Orient and the rest of the world falls.

I've hit that road. What I find proves that the Russians have been kidding us at the summit. Bluntly, they're lying in their teeth. They haven't made one friendly gesture in the Far East. This is still their road to world power—and they are on it.

DON'T NEED WAR

They're pouring saboteurs, espionage agents, millions of dollars, and tons of propaganda into every eastern nation to undermine us and tear our oriental allies from us.

Certainly they don't want war. They don't need it. At this rate they'll win without firing a shot.

And they're winning in Japan. Slowly, but most definitely. They dominate the most powerful labor federation, the Sohyo. I've just been to its national convention and I thought I was at an anti-American Communist rally.

Typical is the schoolteachers' union which won't cooperate with the antinarcotics division of the government by directing its members to warn their pupils of the evils of opium. Of course, the opium trade brings the Sovietized Chinese Government in Peiping $600 million a year.

I've listened to the Japanese counterpart of J. Edgar Hoover. He is Giochiro Fujii, director of Japan's Public Security Investigation Bureau.

He reports that the Japanese Communist Party has 300,000 members and sympathizers and runs a secret army under a central command called the military committee. This is part of a Russian-controlled underground which has 4,500 full-time agents. The Japanese FBI chief just told Cabinet members here that the existence of this underground Communist army gives living lie to the new Communist tactics of peace and good behavior.

REDS ON MARCH

Mr. Fujii warned the government that these new tactics are the most dangerous.

Already the Communist underground has succeeded in infiltrating central government offices here, and fully 60 percent of the Communist-dominated Sohyo labor federation are Government workers in the most strategic bureaus.

There are 28 Communist Party members in the vital Justice Ministry alone, Mr. Fujii disclosed. He added, "That's few compared to some other offices."

This means that the Communist Party is in a position to know what's happening inside the Japanese police and other governmental divisions—to which we, the United States, confide some of our most important defense secrets. Mr. Fujii sadly warned of the danger of the new Communist respectability—but few are taking all this seriously.

The public sees what I saw at a recent Communist rally here. Some 27,000 Communists poured into the International Stadium in the Ryogoku section. My translator told me that some of the Commie leaders, appearing publicly for the first time in years, said, in effect, that the Communists must take their time. Revolutions aren't made overnight. It all must be carefully planned. And once more the lead at the rally was taken by the Japanese Communist labor commissar, Ichizo Suzuki.

UNITED STATES ARMY BLAMED

Here is as good a place as any to point out that Comrade Suzuki and his people had a wild time of it right after the war. At that time certain of our Army officers permitted the conquered Japanese Government to subsidize the growth of Communist labor unions by paying their organizers and supplying them with office stationary and other operating equipment, which were used to agitate against us.

From that labor base in 1945 sprang the powerful Communist labor machine of today, which is the center of Communist underground strength right now. We have no one but ourselves to blame.

That underground machine is kept oiled by the Russians. Whatever they told us at the summit didn't have any effect on their anti-United States operations here. The Japanese intelligence officers and our State Department know that at least $650,000 was sent by Moscow into the Japanese undercover Communist movement in the past 4 years. That's what we've traced. Obviously millions of dollars more have slipped in surreptitiously.

Soon all this undercover work will turn the Japanese people against us. Then we'll have to fight to keep our military bases here or we'll have to get out. If we get out, most of the Asian nations will fall to the party. The road to Paris will be open.

So, what happened at the summit?

The New Air Force Academy

EXTENSION OF REMARKS

OF

HON. HAROLD D. DONOHUE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 30, 1955

Mr. DONOHUE. Mr. Speaker, I am pleased to include a very timely article by Holmes Alexander entitled "New College Try," which appeared in the June 30, 1955, issue of the Worcester (Mass.) Telegram.

The editorial follows:

NEW COLLEGE TRY

(By Holmes Alexander)

LOWRY AIR FORCE BASE, Colo.—America gets a new college when the Air Force Academy opens here July 11. That in itself should be subject for national satisfaction. How often do we find ourselves blessed with a new and reputable institution of higher learning? As to the Air Academy, it is something special under the troubled sun of this fateful half century.

What is this new college? It is not exactly another service academy, although it has obvious similarities to West Point and Annapolis; not exactly another engineering school, although all its graduates will be bachelors of science in aeronautics; not by any means a liberal arts college, although there is an unexpected but perfectly logical emphasis on the humanities.

CAREERISTS

The Academy's justification for public support is that it will not merely train air cadets but will use every honorable means to turn the cadets into Air Force careerists. The 300 first-year men, and all who follow, will be receiving a $25,000 education for which they have contracted to return a minimum of 3 years in Regular service and 3 years in the Reserve. But the Academy authorities will think very poorly of themselves if any number of graduates quit the service for the high pay industrial jobs which undoubtedly will be beckoning. Col. Arthur Boudreau, B. S., E. E., M. A., the assistant dean, told me:

"We know that many a recruit will arrive here with nothing but vague ideas about being a flyer, or he may even arrive with no idea except to get a free education. But we don't care. By the time he graduates, we'll have sold him on becoming a career officer."

How is this voluntary commitment to a risky, medium-paid profession to be accomplished? There is an answer; and the answer contains, I think, nearly the whole concept of this newest kind of American college.

MAGNET OF GOOD EXAMPLE

First of all, the cadet will be drawn toward his career by the wholesome magnet of good example. The 57-man faculty was avowedly chosen for that primary purpose. All of them are Air Force officers, many with distinguished combat records. Practically all of them have both postgraduate degrees and practical experience in college teaching. A number of them have been founding fathers of the Academy. Colonel Boudreau, a former college dean with 15 years' experience in teaching, has been closely involved with the project since 1948. Lt. Gen. Hubert R. Harmon, the Academy Superintendent and a West Point classmate of President Eisenhower, joined Colonel Boudreau in the effort a year later.

In addition to the academic faculty, there will be 66 young Air Force officers assigned to the campus as military training personnel and in lieu of upper classmen. These men are also in the heroic mold, many Korean veterans and all with standout career records. The young training officers are purposely picked with diverse backgrounds. Nine are Annapolis graduates, 10 are West Point graduates, 23 are the products of college ROTC programs, 24 are from the Aviation Cadet Program Officer Candidate School, and other beginnings. The training officers will lead the cadets toward student government. A big question will be whether or not to establish an honor system.

INSPIRATIONAL LEADERSHIP

It would be hard to name another college where so much is entrusted to inspirational leadership, possibly the oldest and best form of instruction there is. There's something very daring, very thrilling about this reliance on youthful hero worship to bring about a desired result in education.

Almost the same rule is applied to the academic curriculum. Inspiration is again a watchword. While stressing mathematics and aviation, the Air Academy turns to the literary and philosophic classics to change its boys into men. This is where the Air Force Academy shows its deviation from the traditional. At West Point, English is taught in freshman and sophomore years and for only half a term in the senior year. At the Air Academy, English is taught all 4 years. History, which gets only 1 year at the Military Academy, gets 3 at the Air Academy.

Some of the book titles on the Air Academy study list show that the authorities are aiming to produce fighting men, of course, but men of vision, too. In their first semester, the cadets will read Hemingway's For Whom the Bell Tolls, Benet's John Brown's Body, Tolstoy's War and Peace, as well as modern short stories and poems. Socrates, Walter Lippmann, and James Burnham are among the philosophers.

NOT SO STRANGE

These methods of educating and indoctrinating young airmen will not seem so strange upon considering what the Air Academy really is. It is formal recognition of the air age. Mere technical proficiency would not be enough for the oncoming generation. Things are changing so fast that truth, as expressed in art as well as science, remains the only substantial reference point.

The Air Academy, like the air age, has no tradition. It's on its own.

This Is Your Country

EXTENSION OF REMARKS

OF

HON. J. HARRY McGREGOR

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks, I include the following article written by my very good friend and noted author, Louis Bromfield, and it is submitted to the membership for their consideration:

THIS IS YOUR COUNTRY

(By Louis Bromfield)

The deadline is drawing very near for the extension of the so-called Selective Service Act and still nothing sensible has been done by Congress either to correct the obvious evils existing in the old law or to design a law which makes sense—even moderate common sense—under existing world conditions. The present proposals call for a 4-year extension of the existing act and this has been passed in the most irresponsible possible fashion by the House. Considering the fact that the whole question of military service involves almost every young man and woman in the United States as well as countless men, still young, who are in the Reserves and that any law passed may well change the whole course of many young lives, this action is shocking and should be held against every Member of Congress (which means your own) who voted for such hasty and irresponsible action.

The fact is that the Selective Service Act was given from the beginning a deceptive hypocritical meaning. It has never involved selective service at all save in the case of college deferments and of early marriages. Neither of these categories of deferments were ever carried out in a fair and sensible fashion. Apparently Congressmen in general had not the courage to enact a sound and sensible law, and still do not have. This is very hard on all the young people and the members of the Reserve throughout the whole Nation.

The decision and grounds for action, which should have and still should be incorporated in the law itself, were left simply to the discretion and judgment of the officials of the Armed Forces and of the local draft boards. This has generally and consistently produced a condition of general confusion, unfair to every young person. It is especially unfair to the really intelligent and ambitious young man who wishes to plan and get ahead. It is unfair as well to the employer who must know for how long he can count upon the young man he is hiring. It is in fact a law which is unfair and unwise for almost everybody and has undoubtedly made by the confusion and uncertainty a heavy contribution to juvenile delinquency.

Compared to the laws of other countries where conscription is in practice, the present Selective Service Act is simply confused and sloppy. In the first place it calls for a much longer term of service than is demanded of the young men of any other nation, save England and Soviet Russia. It calls upon young Americans to serve 2 years of their lives in defending peoples who recently were cruel and shocking enemies—Japan and Germany. It actually makes no real distinction between the jiving, hot-rodder, and the young man who is either making a valuable contribution to the defense and welfare of his country, or the young man of genius who may be needed in the future as an engineer, a doctor, or a scientist of any sort.

In England a young man, if he is occupying a job concerned with the welfare of the nation or its future, from agriculture to atomic research, is merely drafted to remain in the job without changing for a period of 2 years service. In Soviet Russia such young men are actually exempt altogether from the draft. In the United States the whole thing is left for decision to the prejudices of the Armed Forces and particularly the Army, which apparently would gladly draft even grandparents and men such as the late Albert Einstein; or the burden of decision is placed upon the shoulders of the local draft boards, who should not be asked to bear it.

There is certainly no need whatever to extend any conscription act for a period of 4 years nor to ask for a military training period of 2 years. The Navy, the Air Force, and the Marines have no need for conscription as their demands are being met by voluntary enlistment. This condition is actually true in many areas for the Army and the present unamended Selective Service Act is now creating a whole new set of injustices. It states that the older men must be taken first and the burden of perhaps needless service is being placed on the shoulders of men who during the war periods were justifiably deferred through the judgment of the local and even the appeal boards and now, when they are mature men, with families and deeply concerned with establishing or maintaining businesses or professional careers. This, while each year there enters the draft age some millions of young men, many of whom have no plans or particular ambitions and have not yet embarked upon careers.

It is a shocking fact that under present conditions only 1 in 15 of these younger men will ever actually do any military service of any kind. They are obviously better physical material than the older men, and for many of them a term of Army service might be of benefit so far as that service can benefit any young man. There is also that very large residue of young men who are going about today without even bothering to register. I have never heard of the case of any Government or Army official ever asking to see a draft card. The demand comes mostly from saloon keepers to establish the question of legal drinking age.

The efforts to pass a universal service act, or even to establish a universal Reserve training corps have apparently and fortunately been abandoned by Congress as more than their constituents would swallow. The draft extension may be more politically dangerous than many a Congressman realizes, especially in its present muddled and inefficient form.

Meanwhile the Pentagon keeps up its barrage of expensive and frequently humbug propaganda. On Armed Services Day, they let out all the stops, although they could not drag out the old tired mysterious submarine appearing off the coast which was used for so long. This time it is a flight of new Russian planes. Two facts are evident: (1) That, as high authorities have pointed out, any war would be over long before ground troops could be moved from here to there or any Reserve even mobilized; (2) that the word of the President, who has no ax to grind and certainly knows both the world military and political situations better than any of the Armed Forces brass, and whose honesty is beyond question, should be trusted as against any propaganda of the Armed Forces or any Seidlitz Powder statesman.

Liberty or Death

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 6, 1955

Mr. DONOHUE. Mr. Speaker, I should like to include a very stirring article commemorating the signing of the Declaration of Independence, which appeared in the July 2, 1955, issue of the Worcester (Mass.) Evening Gazette.

Let us pray that the example of these great and grave forefathers will ever remain as the inspiration to all Americans to be ready and willing to forfeit our fortunes and our lives, if necessary, to preserve our sacred honor and blessed freedom.

The editorial follows:

THE DECISION WAS MADE ON JULY 4, 1776

It looks so pat and foreordained in the history books: The great men assembled at Philadelphia, signing the famous declaration; the ringing phrases of oratory; the messages to the several States and to the Continental Army under the command of Gen. George Washington; the eventual victory.

To us, sitting in our comfortable living rooms, conscious of the worldwide might and influence of the United States, it seems like a drama with an inevitable ending. But it was not so to those men of the Continenal Congress who were gathered in that Philadelphia hall to watch the engrossing of the new document written by Thomas Jefferson and revised by Benjamin Franklin and John Adams.

After all, what were they? An illegal body, representing a string of small colonies strung along the Atlantic seaboard. Opposed to them, they knew, was the might of the world's greatest empire. Against Britain's fleets and armies, what availed all this talk about the rights of man and the duties of Englishmen?

Only a year before, in their declaration of the causes and necessity of taking up arms, the men of the Continental Congress had maintained that they had "not raised armies with ambitious designs of separating from Great Britain and establishing independent States." At that time, some of them still clung to the dream that the constitutional empire could be rerestablished in amity and equality. A year of British repression had saddened them and made them wiser.

On July 4, 1776, the fateful decision was written upon the page of history. The representatives of America were then ready to "solemnly publish and declare, That these united colonies are, and of right ought to be, free and independent States."

Before them lay terrible things: six years of bloody, exhausting warfare; hunger; hatred; death for many; divisions between families and friends; exile for thousands; and bankruptcy and poverty.

They did not flinch. Quite literally, they pledged their lives, their fortunes and their sacred honor. The decision was made; they would live as freemen or not at all.

Report of Activities of the Committee on House Administration, 1st Session, 84th Congress

EXTENSION OF REMARKS
OF
HON. OMAR BURLESON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. BURLESON. Mr. Speaker, during the 1st session of the 84th Congress 161 bills and resolutions were referred to the Committee on House Administration. Hearings were held by the subcommittees on accounts, elections, printing, and library on many of the proposed items of legislation, after which recommendations and reports were submitted to the full committee for consideration and final action.

Funds in the amount of $1,967,067.46 were approved for the following standing and select committees to conduct studies and investigations authorized by the House:

Standing committees:	*Amount approved*
Agriculture	$50,000
Armed Services	150,000
Banking and Currency	75,000
District of Columbia	2,000
Education and Labor	125,000
Foreign Affairs	75,000
Government Operations	495,000
House Administration	65,000
Interior and Insular Affairs	50,000
Interstate and Foreign Commerce	60,000
Judiciary	125,000
Merchant Marine and Fisheries	50,000
Post Office and Civil Service	75,000
Public Works	50,000
Un-American Activities	225,000
Veterans' Affairs	50,000
Ways and Means	30,000
Special and select committees:	
Small Business	170,000
Survivors' Benefits	35,000
White County Bridge Commission	10,000

Many resolutions requesting funds for special and select committees necessarily remain on the pending calendar until the House approves legislation authorizing the creation of such committees for the purpose of conducting proposed studies and investigations.

The Committee on House Administration held extensive hearings in connection with proposed legislation to equalize

and adjust certain salaries in the House of Representatives. The final bill, H. R. 7440, was reported by the committee on July 10. A rule was granted on July 29, but the bill was not called up by the leadership.

The leadership agreed that the Committee on Appropriations should take over the bill H. R. 7440 and adopt its provisions in conference in the general legislative appropriation bill, H. R. 7117. Subsequent changes were made in the bill in conference outside of any consultation with the Committee on House Administration.

One of the important pieces of legislation reported by the Committee on House Administration was the recommendation for expanding the facilities of the House restaurant. The committee's report to the House resulted in action of both the House and Senate in recommending completion of the east front of the Capitol in accordance with the architectural plans which had been approved many years before. When completed the addition to the Capitol will include ample restaurant facilities for Members and employees of both Senate and House.

Hearings were conducted by the Committee on House administration on proposed legislation to amend the Hatch Act, as a result of which H. R. 3084 was reported to the House.

Hearings were also held on proposed legislation to amend the Corrupt Practices Act, but final action was postponed until the second session.

The committee secured enactment of H. R. 4048, which recommends to the States that certain framework be provided which will permit members of the armed services, their families, and other personnel to exercise their voting franchise while absent from their legal residences.

The committee reported House Concurrent Resolution 94, which recommends to the States possible changes in State election laws which govern voting for President and Vice President.

Twenty-five bills and resolutions were referred to the Committee on House Administration during the last session providing for printing of certain documents. The Subcommittee on Printing has carefully examined each request and recommended passage of only such resolutions as it deemed necessary and in the public interest. The committee has approved the printing of a manuscript entitled "The House of Representatives," the first document of its kind dealing exclusively with the House of Representatives. Copies will be made available to each Member in the near future.

The Committee on House Administration, through its Subcommittee on Printing, is making a study and investigation of the operations of federally operated printing services, the sale and distribution of Government publications, and Government paperwork in general. It is the desire of the committee to reduce to a minimum the expenditures for printing, and to discover where there is overlapping and waste. Upon completion of the study the committee will recommend legislation to correct what is considered waste in Government printing.

Forty-one resolutions and bills which would provide for memorials to outstanding individuals have been referred to the Committee on House Administration during the first session. The long-established policy of the committee has been to make few recommendations for the spending of Federal funds for such purposes. However, the committee has recommended the acceptance of a gift from the Republic of Venezuela of a statue of the great South American liberator, Simón Bolívar, as reported by the committee in House Joint Resolution 232.

The committee reported legislation which designated the former Arlington House as the Custis-Lee Mansion and dedicated it as a permanent memorial to Robert E. Lee—Senate Joint Resolution 62.

Substantially all of the work of the committee for the first session is completed. The committee looks forward to the second session when it plans to recommend the reorganization and creation of a permanent police force for the United States Capitol.

The President's Commencement Address at Penn State University

EXTENSION OF REMARKS
OF
HON. HAROLD. D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 6, 1955

Mr. DONOHUE. Mr. Speaker, I should like to include a most interesting comment which appeared in the June 25, 1955, weekly issue of America, emphasizing the practical wisdom of President Eisenhower's remarks on general education in the course of his Pennsylvania State University speech.

The article follows:

MR. EISENHOWER ON GENERAL EDUCATION

Most of us can take commencement addresses or leave them. But the one President Eisenhower delivered June 11 at Pennsylvania State University is one to take and remember. He packed a lot of thought into a few paragraphs on the subject of general education. Discussing today's divorce between liberal and professional studies, the President pleaded for training which weds "the liberal and the practical, which helps a student achieve the solid foundation of understanding—understanding of man's social institutions, of man's art and culture, of the physical and biological and spiritual world in which he lives."

We badly need technical experts, and as time goes on we shall need more and more of them. But it would be tragic if we did not try to provide that future technicians have as broad a cultural background as possible. The President related this dual need to the worldwide aspirations for peace, freedom, and justice. These blessings, he said, will flow from sympathetic cooperation among peoples. They will be fostered by knowledge and wisdom—the results of education that produces disciplined thinking. Can we Americans find partners in the quest for peace? Yes, he said, for the divisions between us [nations] are artificial and transient. Our common humanity is God-made and enduring. Education alone, we know, cannot solve all our problems, but the broad directions outlined for education by the President would, if followed, help preserve freedom in our interdependent world.

Soil Conservation

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, July 5, 1955

Mr. NEUBERGER. Mr. President, I would like to introduce for inclusion in the Appendix of the RECORD excerpts from a speech by the first head of the Soil Conservation Service, Dr. Hugh H. Bennett, presented in San Diego, Calif., February 2, 1955, at the meeting of the National Association of Soil Conservation Districts.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

TO THE RESCUE OF SOIL CONSERVATION

(Address by Dr. Hugh H. Bennett, National Association of Soil Conservation Districts, San Diego, Calif., February 2, 1955)

I have been asked to talk to you about how our national program of soil conservation and good land use is getting along. * * *

I am very sorry to say that what all of us have worked so hard for—effective nationwide soil and water conservation and prudent use of land—has, through no fault of our own, stumbled upon hard going in the form of uncertainties and stubborn opposition. The whole difficulty in my opinion lies at the doorstep of those who should have been true and trusted friends of the program but who have turned out to be the opposite, however good their intentions may have been.

I dislike starting a talk in any such vein. For 20 years prior to the past 2 or 3 years every talk I made—and there were hundreds of them—was along lines of optimism. But now circumstances have darkened the horizons. * * *

In 1928 a slight impression on the surface of our American indifference about the security of the land was made through the publication of Soil Erosion a National Menace, a Department of Agriculture bulletin that was widely circulated. Then came, in 1929, an appropriation for a national program of soil conservation research, as the result of the Buchanan amendment to the Agricultural appropriation bill. From the 10 soil conservation research centers that were established with these funds came most of the basic information about accelerated soil erosion and most of the conservation measures that have proved successful in modern soil conservation. * * *

Then came the action program—real soil conservation work out on the land in the form of a nationwide program. This * * * came with the establishment of the Soil Erosion Service. * * * You may be interested to know that some agriculturists were sure the Soil Erosion Service, without precedent or leadership would fold up within a year. I never knew how far that antagonistic point of view spread, but I can assure you that when I was asked to start a national program of soil conservation for the United States only 1 of the 48 land-grant colleges

showed enough interest to come to Washington and sit down with me to help plan the program—just 1. That was the University of Wisconsin. Noble Clark came to Washington from Madison along with several others of the College of Agriculture of the University of Wisconsin and gave me many helpful suggestions. * * *

You might also be interested in another incident pertaining to those early days of modern soil conservation.

One morning there was a telephone call from the White House. "Come at once," the White House official said. "The President wants to see you." * * *

Said the President when I got there, "Bennett, I want to congratulate you and your technicians in the Soil Erosion Service for doing a good job. Would you care to know how I found out about it?"

"Yes, sir."

"It was simple," the President said. "They want to take over your agency. If you weren't doing a good job they would not be after you."

I found out before leaving the White House who "they" were. "They" were the Extension Service. And it wasn't the last time—only the first time. Year after year Farm Bureau representatives bore down on the subcommittee of the Appropriations Committee of the House holding hearings on funds for the Department of Agriculture, urging that SCS be turned over to Extension. It is all there in the printed records. Ted Silverwood gave you the details at your New Orleans convention last year.

Another example out of the past may help you to understand the motives * * * behind a movement that led up to the disruption of the most successful program of agricultural advancement in history. I have reference to the recent disruption by reorganization of the program of the Soil Conservation districts and the Soil Conservation Service.

This time it was the Secretary of Agriculture who summoned me to his office; not the present Secretary. The conservation work was moving forward at a good rate of progress by this time, late in the 1930's. And this may have brought on some Extension jitters. Anyway, without hint of what was up, I was ushered into the middle of a well-laid plan of mice and men. There, clustered about the Secretary of Agriculture were 5 State directors of extension and 1 dean of a great agricultural college. * * * Cornell University.

Said the Secretary, as well as I can recall, "Hugh, these gentlemen have a plan by which they tell me the Department's work in soil conservation can be made to move faster. Some preliminary steps have been taken, but it was my feeling you should be told about the plan before final approval. Director Creel, suppose you state the details."

Said the Director in tones of affection, "Hugh, let me say at the outset that you have done a wonderfully good job, first in arousing the Nation to the dangers of uncontrolled soil erosion, and secondly, in establishing a competent agency for carrying out a much-needed nationwide program of soil conservation. Now you must understand, we have no thought of hurting this plendid program in any way. All we propose doing is to help you make it go faster, by relieving you of some of the arduous details. We know you must be very tired; we are going to give you the opportunity to take it easier, to sit down and think things over, to write and help plan for the future. It will be a wonderful opportunity for you."

And that was nearly 20 years ago. Apparently it pays to start early and plan carefully in fostering agency schemes of this nature. * * *

"The extension services of the States are perfectly set up to help with the soil conservation program; we have offices all over the country—an office in almost every county. Now here is what we propose to do, and the proposal has already been reduced to writing in the form of a legislative amendment now in the hands of Senator BLANK who is waiting for the green light from the Secretary before introducing it into Congress. All we propose is that the moneys, properties, and personnel of the field work of SCS be turned over to the State extension services. You will still have the Washington office * * * and your research and your surveys—plenty to keep you busy.

At this juncture the Secretary broke in, "Hugh, do you have anything to say about this proposal of the extension directors?"

"Yes, sir, Mr. Secretary, I should like to say something."

"Go ahead."

I did * * * a summarization of my remarks, as well as I can remember them, will suffice: I said "We too, Mr. Secretary, have work going in many of the counties of the country, but very little of it is in offices. Yes, it did take a long time—about 25 years—to arouse enough public interest in the erosion problem to get a program of soil conservation research started—and additional time to get an action program of soil conservation under way. Our work has proved effective and farmers like it—the rate of progress has been increasing progressively. Many nations of the world are sending specialists to study our program by working with our technicians—it is developing a high degree of cooperation among farmers—we have the only really experienced corps of technicians in soil conservation—these men are working with almost religious fervor—interference such as that proposed here this morning, would break this splendid morale and destroy a going and highly effective program. The Nation was a 100 years late getting started—what point is there in stopping all progress by turning the work over to an agency that has shown little interest in the subject? * * * Perhaps a little could be done, but I am convinced it would be very little, for without experience and vision and enthusiasm this kind of work will be slowed, not made faster. Finally, it will wither away under these handicaps, and we will be right back where we were at the beginning.

"Mr. Secretary, I cannot recall ever having received before this morning one single word of interest, encouragement, or advice during the stages of conservation field exploration, research, or action from a single one of the directors in this room. I am completely and unalterably opposed to their proposal in every single detail. I am shocked and sorely disappointed at the cold acquisitiveness of the Extension Services, from which agencies I had expected cooperation and help, not this proposal of death." * * *

Dillon Meyer was there with me and he, too, came forward with an equally negative reaction.

When we had completed our lamentations, the Secretary said something like this: "Gentlemen, for the time being I withdraw the green light. Will one of you phone Senator Blank to go no further with the proposed amendment until he hears from me? And now, Hugh, will you and Dillon meet with the Assistant Secretary this afternoon and anyone he chooses to call in so that some compromise may be worked out."

No compromise was worked out. My recollection is that either the Assistant Secretary or the Director of Information, who was dead against the Extension proposal, reported to the Secretary later that afternoon, something like this: "We are getting nowhere, Mr. Secretary. Hugh Bennett's opposition increases. No compromise seems possible."

Anyway, next morning I was again summoned to the Secretary's office. He said something about like this: "Hugh, I have called off this proposal of the Extension people. I didn't sleep very well last night; what you and Dillon Meyer said yesterday in my office seemed to place you in the same position with respect to my decision in this matter as I am in respect to the President's decision in the matter of the Secretary of the Interior's proposal to move the Forest Service from the Agriculture to Interior."

And there ended that scheme.

But there were others. They continued to crop up in congressional hearings, on the floor of the House, and in meetings of the National Associations of County Agents and Land Grant Colleges.

Now, I have come to * * * what I want to talk about, and that is what has been done to the Nation's soil and water conservation program, what it is further proposed to do with the program, why the land grant colleges should get back to their knitting—education that is—and how and why Extension should throw off its ancient, passionate, and undemocratic obsession that no other agency but itself should contact farmers—and get on with its real work, of which there is more to do now than can be done. Maybe obsession is not the right word; perhaps it is passion to dominate; but whatever it is, it amounts to the most one-sided, narrowest point of view that has befuddled modern democracy. What the Department of Agriculture's reorganization did to the SCS-district program can be boiled down, as I see it, to some such substance as the following: At increased costs, SCS is now doing less of the permanent type of soil conservation than at any time during the past 5 years.

It is doing more indoors work in the 51 greatly expanded State and Territorial offices where bookkeepers, accountants, checkwriters, and other overhead clerical workers are carrying on the expanded overhead and administrative activities that were formerly efficiently performed in 7 regional offices. What the reformers and reorganizers apparently overlooked was that soil erosions, wastage of rainfall, and soil conservation are all out-of-office activities—land activities, not office activities. * * *

The reorganizers did a thorough job of tearing SCS to pieces and distributing the pieces haphazardly about the country, mostly where they didn't fit and were not needed. Some of the strangest actions were taken in connection with the mutilation of this highly successful world-famed agency. The regional offices were abolished and yet retained for placement of certain engineering functions and personnel, presumably in order to keep this engineering work, one of the inseparable parts of the modern soil conservation near the work job. Precisely that was one of the principal reasons I established the regional offices in the first place, that is, to decentralize the work out of Washington so as to put as much of it as near the work job as we could (which certainly is not in Washington). And this was done * * * after the State office system had failed just as it is failing now. We had State offices, certainly, but they were soil conservation work offices, not offices for doing the indoors job of bookkeeping, letter filing, and letterwriting.

Let's cite a specific example of the senseless shuffling. The regional director for the Northeastern States, a graduate of Pennsylvania State College and a longtime professor of soils in that institution, as well as an experienced scientist in the Federal Bureau of Soils, was moved out to the Corn Belt, where he had had a minimum of experience. Could this have been because he knew so much about soil conservation in the Northeast and so little about the problem in the Corn Belt? Could have been, I suppose, but it doesn't make sense. Then they moved the long-experienced regional director of the Corn Belt area way down South to the Cotton Belt, where he had had so little experience I doubt if he knew whether cotton blooms yellow or red. And that didn't make sense,

either—only more confusion and pure nonsense.

Some few months ago I heard a prominent engineer—Morris L. Cooke, who started off the rural electrification program of the United States—say at a meeting of conservationists in Washington that in his opinion the reorganization to which I refer could easily result in setting back soil and water conservation in this country by 50 years. I believe he was right—unless the blunder can be remedied. I feel this way not only because of the emasculation of SCS but because of that and the resultant danger to the soil conservation districts—representing the most democratic agricultural organization of all time—and its splendidly going program. I am convinced this same element in some but not all of the land-grant colleges and the State extension services was really hitting at the districts by first killing off their strong ally the SCS, and then any other support the districts have. But they say they are not after the districts. * * *

It scarcely seems necessary to comment further on the apparent fact that extension for years has in some parts of the county devoted as much or more time trying to destroy the regional offices of SCS and the service itself as they have devoted to their legitimate job of carrying on needed educational work among farmers—with taxpayers' money.

It must be pointed out, however, that many county agents have worked valiantly to help SCS technicians and the districts to move ahead with the soil conservation program, sometimes against the wishes or instructions of the directing office boys up at headquarters. * * *

Too often in our collective activities it is the work of a few, not the majority, which upsets our programs, no matter how well they are working or how much good they are doing.

The reorganization crushed the fine morale of SCS, which was the wonder of the world, and substituted for it, and the efficiency that went with it, obscuring confusion.

Leadership has been weakened by removal of the head of the Service from civil service.

Research that was making excellent progress was largely removed from SCS, and put elsewhere. * * *

I could go on with examples of the harm that comes from reorganization carried out behind closed doors by reorganizers who know very little about what they are reorganizing—at least on the basis of field experience. They didn't ask your representative in—that is, not much, beyond the foot-cooling outer office of their inner sanctorium. They didn't let me get even so far as the cooler.

No wonder the net results, as well as I have been able to appraise the situation from the sidelines of retirement, were pretty much all wrong and hurt the program terribly—and is still hurting it terribly. Yet, some good work is being done here and there I am informed—in those places probably where the spirit of the technicians was not completely broken.

I am not insisting that all of the reorganizers were without good intentions, but I am insisting that they proceeded too much in the dark, acted precipitately, and failed to call in enough experienced soil conservationists for wholesome advice.

At the time of the lighteninglike reorganization SCS and the districts were making astoundingly good progress. This was recognized throughout the world. The program had provided security for 200 million acres of farmland in the United States. And that was close to 200 million acres more than had been effectively safeguarded in all our previous history. As a matter of fact, until SCS and a little later the districts, came along, very little of lasting nature had been done. * * *

Before I retired from SCS some 80 nations—most of the countries of the world—had sent agricultural specialists to the United States to study our program. This was for the most part before the big technical-assistance programs got under way. And the result was that some of those countries had started programs of soil conservation at home. Some of these I have seen; they are making progress—where there was serious agricultural decline before. * * *

As if the Department's demolishment of SCS by its sweeping reorganization wasn't enough, now comes another gang looking for any leftovers or parts of SCS the State grabbers may want. This time it is a committee or a commission reporting to the President's Commission on Intergovernmental Relations, I am told. I have seen the recommendations of the committee as given by your national association. If these recommendations are carried out then the colleges will have what some of them have been gunning for nearly 25 years—that is, the complete takeover of SCS except the name which is to be left to a little group of office boys in Washington with nothing to do.

These committee recommendations which I have seen read like the best-spun product of a Philadelphia lawyer. They sound ponderous and from a legal standpoint I am convinced there are no loose ends. * * *

And let me say that I am not questioning the committee's good intentions, but I most certainly am questioning their familiarity with or knowledge of the national program of soil and water conservation as it has been conducted by the soil conservation districts and the SCS as technical aid. The committee's lack of a clear understanding of modern soil conservation is shown by a number of wholly incorrect assertions accompanying its recommendations, as reported.

For example, the report says in that part dealing with soil conservation, "Nationwide uniformity is not required (nor is it possible or desirable)."

If that were true, * * * there could be no effective program of soil conservation anywhere on earth. This assertion is completely contrary to the physical facts in all that it says or implies. It is contrary to natural law and is exceedingly dangerous misinformation to spread about under the guise of education. To a very large degree this same kind of misconception explains the failure of practically all of our efforts in soil conservation prior to the advent of the program of the Soil Conservation Service (and its forerunner, the Soil Erosion Service). The immediate and widespread success of the conservation work of SCS was due to the fact that it based its program on physical facts insofar as farm economy would permit—and that went most of the way.

In other words, we followed the plan of nature as closely as possible, having realized that the problem of accelerated erosion is due wholly to man's interference with the natural order of land affairs in his use and abuse of the soil. I had learned this in my years of field work in the old Bureau of Soils, and having been assigned to direct the soil conservation program, I insisted at the start on abiding by the following basic physical facts, which were in force then, are now, and always will be * * * due to differences in soil, slope, climate, and vegetative adaptability. It is, therefore, necessary in all true and effective soil conservation work to treat the land according to its natural capability and its condition as the result of the way man has used it. It is physically impossible, for example, to practice clean tillage on a 60-percent slope and keep the soil there without suitable protection—and slope, soil, and climate absolutely determine what is suitable protection in such land situations as well as in most other land situations. * * *

Soil conservation and soil conservation science * * * take terracing. It was the principal tool of soil conservation in this country for more than a hundred years, and yet we had not learned how properly to build a terrace until modern soil conservation came to us. Most of them were improperly built or used on land that was too steep, or on soil that was not suitable for terracing and consequently most of them failed. In the long run they did more harm than good.

When we started our program of modern soil conservation we had to tear down about 90 percent of all terracing that had been put on the land, mostly by farmers who were not told by the colleges and extension how properly to build terraces—because they didn't know how.

To insist that uniformity in our conservation program is not needed and is impossible is the equivalent of denying the validity of a natural law which is just as valid as the law that prevents water from running uphill on its own power. Let's listen to nature and work with her. The old lady is very wise and very cooperative, having learned ages ago how to keep land perpetually productive by abiding by her own basic laws of creation. So, according to the concept of the committee, 48 soil programs are quite all right for America and you can't have just one. We did have just one, however, and it worked perfectly. The truth is we can have only 1 program, not 2, or 3, or 48—just 1—that is if we are going to protect the land.

Now, some are likely to say that Bennett has gone out of his way to lambast the land-grant colleges, the State extension services, and everything about the States. But precisely the opposite is true. Soil-conservation districts are State agencies—and let me repeat, they are doing a magnificent job of conducting the soil-conservation program—they are thoroughly democratic and highly cooperative. What I recommend is leave them alone, quit trying to knock them out, and quit squawking about "SCS doing what extensions was set up to do." A question right there might be appropriate, "Well why didn't you do it." The answer is always the same, "We didn't have the money." But that is not the answer and, furthermore, they never mention Public Law 46—the first Soil Conservation Act of all times, besides representing the will of Congress.

And if the colleges and extension will do what I recommend, they will get along better. My recommendations are that they get out of this business of stirring up controversy by insisting on taking over the whole field of agricultural activity by shoving out all other outsiders and insiders who would contact farmers, and get back on the job of education up at the colleges. If any of them are in politics, they should get out of that, too.

And this would be better, far better, for all concerned: What is needed now over all else is cooperation—cooperation that brings agencies and farmers and city people closer together for sincere discussion to the end of finding ways and means for mutually helping one another. Moreover, what point is there in drawing sharp lines between Federal and State Governments. We are all one Nation—we should all be working for the good of this one Nation—and thereby for the good of every man, woman and child in it.

This can be done, too; it is not a dream. Through the district program it is being done. The districts are getting for the first time real cooperation among farmers. In thousands of communities farmers are working together as friends, copartners, and neighbors. They are coming together in meetings to discuss their common needs. They are helping one another in various ways, even to the extent of lending machinery to one another and sometimes providing labor, in emergencies. What is needed now more than anything else, let me repeat, is more and more friendly cooperation of this kind, and less and less of the spirit of acquisitiveness and domination and rule or ruin. Let's get this concept over to the people.

If only deaf ears meet our pleas, then but one course will be left us. The Nation will go backward, not forward, without a continuing program of effective soil and water conservation, as a number of nations have done down through the centuries. Therefore we stand for and will fight for this principle of mutual cooperation. But fighting is not of our choice—cooperation is our choice. However, we are patriots and Christians and not the kind to yield in principle.

Our population is rapidly mounting; our supplies of productive land is diminishing. Last year we covered up more than 230,000 acres with our 38,000 miles of new roads and we probably took out of cultivation or made useless for cultivation about as much for new buildings, airfields etc. And erosion is still ruining for further practical cultivation every year around half a million acres. Next year we are planning, I am advised, to build 48,000 miles of new roads, with a * * * program of super highways coming up.

We need new and better roads and new buildings, but we do not need to put them all on grade A cropland. * * *

Now * * * my final recommendations are, in all sincerity and with ill will toward none, that the Congress review the Department of Agriculture's reorganization of SCS in the light of a full year's operation, with the view of correcting any mistakes or weaknesses that may be found, especially in relation to (1) amount of on-site technical assistance made available to farmers in soil conservation districts; (2) number of basic conservation farm plans completed, acreage included, and costs; (3) number of initial farm conservation plans and cost, with acreages of specific conservation practices actually applied to the land; (4) same thing for advanced farm conservation plans; (5) amount of conservation completed for the 13 practices reported in the 1950 annual report of the chief of the Soil Conservation Service, with the same unit measurements. I further recommend restoration of 6 of the 7 regional offices abolished, restoration to SCS of all of the strictly soil and water conservation research projects and stations taken out of the agency, and restoration of all of the conservation nurseries where the land is still federally owned or leased.

With respect to the soil conservation recommendations of the committee on Federal aid to agriculture, as reported, my view is that they are not needed and would result in deadly impairment of the Nation's conservation program as established by Congress through Public Law 46, adopted in 1935.

Constitution and Bylaws of the National Association of Veterans Employment Councils

---

EXTENSION OF REMARKS

OF

HON. THOMAS J. DODD

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. DODD. Mr. Speaker, I insert in the RECORD the constitution and bylaws of the National Association of Veterans Employment Councils. This organization, dedicated to the great American principles of help to others, is in itself evidence of the desire of the veteran to help his fellow veteran.

A nonprofit group of volunteers, they are carrying on in the field of patriotic service and devotion to the causes of those who need help the most—our handicapped war veterans—without cost to the taxpayer.

Through the medium of the CONGRESSIONAL RECORD, we can make available to us, as national legislators, and to the public the full details of the constitution and bylaws of this worthwhile and patriotic organization:

CONSTITUTION, NATIONAL ASSOCIATION OF VETERANS EMPLOYMENT COUNCILS

PREAMBLE

We as members and former members of the Armed Forces of the United States of America, aiding and having aided in the maintenance of its honor, integrity, and the supremacy of our Nation, associate ourselves for our Creator and Nation in the National Association of Veterans Employment Councils, whose purposes and principles shall be to pledge supreme allegiance to the United States of America; to defend the Constitution and laws of the United States of America; to further the welfare of the handicapped veteran, with respect to gainful employment of such handicapped veteran.

Article I. Name

The name of this organization shall be National Association of Veterans Employment Councils.

Article II. Purpose

To cooperate with, and to assist, governmental and private groups now engaged in the promotion of the employment of the handicapped veteran; to operate throughout the United States volunteer veteran employment councils designed to aid, free of charge, the handicapped veteran secure useful and productive employment; to educate the American public generally, and the American employer specifically, as to the value of the handicapped veteran employee; to advance the interest of, and work for the betterment of, all veterans who, by reason of any cause whatsoever, were, are, or have become handicapped; and to promote and arrange for and, in all other ways, obtain suitable employment in all of its phases and ramifications for such handicapped veterans.

Article III. Membership

Any person serving in peace or war, with honor or having been honorably discharged from service in peace or war from the Armed Forces of the United States of America.

Article IV. Powers

This organization shall have the power to adopt and amend a constitution and bylaws to regulate this organization, so that they will not conflict with the laws of the United States of America or of any of the several States; to perpetuate the succession, with power to sue and be sued in courts of law and equity; to purchase, lease, hold, receive by gift bequest or otherwise, sell, mortgage, or otherwise acquire or dispose of such real or personal property as may be necessary or expedient to the purposes of this corporation and to solicit funds from the general public in order to attain and promote the objects and purposes of this corporation; to adopt a corporate seal with the power to alter the same at the pleasure of this organization; to establish and maintain offices for the conduct of its business, and to do any and all such acts and things that may be necessary and convenient to attain the objects and purposes herein set forth.

Article V. Amendments to the constitution

This constitution may be amended at a meeting of the national board of directors especially called for that purpose and with a two-thirds vote of the directors.

Article VI. Administration and executive powers

The administration of the affairs of this organization and the executive powers of this organization shall be vested in a national board of directors to be composed of not less than 3 or more than 5 persons including the national president and the executive director; the immediate retiring national president shall be an ex officio member of the national board of directors. The executive director shall carry out the mandates and directions of the national board of directors.

Article VII

The property of the officers, directors, managers, and members of this corporation shall not be subject to or chargeable with the payment of corporate debts or obligations.

BYLAWS, THE NATIONAL ASSOCIATION OF VETERANS EMPLOYMENT COUNCILS, WASHINGTON, D. C.

Article I. Organization

SECTION 1. The National Association of Veterans Employment Councils hereinafter referred to as "organization," shall be organized with the national headquarters located in Washington, D. C., and councils in such States and Territories of the United States as may be authorized by the national board of directors. Local councils may be formed and administrative groups may be created by authority of the national board of directors.

SEC. 2. The national board of directors, the national employment council, the State employment councils, and the local employment councils shall constitute the working structure of the organization.

SEC. 3. Each of the above bodies shall keep records of its proceedings, which shall be filed with national headquarters within 30 days after any meeting.

SEC. 4. National board of directors—

(a) The national board of directors shall be composed of not less than 3 nor more than 5 members of this organization, 1 of whom shall be the executive director, and the president of the national council shall be a member of the national board of directors.

(b) The executive authority of this organization shall be vested in the national board of directors.

(c) Vacancies in the national board of directors shall be filled by majority vote of the first board. The term of office of the board of directors shall be for periods of 1, 2, and 3 years from the first national council meeting, after which they shall be elected by the majority of voting members of the national council meeting.

(d) State employment council presidents and State employment council directors may attend any meeting of the national board of directors, without cost to the national organization.

(e) Members of the national board of directors may vote on any specific issue before the board by certified or registered mail.

(f) A majority of the national board of directors in person or represented by certified or registered mail shall constitute a quorum; provided, however, that in the event a quorum is not present a majority of those directors present may adjourn the meeting without notice.

(g) The national board of directors shall meet as often as may be necessary to carry out its duties and obligations and in any event annually on the 2d Monday in February of every year.

(h) The national executive director shall issue a notice of each meeting of the national board of directors at least 5 days before such meeting to each of the official members of the board and shall set forth therein those issues to be considered by the board.

Article II. Membership

SECTION 1. Any person serving in peace or war with honor or having been honorably discharged from service in peace or war with the Armed Forces of the United States is eligible for membership.

SEC. 2. No person who is a member of or who advocates the principle of any organiza-

tion believing in or working for the overthrow of the United States Government by force and no person who refuses to uphold and defend the Constitution of the United States shall be privileged to become or continue to be a member of this organization. with a suitably inscribed certificate of award for those rendering distinct service to the community and the handicapped war veterans of the Nation, and are eligible to serve on local employment councils. All awards must be approved by the national board of directors.

SEC. 4. Membership fees:

Paragraph 1. The national life membership fee shall be $1 for any veteran qualifying under section 1 of this article who is in addition thereby classified as a handicapped war veteran. This classification shall be automatic for those veterans recognized as disabled by the Veterans' Administration. Peacetime disability will be recognized upon application to the membership committee.

Paragraph 2. National life membership fee shall be $1 for any veteran qualifying under section 1 of this article who supports and subscribes to the aims and principles of this organization.

Paragraph 3. The annual supporting membership fee shall be $5 to any veteran qualifying under section 1 of this article who options to give annual support to the organization. $1 of the first annual dues shall pay for life membership. Such members will be known as annual supporting members.

Paragraph 4. Life supporting membership fee shall be $100.

Article III. Discipline

SECTION 1. The national board of directors after notice and hearing before subcommittee may cancel, suspend, or revoke the charter of any State or local council for good and sufficient cause. Procedure for such actions shall be prescribed by the legal counsel. In the event of such action, the board of directors is empowered to take over the operation of the council whose charter is suspended or revoked until the next State council meeting. At the next State council meeting new State or local officers must be selected to carry on the work of the council.

SEC. 2. The national presirdent, may, for cause, suspend the charter of any council for a period of 90 days, pending the action of the national board of directors. The term "for cause" as used herein, shall refer only to matters specifically required or prohibited.

SEC. 3. Upon revocation or suspension of the charter of a State council, all property, money, and effects of that council shall be immediately returned. In the event that at the end of such period of time, such council is not reinstated, all such property, money, and effects shall become the property of the national organization.

SEC. 4. In addition to any other grounds, a member may be suspended and the charter of a State or local council may be suspended or revoked, should such member or council resort to a civil court action against a State council or the national organization, or the officers thereof, as such, before exhausting all remedies available within the organization.

SEC. 5. The final remedy for any grievance of any member or council within this organization shall be an appeal to the national employment council.

Article IV. National employment council

SECTION 1. The employment program and organization legislative matters shall be vested in the national employment council.

SEC. 2. The national employment council meeting shall be held at such time and place as may be determined by the national board of directors and shall be attended by the national advisory committee, the national officers, the national board of directors, State council officers, and local council officers, who shall comprise the voting members of the national council meeting.

SEC. 3. All matters brought before the council shall be determined by a majority vote of those attending the national employment council meeting.

Article V. State employment councils

SECTION 1. A State council may be authorized by the national board of directors and shall be the governing body of the local councils within the State in which it is located.

SEC. 2. Members of the organization within the State shall once a year elect a State president and vice president, and shall also elect or appoint such other State officers as may be necessary.

SEC. 3. Each State employment council shall hold annually at an appropriate time and place a meeting of local council presidents and directors and accredited representatives of the national organization, the department officers, and all other officers and members within the State.

Article VI. Local employment councils

SECTION 1. Local councils shall be established by direction of the national board of directors. The membership of such councils shall consist of a council director appointed from the membership, members in good standing of the organization who are leaders in industry selected from the local community by the members of the council, and other volunteer citizen workers who have been made honorary members.

SEC. 2. It shall be the duty of the local council to set up mechanics to implement the program for gaining employment for handicapped war veterans on a local level.

SEC. 3. The local councils will assist existing agencies in the field of employment for handicapped persons and carry out the policies set forth by the State and National councils.

Article VII. National officers

SECTION 1. Paragraph 1. The national president shall be elected by the national employment council for the ensuing year. The national employment council may also elect any other national officers it may deem necessary.

SEC. 2. Subject to the limitations of the constitution and bylaws and with the consent of the national board of directors, appropriate salaried officers and personnel may be appointed by the national executive director.

SEC. 3. The national president shall be the presiding officer of the national council meeting.

SEC. 4. Paragraph 1. The national executive director shall be the manager of the business and administrative affairs of this organization.

Paragraph 2. The national executive director shall appoint such employees as may be deemed necessary to conduct the business affairs of his office, and shall by and with the consent of the national finance committee determine the salaries of said employees.

Paragraph 3: The assistant to the national executive director shall be known as the national secretary.

Article VIII. Qualifications for office

SECTION 1. Any person holding membership in this organization may be elected or appointed to any office.

Article IX. Tenure of office

SECTION 1. The elective officers shall hold their respective offices from the 1st day of January until the 31st day of December or until their successors have been elected and installed.

SEC. 2. The tenure of office of the appointed national officers shall be at the pleasure of the national board of directors.

Article X. Finances

SECTION 1. Paragraph 1: The revenue of the national organization shall be derived from membership fees, contributions, and such other sources as may be approved by the national board of directors.

SEC. 2. Paragraph 1. All revenue and expenditures of the national organization shall be under the direct supervision of the national finance committee composed of not more than 3 members of this organization, to be elected annually by the national employment council, and 2 by national board of directors, and none of whom shall be paid employees.

Paragraph 2: It shall be the responsibility of the national finance committee to provide for all audits of all accounts and to see that the proper bonds are enforced on all employees who are entrusted with the handling of all funds and revenue; it is the responsibility of this committee to see that bond premiums are paid and that the finances of the organization are handled at all times to secure an economic and businesslike administration of its financial affairs.

Paragraph 3: The national board of directors shall designate the national depository or depositories for all revenue of this corporation which shall be located in the same city as national headquarters.

Paragraph 4: The national finance committee shall have the executive director and those members of the board authorized to sign checks bonded at an amount to adequately cover the total funds of the organization.

The annual premium to maintain said bond in force shall be paid by the executive director from the general funds of the organization, under the direction of the national finance committee, as hereinafter set forth.

Paragraph 5: None of the funds collected by this organization shall be withdrawn from the depository or depositories in which they may be deposited except upon the signature of the executive director and one member of the board of directors of this corporation and/or any other person whose signature may be required by the bonding company. In no event, however, shall any withdrawals be made except upon proper check and voucher.

Paragraph 6: No funds of the organization shall be used for making loans or advances of any character to any individual.

SEC. 3. No fund-raising project or operation shall be engaged in by any State or local employment council of this organization.

SEC. 4. Paragraph 1: The salaries of the executive director and any other paid officers of this organization shall be determined by the national finance committee with the approval of the national board of directors.

Paragraph 2: The national president shall not be considered a paid employee. He shall receive, however, an amount as expenses for his year's tenure in office to be fixed by the national finance committee with the approval of the national board of directors. The national president shall account for such sums and shall be allowed such sums as may be reasonable and necessary to fulfill his obligations and duties of office.

Article XI. Meetings

SECTION 1. All business meetings of this organization shall be conducted under Roberts Rules of Order, when not in conflict with the bylaws.

SEC. 2. All members in good standing of the organization shall be entitled to one vote at a State employment council meeting. A member is a member in good standing providing he has attended four or more bona fide meetings of the organization during the preceding year and is so certified by his local council director.

Article XII. Fiscal year

The fiscal year of this corporation shall begin on the 1st day of February and end on the 31st day of January of the next year.

Article XIII. Seal

The national board of directors shall provide a corporate seal which shall be in the form of a circle and shall have inscribed thereon the name of the corporation and the words "Corporate seal, District of Columbia."

Article XIV. Waiver of notice

Whenever any notice whatever is required to be delivered under the provisions of title 29, chapter 6, of the 1951 Code of the District of Columbia or under the provisions of the certificate of incorporation, the constitution or the bylaws of this corporation, a waiver thereof in writing signed by the person or persons entitled to such notice, whether before or after the time stated therein, shall be deemed equivalent to the giving of such notice.

Article XV. Amendments to bylaws

These bylaws may be altered, amended, or repealed and new bylaws may be adopted by a two-thirds majority of the Directors present at any annual meeting or any special meeting called for that purpose provided that at least 5 days' notice is given by the national executive director of the intention to alter, amend, or repeal or to adopt new bylaws at such meeting.

Report to the People of the Eighth Congressional District of Wisconsin—IX

EXTENSION OF REMARKS

OF

HON. JOHN W. BYRNES

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. BYRNES of Wisconsin. Mr. Speaker, under leave to extend my remarks, I include a report to the people of the Eighth Congressional District of Wisconsin on my voting and attendance record for the 1st session of the 84th Congress.

No attempt has been made to include votes on all of the numerous bills, motions, and amendments, but the report does include all rollcall votes, all quorum calls, and my votes on some other measures on which there was no record taken, but which I believe are of importance and concern to the people of my district. The purpose of this report is to collect in one place and in concise form information which is scattered through some 11,000 pages of the CONGRESSIONAL RECORD. It also contains information which is not available from any public record but which I feel should be made available to the people.

The descriptions of the bills and the amendments or motions as contained in the report are for the purposes of identification only; no attempt is made to describe the legislation completely or to elaborate upon the issues involved. I believe this word of caution is advisable in view of the fact that the descriptions used are, for the most part, taken from the official titles of the bills which unfortunately do not always reflect the nature or true purpose of the legislation. Upon request, I will be pleased to furnish more complete information concerning any particular bill, as well as a summary of the issues involved and the reasons for my vote.

The furnishing of this report continues a service I began in the 1st session of the 80th Congress. This is the ninth report of my voting and attendance record. These 9 reports show how I voted on 1,357 questions in the House of Representatives. Based on quorum calls and the record votes, they also show an attendance record of 95 percent.

Voting and attendance record, Representative JOHN W. BYRNES, 8th District, Wisconsin (84th Cong., 1st sess.)

Roll-call No.	Date 1955	Measure, question, and result	Vote
1	Jan. 5	Call of the House	Present.
2	Jan. 5	Election of Speaker	Martin.
		H. J. Res. 159, authorizing the President to employ the Armed Forces of the United States for protecting the security of Formosa, the Pescadores, and related positions and territories of that area:

		H. R. 6243, authorizing construction of an atomic-powered merchant ship to promote peaceful uses of atomic energy:	
	July 18	On passage. (Passed, voice vote.)	Yea.
122	July 19	Quorum call	Present.
123	July 19	Quorum call	Present.
124	July 20	Quorum call	Present.
		H. R. 7214, amending the Fair Labor Standards Act to make the minimum wage $1 an hour effective Mar. 1, 1956:	
	July 20	On amendment to increase minimum wage to 90 cents per hour. (Rejected 145 to 188.)	Yea.
125	July 20	On passage. (Passed 362 to 54.)	Nay.
126	July 25	Quorum call	Present.
127	July 25	Quorum call	Present.
128	July 25	Quorum call	Present.
		H. R. 7000, providing for strengthening of the Reserve Forces:	
129	July 25	On adoption of conference report. (Adopted 315 to 78.)	Yea.
		H. R. 314, providing for 3 hours of debate on H. R. 7474, the Federal-State highway construction bill:	
130	July 26	On passage. (Passed 274 to 129.)	Yea.
131	July 27	Quorum call	Present.
		H. R. 7474, the Federal-State highway construction bill:	
132	July 27	On motion to recommit to incorporate bonding provisions of Dondero substitute (administration program) into bill. (Rejected 193 to 221.)	Nay.
133	July 27	On passage. (Rejected 123 to 292.)	Nay.
		H. R. 5647, repealing excise tax on motorcycles:	
	July 27	On passage. (Passed, voice vote.)	Yea.
134	July 28	Quorum call	Present.
		H. Res. 317, providing for the consideration of H. R. 6645, removing natural gas producers from Federal regulation:	
135	July 28	On passage. (Passed 272 to 135.)	Yea.
136	July 28	Quorum call	Present.
		H. R. 6645, removing natural-gas producers from Federal regulation:	
137	July 28	On motion to recommit. (Rejected 203 to 210.)	Yea.
138	July 28	On passage. (Passed 209 to 203.)	Nay.

Voting and attendance record, Representative JOHN W. BYRNES, 8th District, Wisconsin (84th Cong., 1st sess.)—Continued

Roll-call No.	Date 1955	Measure, question, and result	Vote
139	July 29	Quorum call	Present.
		S. 2126, the Housing Act of 1955:	
140	July 29	On amendment removing public housing provisions and extending FHA mortgage insurance authority. (Passed 217 to 188.)	Yea.
141	July 29	On passage. (Passed 396 to 3.)	Yea.
		H. R. 7618, adjusting civil-service retirement annuities:	
	July 29	On passage. (Passed, voice vote.)	Yea.
		H. R. 7215, extending for 1 year to June 30, 1956, free postal privileges for members of Armed Forces abroad:	
	July 30	On passage. (Passed, voice vote.)	Yea.
		H. R. 7030, amending and extending Sugar Act of 1948, fixing domestic and foreign quotas:	
	July 30	On passage. (Passed, division vote, 194 to 44.)	Yea.
		S. 2253, increasing from $700 million to $1.5 billion private sales of surplus agricultural commodities to friendly nations abroad under the Agricultural Trade Development and Assistance Act of 1954:	
	July 30	On passage. (Passed, voice vote.)	Yea.
		H. R. 7470, extending Defense Production Act to June 30, 1956:	
	July 30	On passage. (Passed, voice vote.)	Yea.
142	Aug. 1	Quorum call	Present.
		H. Res. 299, providing $35,000 for further expenses of the Select Committee on Small Business:	
143	Aug. 1	On passage. (Passed 231 to 134.)	Nay.
		S. 2576, repealing the franchise of Capital Transit Co., operating in the District of Columbia:	
144	Aug. 1	On suspension of rules and passage. (Rejected 215 to 159; a ⅔ majority is necessary for passage under suspension of rules.)	Nay.
145	Aug. 1	Quorum call	Present.
		H. R. 2552, authorizing the modification of the existing project for the Great Lakes connecting channels above Lake Erie (extending St. Lawrence seaway depths to Wisconsin ports):	
	Aug. 1	On passage. (Passed, voice vote.)	Yea.
146	Aug. 2	Quorum call	Present.
		S. 2126, the Housing Act of 1955:	
147	Aug. 2	On adoption of conference report providing for construction of 45,000 public housing units in 1 year. (Adopted 187 to 168.)	Nay.
		S. 2127, authorizing continuance of Small Business Administration to June 30, 1957, and increasing its revolving fund for loans to total $175 million:	
	Aug. 2	On passage. (Passed, voice vote.)	Yea.
		S. 756, authorizing Federal aid to States for wildlife restoration projects:	
	Aug. 2	On passage. (Passed, voice vote.)	Yea.

AN EXPLANATION OF TERMS

Of necessity the report contains parliamentary and legislative terms with which the reader may not be familiar. An explanation of some of these terms may, therefore, be helpful:

A. A quorum call consists of a calling of the roll of Members to determine whether or not a quorum—a majority of Members—is present. No business may be conducted when it is found that a quorum is not present.

B. Recommittal: Generally, on all important bills, a motion to recommit the bill to a committee, with or without instructions, is voted upon by the House before it votes upon passage of the bill. If such a motion is adopted, it means that the bill will be changed, delayed, or even killed. However, when a motion to recommit is accompanied by instructions, the vote generally indicates whether the Member is in favor of or opposed to the change in the legislation proposed by the instructions and does not necessarily indicate his position on the bill as a whole. A motion to recommit with instructions, if adopted, does not kill the bill.

C. The type of bill can be determined by the letters which precede its number. All bills that originate in the House are designated by an H; those that originate in the Senate by an S. There are four main types:

First. H. R. (S.) designates a bill which, when passed by both Houses in identical form and signed by the President, becomes law.

Second. H. J. Res. (S. J. Res.) designates a joint resolution which must pass both Houses and be signed by the President before becoming law. It is generally used for continuing the life of an existing law, or in submitting to the States a constitutional amendment, in which case it does not require the signature of the President but must be passed by a two-thirds majority of both Houses.

Third. H. Con. Res. (S. Con. Res.) designates a concurrent resolution. To become effective it must be passed by both the House and Senate but does not require the President's signature. It is used to take joint action which is purely within the jurisdiction of Congress. Many emergency laws carry the provision that they may be terminated by concurrent resolution, thus eliminating the possibility of a Presidential veto.

Fourth. H. Res. (S. Res.) designates a simple resolution of either body. It does not require approval by the other body nor the signature of the President. It is used to deal with matters that concern one House only, such as changing rules, creating special committees, and so forth.

D. Rule: Important bills, after approval of the committee concerned, go to the House Committee on Rules where a rule, in the form of a House resolution (H. Res.), is granted covering the time allowed for debate, consideration of amendments, and other parliamentary questions.

E. Conference: Representatives from both Houses of Congress meet in conference to work out differences existing in the legislation as passed by the two bodies. Upon conclusion of their conference, a report is submitted to each House setting forth the agreements reached. Each House then must act by way of adopting or rejecting the report in whole or in part.

F. Ordering the previous question: A motion to order the previous question, if adopted, shuts off further debate on the question before the House and prevents further amendments to such proposition.

G. A bill may pass, or be defeated, by one of the following kind of votes:

First. Voice vote: The Speaker first asks all in favor to say "aye" then those opposed to say "nay." If there is no question as to the result, this is sufficient.

Second. Division: If the result of the voice vote is in doubt, the Speaker asks those in favor to stand, then those opposed to stand. He counts in each instance and announces the result. If he is in doubt, or if demand is made by one-fifth of a quorum, then—

Third. Tellers are ordered. A Member on each side of the question is appointed as teller, and they take their places at each side of the center aisle. Those in favor walk through and are counted. Those opposed do likewise. The result settles most questions, but any Member, supported by one-fifth of a quorum, can ask for a rollcall. This privilege is guaranteed by the Constitution.

Fourth. Rollcalls place each Member on record on the particular measure involved. Each Member's name is called and his vote recorded. Rollcalls constitute the official voting record of the House.

The outcome of various votes are indicated in parentheses in the record above. In the case of rollcall votes, the actual vote is shown—the yeas first and the nays last.

Work of the Committee on Foreign Affairs

EXTENSION OF REMARKS

OF

HON. JAMES P. RICHARDS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. RICHARDS. Mr. Speaker, during the 1st session of the 84th Congress, significant contributions have been made by the legislative branch of the Government to the international relations of the United States, and the Committee on Foreign Affairs has played a major role in effecting these contributions.

As chairman of the Committee on Foreign Affairs, I want to acknowledge the hard work and wholehearted cooperation of each and every member of the

committee, both on the majority and on the minority side, without which all the accomplishments during the 1st session of the 84th Congress would not have been possible. Operating on a bipartisan basis, the committee has added to the strength and unity which the United States presents to the world. It has considered and reported legislation which has made more effective the conduct of foreign affairs by those charged with its conduct—the executive branch of the Government.

There follows a brief summary of the legislation which the committee has reported favorably after careful consideration:

MEASURES REPORTED AND PASSED BY THE HOUSE AND THE SENATE

FORMOSA

Unanimously reported from the committee January 24, 1955; passed House January 25, 1955, by vote of 409 to 3; passed Senate January 28, 1955, by vote of 85 to 3; approved January 29, 1955; Public Law 4: This resolution authorizes the President to employ the Armed Forces of the United States for protecting the security of Formosa, the Pescadores, and related positions and territories of that area.

EXTENSION OF MUTUAL SECURITY ACT

Passed Senate June 2, 1955, by vote of 59 to 18; passed House, amended, June 30, 1955, by vote of 273 to 128; conference report adopted in House July 7, 1955, by vote of 262 to 120; in Senate on July 7, 1955, by voice vote; approved July 8, 1955; Public Law 138: This act extended the mutual security program for another year, authorizing $2,472,500,000 for military aid, of which $1,133,000,000 was for military assistance, $317,200,000 for direct forces support, and $1,022,300,000 for defense support. It also authorized $182 million for development assistance; $172 million for technical cooperation and $459,300,000 for other programs, including an Asian development fund of $200 million and a special Presidential fund of $100 million.

INTERNATIONAL CLAIMS SETTLEMENT ACT

Passed House, amended, June 23, 1955, by voice vote; passed Senate, amended, July 25, 1955, by voice vote; conference report adopted by House July 29, 1955, by voice vote; by Senate August 1, 1955, by voice vote; approved August 9, 1955; Public Law 285: Provides for distribution to American claimants of $41 million available in the United States for payment of claims against Bulgaria, Hungary, Rumania, the Soviet Union, and Italy. Utilizes existing claims adjudication organization at no cost to American taxpayer. Administrative expenses are to be met from funds available for distribution.

STRENGTHENING THE STATE DEPARTMENT

Passed Senate June 17, 1955; passed House, amended, by vote of 142 to 27, under suspension of rules, August 1, 1955; Senate agreed to House amendment August 1, 1955; approved August 5, 1955; Public Law 250: This bill increases the number of top-level statutory positions in the Department of State by three officers at the level of Deputy Under Secretary of State; provides for the rank of career ambassador as the highest class of Foreign Service officer; and permits computations for retirement purposes upon the actual salary received by an officer.

CORREGIDOR-BATAAN MEMORIAL COMMISSION

Passed House, Consent Calendar proceedings, July 30, 1955; passed Senate August 2, 1955; approved August 9, 1955; Public Law 298: This bill amends an act of August 5, 1953, to give more flexibility to the Commission in its plans for a suitable memorial in the Philippines to the Filipinos and Americans who fought there during World War II. It permits the Commission to accept public and private gifts and carries an authorization of not more than $100,000 for the expenses of the Commission. Also, it permits the Commission to contract for work, supplies, materials, and equipment inside and outside the United States and to engage the services of architects and other personnel.

INTEGRATION OF FOREIGN SERVICE AND DEPARTMENT OF STATE PERSONNEL

Passed House by voice vote March 23, 1955; passed Senate by voice vote March 30, 1955; approved April 5, 1955; Public Law 22:

Enables the Department of State to continue the integration of its personnel into the Foreign Service Officer Corps, as has been recommended by several independent committees appointed to study the State Department personnel and organization.

Establishes a home transfer allowance; permits the Department to defray part of the cost of education of children of Foreign Service officers when living abroad; provides for medical examinations, inoculations and vaccinations for dependents of Foreign Service officers; makes Foreign Service and Reserve officers eligible to receive hardship post differentials like those paid staff officers and employees and civilian personnel of other Government agencies stationed abroad.

CONSTRUCTION OF BRIDGES ACROSS CANADIAN AND MEXICAN BOUNDARIES

Bridge across the Rainy River, at or near Baudette, Minn.—passed Senate May 31, 1955; passed House, Consent Calendar proceedings, June 7, 1955; approved June 16, 1955; Public Law 79.

Bridge across the Rio Grande, at or near Los Ebanos, Tex.—passed House May 17, 1955, Consent Calendar proceedings; passed Senate June 17, 1955; approved June 28, 1955; Public Law 98.

Bridge across the Rio Grande at Rio Grande City, Tex.—passed House, Consent Calendar proceedings, May 17, 1955; passed Senate June 17, 1955; approved June 28, 1955; Public Law 100.

Bridge across the St. Croix River between Calais, Maine, and St. Stephen, New Brunswick, Canada—passed Senate June 17, 1955; passed House, Consent Calendar proceedings, July 18, 1955; approved July 28, 1955; Public Law 184.

OLYMPIC GAMES AT SQUAW VALLEY, CALIF., 1960

Passed Senate May 13, 1955; passed House, Consent Calendar proceedings, June 7, 1955; approved June 13, 1955; Public Law 69: Gives official United States sanction to the extension of an invitation by the United States Olympic Committee to hold the 1960 winter Olympic games at Squaw Valley, Calif. No expense to the United States Government is involved. The last games were held in the United States in 1932.

REPEAL OF CONSULAR FEE STAMP REQUIREMENT

Passed House, Consent Calendar proceedings, May 17, 1955; passed Senate June 17, 1955; approved June 28, 1955; Public Law 101: Repeals the requirement for adhesive official stamps to be affixed by consular officers abroad when any consular or notarial act is performed. Elimination of this stamp dispenses with an obsolete and costly procedure and permits the Department of State to conduct certain of its functions in a more efficient and businesslike manner.

SERVICE CHARGE

Passed House, Consent Calendar proceedings, May 17, 1955; passed Senate June 17, 1955; approved June 28, 1955; Public Law 102: Repeals service charge for making out and authenticating copies of records in Department of State. Permits the Department to charge for such services at a rate commensurate with cost.

PROTECTION OF UNITED STATES OFFICIALS AND DISTINGUISHED FOREIGN VISITORS

Passed House, Consent Calendar proceedings, May 17, 1955; passed Senate June 17, 1955; approved June 28, 1955; Public Law 104: Authorizes certain security officers of the Department of State and the Foreign Service to carry firearms for the protection of United States officials at international conferences and distinguished foreign visitors to the United States.

NORTH ATLANTIC TREATY ORGANIZATION PARLIAMENTARY CONFERENCE, HOUSE CONCURRENT RESOLUTION 109

Passed House under suspension of rules June 20, 1955, by vote of 338 to 31; passed Senate July 1, 1955: Authorized appointment of seven delegates by the Speaker of the House of Representatives and by the President of the Senate to meet jointly with representative parliamentary groups from other NATO members at a conference in Paris in July 1955.

OPPOSITION TO COLONIALISM AND COMMUNIST IMPERIALISM, HOUSE CONCURRENT RESOLUTION 149

Passed House, unanimous-consent proceedings, June 23, 1955, by vote of 367 to 0; passed Senate, amended, by vote of 88 to 0, July 14, 1955; House agreed to Senate amendments July 18, 1955: Expresses the sense of Congress that the United States in its international relations should maintain its traditional policy in opposition to colonialism and Communist imperialism.

PEACE, HOUSE CONCURRENT RESOLUTION 157

Passed House, unanimous-consent proceedings, June 14, 1955; passed Senate June 17, 1955: Congress hereby expresses the fundamental desire and hopes of the American people for peace and calls upon other nations to renew efforts to strengthen the peace.

MEASURES REPORTED AND PASSED BY HOUSE BUT NOT FINALLY ACTED UPON IN SENATE

PASSPORT FEES, H. R. 5844

Passed House, Consent Calendar proceedings, July 30, 1955: Authorizes increase from $1 to $3 in the passport fee

collected by clerks of State courts when executing passport applications.

FREEDOM OF RELIGION, HOUSE JOINT RESOLUTION 386

Passed House, unanimous-consent proceedings, July 18, 1955: Calls upon the people of the world to join in protecting their continued right to worship and to practice their own spiritual beliefs.

MEMBERSHIP OF SPAIN IN NATO, HOUSE CONCURRENT RESOLUTION 127

Passed House, unanimous-consent proceedings, July 14, 1955: Expresses the sense of the Congress that the President should take all proper and necessary steps to bring about an invitation to Spain to become a party to the North Atlantic Treaty and a member of the North Atlantic Treaty Organization.

FOREIGN SERVICE ANNUITIES, S. 1287

Passed Senate June 24, 1955; passed House, amended, under suspension of rules, August 1, 1955; Senate action deferred: This bill provides for a $324 increase for about 250 retired Foreign Service officers and widows. It also makes an adjustment in some annuities similar to the cost-of-living increase already provided for a comparable group of retired civil-service employees. The bill also provides relief through grants, not exceeding $100 a month, to widows living in impoverished circumstances who are not eligible for annuities.

MEASURES REPORTED BUT NOT FINALLY ACTED UPON IN THE HOUSE

UNITED STATES NATIONAL COMMISSION FOR UNESCO, H. R. 5894

Reported July 14, 1955: Amends Public Law 565, 79th Congress, to permit acceptance by the United States National Commission of gifts or bequests of money, such gifts or bequests to be exempt from District of Columbia as well as Federal income, estate, and gift taxes.

UNITED NATIONS MEMBERSHIP, HOUSE CONCURRENT RESOLUTION 186

Reported July 12, 1955: Membership in the United Nations for Austria, Cambodia, Ceylon, Finland, Ireland, Italy, Japan, Jordan, the Republic of Korea, Laos, Libya, Nepal, Portugal, and Viet-Nam has been blocked by Soviet veto in the Security Council. It is the sense of this resolution that the United States should "exercise all possible influence in the United Nations to support these free and independent countries for membership in the United Nations."

SELECT COMMITTEE ON COMMUNIST AGGRESSION, HOUSE RESOLUTION 183

Reported June 9, 1955: Requests the Secretary of State to take action to carry out certain recommendations of the Select Committee on Communist Aggression, contained in its report made at the close of the 83d Congress.

PASSAMAQUODDY INTERNATIONAL TIDAL POWER PROJECT, SENATE JOINT RESOLUTION 12

Passed Senate June 14, 1955; reported by committee to House July 14, 1955: Not to exceed $3 million is authorized by this resolution for the purpose of making a final survey to determine the feasibility of construction of a tidal power project in Passamaquoddy Bay for the generation of hydroelectric power, its cost, and whether in the interest of national economy and national defense. A similar measure was reported favorably by the committee during the 83d Congress.

LEGISLATIVE ACTION NOT COMPLETED BY COMMITTEE

STATUS OF FORCES AGREEMENTS, HOUSE JOINT RESOLUTION 309, AND IDENTICAL AND SIMILAR RESOLUTIONS

Provides for revision of Status of Forces Agreements and certain other treaties and agreements so that "foreign countries will not have criminal jurisdiction over American Armed Forces personnel stationed within their boundaries."

The committee received testimony from 7 Members of Congress, 7 Government officials, and 5 private witnesses during hearings held on July 13, 14, 19, 20, 21, and 26, 1955. These hearings are being printed to date and will soon become available. The committee will resume hearings on House Joint Resolution 309 when the Congress reconvenes in January 1956.

Statistical record, Committee on Foreign Affairs, 84th Cong., 1st sess.

Number of consultative subcommittees		8
Number of special legislative subcommittees		3
Number of conference committees		2
Number of meetings of conference committees		2
Number of bills and joint resolutions referred to the committee		104
Number of simple and concurrent resolutions referred to committee		106
Number of bills and joint resolutions considered by the committee		28
Number of bills and joint resolutions reported favorably		19
Number of bills and joint resolutions favorably reported by committee and passed by House		17
Number of bills and joint resolutions enacted into law		14
Number of simple and concurrent resolutions considered by committee		12
Number of simple and concurrent resolutions reported and acted upon by the House		4
Number of hearings (open and executive)		112
Number of pages of printed hearings		1,988
Number of pages of reports		276
Number of witnesses		179
Number of witness appearances before committee		243
Number of meetings with Rules Committee		8
Number of committee reports:		
Reports on legislation	24	
Minority reports on legislation	2	
Conference reports	2	
Special reports	3	
Total		31
Number of messages from the President and executive communications referred to the committee		25
Number of House documents referred to the committee		15
Number of memorials and petitions referred to the committee		54
Number of reports requested from Government departments and agencies on legislation referred to the committee		46
Approximate number of pages in CONGRESSIONAL RECORD of House consideration on bills and resolutions reported by committee		250
Number of Members sponsoring measures referred to the committee		130

Time spent in sessions:

By committee: Executive, 91 hours, 9 minutes; open, 49 hours, 8 minutes.

By subcommittees: Executive, 31 hours, 18 minutes; open, 5 hours, 22 minutes.

Total: 176 hours, 57 minutes.

Approximate total authorization in measures considered by committee and passed by House and enacted into law: $3,285,930,000.

(By way of comparison, the money involved in public bills before the committee during the 73d Cong. was $102,000.)

Georgia Veterans of Foreign Wars Observe Loyalty Day

EXTENSION OF REMARKS

OF

HON. JAMES C. DAVIS

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. DAVIS of Georgia. Mr. Speaker, each year on May 1, the Veterans of Foreign Wars observe Loyalty Day. This day is set aside annually to remind the people of this great Nation that they must do more than just call themselves Americans; they must support and believe in the American way of life.

The Communist nations of the world celebrate May 1 as May Day, with massive parades, slogan shouting, and military might. Americans hope to minimize the effects of this Communist propaganda by celebrating this day as Loyalty Day.

The energetic efforts of VFW State Loyalty Day Chairman Charles A. Moran have contributed much to make Loyalty Day an outstanding event in Georgia. In a report on Loyalty Day to the 1955 Georgia VFW Encampment at Savannah, Ga., Chairman Moran points up the increasing participation of more VFW posts and auxiliaries in Georgia on Loyalty Day. The success of this program is most gratifying, and it is an exmple to the American people that through the observance of this one day, the Georgia VFW has rededicated itself to the belief of a free country, a free world and a free man.

Under leave previously granted, I attach herewith as a part of these remarks Chairman Moran's report on Loyalty Day to the department encampment:

Comrade Department Commander Roland Richardson, comrades, sisters of the auxiliary, and friends of our great VFW, it is not possible to put into 5 minutes everything that was done during the year by the Georgia Loyalty Day committee. So I will tell you what I think would be of the most interest and would serve as an incentive for more of our members to enter into the spirit of it when the time comes to help sponsor one of the most important days in the entire year—Loyalty Day, May 1.

As you know, this day has been recognized by our Federal Government at the instance of Jimmy VanZandt, a past commander in chief, a personal friend of mine, with whom I served during his 3 years as chief. Two years ago, Loyalty Day was recognized by our general assembly, through the cooperation of another Jimmy—last name Floyd, and Representative Braswell Deen.

A lot has been done and accomplished. There were various and numerous contacts

made—in person, by letters, and by telegram. In that way many organizations holding their national and State conventions in Atlanta and other parts of Georgia learned more about Loyalty Day—what it is and what it stands for. At the same time many more friends were made for the VFW. I will not list these organizations here lest we incur the envy of the State chamber of commerce. Our posts and districts were sent the customary directives from our national committee in addition to some of my own pep notes.

Again there has been an appreciable increase in those posts and auxiliaries that sponsored some sort of observance. We are happy to announce that one of the best parades in the entire VFW organization was held in Georgia by Post 5257, Stone Mountain. Post 5290, Conyers, and Post 5448, Griffin, sponsored their second parade. Post 2681, Marietta, attracted people not only from all parts of Cobb County, but had the participation of Post 7612 of Atlanta and one of the best girls' drum and bugle corps in the VFW—from Post 4421, Monroe. Post 3027, Atlanta, had a very enthusiastic meeting. Rather than not to miss it, the wife of the post quartermaster, Comrade McKenney, who has been afflicted as the result of a stroke, listened as best she could from her car. Comrades: Such a gallant heart, a patriot, can give a lesson in loyalty to those who had something else planned for that day—golf or fishing, etc. Post 8579 joined in with Stone Mountain. Post 6449, Fairburn, attracted widespread and favorable attention with its all-day vigil at the War Veterans' Monument there where members took turns standing at attention. Are there any posts who have been omitted? It is possible for mail sometimes not to reach its destination. So that our comrades and friends—and I—may see those from the posts mentioned, as they helped to make our Loyalty Day a success, I will ask that they please stand. In the name of our department and our great order we extend to you, comrades, our thanks and gratitude.

We cannot let this occasion pass without expressing our gratitude also to the press in all parts of Georgia, the radio, and the 13 TV stations, the ministers and the teachers; also to Herman Talmadge, Marvin Griffin, Ben Huiet, Marion Williamson, Ben Fortson, Jack Langford, Georgia commander of the American Legion; Judge James Davis, our Fifth District Congressman; Pete Wheeler, director, Georgia Department of Veterans' Service; our department commander, Roland Richardson; Sister Lydia Alexander, Georgia VFW Auxiliary president; Department Quartermaster Jimmy Floyd, and Past Quartermaster Kelso Hearn; Ben Mosely, manager of the Scoutorama in Atlanta; also our commander in chief, Merton Tice; AMVETS National Commander Rufus Wilson; National DAV Commander Judge English; Brother Jernick, the grand exalted ruler of the BPO Elks; the officers and members of the Georgia Press Association; and to others who were so cooperative and encouraging.

Comrades, we must exemplify militant Americanism through the medium of our Loyalty Day. We must be fired with a zeal such as that which characterized those who since the founding of our beloved country paid the supreme sacrifice while wearing the uniform, whether he be city boy or country boy, converted Yankee or Georgia Cracker, Protestant or Catholic, Jew or gentile, white or colored, God has given each an opportunity to help eradicate the malignant scourge of atheistic communism—those of us here in our great State of Georgia will do our share.

Recreation Plans Shelved by United States

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. METCALF. Mr. Speaker, one of the first directives that went out from Washington upon establishment of the Forest Service 50 years ago was that our public forests should be managed to provide the greatest good to the greatest number of people in the long run.

Today we are seeing a reversal of that historic policy as it applies to recreation, one of the multipurpose uses of these forests.

Each year more Americans spend at least part of their vacations in our national forests. Last year 40 million Americans did so. This was more than twice the total number of visits in 1946.

Last year we appropriated $1½ million for the Forest Service to operate and maintain recreational facilities, for sanitation and care of some 4,700 public-use areas, and $210,000 for wildlife management. In other words, we were willing to spend less than 4 cents per visitor on facilities first built in the CCC days and which are falling apart.

But there are also threats to our recreation areas from other directions.

The Hoover Commission task force on water resources disclaims all basic Federal responsibility for recreation, fish, and wildlife conservation. These are the responsibility of local government and private citizens, the task force said.

And the Justice Department has announced a new antirecreation policy, as is pointed out in the following article from the July 26 issue of Labor's Daily:

RECREATION PLANS SHELVED BY UNITED STATES

Conservation groups in the United States are becoming deeply concerned about the present tendency in Washington to eliminate recreation, fishing, and wildlife conservation considerations from Federal programs in the face of a mushrooming demand and growing shortage of recreation facilities in the Nation, says the Washington Window column of the Public Affairs Institute.

National park and forest facilities are now swamped, unable to handle all the skyrocketing number of visitors. Number of hunting and fishing visitors drawn to parks and forests, jumped from 5 million to 11 million between 1947 and 1953. Everywhere recreation facilities are jampacked and prospects are that demand for such facilities will grow in the next decade as never before.

In face of this situation, conservationists are concerned by such actions as these:

1. The Hoover Commission Task Force on Water Resources has disclaimed all basic Federal responsibility for recreation, fish, and wildlife conservation and similar programs. They are the responsibility of local government and private citizens, the task force reported.

PROHIBIT INUNDATION

Furthermore, the task force recommended that in the jurisdiction of all future water projects, no costs or damages be given consideration which are not "susceptive to monetary evaluation." This would exclude the inundation of a scenic area, a great river gorge or natural wildlife habitat from cost considerations. And on the benefit side of the ledger, the task force recommended that no value be allowed beyond actual sums collectible from users or contributed by nonadministering agencies.

2. The Attorney General's office has just announced, in the name of economy, that land taken for dams, reservoirs, and other Federal projects will be strictly limited "to the absolute minimum necessary for the operation and maintenance of the project."

This appears to be a slap at a policy instituted by the Tennessee Valley Authority to buy a strip of land around the border of lakes to assure access by the public, free of charge for recreation uses.

The Justice Department's announcement of the new policy on land acquisition forecasts millions of savings in land costs to the Government and observes that "development of recreational and other incidental facilities by local agencies or private individuals will be made possible without Federal expense."

The new policy of acquiring an absolute minimum of land is already in effect by agreement of construction agencies, the Justice Department announced.

SOME LANDS TO BE RETURNED

Some lands already taken for pending projects may be returned to private owners. The announcement said that Corps of Engineers has 25 projects underway in which as much as 186,000 acres—10 percent of all land involved—may be allowed to remain in private hands.

National recreation groups believe that the Federal Government should put greater emphasis, not less, on recreation programs. They point to recent growth in attendance at forests and parks and the huge jump in hunting and fishing licenses reported above.

Prospective further growth of demand for recreation facilities has been studied by Stephen Raushenbush, of the Public Affairs Institute, who foresees a further growth of 50 to 100 percent in use of facilities in the coming decade.

Population growth alone would account for some growth. But other factors are at work. Per capita income is rising, and use of recreation facilities rises with income. The present administration is predicting a 28 percent rise in total disposable income by 1960 and 52 percent by 1965. The per capita rise should be at least half of the total rise, percentagewise, and will mean a great increase in the per capita use of recreation facilities. In addition to these two factors, population increase and improved incomes, there is the prospect of shorter workweek, longer weekends and extended annual vacations due to increases in the labor force and increased productivity of all labor.

DEMANDS MAY RISE

Taking all these factors into consideration, Raushenbush reported that demand for outdoor recreation facilities "may easily be up 50 percent to 100 percent in the next 10 years."

Conservation groups point out that the recent Hoover Commission and administration actions in the recreation, fish and wildlife fields are in sharp contrast to recommendations of the Truman Water Policy Commission of 1950–51. This recommended (1) that recreational opportunities be given fullest consideration in planning all projects; (2) that water resources programs be coordinated with local, State, and regional recreational programs and (3) that projects be constructed and operated "to insure full realization for their recreational values."

Further, the Truman Commission specifically recommended:

"Suitable lands adjacent to all Federal reservoirs should be reserved and made available for public recreation use."

That recommendation is the exact opposite of the current Justice Department policy announcement.

Mr. Speaker, the Federal Government must shoulder its share of the responsibility for recreation, fish, and wildlife conservation, and similar programs regardless of what the Hoover Commission recommends or the Attorney General orders.

It is for this reason that I introduced H. R. 1823 which would—

First. Declare public recreation use of the national forests to be a policy of Congress.

Second. Earmark 10 percent of the national forests receipts each year for development, maintenance, and operation of facilities and areas for recreation use, improvement, and maintenance of wildlife habitat and provisions for adequate safety, sanitation, and health in connection with uses of the national forests. The amount so set aside shall not exceed $5½ million in any 1 year. None of the money shall be used for land acquisition.

Third. Provide that fees, already authorized, collected for use of any substantially improved recreational area where special services or facilities are provided, shall go into this special improvement fund instead of into the Treasury.

Our national forests are making money for us. Receipts in fiscal 1953 totaled $73 million. That same year Congress appropriated about $62 million for the Forest Service. So $11 million went into the Treasury from operation of our national forests. We should reinvest some of this profit in the business.

Mr. Speaker, this Nation has about as much land under concrete—in highways, streets, and parking lots—as it has in wilderness areas. If our children and their children are to get to know and love the outdoors as we do, we must act now to preserve our vanishing wilderness.

Age Reduction in Social-Security Benefits

EXTENSION OF REMARKS

OF

HON. J. HARRY McGREGOR

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. McGREGOR. Mr. Speaker, now that the 1st session of the 84th Congress is adjourning and I cannot be accused of playing politics, I want to take this opportunity to thank the Democratic majority leadership, as well as the Republican minority leadership, and the majority members, as well as the minority members, for their assistance in making it possible to give the aged people the relief I asked for when I introduced H. R. 5064 on March 18, 1955.

Especially do I appreciate the thoughtful consideration given to the subject by the members of the Ways and Means Committee. I am also grateful for the many telegrams and letters I have received from people all over the country complimenting me on the introduction of this legislation. I am certain their recommendations and suggestions to me, as well as to their Congressmen, played an important part in the granting of the age reduction from 65 to 60 years to women who desire to receive social-security benefits.

What Next in the Automobile Industry?

EXTENSION OF REMARKS

OF

HON. LOUIS C. RABAUT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. RABAUT. Mr. Speaker, today I had the pleasure of viewing an extraordinary invention in the automotive field which ultimately will save thousands of lives and millions of dollars that would ordinarily be lost in property damage. Mr. Rashid, a resident of the State I am privileged to represent, brought his radar-equipped automobile to Washington for a demonstration.

We rode around the Capitol for some time while Mr. Rashid showed us the almost unbelievable features of this vehicle. This car has a radar screen directly below the grillwork, several inches high and extending the width of the auto, which projects an impulse that is guaranteed to halt the car should anyone or anything appear in its path. Incidentally, there is a similar apparatus on the rear of the car to prevent injuring pedestrians or property while operating the car in reverse. The natural tendency of a person viewing this invention for the first time is to expect to be hurled through the windshield; however, this is not the case. The faster the car is moving the farther the radar beam is projected. If you are approaching an object at a high speed, the radar is reducing car speed before you, the driver, are actually aware of impending danger. The car will then, if not manually halted, stop before striking the object. Tests were conducted in Michigan wherein two radar-equipped cars tried unsuccessfully at 50 miles per hour to crash head-on; both stopped with ease many yards apart. Also, a car changing lanes and cutting you off in traffic will bring your radar into immediate action, thereby eliminating the possibility of a collision.

This radar does not work at less than 10 miles per hour, therefore it does not hinder parking or entering a garage, and so forth. Mr. Rashid informs me that his invention will cost no more than power-steering and will pay for itself in about 3 years if the insurance companies reduce their rates, as is anticipated, on cars containing radar.

It is indeed gratifying to know that Mr. Carl Rashid and his colleagues, who have worked so long and hard on the problems of highway accidents, have at last come up with a device that may prove the solution.

True Pledge of Allegiance to the United States

EXTENSION OF REMARKS

OF

HON. LOUIS C. RABAUT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. RABAUT. Mr. Speaker, at the request of Mr. Charles J. Weber, of the Detroit general assembly, fourth degree, Knights of Columbus, Detroit, Mich., I am submitting the following article from Dawn of July 9, 1955, a patriotic journal published by Mr. S. C. Ide, in Portland, Ind.:

TRUE PLEDGE OF ALLEGIANCE TO THE UNITED STATES

(By Most Rev. John K. Mussio, bishop of Steubenville, Ohio)

Before God, we today pledge anew our allegiance to the United States and to all for which it stands. Too long have we Americans allowed our pledge of allegiance to be but a mere formality in our lives as citizens of this great democracy. We salute the flag with little appreciation of the tremendous principles of right living for which it is a symbol. We mumble the words of the Declaration of Independence without a true understanding of what it costs in effort and sacrifice to bring its blessings to us. We live our days under the protection of the great Constitution of these United States with little or no concern whether or not men are conspiring to make its words hollow and meaningless sounds.

We are guilty of all these faults, not because we do not love America, not because we do not treasure her blessings, not because we are unconcerned with real threats to our security and preservation as a free people, but simply because we are steeped in the illusion that nothing can happen to America. To us it is unthinkable that anyone would want any other way of life than the democratic way, especially when that way has been the salvation of hungry and persecuted peoples all over the face of the world. Democracy is so much a part of our living that we find it practically impossible to imagine how life could be otherwise. And in this lies the grave threat to our security. For there are people who hate democracy as the greatest barrier to their own selfish designs for world conquest. There are those who are pushing into our American life a Trojan horse which is made to look pleasing to the American eye, but is in reality full of treachery and ruin. We all have to learn again that to preserve America we must fight for the preservation of her democratic spirit.

DEMOCRACY MUST BE KNOWN TO BE LOVED

Unless we know the principles of democracy, how can we be devoted to their preservation? Men do not die for vague theories or for meaningless catchwords. Nor do they live in loyal support to an unhonored shrine. We must know to love. And yet, although we live daily in the enjoyment of rights guaranteed us by the Constitution, few of us know anything about that Constitution. Do you know the Constitution of the United

States? Are you acquainted with the Declaration of Independence?

Our schools are extremely lax in their insistence upon a firm and sound understanding of the basic principles of true Americanism. We fail to see the truth that unless we know the principles of American democracy, we can hardly know when they are being attacked. As a result we are doing things daily that weaken our democratic way of life. It is appalling how easily we will give to anyone who promises much the very custodianship of our most hallowed rights. Any appeal to our selfishness will give to a shrewd conspirator an authority which could crush us; a tongue that knows the language of class hatred and religious bigotry can sway our people to practice real tyranny under the guise of democracy.

AMERICA IS HER PEOPLE

We have in America today shameful examples of the abuse of authority, a setting aside of human rights, the practice of political absolutism unequaled in our history. We see daily the spectacle of men glutting themselves at the expense of social justice, national security, and moral principles. We see Americans ready to barter their vote or too lazy to exercise it. We rub shoulders daily with men who are ready to chisel, lie, steal, betray, and kill without any moral scruples whatsoever, their only fear being one of detection. America cannot long survive if she must be nourished from such a soil. America was born in the spirit of God-fearing men; in that spirit alone can she endure.

We must remember that we cannot hold on to liberty if we do not value it for what it is worth; we will not have America unless we want what America stands for. America is not an official's desk, not a congress, not a state. America is her people. The preamble of the Constitution of the United States opens with the words "We the people of the United States." It is a government of the people, not of the States. President Monroe said: "The people, the highest authority known to our system, from whom all our institutions spring, and on whom they depend, formed it."

Patrick Henry exclaimed in truth: "Its language, 'We the people,' is the institution of one great, consolidated, National Government of the people of all the States, instead of a Government by compact with the States for its agents."

FIDELITY TO FREEDOM'S HIGHEST PRINCIPLES

It is our Government and will be Government as long as we cherish its great character of human liberties. No matter what may happen over the face of the world, America will always remain the great beacon of hope and freedom to everyone as long as we are a people who love freedom, think of freedom, are ready to fight for freedom, and daily live a life in fidelity to freedom's highest principles. We are worthy of America only as long as we are true sons of all for which she stands.

How well are we fulfilling our great trust? Certainly we have been asleep. If we do not soon awaken to our danger, we will never again awaken to the American scene as we have always known it. What has been going on? Well, we have allowed writers and speakers to pooh-pooh our pledges of loyalty; we have had our national heroes ridiculed and called thieves, bumpkins, and louts. We have watched men, under the exaggerated privilege of freedom of speech, preach against America, inveigh against her most sacred institutions, and advocate theories which are diametrically opposed to our democratic way of life. We have exposed our children to this diabolical drivel on the grounds that this is the only way to practice liberty.

ENEMIES IN OUR MIDST AFFECTING PUBLIC OPINION

As a result, our enemies are soundly entrenched in our schools, our universities, and in every channel which affects public opinion. Our courts have been made a laughing stock by these fifth columnists, and at this very time they are using our courts with a contempt designed to show their contempt for everything American. They stretch our protection of rights to a breaking point that might actually ruin America. In fact they are using America to break America. And we stand by, meekly watching men who are selling America down the river take the key places in our literary and dramatic fields, in the movies, the radio, in labor, and in politics—men boasting of their dislike for things American by supporting everything that is un-American—and still we sit by as casual onlookers. We have seen these people maneuvering American policy so that it would seem to oppose the just claims of minorities.

DEMOCRACY OR TOTALITARIANISM?

Having thus set the stage, these troublemakers would then rush in to protect the rights of the minorities in the name of justice, would pit this class against that class, thus paving the way for their own access to power. We find labor organizations shot through with these agitators, whose one purpose, as in Italy and France, is to cripple our economic system. We find the greatest success of our enemies in spreading the doctrine of secularism among our people, among a people who have always been godly and of strong moral fiber.

How they are succeeding need not be told here. The sordid records of the divorce courts, of the juvenile delinquency case histories, the tragedy of broken homes, wandering families, of the cheap price put on human life, the old heads on young children, the disrespect for authority, the contempt for law, the chiseling among those in authority, the lack of honor among the citizenry—all of this is the shame of America, the open sores of her secularist spirit. We have let this un-American spirit run God out of our schools. We have let professors under the guise of academic freedom preach Marxism and all it stands for to young men in whose hands lie the future of our democracy. We have allowed anyone to say anything at any time against America, her ideals, and her leaders, without any consideration whatsoever of that higher right America possesses against such defamers to preserve her integrity and her very existence.

Does America admit the freedom to overthrow her? If so, then our patriots of old were certainly wrong—and fools to boot—when they took up arms to fight off oppression and tyranny and rebellion. Are we ready to allow our children to be trained in the doctrine that totalitarianism is better than our great democracy? Are we? Then, why are we permitting it? What can we expect for the next generation if we of this are so negligent in protecting our great heritage? We today can doom America if, no matter how much we profess our love of democracy, we do nothing to insure its perpetuation in the hearts and minds of our children. Are we to be those who go down in history making Benedict Arnold a tyro in the business of betrayal? Shall we be branded as the tools who let our spiritual heritage go to pieces because we were too taken up filling our bellies with the things of our own desires?

DENOUNCE MEN WHO DENOUNCE AMERICA

We will do and be all this unless we look around and spot the thieves who have been and are carrying our treasures to the dump heap. It is not enough to talk about something being done by someone else; it is imperative that we ourselves do that something. And if we feel that we cannot, as individuals, do something, then already we have lost the American spirit. We have despaired of our opportunity assured us under this democratic way of life; we seem to have confirmed the truth of the charge of recent dictators that we are all washed out as a democracy.

It is time for us to make our pledges of loyalty talk, not in words, but in action. It is time we denounce men who denounce America. It is time we refuse to support men who refuse to support America. It is time we close our pockets to those who open their pockets to the enemies of this great country of ours. It is time we vote solidly against men whose loyalty to America is suspect. It is time we give to our courts the high respect they deserve to our laws the reverence that is theirs, to our leaders the support they must have. It is time that we understand our right arm of defense is a strong FBI, and that our internal security lies in those other great agencies set up to insure the security of America.

We should see in unreasonable attacks against these great agencies the first attack against the first-line defenses of our Nation. It is time we fine-comb our schools, and, even if there is a teacher shortage, throw out every teacher who is not an American at heart. We can do without the kind of education that trains in deceit and sabotage, in treachery and betrayal, and disloyalty. The only school that is American is one that trains children to love America as the truest expression of man's dignity as a human being, of his rights as a citizen, of his destiny as a force for peace.

THROW OUT THE CRACKPOTS

It is time we get rid of the idiotic notion that our universities are sounding boards for every crackpot who lands on these shores. If the universities do not teach truth then they are false to their very reason for existence. And if the universities are teaching godlessness, materialism, and Marxism, they are rotten to the core and giving actual support to the enemies of the state. It is time, too, that we cease making best sellers out of immoral books, that we cease giving accolades to movies which trade on sex appeal and crime, cease tuning in on radio programs whose ideas weaken, cheapen, and destroy the idealism which has inspired the first beginnings of our country.

If we condemn those in Germany and Japan for broadcasting lies about our democratic system, why should we spare those here at home who are doing the same thing? We are not going to save America and things American by timid half-measures, by fear and stupid kow-towing to big names that mask men who are ready to sell America to anyone who meets their price. It is time we understand that our enemies are out to destroy, and will destroy, if their hatred of America is not met by the greater force of our love for things American. It is time we stop expecting the President, the Congress, and J. Edgar Hoover, or this or that agency, to do this battle singlehanded. They can do nothing, unless you are aroused and determined to save America. For you are America. She will stand or fall according to the price you put upon her basic rights and privileges. What America stands for is what you stand for.

STAND UP AND BE COUNTED

It is time we wake up and realize that the hand stretched out to crush our spirit is the hand stretched out to kill America. When we see religious groups pitted one against the other, when religious leaders are sucked into the camp of the enemy, when God is banned from our schools, and the existence of the soul branded a fable by men in the public employ as professors; when morality is sneered at, and patriotism looked upon as fit only for fools, then we can see how far

we have allowed the destroyer to invade the sanctuary of our spirit. It is time to wake up, Americans; time to realize that we are being softened up for the knockout blow. If America is not worthy of a terrific effort on our part for her preservation, then none of us deserves America.

RIGHTS UNDER GOD IN AMERICA

Keep this clear in your mind: Anyone who tells you that God has no right in America is telling that you have no rights under God. And, if we have no rights under God, then America has no purpose of existence. For America is all that she is simply because she recognizes our rights under God, and guarantees that no man or group of men, no state or group of states, shall rob us of this high estate. This is America, recognizing our dignity as sons of God, our rights as citizens endowed with the freedom of heaven, our privileges as loyal and dutiful members of this great democracy. God grant we may never fail America by failing her principles of true citizenship and of the innate dignity of the individual whose roots are in the divine decree.

We Catholics in company with our non-Catholic neighbors, patriotism is a religious duty placed upon us by the fourth commandment. We as citizens have an obligation in conscience to love our country, for to that country we owe our protection and the opportunity to promote the common interests handed down to us by our forefathers.

We are bound to show that love of our country by furthering its welfare and by living in harmony with our fellow citizens. And we must especially beware of prejudicing the common good in favor of some particular class or clique. We are, moreover, bound to have respect for authority. The contumelious treatment of one in authority is gravely sinful, especially when it occurs in public; and, furthermore, when it occurs in his very presence.

VOTING IS A CIVIC DUTY

Then, there is the duty incumbent upon us of electing good representatives. Voting is a civic duty, and this is a serious charge upon us when our refusal to vote might result in the election of an unworthy candidate. Again, under this great commandment, we are bound to be loyal to lawfully constituted authority and to obey all law in general. This is not a matter of personal like or dislike, but, rather a duty imposed upon us by our Catholic faith.

From the gradual disregard for the observance of these religious principles of respect for authority and love for country, America has suffered. Unless we are convinced that our obligation to patriotism, and to loyalty, and to obedience, stems from God, we are very liable to begin bargaining within ourselves and to weigh off our own personal profit against the common good. For, if it is a case simply of man against man, or against a group of men, then the individual will calculate for his own profit and security.

RELIGION, MORALITY, DEMOCRACY

The further men move from God and His principles, the worse it will be for America. Our forefathers acknowledged the supremacy of God and the inalienable character of those rights flowing from God. They knew that the basic principles of liberty and justice for all are rooted in God and that without Him they have no meaning. Religion and morality are indispensable to the continuance of America as a truly great democracy. When, therefore, our people give up God for anything else, they are simply declaring that they will serve no one but themselves. And, if they will not serve God, they will not serve America. Our people without God would be a people reading the death warrant to real American freedom.

LOVE OF COUNTRY OBLIGATION IN CONSCIENCE

We Catholics are bound in conscience to love America, to cherish her institutions, to love our fellowmen and to respect them in their way of life, to exert every force in our power to resist the encroachment of any group that might try to monopolize the scene, and we are bound in conscience not to so violate the American scheme of things. We must, moreover, have respect for lawfully constituted authority, obey our leaders when they act within the scope of their high office, take up arms against every threat to our country, weed out plotters, hate rebellion and treachery and disloyalty as sins against God.

We are bound in conscience to protect unto the death the principles that make up the spiritual heritage of America. The defense of America is the true exemplification of the high principles of brotherhood, for we but show a readiness to lay down our lives, not only for our own, but also for our neighbor's right to profess God-given principles, to practice God-given commandments, and to live God-ordered lives. This is America and always will be America. There is no other pattern of life that can bear this trademark.

How well does the great patriot Abraham Lincoln sum up our duty in these words: "Let every American, every lover of liberty, every well-wisher to his posterity, swear by the blood of the Revolution never to violate in the least particular the laws of the country, and never to tolerate their violation by others. As the patriots of '76 did to the support of the Declaration of Independence, so to the support of the Constitution and laws let every American pledge his life, his property, and his sacred honor. Let every man remember that to violate the law is to trample on the blood of his father, and to tear the charter of his own and his children's liberty."

CATHOLICS TREASURE AMERICAN WAY OF LIFE

We Catholics, and I am sure I speak for all real patriots, are eternally grateful that we have been given a place in this great scheme of common living; we treasure the American way of life, for it has been for us, as for others, the rich soil in which our religious faith has been free to flourish. We want nothing more than to live in peace with our fellowmen. We pray God that we may so fully live our Catholic faith that our neighbors will have the confidence born of truth that we would not as Catholics do anything to deprive others of even the slightest particle of their full rights as American citizens. Indeed, we will fight to the last ditch for our rights under our great Constitution and we will fight equally as hard and vehemently to secure these same rights for our fellowmen.

A GOOD CATHOLIC, A GOOD AMERICAN

This is our word to all our non-Catholic neighbors. We pledge ourselves in this manner before the altar of God. A good Catholic must of necessity be a good American. We swear our allegiance in the name of Mary, under whose patronage this great country of ours is placed.

Do not listen to the enemies of America, as to what we mean or intend to seek, but, rather, listen to us, who were born among you, reared with you, who have received with you our blessings from the same common font, and whose beloved are buried in the same home soil. Listen to us, for it is time that we knew each other from first-hand knowledge, and not from the pens and tongues of men who are dedicated to destroy America by pitting her people, man against man, class against class, religious group against religious group. It is time that we really be neighbors in the Christian sense, that we live as neighbors, and have trust one for the other. This is the American way; this is God's way.

SERVICE TO GOD IS SERVICE TO COUNTRY

Get down on your knees, America. You will never know what to defend and what to attack; you will never understand what is good and what is bad; you will never know zeal from fanaticism, justice from tyranny, loyalty from betrayal, unless you know your God and love Him and serve Him. In your faithful service to Him is guaranteed your service to the imperishable truths which make you a beacon of hope to the oppressed in every land.

Only God-fearing men can guarantee to America her greatness, her survival, and her continued blessings for the generations to come. For America found her birth in the vision and dedicated efforts of men who worshipped God in humility and subjection. And America can live on only in that same spirit which stamps upon our daily life words "In God we trust." May He be with you all and may we, who love America, give to Him that honor and glory which make our patriotism a living and fruitful service to American freedom.

An Exchange of Notes Between the Late Justice Rutledge and Col. Heber Rice, of Chevy Chase, Md.

EXTENSION OF REMARKS
OF
HON. DeWITT S. HYDE
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. HYDE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article contained in the June 1955 issue of the Federal Bar News:

PRESENTATION OF THE JUSTICE RUTLEDGE PORTRAIT

The late Associate Justice Wiley B. Rutledge, of the United States Supreme Court, was not only recognized as an outstanding jurist but is also remembered for his gracious kindness to his friends and his disposition to spread cheer and extend a welcome to his acquaintances. Such fine attributes were referred to in the recent presentation of his excellent portrait to the United States Supreme Court by Prof. Philip Mechem, of the University of Pennsylvania Law School, and its acceptance by Hon. Earl Warren, Chief Justice of the United States. These qualities, along with his sense of humor, are illustrated by the following exchange of notes at the Supreme Court on April 19, 1949, between the Justice and his good friend, Heber H. Rice, of the Federal Bar Association, then just out of the hospital and who was seated in the lawyers' panel of the Court:

"DEAR MR. JUSTICE RUTLEDGE: When asked by a friend if I were the Herbert Rice who featured in yesterday's Supreme Court decision and who was reported to have received a Reno divorce from his first wife and died intestate, my reply was in the negative, because I am happily married, with no divorce, and that recently I was merely in the hospital but did not die, and am now out, feeling about as good as new.

"Most sincerely,

"HEBER RICE."

(Reply by Justice Rutledge:)

"Colonel Rice, I am especially glad to see you here today; and, may I add, looking fit as a fiddle. Your note reminds me of Mark

Twain, who, however, was never accused of securing a divorce or having a common-law wife, to my knowledge.

"I trust, now that all these rumors are corrected, that Mrs. Rice will keep you wholly in the straight and narrow path and complete enjoyment of your fine recovery.

"Mrs. Rutledge would join me in happy regards to both of you.

"WILEY RUTLEDGE."

The South Gets a Sample of What the North Has Been Taking

EXTENSION OF REMARKS
OF
CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. HOFFMAN of Michigan. Mr. Speaker, in the late 1930's from the well of the House, I called the attention of my Southern colleagues to the violence in connection with the sit-down and other strikes in Michigan.

At that time, the Honorable John Rankin, always an outstanding proponent of civil rights and constitutional government, in a somewhat delicate way intimated that we from Michigan should take care of our own labor troubles or, as some at that time put it, wash our dirty linen in private. While that was a good suggestion, sometimes it just cannot be done if a deplorable situation is to be remedied.

Our colleague from Mississippi also suggested that the people of the South never would submit to being plagued and pushed around by lawless elements, even though they were supported by labor organizations.

The First Congressional District of Mississippi, as well as the State and the Nation at large, lost a very able, active, patriotic, incorruptible Representative when, through redistricting, the gentleman from the First Congressional District was legislated out of office. We have missed him. Not only his ready wit, his entertaining remarks, but his always effective, vigorous battle for constitutional government.

It is with regret that I note that the goons have hit his hometown of Tupelo.

One of his Southern colleagues sent over to my office a few excerpts from Southern papers which give some idea of what is now happening in the South. As supplementing my talk of today, permit me to quote:

[From the Tupelo (Miss.) Daily Journal of March 23, 1955]

FROM HEROISM TO VANDALISM IN 19 YEARS

Nineteen years ago when one of the Nation's most destructive tornadoes struck Tupelo, telephone operators and repairmen were among the great unsung heroes of the disaster.

But Monday when tornadic winds returned and muddy floodwaters rolled knee deep through Tupelo homes, there was a black void in this field of public service.

Where in 1936 there had been courage, initiative, and a dedications to duty which won the admiration of the whole Mid-South, some of the phone strikers Monday displayed an attitude which could only be described by four words "The public be damned."

Idle workmen stood around with smirks on their faces while supervisory personnel strived desperately to restore lines damaged by the tornado.

And then in almost unbelievable acts of hoodlumism, men who knew exactly what they were doing reached high up on phone poles with special shears and cut the lines over which messages of reassurance were flowing out to relatives of Tupeloans made frantic by wild reports of damaged homes and personal injury.

While women pleaded in tears to get through calls to their loved ones, men who knew where to locate the long distance lines connecting Tupelo with the outside world cut in a dozen places the cables that could have relieved anxiety in hundreds of homes.

What has happened during these last 19 years to turn jobs that once produced heroes into jobs that now produce an attitude that loudly shouts "The public be damned"?

What has happened to turn phone crews who once worked around the clock to repair storm damage into groups which the public suspects of cutting wires at the height of frantic efforts to relieve the fear and anxiety caused by wild rumors of tornado damage?

The answer is that a union has come to town.

And workers once dedicated to serving the public are now dedicated to serving the union.

We have a feeling that, even so, the typical telephone worker in this area isn't too proud of his union today.

Most of the workers, we believe, abhor acts of hoodlumism like cutting wires and otherwise damaging property.

And most, we are sure, would have been far happier pitching in to help with Monday's tornado emergency than sitting back with a public-be-damned attitude while a whole town was torn by wild rumors, fear, and anxiety.

But during the 19 years since our community's last great emergency, union domination has replaced the old creed of public service.

And that change made the difference Monday between public servants of which our community could be proud and strikers for whom the public had little but harsh words of condemnation.

We don't know that the 1936 version of dedication to public service can ever be restored.

Maybe times have changed and people may now consider outmoded the idea of putting service to others ahead of service to self.

But if so, Tupelo—and any other community experiencing a similar change—has lost one of the most essential ingredients of happy living.

For what joy can there be in telling one's grandchildren:

"In the big flood and tornado of 1955 I was a member of the group which stole around under cover of darkness cutting phone lines to isolate our town from the outside world. While others strived to restore service to a frantic community, I stood by and laughed at their efforts. I was a hero to my union—but a failure to my community."

If that is the attitude the Communication Works or America propose to develop among Tupelo men and women who have inherited a tradition of service and heroism in times of crisis, we have no use for their aims.

We feel a sense of deep appreciation to the supervisory personnel who are so admirably upholding the tradition of dedicated public service that in 1936 won widespread acclaim for Tupelo phone workers.

But we feel only disappointment and disgust over the public-be-damned attitude which has been introduced into our community by property-damaging vandals who can think only of themselves even in times of strain and anxiety among their friends and neighbors.

DYNAMITE USED, DAMAGE IS $100,000—TEACHER, SON ESCAPE INJURY IN TRAILER

A dynamite blast last night demolished the dial telephone exchange at Greenback, knocking out approximately 480 telephones in sections of Blount and Loudon Counties.

Group Manager C. R. Mott, Jr., said today that all equipment in the building, and the building itself, will have to be replaced. He estimated damage at between $90,000 and $100,000.

Mrs. Nina Strater, a Greenback schoolteacher, and her 12-year-old son, Billy, who live in a house trailer about 25 feet away from the exchange building, escaped injury in the explosion. They had gone to bed shortly before the blast which occurred about 10:15 p. m.

Asbestos shingles which covered the frame exchange building, were scattered all over the telephone company property, and some of the shingles hit the house trailer. However, the trailer was not damaged. The door of the exchange building was blasted into the roadway.

The Greenback exchange building is located just off Highway 411, on the south side of the Greenback road.

Mott stated today that none of the equipment in the building can be repaired for further use. The building itself, although still standing, is badly bulged out on all sides. Some shingles on the roof are also torn loose.

Under good conditions, said the group manager, it would take at least 30 days to get the Greenback exchange back into operation. He said the company will aim at a 30-day period. In the meantime, the only telephone service that will be available will be in pay stations in the area. They will be tied into toll circuits connecting Maryville and Greenback. Greenback, Brick Mill, and Lanier communities are all served by the exchange.

Mott stated that an extra lock had been placed on the door of the building. That lock was broken off, and the regular lock appeared to have been opened with a key, said Mott. Whoever set the charge in the building locked the regular lock again when he left the building, Mott added.

Sgt. James Waldrop, of the Tennessee Highway Patrol, went to Greenback following the explosion. Police were reportedly alerted to be on the lookout for a black coupe which was at the exchange building shortly before the blast.

At the scene this morning many spectators still milled about the building. Several were Aluminum Co. employees, union members, who expressed regrets over the blast.

"It makes it look awful bad on the union when something like this happens," said one man who stated he was a member of the union.

Several remarked that it is a wonder Mrs. Strater and her son were not injured in the explosion.

In Maryville last night a crowd of approximately 100 men gathered near the telephone exchange building. Mott stated that company legal officials are investigating the incident to see if it violated the injunction imposed last April 2. There was no violence at the Maryville exchange.

[From the Aberdeen (Miss.) Examiner of April 14, 1955]

VIOLENCE BREAKS OUT HERE AS PHONE STRIKE CONTINUES—BELL EMPLOYEES ARE BEATEN ON STREET TUESDAY NIGHT—FIRST ABERDEEN OUTBREAK

Terrorizing mob violence erupted here Tuesday night when two Southern Bell Tele-

phone Co. employees were beaten as tension mounted in the month-old strike.

O. T. Robinson, a 40-year-old telephone company supervisor from Jackson, Miss., was severely beaten.

Mrs. Mae Gill, 28, Aberdeen, was bruised by blows from the mob.

Robinson and George Boardman, Atlanta, Ga., telephone company officials, were accompanying Mrs. Gill home when they were attacked by 20 to 25 persons on South Hickory near the post-office building.

Both Robinson and Boardman are supervisory employees for the phone company and have been working here since the strike began a month ago.

Mrs. Gill had been working at the phone company office here for about a week as a nonunion employee. Boardman wasn't injured by the mob.

Robinson was confined to the Monroe County Clinic, Wednesday with a fractured face bone, multiple lacerations and bruises.

Mrs. Gill was treated by a private physician for bruises and shock.

L. C. Parker, telephone company official, said Wednesday that the company plans a full scale investigation of the beatings.

He said the company had asked the cooperation of County Attorney William S. Turner.

Mayor Walton Bright said city police also would investigate the violence, first here since the strike began.

So far, police have made no arrests in connection with the incident.

Robinson, Boardman, and Mrs. Gill left the phone company office at 6 p. m. Tuesday and went to Nick's Cafe to eat.

The telephone company announced Wednesday night that it had no intention of closing the Aberdeen office because of Tuesday night's incident. A company official said a 24-hour guard would be maintained at the office here to protect employees from any violence.

They were attacked as they walked near the post-office building. Mrs. Gill lives on South Hickory.

It could not be determined Wednesday if Mrs. Gill or Robinson could identify any of their assailants.

Saturday night several hundred persons, mostly union workers from this area, gathered in front of the telephone office hurled eggs and yelled at Mrs. Gill when she left the phone company office with Robinson after completing work.

Large crowds began to gather in front of the phone company office nightly after several nonunion employees were hired by the company.

[From the Birmingham (Ala.) Alabama News Magazine of May 6, 1955]

PATH TO UNPOPULARITY

With homes being bombed, trains wrecked, bridges burned, telephone exchanges dynamited, and cables slashed, the campaign of terror and violence in the strikes against Southern Bell Telephone Co. and L. & N. Railroad is daily becoming more indecent and intolerable. The public patience has reached the saturation point.

Governor Clement, of Tennessee (who rates, incidentally, as one of the South's leading liberals), has provided rewards totaling $100,000 for the arrest and conviction of the goons who are perpetrating the rampant lawlessness in his State.

In Alabama no such forthright action to quell the continuing outrages and uphold the dignity of the law has come from our State government. Instead, the Governor has made a personal appearance before a CIO convention and thundered words of encouragement to union leaders promoting the strikes and whose national organization is financing one of them to the tune of $1,250,000.

"I have just returned from Atlanta, where I tried to help the workers, but I wasn't too successful," Governor Folsom told the labor delegates. Thus, the chief executive of this State openly admits that he attended the recent governors' conference not as a representative of the public but as a partisan and a spokesman for one side in a labor dispute.

Another public official who addressed the CIO'ers in similar fashion was Senator E. W. Skidmore, of Tuscaloosa, a bitter opponent of Alabama's right-to-work bill. He had accompanied the Governor on the Georgia trip. Without the slightest reference to the unprecedented wave of violence now jeopardizing life and property in Alabama, he denounced the telephone and railroad officials who participated in the governors' conference. Then he took another whack at the right-to-work law which swept through the 1953 legislature by top-heavy majorities, describing it as "the blackest page since the reconstruction act was written."

The ill-advised remarks of the Governor and the senator drew heavy applause from the CIO delegates. But when their statements appeared in the press we doubt that the great majority of Alabama citizens were in a mood for handclapping Beyond doubt, the people are in frame of mind to approve this comment by the Atlanta Constitution (of which Ralph McGill, a recognized liberal, is editor):

"The people * * * wonder whether the L. & N. employees and the telephone workers put themselves above the law. It should be significant that the Taft-Hartley law was not amended chiefly because too many union members didn't want it amended.

"It is folly to suggest that strikers are not carrying out this violence, or having it done by their friends. Of course, they are.

"The American people are being shoved along the road toward more and more antilabor legislation by the violence and destruction of property in both of these poorly explained strikes. In the telephone strike, for example, almost as many persons have gone back to work as there are idle employers.

"Are a few union leaders, who called what seems to be an unpopular strike, determined to have their way by intimidation and violence? If so, the people are likely to rise against them."

Far more likely to win popular approval than the statements of Governor Folsom and Senator Skidmore is the comment of Montgomery's afternoon newspaper, the Journal. It asserts the Governor has offended public decency by "consorting with law violators and encouraging them in their lawlessness instead of lining up on the side of law and order."

And a vast segment of the State's population doubtless agrees also with the Mobile Press, which declares:

"As we recall it, Governor Folsom said nothing in his campaign about letting violent elements take over the State. * * * Yet in recent weeks there has been one violent incident after another. * * *Jefferson County's Sheriff Holt McDowell sometime ago requested National Guard troops to quell violence, but the State's chief executive refused. Such inaction on the part of the Governor in a crisis like this is shameful and inexcusable. What greater obligation does a governor have to his people than that of protecting them from lawlessness?

"The Governor is risking alienation of general support over the State and placing Alabama in a sorry position to attract new industries."

In his campaign and subsequently, the Governor promised repeatedly to represent all elements of the State and to launch a wide-scale drive to promote industrial development. He pledged that the public policies of the State would create a friendly climate for new plants and payrolls so sorely needed. In the light of those commitments, the Governor's recent acts and statements have been most disquieting. Unless he alters his apparent course and sets about making good on his promises, there is grave danger that basic harm will be done the State. If he wants to kiss his development program goodby and let himself in for 4 years of unprecedented unpopularity, about all he needs to do is to continue down the path he has been following recently.

[From the Montgomery (Ala.) Advertiser of May 4, 1955]

BIG JIM FOLSOM, CAPTAIN OF INDUSTRY

Folsom has reverted to type, as was inevitable. After a fling in the role of the new Folsom, complete with socks and overtures to new industries for Alabama, he's back where he was 8 years ago, baiting the gotrocks.

Now he wants the legislature to give him the right to seize Southern Bell, and any other strikebound industry. He can't claim public necessity, because telephone service has not been seriously hampered. As we read him, he claims a moral right to seizure because:

Southern Bell is a big corporation, and hence fair game.

He's mad at the telephone company because its workers are on strike.

Even President Truman, when he seized the steel industry in 1952, claimed that the action was in the public interest: to provide a free flow of steel for defense needs and to prevent a disruption of the economy. Folsom eschews such circuitous reasoning. To him it's simple: "When a corporation gets as all powerful as A. T. & T. it should become some sort of public corporation." And he would become some sort of public vice president in charge of settling the strike by turning the company over to the strikers.

It is inconceivable that the Alabama legislature would be so foolhardy as to make Folsom, or any other governor, a captain of all industry in this State. Still the damage has been done by the threat to claim such authority. Any industry that might have been contemplating moving to Alabama would hardly dare now. Whatever success Folsom might have had in allaying fears by all that sweet talk about attracting new industry in now dead and done.

The best answer to Folsom's request for an absolute monarchy over industrial Alabama was given by Justice Jackson in 1952 when the Supreme Court, by a vote of 6 to 3 (the majority including Alabama's Justice Hugo Black), invalidated Truman's order to seize the steel industry. Jackson said:

"Such power either has no beginning or it has no end. If it exists, it need submit to no legal restraint. I am not alarmed that it would plunge us straightway into dictatorship, but it is at least a step in that wrong direction."

[From the Brewton (Ala.) Standard of May 5, 1955]

PHONY ARM WAVING

There is a good bit of phony arm waving going on in 2 seats of Government, 1 State and 1 Federal.

In Montgomery, Governor Folsom has decided that the best way to settle the Southern Bell Telephone strike is to take over the phone company. This would be a convenient way to bail out the Communications Workers Union, but it would not settle the strike. The fact is that telephone service has been good, if not normal, throughout the strike, even where there are no dial systems.

The unions would be delighted to "run home to momma" in this particular strike. Previously, they could depend on an emergency order of some kind from the White

House to rescue them when the going got tough. Now, President Eisenhower has said he is perfectly willing to let the collective-bargaining laws of the Nation function in a normal manner.

Having to stand on its own feet is not nearly so pleasant as letting the Government settle strikes, the union has found.

Governor Folsom's idea is lacking in logic or legality. The State, in one fashion or another, regulates almost every business. Is Big Jim ready to join King Louis of France in declaring that he is the state?

At the other extreme is the cry for Federal control of Salk antipolio vaccine. A majority of Americans probably will be more willing to trust the family doctor for advice on the vaccine than to accept the decision of some newly formed bureau created for the purpose.

Less, not more, government is the answer to many problems.

[From the Knoxville (Tenn.) Journal of May 7, 1955]

PUBLIC WILL HOLD UNION RESPONSIBLE FOR HOOLIGANISM NO MATTER HOW MUCH IT VIOLATES ATTITUDE OF LEADERSHIP

Night before last a second nonstriking telephone employee got a pointed reminder of the fanaticism which possesses some of her former fellow workers or their sympathizers. A rifle bullet crashed into her home on Columbia Avenue, only inches from her head.

The night before, the home of another nonstriking employee was fired into by some thug with a shotgun. The grandmother at the house happened to be nearest to the charge and might have well been killed.

This kind of thing represents unionism at its very worst. We know that it doesn't represent the feeling or the wishes of any but a handful of fanatics in the CWA, of all the thousands who are on strike.

But, the CWA leadership must keep in mind that, however the acts of hooliganism noted above may violate the attitude of a majority of its members, and however strong the public statements the leaders themselves make against vandalism, the public holds the union responsible for the acts of his members and sympathizers.

If a man keeps a dog that bites he must regard himself both morally and legally responsible for its behavior.

A union card is not, in the judgment of a majority of the citizens of this country, a license to commit crimes which the ordinary, or nonunion, citizen must pay the law a penalty for committing.

Furthermore, a majority of United States citizens hold that the right of the union member of belonging to the union of his choice is not in anyway less sacred than the right of the citizen to not join a union at all, if that is the way he or she wants to work.

A Session-End Review of Klein Mission Report

EXTENSION OF REMARKS

OF

HON. THOMAS J. DODD

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. DODD. Mr. Speaker, 2 events—1 recently passed and 1 to occur shortly—move me to these remarks today. The event recently passed is the summit meeting of the national leaders of the United States, Great Britain, France, and the Soviet Union in Geneva, a meeting much in the minds and prayers of the peoples of the world who share a common desire to live in peace. The event in the immediate offing is the adjournment of the Congress which, as has been the custom in recent years, will be followed by visits of many of our colleagues abroad on study missions and other congressional business.

Late last year Gen. Julius Klein, of Chicago, served as a consultant to the Committee on Appropriations and to the Subcommittee of the Armed Forces Committee on Appropriations of the United States Senate. In that capacity, and without pay or reimbursement for his expenses, General Klein made a survey of the general political situation in most of the West European countries and prepared a detailed report on his findings, accompanied by a series of excellent and worthwhile recommendations.

His report, which received wide acclaim in the Nation's press, was published early this January.

A few months ago, five Members of the other body from both parties—Senators BRIDGES, HUMPHREY, KEFAUVER, SYMINGTON, and WILEY [1]—discussed the Klein report and its recommendations at great length. In addition to praising the selfless work of General Klein and the service he rendered his country, they remarked on the technical proficiency of the report and those of its recommendations which have already been put into effect.

Now, it is too early to attempt an evaluation of the results of the summit conference in Geneva. Many reports were colored, some of them were influenced by the wishful thinking of correspondents who reflected the peoples' yearning for peace and security, while others mirrored the pessimism of those who have seen too many international conferences produce no more than an avalanche of words and victories only on the propaganda battlefront.

I hold, Mr. Speaker, that we can perform our duties only as effectively as our information is accurate and reliable. It behooves us, therefore, as many of us travel abroad, to widen our knowledge to the best of our ability. And may I suggest to my honorable colleagues that in their quest for this type of knowledge the report on General Klein's European mission is an excellent guide. His statements are well documented with facts backed up by several decades of first-hand knowledge in international affairs, military matters, and politics.

Perhaps the best yardstick of the value of this report lies in the batting average as it applies to how many of the Klein recommendations have been put into effect. While some of these recommendations may well have been realized in any event, nevertheless, the value of such a study as the Klein report can be evaluated from its success—and the use to which it still must be put.

I am a Democrat, General Klein is a Republican. While we do not share the same political affiliation and disagree on some issues, I find myself in the same position as Senators HUMPHREY, KEFAUVER, and SYMINGTON in recognizing the merit and value of General Klein's work.

With the imminent conclusion of this 1st session of the 84th Congress, I believe it would be well to review here the ultimate disposition of the recommendations of General Klein, which were first published as we gathered here for the convening of this Congress.

Recommendation 1:

That Congress maintain in Europe a professional staff of modest size * * * to study and observe the administrative aspects of American programs in Europe and report to appropriate congressional committees at times when pertinent legislation is being considered.

Development: Widespread favorable comment in newspapers and official circles. Members of Congress on survey trips, made more aware of the handicaps involved in obtaining a maximum of information during brief visits, are considered likely to revive consideration of this recommendation

Recommendation 2:

That an official on the cabinet level be designated * * * to achieve a more effective and economical alinement of our diplomatic and administrative agencies overseas.

Development: President Eisenhower has designated the Honorable Joseph W. Dodge as the top-level official to coordinate American policy overseas.

Recommendations 3:

(a) That we redefine, especially for governments of foreign countries, the functions and responsibilities of our ambassadors, reinvesting these officials with the authority they should properly exercise. * * * (b) That we broaden the jurisdiction of our ambassadors and provide them with the necessary staffs to permit them to assume actual authority for cultural, economic, informational activities now being carried on in countries where they are stationed by other agencies.

Development: Following his Latin-American tour, Vice President NIXON concurred in this recommendation. The dissolution of the Foreign Operations Administration, with assumption of its functions by a newly-created agency within the Department of State, its concrete progress in the direction of this recommendation.

Recommendation 4:

To increase our diplomatic effectiveness abroad and to develop an adequate reservoir of skilled personnel for our Foreign Services requires that * * * (a) consideration be given to a reevaluation of existing salary levels * * * (b) in such fields as economic and cultural relations, efforts be made to borrow skilled specialists from American industry * * *(c) * * * existing Federal laws be reexamined with a view toward amendment that will permit the Nation to avail itself of skilled specialists on short-term tours of duty * * * (d) consideration be given to providing compensation adequate to attract trained specialists * * *(e) a training program be instituted, utilizing the skills and experience of existing Federal agencies and private institutions.

Development: A letter from Mr. I. S. Carpenter, Jr., Assistant Secretary of State, advises that the Foreign Service is being revitalized, salary levels raised, and other of General Klein's recommenda-

---

[1] Gen. Julius Klein's European Mission—A Job Well Done—CONGRESSIONAL RECORD of March 30, April 1, 1955, pp. 3457-3463, 3541.

tions are in the process of being implemented.

Recommendation 5:

(a) That offshore purchasing be centered in a single operating agency, the General Services Administration * * *; (b) that the experienced judgment and skills of the General Services Administration be brought into play to assume many of the purchasing and procurement responsibilities now being borne by individual agencies; (c) that consideration be given to insure that the joint committee made up of GSA, military, and economic agency representatives meets agency needs efficiently and economically * * *; (d) that, while GSA participation in the case of military purchasing can relieve the armed services of heavy burdens * * * control of the development of specifications and inspection of finished products * * * must necessarily remain with military services; (e) that recommendations contained in congressional reports, such as the Bridges-Symington report, be followed to their conclusion.

Development: Findings of the Hoover Commission and congressional committees during this session of the Congress confirm the wisdom of this recommendation; further action is anticipated.

Recommendation 6:

That we intensify our efforts to shift to native media the main burden of Europe's defense against the ideological onslaughts of communism; (b) that those of our information activities aimed at countries behind the Iron Curtain concentrate on special appeals to induce defections from Communist regimes by scientists, technicians, engineers, and skilled personnel generally; (c) that exploratory talks be held with our friends in the free world to develop an allied information program * * * (d) that * * * efforts be made to staff all overseas information posts with persons who have practical rather than academic experience * * * and that * * * overseas personnel be rotated to the United States periodically; (e) that our existing program be carefully appraised to determine whether it is adequately serving the political objectives on which it is based.

Development: A letter from United States Information Agency Director Theodore Streibert indicates that these recommendations are being followed.

Recommendation 7:

(a) That American economic policy be more clearly defined to avoid misinterpretations which are being exploited by the Communists, especially in their efforts to lure trade to the East; (b) that American technical aid in retailing and distributive methods be intensified with the objective of increasing the vast untapped consumer markets within the European nations themselves.

Development: Legislation creating the International Development Corporation; money grants reduced in preference to technical aid; Government technical assistance supplemented by private agencies, for example, Pan American World Airways assistance to Pakistan airline and TWA and Pan American assistance to Lupthansa, the German airline.

Recommendation 8:

(a) Intensification of the interchange-of-persons program at all levels; (b) encouragement of European tourist and business travel to the United States through cooperation with the established American travel industry; (c) reexamination of existing law with a view toward facilitating and, with all safeguards of our interests, expanding the opportunities for foreign travel to the United States * * *; (d) an evaluation of our present exchange student and foreign visitors program to ascertain whether we are receiving the fullest possible benefits from it.

Development: Congressional interest manifested by legislation, committee action, and floor speeches. Attention and commendation in important periodicals insure continuing pressure for accomplishment.

Recommendation 9:

That increased attention be paid to political opposition parties in Europe while adequate relations are maintained with government party leadership.

Development: Reports indicate that this recommendation is being followed.

Recommendation 10:

That appropriate congressional committees consult with a selected number of experienced American radio and press correspondents abroad.

Development: It was stressed that such conferences be unofficial for the protection of the correspondents themselves, and there is thus no official record of such consultations. Members of Congress have, however, individually expressed approval of this recommendation.

Recommendation 11:

(a) Establish and maintain unchallengeable supremacy in airpower * * * (b) Ground Forces * * * in adequate numbers to cope with any conceivable emergency * * * (c) * * * both qualitative and quantitative superiority for our Naval Establishment (d) * * * present commitments of United States Ground Forces to Europe be reevaluated, as European military manpower contributions grow * * *, to determine the feasibility of reducing the present United States Ground Force Establishment on the Continent, leaving major emphasis of the United States contribution to air and naval forces; (e) that we continue to maintain a portion of our Ground Forces in Europe * * * as a deterrent symbol to Communist aggression.

Development: This recommendation being generally followed.

Recommendation 12:

(a) * * * maintain our country's lead in the development of trained scientific and technological personnel, (b) that a high-level conference of military authorities and educators be called for the purpose of devising a program * * * to initiate the training of scientific and technological manpower required for future security needs, (c) that such a program be sufficiently flexible to allow for the productive integration of those selected for training in the Nation's peacetime industrial facilities.

Development: General Klein submitted additional testimony on this recommendation to Senate Committee on Labor and Public Welfare. Congressional committee and White House Conference on Education pursuing this recommendation.

Recommendation 13:

Anti-Communist exiles and refugees * * *; (a) that a careful survey be made to determine how best to assist these heroic enemies of communism in maintaining a cohesive, efficient adjunct of the free world's total defense effort against Communist aggression; (b) that they be encouraged to retain their national identification; (c) that such facilities and assistance as are warranted by their capabilities for aiding the defense of the free world be extended.

Development: Officials and private individuals concerned with this question have expressed approval and indicated their desire to see the recommendation implemented.

Recommendation 14:

(a) That an advisory group—

Similar to the Air Coordinating Committee—

be created in the field of maritime transportation; (b) that a study be made of the feasibility of coordinating the activities of the proposed Maritime Coordinating Committee with those of the Air Coordinating Committee, to avoid duplication, the objective in view to be the preventing of overlapping, duplication, and wasteful competition in the two transportation fields.

Development: Some discussion along this line, but no concrete action as yet.

Recommendation 15:

General MacArthur's views be invited by both our highest policymaking authorities and appropriate congressional committees.

Development: Widespread editorial and congressional support evinced but no specific consultations of the order suggested.

Recommendation 16:

(a) That United States policy in the Middle East be directed toward integrating this area in the total structure of Western European defense; (b) that United States aid to states in the Middle East be predicated on the readiness of recipient countries to join in the free world's defense system; (c) * * * every effort should be exerted to discourage the revival of armed hostilities between the State of Israel and the Arab nations; (d) that in no case should we extend aid to any country in the area unless a recipient state effectively guarantees that United States aid will not be used for aggressive purposes.

Development: Approval expressed in responsible quarters, but no indication that the State Department has altered its policies.

Recommendation 17:

That increased attention be given to furthering the hemispheric solidarity between the United States and her Latin American neighbors.

Development: Vice President NIXON'S recent tour was an active expression of the suggested policy and increasing attention is being brought to bear upon the quest for closer relations with our Latin neighbors.

Recommendation 18:

That a careful study be made to determine how best to utilize the facilities of the Intergovernmental Committee for European Migration and * * * strengthening the ICEM personnel structure and screening procedures.

Development: Avoidable frictions arose in administrative circles because of failure to heed the spirit of this recommendation. The attention now centered on the problem presages action.

Recommendation 19:

That United States policy to continue to aim at strengthening the United Nations.

Development: Commanding sentiment favors.

Recommendation 20:

(a) That United States aid to France * * * be geared to the current needs of United States policy objectives * * * (b) that we continue to maintain our military installa-

tions in France and advance such aid as may be required by the military necessity.

Development: This policy being firmly followed with the further extension of a strong position with respect to South Vietnam.

Recommendation 21:

(a) That the people of the Saar be given the opportunity * * * to determine the future political status of their territory; (b) that the people of the Saar also be given the opportunity to express themselves politically through parties of their choice; (c) that a representative of the people of the Saar participate fully in any and all international discussions affecting the status of this area.

Developments: It must be reported regretfully that the temperate course recommended is being ignored and the mistakes made in the past with regard to the Saar are being repeated.

Recommendation 22:

(a) That trade, rather than aid, form the cornerstone of our policy toward Germany * * * (b) * * * Congress expedite the legislation for the return of property to German citizens now held by the Alien Property Custodian * * * (c) that we continue to manifest our support for German unification through free all-German elections; * * * (d) we take the lead in proposing the Federal Republic for membership in the United Nations * * * (e) * * * that adequate safeguard be maintained to assure that German militarism will never again become a threat to peace or an instrument of aggression.

Development: Following the recent conferences here in Washington between American and German officials, the State Department has recommended the return of property up to $10,000 in value. Legislation for full return is presently pending in both Houses of Congress; hearings have already been held by House Foreign Affairs Committee. Other points of recommendations have received strong support or form present policy.

Recommendation 23:

That military authorities of the Federal Republic of Germany be invited to send selected officers and officer candidates of the Federal German Army for training.

Development: Though the embryonic stage of the German Army has provided no opportunity for implementation of this recommendation, the suggestion was well received by affected authorities and efforts toward implementation can be predicted.

Recommendation 24:

That consideration be given to including Spain in our offshore procurement program, particularly with a view toward increasing the western community's capabilities for arms production.

Development: This course being adopted as United States policy.

Passing events have borne out General Klein's keen evaluation of NATO. The Nation can indeed be grateful that it has as the guardians of our security on our European flank General Greunther and his associates.

I could go on to discuss other aspects of the Klein report but I am certain that my colleagues will continue to often refer to this survey. I do hope that the executive departments, as recommended in the debate this spring in the other body, will carry forth the recommendations of General Klein wherever they will aid the peace and prosperity of our Nation.

The Klein report has indeed been a contribution to American political policy. It is hoped that Gen. Julius Klein will continue to be called upon for his services in this manner.

Our Water Conservation Program

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AVERY
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. AVERY. Mr. Speaker, although it lacks the glamor of a hydroelectric dam and the traveler appeal of a national park improvement program, the soil and water conservation program of the Department of Agriculture has a direct effect on every citizen and taxpayer of the United States. There is no national highway leading to these many projects or no conspicuous sign advertising the accomplishment of any Government agency or bureau.

Soil conservation development is continually growing and progressing at the grassroots level on the crossroads to some degree in every State of the Union. In the great Middle West where the basis of our economy is agriculture this conservation development has been especially outstanding. It symbolizes cooperation between the individual landowner or operator and Government agencies on the national, State, and local level. There is probably no program in the field of government in which cooperation is so vital as in the soil-conservation program. This cooperation is not only financial, but also in overall objectives, method of procedure, and means of implementation. In my opinion, that is the principal reason that the progress of this program has not been spectacular but has always been moving forward on a sound, practical basis. Although I heartily endorse the principle of local financial responsibility by the participant in any phase of government assistance I do feel that this program has not received sufficient recognition from the viewpoint of government financial assistance when analyzed and evaluated according to the objectives anticipated by its development. Whereas some Federal programs receive 100 percent financial assistance from the Federal Treasury the conservation program receives assistance on an average of about 50 percent of the cost by the Government and 50 percent to be assumed by the benefiting area or persons.

Either conservation practices should be brought up to the same level as other agency programs or the programs of other agencies should be reduced to approximately the same division of financial responsibility by the Government and the benefiting areas.

Mr. Speaker, I take considerable pride in the advancement of conservation work in my district and wish to include in this unanimous consent request an editorial expressing recognition and results of this program in my district written by Byron Guise, the editor of the Marysville Advocate, and later reprinted in the Topeka Daily Capital:

LONG IS THE WAY

As long as the sun shall shine, the stars twinkle, the rain come, and the moon gleam, Marshall County will be able to produce food from the soil. It all began back in the late 20's by a few farmers who had the courage to follow the ideas promulgated by the extension service of Kansas State College. The ideas were simple: Make the running water walk, and keep the soil where it is.

Simple as it may seem these ideas were not to gain foothold like the popularity of a movie star. On the contrary the ideas were so new that few accepted them as sound. Had not the land produced the best wheat, the finest corn, the most luscious alfalfa, the good oats, potatoes, and other crops? Why do silly things when the land was still doing a good job?

But the promoters of the new idea knew full well that sooner or later the land out here in the Great Plains Empire would be depleted of some of its most necessary elements, in addition to being washed into the Big Blue River, the Kaw, the Missouri, and the Mississippi. However, when a man lives on the same farm for years, he fails to notice the changing of his land as does another who goes away for years and then comes back.

Inserting the soil-saving idea into the minds of many a Marshall County farmer was something like trying to sell an airplane to a man a year or so after it is first invented. The idea did not take. It took virtual revival meetings to get the idea to soak in. Then here and there a few accepted. Gradually a few terraces were seen over the countryside. A few farmers began farming on the contour. Some built check dams.

When it seemed as if the idea never would become popular, all of a sudden the owners of the land and the tenants saw the need. In recent years soil saving has fast become a must in Marshall County. Farmers who have followed these practices for several years are making better and bigger profits than their neighbors. And when they want to sell their land they can command more for it.

The day is coming in Marshall County when an unterraced farm, or a farm not protected by soil-saving practices, will be an outlaw. And 25 years or more ago the farmer who carried on these practices had what some called an outlaw farm. (Marysville Advocate.)

Operation Brave

EXTENSION OF REMARKS
OF
HON. ERRETT P. SCRIVNER
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Friday, July 29, 1955

Mr. SCRIVNER. Mr. Speaker, Operation Brave, a program to bring together those men of the 22 nations who fought and suffered for freedom for the Republic of Korea, is an idea developed and fostered by George W. Brazier, Jr., of my home town of Kansas City, Kans.

Mr. Brazier's proposal is a simple one—one based on friendship and understand-

ing growing out of mutual sacrifice and common cause—stopping Communist aggression.

Operation Brave calls for 22 carefully selected American veterans of the Korean fighting, formed into small teams, visiting their former comrades-in-arms in their home countries, with other teams from other lands visiting comrades here in the United States.

These reunions, or visits of first acquaintances, would provide a grassroots demonstration of the continued desire of this Republic for continued peace and liberty.

While all details are not yet complete, it would appear that the idea and ideal behind this proposal could spread far beyond its present limits.

Mr. Brazier has put time, thought, and his own money into bringing this idea into realization, feeling quite confidently that better understanding and cooperation in peace among those whose joint efforts brought victory in war can lay the foundation for continued friendly, peaceful relations between men and countries.

Such a program deserves a boost, and knowing the enthusiasm and zeal Mr. Brazier has I, for one, am sure he will accomplish his program.

My best goes with this highly idealistic veteran as he turns his efforts from war to peace.

Keenotes

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mrs. KEE. Mr. Speaker, under leave to extend my remarks in the RECORD, I should like to include my newspaper column, Keenotes, on the subject of another meeting at Geneva. The column follows:

KEENOTES

(By Representative ELIZABETH KEE)

Another meeting at Geneva.

Not the one at the summit at which President Eisenhower made his bold proposal for aerial inspection—the proposal which now gives Bulganin and the Supreme Soviet such a chuckle. Nor the one in which American and Communist Chinese envoys negotiate over the exchange of nationals.

A different meeting at Geneva—and one which may transcend all of the others in terms of eventual international and human significance.

It is the atoms-for-peace conference, attended by atomic scientists from both sides of the Iron Curtain, and intended to find ways of putting this horrible and awesome force of destruction to use instead to make life better.

The use of atomic power for energy purposes is no longer a day-after-tomorrow matter. It is taking place right now, chiefly in the generation of electric power and in the propulsion of the submarine *Nautilus*. Its use will expand.

Atomic energy byproducts, meanwhile, are providing some of medicine's greatest weapons against dread diseases. They are, too, serving as the tracking agents—the bloodhounds—of scientific and medical research, by making possible the tracing of body functions.

This meeting now taking place at Geneva, at which the nations are to exchange knowledge and know-how in developing peaceful uses for the atom, will probably not provide the same sort of international drama and suspense of the Big Four of Eisenhower, Eden, Faure, and Bulganin (or should we say Khrushchev?).

But if the scientists can teach each other methods of saving lives, of broadening resources, of improving living standards, of helping people through the use of the forces of the atom, then indeed it will be one of the most fruitful conferences in human history.

It comes at a most propitious time.

It comes exactly 2 years since an announcement from Moscow spread dread and alarm throughout the civilized world—an announcement by the then Premier Malenkov that the Soviet Union had developed the hydrogen bomb. Subsequent events showed the Soviets had really done so. And after that, the cold war became infinitely more harrowing, for we had the knowledge that an aggressive force which hated freedom had the power to destroy whole cities of the world.

Just 10 years ago, on August 6, 1945, the world first learned of what the now old-fashioned Model T atomic bomb could do to destroy a city. Hiroshima in ruins was mankind's warning to find the way to peace, and to the use of this great force of nature for the improvement of civilization rather than for its destruction.

May I suggest that we all make room in our prayers this week for the devout wish that the scientists now meeting in Geneva can succeed where statesmen have failed—in bringing the wonders of science into a new focus for peace—and for people—rather than bringing in their wake death, destruction, and despair.

A Free Nation Is Grateful to America

EXTENSION OF REMARKS
OF
HON. LAURENCE CURTIS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. CURTIS of Massachusetts. Mr. Speaker, under leave to extend my remarks, I include an editorial which first appeared in the Jerusalem Post, published in Israel, and was subsequently reprinted in the Christian Science Monitor. The publishing house is in the district which I am privileged to represent, as is also the mother church. The American people have been glad to do much for Israel, the new outpost for democracy in the Near East, and will be gratified by this sincere expression of appreciation.

It is only when we pause to reflect that we fully appreciate the extent of the United States contribution to the economic development of Israel. There have been contributions of individual United States citizens, predominantly but not exclusively Jewish, to the United Jewish Appeal, to other institutions and agencies working or supporting work in Israel, to individuals, friends, and relatives living in Israel and through purchases of bonds of the Government of Israel. Aside from all this, however, has been the economic assistance extended by the American people through their Government.

This assistance so thoroughly permeates the economy that we tend to lose sight of the extent to which our economic life is based on it, and of the extent to which its continuation will be necessary until Israel achieves a position of economic independence.

The simple listing is impressive. The first Export-Import Bank loan of $100 million in January 1949 went a long way toward supplying the construction equipment, the industrial equipment, the trucks, the pumps, pipes, tractors, farm implements, and other materials necessary for the launching of new agricultural settlements and the extension of existing ones.

The second Export-Import Bank loan in 1951 of $35 million contributed greatly to the continuation of the program of irrigation and agricultural development. In 1951–52, the first grant-in-aid was made in the amount of $63,500,000. Each year since that date successive grants have been made totaling, all told, by June 30, 1955, $226 million. The United States Government has also sold to Israel, at nominal cost, very substantial supplies of milk powder, egg powder, potatoes, butter, cheese, peanuts, and other food commodities.

From the beginning of the grant-in-aid program, there has been the accompanying program of technical assistance. Measured in dollars, this has amounted, up to June 30, 1955, to some $5 million. Expressed in what in this case are more meaningful terms, the contribution of technical knowledge and experience to Israel's young industry, agriculture, government, and other activities, the value of this assistance cannot be measured but is unquestionably far greater than its cost to the United States Government.

In the past 7 years, Israel's import surplus, financed by gifts, loans, German reparations, and private investment has amounted to a total of approximately $1,750,000,000, a little more than $1,000 for every man, woman, and child here. The greatest part of this has come from the United States. The United States Government itself has provided approximately $400 million, or almost one-fourth of the total. It is not to minimize aid from other sources, nor, of course, the achievement of citizens of Israel themselves, to say that without American aid, living standards in Israel today would be far below their present levels; the number employed in useful and productive work would be far smaller.

Assistance from abroad and from the United States Government will continue to be necessary for some years to come and in large amounts, although we expect and believe that we can move toward the eventual elimination of this aid. We trust that the United States Government itself shares our view. We know that it shares our objective.

Economic assistance by one government to another, contrary to some opinions, is no new phenomenon in world history. What is new and what is the special contribution of the United States to relations between peoples is the extension of such assistance without intervention in the political life and affairs of the country assisted and without an abridgment of the political independence of these countries. We have seen this new process at work in the relations between the United States and Israel. What is also new is the use of assistance for such planned construction, humanitarian and positive purposes as in Israel in the last 6 years. This is an achievement for which the Government of Israel can claim credit. (Economist in Jerusalem Post.)

Sunday Bargain Days

EXTENSION OF REMARKS
OF
HON. A. S. MIKE MONRONEY
OF OKLAHOMA
IN THE SENATE OF THE UNITED STATES
Tuesday, August 2, 1955

Mr. MONRONEY. Mr. President, I would like to call the attention of the Senate to the continued growing threat of making Sunday in Washington the big bargain day of the week.

This practice engaged in by a relatively few large stores is threatening to change the merchandising pattern in many lines of goods as well as posing a serious threat to the observance of the Sabbath in the Nation's Capital.

It becomes more than a local issue since the pattern set here has a national impact upon the business pattern of the Nation. If the respect and observance of Sunday is to be broken by several companies, competitive conditions help to create their spread.

I ask unanimous consent to insert two articles from the Washington Post, under date of July 23 and July 25, setting out the feeling of many of the ministers regarding this practice. It will be noted that they are asking the companies to refrain from these Sunday openings and are not advocating a return to blue laws.

It should be observed that the vast majority of merchants in the Washington area respect the observance of the traditional American Sunday and refuse to violate it. However, these merchants are placed at a distinct disadvantage by the violators. Their advertising in the papers which provide for regular weekday sales beginning Monday are at a disadvantage with the ads in the same paper shouting about great alleged bargains for Sunday openings.

The very idea that the sale is being held on Sunday has a tendency to give added urgency and sales promotion impact to the disadvantage of the regular adverttisers who observe the Sabbath.

It would appear to me that because of the dangerous precedents that are being set by these Sunday sales that the District Commissioners should act to see if they cannot be discontinued by voluntary agreement. Religious leaders, business interests, the newspapers, and other interested parties should be called into a full scale conference to search for ways of preventing this growing menace of the violation of the Sabbath.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Washington Post and Times Herald of July 23, 1955]

DISTRICT OF COLUMBIA PASTORS HIT SUNDAY DESECRATION

Ministers of leading Protestant churches here will make pulpit appeals Sunday not to patronize stores that open on Sundays.

The simultaneous plea is being sponsored by the Washington Federation of Churches, whose executive secretary, the Reverend Frederick E. Reissig, has been decrying for more than a year the growing commercialization of the Sabbath.

He says violation of Sunday as a day of rest is rapidly becoming more acute, with the "auto people, furniture dealers, and food stores" the newest offenders.

Stores that have traditionally remained open on Sunday, such as drugstores and restaurants, are not included in the criticism.

A year ago the Federation of Churches circularized its member churches on the matter of Sabbath violation. Last December 12, leaders of the Protestant, Catholic, and Jewish faiths and representatives of the Washington Board of Trade, Junior Chamber of Commerce, and Merchants and Manufacturers' Association called on the merchants and public to respect the Sabbath.

Last Sunday Catholic pastors throughout the archdiocese of Washington asked their parishioners to refrain from unnecessary shopping on Sunday, and to refuse to patronize any store staying open.

[From the Washington Post and Times Herald of July 25, 1955]

SUNDAY SALES BOYCOTT URGED BY DISTRICT OF COLUMBIA PASTORS

(By Albon B. Hailey)

Pastors of leading Protestant churches in the District area urged their congregations yesterday not to patronize business concerns and shops remaining open for "business as usual" on Sunday.

Members of the clergy, heeding the call from the Washington Federation of Churches, noting that more and more stores are beginning to remain open on Sunday, emphasized that refusal to make Sunday purchases would check the tendency for commercialization of the Sabbath.

"One of the most regrettable and useless tendencies in the present day is the increased commercialization of Sunday," the Reverend Lawrence D. Folkemer, pastor of the Church of the Reformation, 212 East Capitol Street, told his congregation.

"It is regrettable because it cheapens and seriously weakens a religious institution so basic to the spiritual life of America; useless because it is not necessary. Furthermore, many business leaders who feel, rightly or wrongly, that they must keep their businesses open because of competition do not like it. They have repeatedly said so—privately and in small gatherings of interested persons."

TERMS PRACTICE "FOLLY"

"At a time in our history when spiritual values are so essential and when there is evidence of a genuine spiritual rebirth among our people, it is sheer folly to commercialize the day of worship which the Christian Church has established.

"Sunday was meant to be a special day of worship and rest for all men. If we take away from that day its unique and blessed character, we do it at our own peril," Dr. Folkemer said.

Most ministers pointed out that a return to the so-called blue laws is not desired and that drug stores, restaurants, and places which traditionally have remained open are not the cause for their alarm.

"Businessmen of both groups, those who open and those who remain closed are quick to say that the answer to this problem is in the hands of the consumer," the Reverend John F. McClelland, pastor of Christ Congregational Church, 9525 Colesville Road, Silver Spring, said."

NO CHANGE IN LAW

"We do not mean to change the present blue laws, but only to see that they are respected. Our refusal to make unnecessary purchases on Sunday would soon change the business practice of those who have been remaining open.

"With the arrival of summer and its inevitable relaxation on many fronts, may I urge you not to relax in your own keeping of the Sabbath."

The Reverend Henry C. Koch, pastor of the Concordia Lutheran Evangelical Church, 20th and G Streets NW., said that "people of all faiths are becoming increasingly disturbed over the flagrant way in which some business houses ignore the traditional respect for the day of worship.

IMPORTANCE OF WORSHIP

"In a time when American democracy is facing its greatest opportunity to lead the free world in moral and spiritual values, these institutions would attack the very heart of that democracy, namely, its religious life," Dr. Koch said.

"Observance of a day of rest and worship is a very vital consideration in the prevention of juvenile delinquency. No more serious problem faces our country today. We dare not allow ourselves to be weakened internally while we are dealing with a dangerous enemy on the outside.

"I believe that any business house that does business on a day of worship where it is not absolutely necessary is directly contributing to the moral and spiritual breakdown of our country and weakening our position among the nations of the free world."

Summary of Activities of the Committee on Public Works, United States Senate, 84th Congress, 1st Session

EXTENSION OF REMARKS
OF
HON. DENNIS CHAVEZ
OF NEW MEXICO
IN THE SENATE OF THE UNITED STATES
Tuesday, August 2, 1955

Mr. CHAVEZ. Mr. President, I ask unanimous consent to include in the Appendix of the RECORD a summary of the activities of the Committee on Public Works, United States Senate, 84th Congress, 1st session.

There being no objection, the summary was ordered to be printed in the RECORD, as follows:

Under the provisions of the Legislative Reorganization Act, the Committee on Public Works of the United States Senate has jurisdiction over legislation relating to flood control, improvement of rivers and harbors, public buildings, public roads, water power, bridges over navigable waterways, pollution of navigable waters, and public reservations and parks in the District of Columbia.

There were 144 measure referred to the committee during the 1st session of the 84th Congress. The committee approved 42 bills, of which 34 were passed by both Houses. Hearings were held on many of them and on others that were carried over until the next session. Survey reports for flood control and navigation have been received and reviewed, and review of previous reports covering 35 basins and localities have been authorized by committee resolutions. Lease-purchase projects for 27 post offices and 26 General Services Administration buildings for courthouses, post offices, and Federal office buildings, aggregating a total estimated cost of $105,562,027, were approved by the committee. There were seven House-passed bills pending before the committee at the end of the session.

Bills and resolutions approved by the committee are as follows:

As of Aug. 4, 1955

ENACTED INTO LAW

Public law	Date approved	Title	Estimated cost
23	Apr. 11, 1955	Authorizing the Secretary of the Army to contract with the city of McCormick, S. C., for sale of water from Clark Hill Reservoir	0
34	May 13, 1955	Declare a portion of waterway, Fort Point Channel, in Boston nonnavigable	0
62	June 8, 1955	Amend sec. 2 of act of Mar. 2, 1945, Columbia River at Bonneville, Oreg	$135,000
63	do	Provide for adjustment of tolls on bridge across Des Moines River at St. Francisville, Mo	0
71	June 15, 1955	Authorize preliminary examination and survey of New England, New York, and eastern and southern seaboards to determine means of protection from hurricane winds and tides	2,800,000
79	June 16, 1955	Extend time for construction of toll bridge across Rainy River, Baudette, Minn	0
97	June 28, 1955	Grant consent of Congress to States of Arkansas and Oklahoma to enter into compact on Arkansas River	0
99	do	Amend sec. 5 of Flood Control Act of 1941 pertaining to emergency flood-control work	0
103	do	Amend sec. 7 of act of Sept. 22, 1922, for installations of telephones in private residences at Federal locks and dams	30,000
106	do	Authorize construction of building for Museum of History and Technology for Smithsonian Institution	36,000,000
129	July 1, 1955	Authorize sums for completion of construction of Inter-American Highway	25,730,000
150	July 12, 1955	Provide for construction of Government buildings under lease-purchase in Southwest Washington, District of Columbia	0
159	July 14, 1955	Provide for control of air pollution by research and technical assistance	25,000,000
160	July 15, 1955	Modify Ferrells Bridge Reservoir to provide for cash contribution by local interests for water supply features	3,200,000
164	do	Authorize construction of highway crossing over Lake Texoma, Red River, Tex.-Okla	6,000,000
184	July 28, 1955	Authorize State of Maine to construct bridge across St. Croix River between Calais, Maine, and St. Stephen, New Brunswick, Canada	0

PASSED BY BOTH HOUSES

Bill No.	Title	Estimated cost
S. 56	Authorizing construction of flood-control improvements, St. Louis, Mo	$123,020,000
S. 1210	Amend Public Buildings Act to increase 1-year limitation on leases in District of Columbia to 5 years	0
S. 1340	Authorize conveyance of land to Brownsville Navigation District, Tex	0
S. 1577	Remove limitation on tolls on bridges over Connecticut River	0
S. 1899	Authorize flood-control improvement on Amite River, La	3,008,000
S. 2260	Granting consent of Congress to compact between States of Texas, Oklahoma, Arkansas, and Louisiana on apportionment of waters of Red River.	0
H. R. 2866	Declaring a portion of waterway on Acushnet River in New Bedford, Mass., a nonnavigable stream	0
H. R. 4362	Authorize construction of flood-control improvements on Red River below Denison Dam	12,734,000
H. R. 1309	Provide for adjustment in lands acquired for Jim Woodruff Dam, Fla. and Ga., by reconveyance to former owners	0
H. R. 3235	Provide for adjustment in lands acquired for Demopolis lock and dam, Alabama, by reconveyance of interests to former owners	0
H. R. 6006	Modify flood-control project on San Joaquin River to permit construction of levees by local interests instead of acquiring flowage easements	0
H. R. 6417	Revive and reenact act authorizing Arkansas-Mississippi Bridge Commission to construct bridge across Mississippi River at Friar Point, Miss.	0
H. R. 503	Convey land in Whitney Reservoir to State of Texas	0
H. R. 7628	Authorize appointment of Maj. Gen. John S. Bragdon to civilian position in White House Office	0
H. R. 6634	Provide for conveyance of land in Grapevine Reservoir to city of Grapevine, Tex	0
H. R. 7195	Provide for conveyance of lands or interests in Belton, Benbrook, Garza-Little Elm, Grapevine, and Whitney Reservoirs, Tex., to former owners.	0
H. R. 6102	Change name of Garza-Little Elm Dam to Lewisville Dam	0
H. R. 4734	Amend River and Harbor Act of 1954 to extend time for reimbursement to local interests for work done on Los Angeles-Long Beach Harbors, Calif.	0

REPORTED BY COMMITTEE ON PUBLIC WORKS AND PASSED SENATE

S. 890	Extending and strengthening Water Pollution Control Act	$10,000,000
S. 1048	To amend and supplement the Federal-Aid Road Act by continuing authorizations	12,580,000,000
S. 1749	Authorize improvement of harbor at Rockland, Maine	710,000
S. 1851	Authorize conveyance of certain land to Mary Ann Aust	0
S. 2029	Change name of Hulah Reservoir, Okla., to Lake O'the Osages	0
S. 2093	Compensate certain property owners for damages in connection with reservoirs in Missouri River Basin	790,000
S. 2374	Authorize Secretary of the Army to enter into contracts to furnish municipal water supply from flood control and river and harbor projects.	0
S. Res. 70	Increase limit of expenditures by the Committee on Public Works	100,000

Gainesville, Tex.: Post office and Federal building	645,036

The important legislation of national interest and effect that was approved by the committee is discussed briefly as follows:

FEDERAL-AID HIGHWAYS

The committee approved a bill to authorize appropriations for continuing the construction of Federal-aid highways for a period of 5 years, 1957 through 1961. The program for the regular Federal-aid systems would be increased to a total of $900 million for each of the 5 fiscal years, and continued on a 50–50 matching ratio and on existing apportionment formula.

Funds for the national system of interstate highways would be increased to $1 billion for fiscal year 1957, and increasing to $2 billion for fiscal years 1960 and 1961, a total of $7,750 million for the 5-year period. These funds would be apportioned to the States under existing law, with a 90–10 matching ratio.

The bill as approved by the Senate would permit 20-percent interchange of funds between systems, would continue the program on miscellaneous roads on Federal lands at existing levels, would permit reimbursement to utilities for a part of relocation cost in connection with Federal-aid projects, and limit weights of vehicles traveling on Federal-aid highways. The highway program would be financed from general revenues of the Treasury as at present.

A Federal-aid highway bill was defeated in the House of Representatives.

AIR POLLUTION CONTROL

Public Law 159 provides for research and technical assistance to devise methods of abating air pollution. The act recognizes the primary responsibility of State and local governments, but provides Federal aid to those agencies concerned with air pollution and control. The Surgeon General would encourage cooperative activities, collect and disseminate information, conduct and support research, and make available to all parties the results of surveys, studies, investigations, research, and experiments. An appropriation of $5 million annually for fiscal years 1956 through 1960.

WATER POLLUTION CONTROL

S. 890 would amend the existing Water Pollution Control Act which terminates June 30, 1956. It reemphasizes the policy of the Congress to recognize, preserve, and protect the primary rights and responsibilities of the States in controlling water pollution. It would provide a base for the cooperative program which the Public Health Service is carrying on with the States and interstate pollution-control agencies. The objective of these Federal activities is to support and assist State and interstate agencies. National research efforts in water pollution would be intensified, and a reasonable and equitable mechanism for Federal-State cooperation in resolving serious interstate pollution problems. Would authorize grants for each of 5 years of $2 million to States and interstate agencies, and provide means of enforcing abatement of pollution.

This bill passed the Senate on June 17, 1955, and was on the House Calendar at the end of the session.

HURRICANE DAMAGE SURVEY

Public Law 71 authorizes the Secretary of the Army to make an examination and survey along the coastal and tidal areas of the eastern and southern United States, to secure data on movement of hurricanes, forecasting their paths, and investigating possible structural improvements which may be provided to prevent loss of life and property damages during the occurrence of such hurricanes.

INTER-AMERICAN HIGHWAY

Public Law 129 provides legislative authority for the necessary appropriations for accelerating completion of the inter-American highway within a 3-year period. The act makes the authorizations contained in the Federal-Aid Highway Act of 1954 immediately available for appropriation, and would authorize an additional sum of $25,370,000 to be immediately available for appropriation, all sums to remain available until expended.

FLOOD CONTROL

In general, the committee deferred action on individual flood-control and river and harbor projects, with the idea of including them in the next omnibus bill. However, due to the needs for certain localities, and emergencies that exist in others, several individual bills were reported favorably by the committee. These projects included one for flood control at St. Louis, Mo.; flood control on the Amite River, La.; and flood control on Red River below Denison Dam, Oklahoma, and Texas.

WATER SUPPLY

The committee approved a bill to authorize the Secretary of the Army to enter into contracts to furnish water for municipal water supplies, including water for domestic and industrial uses, in the operation of any flood-control or river and harbor project heretofore or hereafter constructed, with repayment of allocated construction costs to the United States over a period of not to exceed 40 years from the year water is first delivered, with interest at current average rates on long-term marketable loans of the United States.

Special Committee of Los Angeles American Legion Denounces Whitewash of UNESCO

EXTENSION OF REMARKS

OF

HON. H. R. GROSS

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. GROSS. Mr. Speaker, a special committee of the Los Angeles Council, American Legion, Department of California, composed of Mr. W. Devore Walden, chairman, Mr. James G. Law, and Mr. P. A. Horton, have prepared an evaluation of the report by a special committee to the national executive committee of the American Legion.

The report, dealing with UNESCO, was submitted to the American Legion's national executive committee on May 4, 5, and 6, 1955.

The evaluation of that report follows:

This report, known herein as the Murphy committee report or as the Murphy report, is very lengthy, covering some 131 pages of typed material. One is struck with the lengthiness of this report as a typographical filibuster. The report contains much that is irrelevant and not the result of investigation. It is felt that it was made long deliberately in order to discourage study by the busy legionnaire.

On careful reading of this document, one is aware of a definite attitude of supercilious condescension. It implies that of all the membership of the American Legion, none but the members of the Murphy committee are competent to study and understand the problem of UNESCO.

Nowhere in the report is any recognition given to the vast amount of material gathered by other investigating groups from various departments, districts, and posts of the American Legion. There is no record of the Murphy committee having availed itself of the previously formed opinions and conclusions of any other American Legion group.

On successive readings of the Murphy report, one becomes more and more impressed with the apparent method of investigation used by the Murphy committee as having gone to the interested parties in the UNESCO organization and in the United States Department of State with a listing of the complaints against UNESCO and requesting instructions on how to answer.

BIASED REPORT

The result is a report which is biased, slanted in favor of UNESCO, and, in many places, not in keeping with fact.

In evaluating this report, care must be taken that we do not follow the lead taken by the Murphy committee and render another typographical filibuster. This report must be read and understood by delegates to the convention who are already burdened with many other important matters and are therefore pressed for time.

We shall therefore content ourselves with only the most outstanding evidences of bias contained in the Murphy report. We must adopt the premise that even one evidence of partiality or bias is sufficient to warrant a conclusion of the failure on the part of the Murphy committee to follow its instructions to examine impartially, but with an American viewpoint.

We must, on a point of personal privilege, first jump ahead to page 20 of the Murphy report to refute a base attempt at character assassination. The inferences contained on page 20 are utterly unworthy of any American Legion report much more so when it bears the signature of a past national commander.

On page 20, the Murphy committee infers that all opposition to UNESCO has a common source: Gerald L. K. Smith. It ties in, by inference, all those Legionnaires who disagree with Murphy to a character who is regarded by all as much an enemy to the American way of life as is UNESCO.

In the name of hundreds of good solid American Legion members from many departments who have spent many hundred hours of cumulative study of UNESCO this committee registers a protest and demands apology from the Murphy group.

The Murphy report opens with a lengthy discussion of the attack on UNESCO in Los Angeles. It quotes from numerous letters, resolutions, and reports, some of which quotations are seriously out of context. It speaks of the bitterness and recrimination of the Los Angeles fight with charges and counter charges and then by a method of thought known only to the Murphy committee comes up with the conclusion that it was all a tempest in a teapot; there was never any problem of UNESCO in the schools of Los Angeles. Therefore, a total of 67 civic organizations, 5 metropolitan newspapers, the members of the board of education, and the entire membership of Los Angeles County Council. The American Legion were all running around in circles trying to make noise. The fact that more than 100 newspapers and several national magazines featured the story of the Los Angeles fight on UNESCO did not register at all with the Murphy committee.

WORLD GOVERNMENT

The two principal objections raised in the Los Angeles exposé were the publications in use: "The E in UNESCO" and the series "Toward World Understanding." Both these objectionable publications are passed over by the Murphy committee as hardly worthy of its consideration. This despite the fact that in the Murphy report itself quotations from "Toward World Understanding" bear out the contention that they are designed to condition the minds of schoolchildren to an acceptance of world government.

Regarding the publication "The E in UNESCO" the Murphy committee points out that it was published by the curriculum division of the Los Angeles school system therefore it could not be charged against UNESCO. The Murphy committee did not recite the fact that the publication was distributed by the American Association for the United Nations; it did not recite the fact that "The E in UNESCO" recommended the series "Toward World Understanding" as a handbook series for teachers; it did not recite the fact that "The E in UNESCO" impresses on the teacher the importance of teaching and advocating the infamous international bill of rights. (The international bill of rights is the implementing tool of the entire con-

spiracy to destroy the sovereignty of the United States.)

The report did not recite the fact that "The E in UNESCO" carries a bibliography of recommended reading for teachers many books of which were authored by cited Communists.

No, the Murphy committee found no harm in this publication because it was published by the Los Angeles school board.

The series "Toward World Understanding" is likewise passed over lightly by the Murphy committee. On page 66 of its report, the Murphy committee says: "Your special committee holds no brief for the series, 'Toward World Understanding', and especially none for volumes IV, V, and VI. At best the latter are poor pedagogy, and in parts, volume V particularly, crassly stupid, and from an American point of view incredibly vicious." We join in any fair condemnation of it.

DESTROY SOVEREIGNTY

The Murphy committee then accepts the fact that those volumes of the series "Toward World Understanding" hides behind a disclaimer printed on the flyleaf. This disclaimer proclaims the opinions expressed as those of the authors rather than of UNESCO. Could the Murphy committee have been sincerely taken in by this device? Especially whe nthose same volumes, on the back cover bear the following: "Toward World Understandings," a series of UNESCO publications for teachers.

The Murphy committee also points out that in no instance could it find any evidence of the volume Toward World Understanding having reached the hands of children. The Murphy committee forgot that the entire series were designed not to reach the children but rather as handbooks for teachers.

For the most part the report of the Murphy committee is, rather than a report of its own investigation into UNESCO, an answer to charges made against UNESCO by the American Flag Committee in its letter 13, dated October 1951.

The American Flag Committee has no connection with the American Legion. The various investigating groups of several departments of the American Legion have, as far as is known, no connection with the American Flag Committee.

The many pages of the Murphy report which are given up to answering the charges of the American Flag Committee are, therefore, completely unwarranted and out of context. It would appear that the Murphy committee has well earned the thanks of UNESCO for having given up its time in the defense of UNESCO against the American Flag Committee, but it is not the concern of the American Legion, nor is it in keeping with the instructions to the Murphy committee.

The Murphy report lays stress on the use of a quotation from a speech of William Benton as evidence of world-mindedness. It quotes the entire speech and stresses the entire sentence from which the quotation emanates. The entire sentence follows: "We are at the beginning of a long process of breaking down the walls of national sovereignty and of persuading the peoples of this world to study each other and to cooperate with each other."

The Murphy committee has evidently forgotten its study of English syntax; this is a compound sentence having a common subject with two separate ideas tied together with the conjunction "and." Proper rhetoric would eliminate the contraction, and the sentence would then read as follows: "We are at the beginning of a long process of breaking down the walls of national sovereignty and we are at the beginning of a long process of persuading the peoples of this world to study each other and to cooperate with each other." The use of the quotation is, therefore, not out of context.

Benton said it; Benton was in an official capacity when he said it; we must believe that he meant what he said or else throw out every official act and statement of this man.

UNESCO FIRST

In this same vein, the Murphy committee defends others for similar utterances. Many words are used to point out that Mr. Milton Eisenhower did not mean what he said in a speech made as Chairman of the United States National Commission for UNESCO.

Continuing in the same vein, the Murphy committee did not find in its "thorough" investigation of UNESCO the speech of Mr. James Marshall, a member of the United States National Commission for UNESCO, as printed on page 207 of the records of the General Conference of UNESCO held in Mexico in 1947, volume 1, proceedings. The opening paragraph of this speech follows:

"Mr. JAMES MARSHALL (United States). Fellow delegates, as we examine this question, I hope we can join together in trying to decide what will be best for UNESCO. I may say for the delegation of the United States and for the National Commission in the United States, of which Mr. Milton Eisenhower is Chairman, that the constant effort of each individual is to discover and to determine what is best for UNESCO. The question we ask ourselves is never 'What is best for the United States?' but 'What is best for UNESCO?' It is the judgment of the United States Government, of the National Commission and of the delegation here that what is best for UNESCO will, in the long run, be best for the United States, even if seemingly against short-term interest. This is our attitude and I will testify personally to this conference that in my 2 years and more of responsibility for UNESCO on behalf of the United States Government, I have only once, in the case of one individual, heard the issue injected into the discussions on UNESCO of 'What is best for the United States?'"

Had the Murphy committee been conducting an investigation into UNESCO instead of a defense of UNESCO it might have found this speech. It is felt that Mr. Murphy and his committee would have been rather hard pressed to explain away this utterance which verges on treason.

CHARACTER ASSASSINATION

On page 78 of its report the Murphy committee again approaches character assassination. The following is a direct quotation:

"After 18 months of careful study and laborious research we find the evidence to be overwhelming that UNESCO is none of the things these good people fear, nor is it any of the things that evil and malicious men and organizations charge."

This can only be taken as a smear of the character of every member of the American Legion who voted approval in post, district, department, and national conclave of the mandated stand of the American Legion against UNESCO. This cannot stand and the Murphy committee deserves severe criticism for its insulting indictment.

Several pages of the Murphy committee report are given over to a recital of the fact that the United States Chamber of Commerce also had a national investigation into UNESCO which was followed by approval of UNESCO. The Murphy committee did not find that the method used in gaining chamber of commerce approval are the same methods and tactics as practiced by the Murphy committee. It did not find and point out that the chamber of commerce matter was directed by Mr. Harry A. Bullis. It did not examine into the background of Mr. Harry A. Bullis. It did point out that because the chamber of commerce found UNESCO pure, we, the American Legion, should do likewise.

Had the Murphy committee examined into Mr. Bullis it would have found, among other things the following organizations and associates: Member, national advisory board, United World Federalists, Inc.; associates, Sergei Koussevitzky, Einstein, Munford, Urey, Karl Van Doren, Isadore Lubin, etc.; member of Committee on the Present Danger. World Government Highlights, revised edition (UWF publication) quotes a letter Bullis write to UWF June 9, 1949: "We must strengthen the U. N. into a limited world government with a police force strong enough to maintain peace throughout the earth." It is felt that the above is sufficient to show that he is hardly the man whose lead should be followed by the American Legion despite the advice of the Murphy committee.

On pages 51–52 of its report, the Murphy committee discusses a charge which has been repeatedly made against William G. Carr. It has been charged that Carr advocated changes in the United Nations Charter to create a world government. The committee says that it has not read Carr's book, One World in the Making. (No mention is made of other books authored by Carr.) However, the committee feels that because he holds an executive position in the NEA and because the American Legion has a special committee in liaison with NEA therefore Mr. Carr could not possibly mean what is said in his various publications.

On pages 44 and 45 of its report the Murphy committee denies any connection or influence on UNESCO by either Hiss or Harry Dexter White.

ALGER HISS AGAIN

In a report of the proceeding of the Utrecht Conference UNESCO–U. N. seminar in London, November 1948 published by NCEA, is mention of a meeting at Adelphi College at which Alger Hiss was present and spoke at the meeting: his subject, Achievements of the United Nations.

Harry Dexter White, according to the Murphy report, had nothing to do with UNESCO, but rather with the establishment of ECOSOG (United Nations Economic and Social Council) which was a forerunner of UNESCO. What difference in name. The influence was there.

On pages 111 through 114 the Murphy committee rather unfairly compares the United States Constitution and the United Nations Charter. This in connection with the charge that UNESCO is godless and that the U. N. is godless. The Murphy committee finds that if the U. N. is atheistic because of the lack of mention of the Deity in its charter then the United States must also be atheistic, for the same reason. Consideration is not given to the fact that regardless of the omission of the Deity from the United States Constitution, all official gatherings of the United States are opened with prayer; Congress, the United States Supreme Court, even down to informal gatherings open with acknowledgments to God. The Declaration of Independence pays homage to God. Our coins bear the legend "In God We Trust."

As previously stated in this evaluation of the Murphy report it is conscientiously felt that the Murphy report is less the result of an impartial investigation into UNESCO and to too great a degree a defense of UNESCO against the attacks of the American Flag Committee. It is felt that a proper study of even a little of the mentioned material or even the short perusal of the herewith offered exhibits, 1 through 5, by the American Legion will prove conclusively that the Murphy report is false, vicious, and entirely out of spirit with the instructions to that committee. The following recommendations are made:

1. Passage of a resolution reaffirming the stand of the American Legion rejecting and condemning UNESCO as a propaganda tool leading to the loss of sovereignty of the United States. Resolution 13, August 5, 1952, Fresno convention.

2. Adoption of the resolution passed by Post 667 and the 17th District Department of California which calls for the discharge of the Murphy committee and filing its final report without action.

3. Passage of a resolution censuring the Murphy committee for its attempts at character assassination of all those who opposed it.

4. Investigation of those responsible for the release to the public press of confidential American Legion reports in such a way as to cause misconstruction of such reports.

5. A strong national program of support for the Bricker resolution for amendment of the Constitution of the United States in such a way as to prevent treaty law.

Record of Committee on Public Works in the 84th Congress, 1st Session

EXTENSION OF REMARKS
OF
HON. CHARLES A. BUCKLEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. BUCKLEY. Mr. Speaker, under leave granted to extend my remarks, I should like to submit a statement concerning the activities of the House Committee on Public Works during the 1st session of the 84th Congress.

Our committee has jurisdiction of legislation dealing with the improvement of rivers and harbors and waterways for navigation, flood control, other water uses, and related purposes, and shore protection. It drafts the legislation for the protection and preservation of the navigable waters of the United States.

The Committee on Public Works handles legislation relating to the construction of Government office and post-office buildings throughout the country and lease-purchase agreements for construction of public buildings by private enterprise pursuant to Public Law 519, the Public Buildings Purchase Contract Act of 1954—title I—and the Post Office Department Property Act of 1954—title II.

The committee has jurisdiction in the matter of oil and other pollution of navigable waters.

All bills relating to the construction or maintenance of roads and post roads must be referred to our committee for consideration.

The committee has made a good record in the 1st session of the 84th Congress.

The committee held its first meeting on January 25, 1955, to organize subcommittees and appoint staff personnel and held approximately 80 meetings and hearings thereafter, which I believe is something of a record.

Three hundred and eighty-six bills have been referred to this committee for consideration. In addition, the committee has handled several hundred survey reports on navigation and flood control. These surveys involve a study and review of previous reports of the Corps of Engineers, discussion with corps' personnel, public hearings, and subcommittee as well as full committee action. The committee also acted upon 38 lease-purchase agreements for public buildings. Forty-two bills had favorable action by the committee.

In addition to hearings on individual river and harbor, flood control, and bridge authorizations, river compact agreements, and so forth, public hearings were held on legislative proposals for a national system of interstate and defense highways; revision and restatement of the highway laws; the Niagara power project; amendments to the Water Pollution Control Act; the Inter-American Highway; a new building for the Smithsonian Institution; Lake Michigan water diversion; Great Lakes connecting channels; the Mississippi River-Gulf outlet; Southwest Washington redevelopment project; and Mississippi River-St. Louis flood-control improvements.

In the accomplishments listed herein I have had the active cooperation and valuable aid of all committee members. I pay special tribute to Representatives GEORGE H. FALLON, CLIFFORD DAVIS, JOHN A. BLATNIK, and ROBERT E. JONES, JR., who served as chairmen of the subcommittees, and to Representative GEORGE A. DONDERO, ranking minority member of the committee and former chairman, who cooperated in every way to perfect the legislation which has been offered to the Congress.

I want to give credit, too, to our efficient and hard-working staff. The committee is fortunate in having capable and experienced staff members and I welcome this opportunity to commend them for a job well done.

American Legion Members, Again Called Upon To Fight Endorsement of UNESCO, Should Demand Explanation of Why Report of Legion's National Americanism Commission Has Been Impounded

EXTENSION OF REMARKS
OF
HON. H. R. GROSS
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. GROSS. Mr. Speaker, the American Legion, with 3 million members and a million members of its auxiliary, is one of the most potent patriotic organizations in the United States.

It is not surprising, therefore, that increasingly strenuous efforts over the past several years have been exerted to persuade the American Legion to put its stamp of approval on the United Nations Educational, Scientific, and Cultural Organization, UNESCO, and to appoint a representative of the American Legion to serve on the United States National Commission for UNESCO.

For several years numerous resolutions have passed various posts and departments against UNESCO, and in 1953 resolution No. 33, censuring UNESCO, was passed by the national executive committee of the American Legion.

Since that time the Special Committee on Covenant on Human Rights, commonly referred to as the Ray Murphy committee because of the chairmanship of same by past national commander, Ray Murphy, has made 2 reports to the national executive committee, practically 100 percent favorable to UNESCO. On three occasions this Murphy committee has recommended the appointment of a representative from the American Legion to serve on the United States National Commission for UNESCO.

The American Legion has not yielded to this persuasion and is still on record against the iniquities of UNESCO and opposed to the appointment of an American Legion representative on the said commission for UNESCO. However, since the Ray Murphy committee presented a 2½-hour oral whitewashing report on UNESCO to the national executive committee at Indianapolis on May 5, 1955, which report was printed in the minutes of the meeting in full and has, I understand, been subsequently printed for a rather wide distribution, and since this report has been referred without approval or disapproval to the National Foreign Relations Commission of the American Legion for a report by them at the forthcoming national convention at Miami next October, it seems important to me that the members of the American Legion and others, who are interested in that great patriotic organization, should have the privilege of reading in the CONGRESSIONAL RECORD a clear chronological statement of the various actions by the American Legion on UNESCO and its present position.

Furthermore, it seems important to me that the members of the American Legion, who will attend the Miami convention next October and who will be called upon to vote to sustain the present position of the American Legion or to follow the Murphy committee by approving UNESCO and appoint a representative on United States National Commission for UNESCO, should have the privilege also of reading a documented research report which was authorized to be published by the National Americanism Commission on May 2, 1955, but all known copies of which were impounded by the national officials of the American Legion on May 6 and which report has not since been released for distribution. I therefore extend my remarks to include the following:

CHRONOLOGICAL SEQUENCE OF ACTIONS BY THE AMERICAN LEGION ON UNESCO

May 1953, national executive committee meeting:

The national executive committee passed motion to approve Resolution 33 censuring UNESCO. Later, on motion of William G. McKinley, New Jersey, the approval was reconsidered and on motion Mr. McKinley that the resolution was referred to the subcommittee on United Nations of the foreign relations commission for study and report later. (P. 47, digest of minutes, national executive committee, April–May 1953.)

May 1953, national executive committee meeting:

Upon motion of Thomas W. Miller, Nevada, seconded by Wm. G. McKinley, New Jersey, Resolution No. 33, which at an earlier session had been referred to the special com-

mittee on covenant on human rights and United Nations, was recalled from that committee and placed before the committee for consideration. Thereupon substitute or amended resolution was passed as Resolution 33, censuring UNESCO. (P. 123, digest of minutes, national executive committee, April–May 1953, exhibit I.)

September 1953, St. Louis convention:

At the St. Louis convention the foreign relations convention committee in their report provided the following:

"That the national executive committee direct its commission on foreign relations:

"To have its subcommittee on human rights and other agencies continue its study on UNESCO and other independent agencies in the United Nations."

This was in spite of the fact that there is no record of any resolutions concerning UNESCO having been referred to the foreign relations committee at that convention. (P. 40, proceedings, convention at St. Louis, 1953.)

May 1954, national executive committee meeting:

The special committee on covenant on human rights and United Nations made a report very favorable on UNESCO and very critical of the American Legion's established position as set forth in Resolution No. 33. The report was neither approved nor adopted but merely filed. (However, this "whitewashing" report was printed in the CONGRESSIONAL RECORD twice and was published throughout the Nation, particularly by the leftwing press as an indication of an about face by the American Legion.) (Pp. 189–193, digest of minutes, national executive committee meeting, May 1954.)

September 1954, Washington convention:

At the Washington convention, Resolution No. 322 was passed reaffirming the position of Resolution No. 33 of 1953 and urging the American Legion not to appoint a representative on the United States National Commission for UNESCO which had been the recommendation of the special committee report filed before the national executive committee in May of 1954. This resolution, No. 322, also provided for continued study of UNESCO by the said special committee. (P. 102, proceedings, convention, Washington, 1954, exhibit II.)

October 1954, national executive committee meeting:

Within less than a month after the Washington convention commitment in Resolution No. 322, against UNESCO, the chairman of the special committee urged that an invitation from the State Department to the American Legion to appoint a representative on the United States National Commission for UNESCO should be accepted and that such representative should be appointed.

October 1954, national executive committee meeting:

The Americanism commission passed Resolution No. 33 (1954) reaffirming the opposition of the American Legion to the teachings of UNESCO and urging that if an invitation to place a representative on UNESCO were presented to the national executive committee that the national executive committee reject it. National executives committee passed this resolution 51 to 6 as No. 33 (1954). (P. 88, digest of minutes national executive committee, October 1954, exhibit III.)

May 2, 1955, meeting executive section of national Americansim commission:

The executive section of the national Americanism commission of the American Legion authorized the publication of a carefully documented research report on UNESCO that had been prepared by the un-American activities research department of national Americanism commission and authorized that that report be delivered to the members of the national executive committee immediately and to the members of the national Americanism commission and for general distribution. Over 100 of these books were printed, assembled and bound on May 5, when the special committee on covenant on human rights and United Nations made its 2½-hour report to national executive committee (exhibit IV).

May 1955, national executive committee meeting:

Past National Commander Murphy made a 2½-hour oral presentation of his 150-page book reporting on UNESCO and it was all defensive of UNESCO or favorable to it. Said report was printed in full in minutes of said meeting. (Pp. 112–176, digest of minutes, national executive committee, May 1955.)

May 5, 1955:

On orders from national adjutant, the un-American activities research department of the national Americanism commission was ordered not to distribute any of their documented research report opposed to UNESCO.

May 6, 1955:

National adjutant's office impounded and took possession of all the 100 research reports that had been printed and bound, all of the extra printed copies not assembled and all of the type plates used in printing and presumably took all of this material back to the national adjutant's office, where it has remained impounded ever since.

May 13, 1955:

The news release of the national public relations section was a complete acceptance of the entire special committee report as though it were absoltuely authentic and documented, which it was not. National public relations section apparently made no effort to ascertain whether or not there was anything on the other side supporting the established position of the American Legion and apparently have not since made any effort so to do.

May 1955:

The national public relations section sent out a suggested speech to the thousands of speakers of the posts and departments over the United States which was singing the praise of the special committee, UNESCO, whitewashing report and giving no comment whatever contrary to the report as presented and indicating that it might result in a reversal of the position of the American Legion.

May 1955:

The American Legion magazine had a column on the Murphy report without any presentation of supporting material for the established position of the American Legion against UNESCO whatsoever, but accepting the Murphy report as though it were a documented fact instead of a self-serving declaration and magnificent defense appeal with the use of the common legal defense of confession and avoidance. (P. 32, the American Legion magazine, May 1955.)

June 1955:

The minutes of the national executive committee meeting of May 1955 printed in full the entire 150-page report—64 printed pages—extolling the greatness of UNESCO. The opening of the minutes on this subject made it appear that it might be uncertain whether or not such report was approved by the statement concerning withdrawal of substitute motion by William Stern, North Dakota, and no comment on admission by proponents that the report was neither being approved nor disapproved. (P. 112, digest of minutes, national executive committee, May 1955.)

July 1955:

The special committee report is running rampant in newspapers friendly and unfriendly to the American Legion all over the United States presenting its arguments and presenting the appearance of an about-face already by the American Legion, while the documented research report showing a few of the iniquities of UNESCO and supporting the present position of the American Legion is still impounded in the national adjutant's office and is not being permitted to be distributed.

NOTE.—It might be significant that 64 pages of digest of minutes, national executive committee, May 4, 5, 6, 1955, are given to printing the entire report of the special committee opposed to the present position of the American Legion and yet similar printed minutes of the national executive committee meeting October 1954, page 88, thoroughly "bollixed up" the incidents leading to the 51-to-6 vote of the national executive committee which passed the national Americanism commission resolution confirming the present position of the American Legion as opposed to any representative of the American Legion being appointed to the United States National Commission for UNESCO. (P. 88, digest of minutes, national executive committee, October 1954.)

EXHIBIT I

RESOLUTION NO. 33—UNESCO

(Passed by national executive committee, May 1953)

Whereas the American educational system since its inception has been used to educate America's youth for a useful, happy, well-ordered life; and

Whereas the teaching of love of God, love of country, and love of home has inspired our people to attain a height of greatness never obtained by any other people; and

Whereas the freedom obtained and guaranteed under our Constitution, together with our free institutions, have created a way of life that is exclusively the American way of life; and

Whereas in our generosity we have poured out assistances to people of the world under the United Nations; and

Whereas those determined plotters who wish to destroy our way of life, capture our wealth, and enslave our people have declared war against our Americanism; and

Whereas they have infiltrated into the United Nations and are using the UNESCO to corrupt the minds of our children by destroying their love of country, by issuing booklets containing statements such as, "Our children should be educated to prepare themselves for citizenship in a world society. As long as the child breathes the poisoned air of nationalism, education in world-mindedness can produce only precarious results. It is frequently the family that infects the child with extreme nationalism. The school should, therefore, combat family attitudes that favor jingoism"; and

Whereas our great Americanism program of the American Legion was conceived for the purpose of building a love of country, and we have often been accused of patriotism and jingoism, which means nothing but our willingness to fight to preserve our free institutions, exactly as our fathers fought to establish them. Those who support the theory of UNESCO are at war with the principles of the American Legion. In our fight to defend at all costs our American ideals and our American institutions. It is a part of that same war for world mindedness and world domination with its headquarters in Moscow; and

Whereas in 1952 this war against Americanism was being subsidized by an appropriation of $8,500,000 from the Federal Treasury. You are paying taxes to print such statements as, quote, "Our country belongs to the United Nations, which is the most important organization that has even been created on this earth. You are now a part of it." Another quote, "The kindergarten of infant school has a significant part to play in the child's education. Not only can it correct many of the errors of home training, but it can also prepare the child for membership, at about the age of seven, in a

group of his own age and habits—the first of many such social identifications that he must achieve on his way to membership in the world society."; and

Whereas for several years certain educational systems have given as their excuse for not teaching more of the fundamentals, such as American history, the three R's, etc.; the fact that there was a shortage of teachers in an overcrowded calendar. But still certain groups can find time and personnel to present the propaganda of these world-minded socialists which ridicule American history and builds a halo on internationalism: Therefore be it

Resolved, That we deplore the use of material furnished by the United Nations educational, scientific, and cultural organizations for the use in our public schools; and be it further

Resolved by the national executive committee of the American Legion, meeting in Indianapolis, Ind., April 29–30, May 1, 1953, That we call upon all American educational institutions and upon boards of education throughout the United States to cease and desist from the use of the educational materials of UNESCO propounding world citizenship and adherence to a nebulous world government as a criteria of education of American citizens; and be it further

Resolved, That we call upon the representatives of the United States to UNESCO to take appropriate measures to cause UNESCO to cease and desist from dissemination of such subversive educational materials.

EXHIBIT II

RESOLUTION NO. 322—OREGON UNESCO TEACHINGS IN PUBLIC SCHOOLS

(Passed by national convention, the American Legion, Washington convention, August 30–September 2, 1954)

Whereas the policy of the American Legion in regard to the United Nations Educational, Scientific, and Cultural Organization was clearly delineated by Resolution No. 33 of the national executive committee meeting in Indianapolis on May 1, 1953; and

Whereas some confusion now exists as to the present American Legion policy toward this same organization: Now, therefore, be it

Resolved by the American Legion in national convention assembled at Washington, D. C., August 30–September 2, 1954, That Resolution No. 33 of the national executive committee, dated May 2, 1953, is hereby reaffirmed as to its resolving clauses: Therefore be it

Resolved, That we deplore the use of material furnished by the United Nations Educational, Scientific, and Cultural Organization for the use in our public schools; and be it further

Resolved by the national executive committee of the American Legion meeting in Indianapolis, Ind., April 29–30, May 1, 1953, That we call upon all American educational institutions and upon boards of education throughout the United States to cease and desist from the use of the educational materials of UNESCO propounding world citizenship and adherence to a nebulous world government as a criteria of education of American citizens; and be it further

Resolved, That we call upon the representatives of the United States to UNESCO to take appropriate measures to cause UNESCO to cease and desist from dissemination of such subversive educational materials; be it still further

Resolved, That studies by the national executive committee now in progress by the special committee on covenant on human rights and United Nations be continued.

EXHIBIT III

The following resolution, originated in the national Americanism commission meeting in Indianapolis October 4, 1954, was overwhelming approved by vote of 51 to 6 of the national executive committee of the American Legion meeting in Indianapolis October 6, 1954 as Resolution No. 33, said resolution as follows:

"Whereas the opposition of the American Legion to the teachings of UNESCO was clearly stated by resolution No. 33, passed by the national executive committee of the American Legion meeting in Indianapolis, Ind., April 29–30–May 1, 1953; and

"Whereas at the national executive committee meeting of May 1954 in Indianapolis the special committee on covenant on human rights and United Nations of the national executive committee filed a report on UNESCO with the national executive committee, on which no approval or other action was taken; and

"Whereas this report largely stated the good things that the United States State Department and the national commission for UNESCO, who are promoting UNESCO, had to say in favor of UNESCO; and

"Whereas this favorable report on UNESCO, though it was neither approved nor adopted by the national executive committee has been copied twice into the CONGRESSIONAL RECORD with inference of about-face by the American Legion, and has been quoted and referred to by the press of the Nation, both friendly and unfriendly to the American Legion, as an about-face of the American Legion, and as tacit approval of UNESCO by the American Legion; and

"Whereas to clear up this confusion the Americanism convention committee recommended and the Washington convention of the American Legion, August 30–September 2, 1954, passed Resolution No. 322 which reaffirmed the resolving clauses of resolution No. 33 opposing the teachings of UNESCO; and

"Whereas if the American Legion were to authorize the appointment of a representative of the American Legion on the national commission for UNESCO, it could serve only to be used by the promoters of UNESCO's world government program, and by the press as approval of UNESCO by the American Legion: Now, therefore, be it

"*Resolved*, That should any proposal be made to the national executive committee of the American Legion for approval of the said report filed by the said special committee before the national executive committee, May 1954, or for the appointment or authorization of the appointment of a representative of the American Legion on the national commission for UNESCO, that the national Americanism commisssion hereby urges the national executive committee not to approve said report and not to appoint nor authorize the appointment of any representative or representation whatsoever of the American Legion on the national commission for UNESCO."

EXHIBIT IV

EXCERPTS FROM DIGEST OF MINUTES, NATIONAL AMERICANISM COMMISSION, EXECUTIVE SECTION MEETING IN INDIANAPOLIS, IND., MAY 1–2, 1955

8. After some discussion, a motion was adopted that the Americanism commission report on UNESCO be distributed to the members of the national Americanism commission, members of the national executive committee, and be made available for general distribution (p. 5).

Mr. Speaker, it is my information that the impounded, official report of the American Legion's national Americanism commission, dated May 1, 1955, contains the following statements:

The organization known as UNESCO does not contribute to the ideals of 100-percent Americanism within the meaning of the constitution and convention mandates of the American Legion. On the contrary, UNESCO, through its propaganda media, has consistently endeavored to bring about a climate of international mindedness in the United States and a subsequent decay in patriotism, national pride, and national sovereignty.

It is the "present policy of the American Legion," as stated on May 1, 1955, according to the national Americanism commission's report, "that the American Legion in no way affiliate with UNESCO in accordance with resolution No. 33 of the national executive committee, October 1954."

The President's Cabinet

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, August 2, 1955

Mr. NEUBERGER. Mr. President, I ask unanimous consent to include in the Appendix of the RECORD an editorial from the Denver Post of August 2, 1955, entitled "A Weak Figure in Ike's Cabinet."

This editorial calls for the resignation of the Secretary of the Interior, Douglas McKay, because of his woeful record in conserving and developing America's natural resources.

The Denver Post is the leading newspaper of the vast Rocky Mountain area. I think it is additionally significant that the distinguished publisher and editor of the Denver Post, Palmer Hoyt, is a leading Republican, a man who for many years prior to moving to Denver, was the publisher of the pro-Republican Oregonian in Portland, Oreg. Mr. Hoyt also is a supporter of President Eisenhower, so there is no partisan political tinge to his disgust and dissatisfaction with what has been happening to our resources under Secretary McKay's aegis.

I ask that the editorial from the Denver Post of August 2, 1955, appear in its entirety in the Appendix.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A WEAK FIGURE IN IKE'S CABINET

Why doesn't Douglas McKay follow Mrs. Hobby in retirement from President Eisenhower's Cabinet? Mr. McKay has been anything but an asset as Secretary of the Interior. When the administration was battling hardest a few weeks ago to authorize two multiple-purpose water projects in the Rocky Mountain empire where was the Secretary? Well, he was making a sentimental journey to the Meuse-Argonne and the hill where he picked up German shrapnel in 1918.

Mr. McKay hasn't helped the Eisenhower administration articulate a water and public works policy that makes sense. He has been of little help in passing legislation that would strengthen the Republican Party's record in that field. Nor has he dramatized the national investment values of reclamation and the use and reuse of water for the benefit of the West, whence he entered high office, or the Nation he is supposed to represent.

The Eisenhower administration put up a fair fight for the Arkansas-Fryingpan and upper Colorado storage projects. But neither

was authorized by the 84th Congress' first session. The Arkansas-Fryingpan failed in the House a year ago, although the Republicans gave it more votes than the Democrats. But this year neither the Arkansas-Fryingpan nor the Colorado River bills got to the floor. The Republicans can blame the Democrats, or California or Governor Johnson if they so desire. But their own Department of Interior must share the blame.

The tide of non-Western opinion against reclamation and related public power, and the historic subsidy therefrom for agriculture, has reached a new high coincident with the Eisenhower administration. Why? The President himself has spoken several times in favor of "basin-wide river development," and the hydroelectric conversion of waterpower where "private industry or local interests," singly or in "partnership," can't do the job.

The President endorsed specifically the two Rocky Mountain projects. And his assistant, Sherman Adams, personally directed the White House staff in a vigorous effort to line up votes for the Colorado River bill in the closing days of the session.

But other than the prosecution of last-minute, bailing out procedures, the administration has pursued no dynamic selling job on western development. That has been, historically, the function of the Interior Department. And Mr. McKay has failed, either from ignorance, indifference, or a calculated compromise engineered by the United States utility industry and its many, many friends.

Mr. McKay's personal integrity, his patriotism, or even his general competence as a politician and public official are not questioned here. He is a likable, courageous, and candid little man whose views are, in most matters, sound and sober (even though, at times, grossly oversimplified). But he has no enthusiasm for the role of championing the economic expansion of a region which now as always relies upon the Department of the Interior for cooperation. And he evidently has been touted away from that feature of his responsibility by the slickest and best-heeled touts of that never-resting gang known as the Washington lobby.

A few weeks ago the Denver Post suggested that perhaps Mr. McKay's failures were not entirely his fault, but were also a reflection of higher confusion of thought and purpose. The Sacramento Bee, commenting upon that editorial, said "The Post may be letting the administration off the hook too easily."

"When the Dixon-Yates contract, anti-public power directives of the Interior Department and other similar documents and actions are considered," the Bee said, "one wonders whether there really is a confusion of thought and purpose. * * * One can wonder whether there is not a very unconfused purpose to stymie or even destroy public power."

That may, indeed, be the contribution for which Mr. McKay will be best and longest known. If that proves to be true, or (as we suspect) many believe it to be true, Mr. Eisenhower would be wise to send his Secretary of Interior out of the country for the duration of the 1956 election year. And he would be wiser still to name a Secretary who would and could use the prestige of a cabinetship to defend and promote the legitimate investment functions of the Central Government.

The people of the United States need a Secretary of the Interior who will act boldly in the demonstrated public interest—one who will not retreat behind the fatuous doubletalk about socialism, the preeminence of local interests, or that frightfully abused phrase "free private enterprise" which is touchingly symbolized by what the late Mr. Ickes aptly described as the barefoot boys of Wall Street.

Meeting Public Needs

EXTENSION OF REMARKS
OF
HON. LISTER HILL
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Tuesday, August 2, 1955

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a speech I made at the 56th annual meeting of the American Hospital Association on September 13, 1954.

There being no objection the speech was ordered to be printed in the RECORD, as follows:

MEETING PUBLIC NEEDS

(Address of Hon. LISTER HILL, United States Senator from Alabama, before the 56th annual meeting of the American Hospital Association, Chicago, Ill., September 13, 1954)

I should like to say how very happy I am to be here with you this afternoon. It is always a pleasure to meet and talk with old friends, and my friendship with the men and women of the American Hospital Association is an old one—a friendship of working together on common ground in a common cause for the common good.

And, speaking of old friends, permit me to say how good it is to see George Bugbee here, whose inspired vision and devoted labors contributed beyond measure to the development of a program to provide hospital facilities for our country. George Bugbee has exhibited rare statesmanship in the field of health. We wish him the best in his new responsibilities, and I know that in his successor, Dr. Crosby, we have another old friend whose dedication and gifted energies will prove a source of leadership and strength to us all in building the Nation's health.

As an old friend, I am going to talk about working together to build this country's health and our responsibilities as citizens for meeting our public needs. Certainly there is no one here who will dispute that today medical care is a public need of national concern. Indeed, it has been said that the building and maintenance of health must now be added to food, clothing, and shelter as one of life's basic human rights.

When we talk of the health of our people we are talking about the real strength of this Nation. The vitality we must have for survival in this mid-20th century is a matter of health. Health, then, is a subject in which the Federal Government must take a direct interest and have a considerable responsibility.

I do not need to remind you of the record of the rejections of men for the armed services during the last war for reasons of poor health, and the even higher rate of rejection during the Korean war. The record presents an absolutely appalling picture for a country with the natural and material resources at our command. Our security and survival as a nation, our very way of life depend ultimately not on any Federal stockpile program of critical materials or atom bombs, but directly and basically upon our greatest natural resource—human life, men and women of sound mind and body. The health of our citizens must be of grave concern to the Federal Government, as it is to all those associated with the voluntary health system.

What, then, should be the role of the Federal Government in meeting this public need of better health?

I am not unaware of the problems of Federal intervention in programs of medical care. Some people are afraid of the patient lest he overutilize the services available to him. Others fear the doctors—or at least the organized ones. Some even fear hospital administrators. And, of course, many people fear our Government, though it is still our servant, not our master. I do not fear any of these because I have faith in people and in their ability to work together to solve their common problems. Human beings are made for cooperation, not for conflict, and voluntary professional organizations like your hospital association have, and will, point the way toward such cooperation in the field of medical care.

It seems to me that there are three factors which determine the extent of the role of the Federal Government in fields which, today, are largely within its sphere of responsibility. These are:

1. The failure of local and State governments to meet responsibilities in the face of public need.

2. The mobility of our total population; the movement of people from one State to another.

3. The disparity in income and taxable wealth among the various States.

I think it would be interesting to hear what was said on this subject by the Assistant Secretary of the Department of Health, Education, and Welfare, Mr. Roswell B. Perkins. In a recent speech, Mr. Perkins said, "The suggestion is frequently made that the Federal Government should return to the States certain sources of tax revenues and terminate Federal grants-in-aid. However, study has shown that this solution is impracticable, at least on any broad scale. * * * There is no assurance that any tax or group of taxes which might be selected to be turned over to the State will provide revenues to an individual States which will be related in any effective way to the need for funds to replace the present Federal grants."

Thus, the present administration, having officially proclaimed its strong belief in decentralization of the Federal Government, has had to recognize the hard fiscal facts of life which have faced previous Presidents, administrations, and Congresses.

None of the three conditions which we have mentioned alters the fundamental relationships between the different levels of Government, but they do decidedly affect the leadership role of the Federal Government in meeting public needs.

Federal leadership in such ventures of national scope as the health of our people is no new event in our history. Soon after the American Colonies won their independence from Britain, the United States established tariffs to protect the infant industries of New England and the hemp industry of Kentucky. With the development of railroads, the Nation willingly gave land and tax exemptions to nurture their growth and make possible the opening of the western country to settlement and development. The establishment of the land-grant colleges, the opening of vast tracts of the public domain for homestead and settlement in the land-rush days, waterways, and harbor development—in all these the States and the Federal Government recognized the need for central leadership and planning if these natural resources were to be fully developed in the public interest.

Today the Nation faces a new phase, with the great issue of the development and use of its atomic-power resources. New ventures challenge the imagination and energies of our people.

As the problems of resource development have grown big in the technological world of science and the machine, so must the means of coping with them be expanded.

More than ever there is need for integrated action—extending through all levels of effort—Government and private, group and individual, with each making his own particular contribution.

But this does not mean that big government is inevitable or desired. It means planning with national results in mind, but the execution of these plans must and should be carried out through local authorities.

I use the TVA as an example. Under TVA, Congress set the national policy. It set the broad outlines of an integrated plan of flood control, navigation, soil restoration, and power production. But in carrying out the mandate of Congress TVA uses local agencies of Government and private organizations.

This is a distinction of, I think, major importance. Congress must and should determine national policy in certain fields. This does not mean, however, that administration of these policies must be on a nationwide or centralized basis.

This is true in the field of health.

The Federal Government, which provides funds, can reserve the right to lay down certain basic standards. But the administration of the program should rest in the hands of local authorities.

The fact is there is no other way to do the job. The task of harmonizing and periodically adjusting the intricate maze of parts that make up the integrated development of resources—human or natural—in a technological world simply cannot be done effectively from some remote government or business headquarters.

Alexander Hamilton, our country's foremost advocate of a strong Central Government, declared, "The more the operations of the national authority are intermingled in the ordinary exercise of government, the more the citizens are accustomed to meet with it in the common occurrences of their political life, the more it is familiarized to their sight and to their feelings, the further it enters into those objects which touch the most sensible chords and put into motion the most active springs of the human heart, the greater will be the probability that it will conciliate the respect and attachment of the community."

And in 1937, in a message to the Congress respecting regional authorities, Franklin D. Roosevelt said:

"It is not wise to direct everything from Washington."

The democracy of decentralized government, which protects the authority of State and local governments from centralized domination while enabling the people to benefit from Federal leadership, funds, and coordination, has long been a personal conviction. As you of the American Hospital Association know, we have, in fact, embodied this philosophy in the Hospital Survey and Construction Act.

In 1946, when Senator Burton and I authored the Hospital Survey and Construction Act, we not only recognized the urgent need for more hospitals and better medical care, but we were convinced that the only way to defeat a compulsory health-insurance system was with an effectively functioning voluntary system. It seemed clear to us that the first step toward the goal of bringing the benefits of modern medicine within the reach of all our people was to make certain that hospital beds were available when needed. It seemed to us that hospitals and voluntary health insurance had to advance together. One could not proceed very far nor very satisfactorily without the other. Hospitals not only have to be paid for, they have to be maintained. Health insurance provides hospitals the means for a steady income. On the other hand, the extension of health insurance beyond the capacity of hospitals to supply beds when needed would only serve to aggravate the shortage of beds and increase the pressure for a socialized system.

I am in thorough agreement with the demonstrated philosophy of your American Hospital Association—a philosophy that believes the way to avoid the evils of socialized health care is to make sure that the voluntary system can do the job.

The forthright and inspired leadership of the American Hospital Association stands as a challenge to all citizen organizations dedicated to the good of the people.

You recognized that public needs had to be met and that there was little opportunity for bringing the benefits of modern medicine to millions of our population without adequate facilities.

As evidence of your association's vital role in meeting these needs, I recall that you scheduled a series of regional conferences held throughout the country last year. These meetings were designed to bring together individuals who had been closely associated with and were well informed on the operations of the Hill-Burton program, in order to determine what their thinking was about the program—whether they had major criticism concerning it and, in general, what their evaluation was as to its operation. The report of these conferences demonstrated that this program for the construction of hospitals and health facilities has been one of the most productive, best administered, and successful ventures into which the Federal Government has ever entered.

The program has been an example of Federal, State, and local community cooperation, and most important for us here, it derives its real strength from the fact that it is government and voluntary enterprise working together.

There are a number of important principles which were built into this program. They are not there by chance. They have had much to do with its success and can well serve as a basis for the expenditure of Federal funds for meeting public needs in other fields. These are:

1. A demonstrated need, substantiated by study and survey.
2. Local decision of greatest need and priority for expenditure of funds.
3. Maximum administrative authority given to the States.
4. Joint financing by all parties concerned.
5. General coordination and supervision by the responsible Federal Government agency.
6. Requirement that there be local responsibility for the operation of any facility.
7. A Federal council to review administrative procedures to insure that the Federal administrator does not act in an arbitrary manner.
8. A formula for the division of funds which recognizes the relative needs of different sections of the country and their ability to meet these needs.
9. Procedures which minimize political influence.

Perhaps more important than all of these principles is the incentive which the grant of Federal funds has given local and State bodies to take action to meet their needs. Our hospital program has demonstrated that when the Government helps to meet the need for hospitals and health facilities by providing assistance grants, the people—with their sense of local responsibility and local leadership—are eager to meet the opportunity and build their own hosptals and health facilities. The stimulus which the program has given to the building of hospitals and health facilities has carried over into many projects which have had no Federal or other governmental funds.

If we are to continue to improve the health of our people and build the strength of our country, we must strengthen the six pillars of health. These are:

1. Adequate numbers of well-trained health personnel—doctors, dentists, nurses, medical technicians.
2. A sufficient number of adequately equipped hospitals, health centers, and other health facilities.
3. Fuller understanding and practice of preventive medicine.
4. Continuation and increase of basic research in all fields of medicine and related sciences.
5. Education: It is the informed person who knows best how to take care of himself and preserve his health.
6. Conservation and enrichment of our soil. The minerals and nutrients which feed and make up our bodies come to us from the plants and products of the soil. Much disease and illness is attributed to deficiencies in our soil.

And I would suggest there is a seventh pillar essential to our health system. It is the newest one, and that is, the full use of voluntary prepayment insurance to finance the costs of needed health services. This instrumentality for easing the burden of the financial costs of illness, which through the years has weighed heavily on family income, can only attain its final goal through the support and participation of everyone, and this includes, I believe, the Federal Government. The voluntary health insurance bill, introduced on behalf of myself and several other Senators as a bipartisan measure, is aimed at bringing about the participation of the Federal Government, embodying the experience and philosophy of the Hospital Survey and Construction Act.

Other problems in the field of health remain unsolved. These have been studied by committees of Congress, the President's Commission on the Health Needs of the Nation, and most recently by the Commission on Financing of Hospital Care, sponsored by your association.

There must be an intelligent seeking for a sound basis of joint participation between local, State and Federal Government with the great voluntary health organizations of our country. The stimulus and incentive which the Federal Government can provide in these affairs does not weaken State and local government; quite to the contrary, it makes it possible for many States and local governments to discharge their responsibility, and thereby safeguards their rights.

If we do things in the voluntary way with a joining of hands and with each fulfilling its responsibilities, our American system of government is strengthened in all its parts, the vitality of our Nation is quickened and preserved, and we hold fast to the principles of democracy proclaimed by Thomas Jefferson:

"Where every man is a sharer in the direction of his government * * * and feels that he is a participator in the government of affairs."

In this spirit, let us move forward in the great mission to which you dedicate your labor and your lives.

The struggles of today are not for today alone, but for a vast future.

Misunderstood and Misapplied

EXTENSION OF REMARKS
OF
HON. CHARLES C. DIGGS, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. DIGGS. Mr. Speaker, the following editorial concerning current widespread misuse of the Attorney General's subversive listing appeared in the August 1 edition of the Detroit Times. I am sure that countless loyal Americans, who passionately believe in and pursue

the principles of democracy, who, like the Senate Internal Security Subcommittee and the United States court of appeals, are certainly not soft toward communism, are grateful for these warning against all too prevalent undemocratic and unjust practices.

THE SUBVERSIVE LIST: "MISUNDERSTOOD AND MISAPPLIED"

The Senate Internal Security Subcommittee, a group certainly not soft toward communism, has lately asserted that the Attorney General's list of subversive organizations has been "widely misunderstood and misapplied."

When the list was first circulated in 1947, it was intended primarily as a guide for helping to determine fitness for Government employment under the security program.

Supposedly, it still should be used in that manner. But in actual practice, by both public and private agencies, it has become a highly effective blacklist. Anyone who has been a member of a listed organization is automatically suspect until he can clear his name.

Under Presidential order, the Attorney General can, after appropriate investigation and determination, place an organization on his subversive list.

Until 2 years ago, listed organizations were denied opportunity to dispute the subversive label hung on them. Then, after the Supreme Court had thrown some doubts on the list, provision was made for a hearing procedure in contested cases.

To be sure, not many of the 263 organizations now on the list have bothered to demand hearings—probably because it could be so readily shown that they are somewhere in the pink-to-red spectrum.

But some of them have asked to be heard, and only now has the first of these been granted opportunity to defend itself. That is the Independent Socialist League. Its officers say they have tried 15 times in the past 6 years to get a hearing before the Attorney General so they can prove the injustice of the designation.

We don't know whether the league is a subversive organization. We do know that under American standards of justice the accused is entitled to his day in court—or in this case, in the hearing room.

And no matter how any subversive list organization comes out at a hearing, or even whether it asks for one, there is another factor to bear in mind in the matter of past membership in such groups.

It is the political climate of 1930, and in the years when we were military allies of communism.

Many an idealist, opposing fascism, or Franco's bloody role in the Spanish civil war, joined altruistic-sounding Communist-front organizations, only to resign in disgust and disillusionment when he discovered what he had gotten into.

There are reliable estimates that more than 700,000 Americans have left the Communist Party in the past 30 years. How many additional thousands similarly found they had made a wrong choice by joining frontist groups and quit them? Nobody knows, but the total probably is immense.

Over all these people hangs the knowledge that because they were once gullible or callow, and in either case much too dewy-eyed, they may at any time encounter serious—and sometimes publicly paraded—doubts as to their loyalty.

The subcommittee's words should carry at least some comfort to those who learned of communism's foulness by touching it—often without knowing that it was communism they were touching until too late.

So, too, should a recent ruling of the United States court of appeals in Washington. Refusing to evict two individuals from a Federal housing project because they refused to sign oaths of nonmembership in subversive organizations, the court cited two principles.

One was that refusal to take such an oath was not legal proof of the fact of membership. The other that even proof that they were members of such a group but knowing nothing of its character would be arbitrary ground for evicting the two.

It would be less than Christian not to go at least as far as the subcommittee and the court in making sure that the Attorney General's subversive organization list is not misused or misapplied as a measure of an individual's good citizenship.

Hardie Ranch Paces County

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, August 2, 1955

Mr. NEUBERGER. Mr. President, Ernest Kirsch, county agent in Gilliam County, Oreg., in reporting to the Portland Oregonian of July 24, 1955, has described the conservation practices of W. D. Hardie and sons, Bill and Earl, the winners of the Gilliam County title of "conservation man of the year" award for 1955. This describes a pattern that should be an inspiration to every farmer who is earnestly endeavoring to follow good conservation practices. I ask unanimous consent, Mr. President, to have Mr. Kirsch's article included in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HARDIE RANCH PACES COUNTY
(By Ernest Kirsch)

Trashy fallow—some 900 acres of it—in an area where this practice is rare earned W. D. Hardie and sons, Bill and Earl, the Gilliam County Conservation Man of the Year award for 1955.

Leaving a trashy blanket of stubble on the surface is the Hardies' main weapon in their fight to hold their wheatland on steep hillsides where erosion and gullying has been a bad problem.

STRIP FINALLY ADOPTED

On one 239-acre field where trashy fallow wasn't enough to stop soil washing, they use rotary subsoiling and similar practices, and now are farming the field with alternate strips of crop and fallow.

"I consider stripcropping a last resort, but this field needs it," Bill Hardie, Jr., told farmers during a recent conservation tour.

The Hardie farm is in the Trailfork and Lost Valley communities southeast of Condon. It includes 10,000 acres of range and 2,400 acres of cropland, of which about 1,600 acres is in wheat and the rest in hay, pasture, and barley.

To make their trashy fallow, the Hardies use the method suggested by Howard Cushman, Oregon State College, in a recent Extension circular. They use a sweep plow trailing a skew trader. Rod weeders are equipped with spiral attachments the first time over.

SOD PAVES WATERWAYS

More than 4,000 feet of draws in grain fields have been seeded down to form sod waterways that lead water gently down slopes. Extensive use is made of nitrogen fertilizer. This year anhydrous ammonia was put on 400 acres of summer fallow, and 300 acres of winter wheat also were fertilized. The Hardies say 30 to 35 pounds of nitrogen to the acre maintain high yields with trashy fallow.

Cross fences permit uniform utilization of rangelands. Other grazing land practices include spring developments and crested wheat seedings.

The Hardies operate as a team in running the ranch. As Bill told the selection committee:

"Dad is responsible for the trashy fallow and I insisted on the stripcropping. Earl looks after the range practices."

As Gilliam County winners, the Hardies will compete against winners from other counties for the State award. The conservation contest is sponsored by the Oregon Wheat Growers League and the Oregonian.

Why Is a Congressman?

EXTENSION OF REMARKS
OF
HON. CHARLES C. DIGGS, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. DIGGS. Mr. Speaker, the following article from the July 31 edition of the Detroit Times, I think, expresses the general reaction to the failure of Congress to enact highway legislation during this session of Congress, because we were not able to resolve differences regarding the financing of this program. I fervently hope that the President will call a special session of Congress to consider this situation as soon as practicable. I am sure that others, in addition to the people of Michigan, have begun negotiations to proceed with new highway constructions under the assurance that Congress would enact legislation this session. The delay in this program can result in tremendous financial losses to States which have plans in process which might not be in accord with the program as finally enacted.

I am in agreement that this problem is of critical concern to the American people and that it should be resolved in Congress without delay.

WHY IS A CONGRESSMAN?

If you don't want to think about the traffic jams you'll be in today as you and your family try to take a ride in the country, you might think about Congressmen.

As you notice the ambulances and wreckers and State police cars heading toward the latest highway disaster, notice also what went on last week in Washington.

Congressmen of both parties, stampeded by lobbyists representing industries that make good money from the use of the highways, voted down any attempt to get you out of the traffic chaos or to make the ambulance trips unnecessary.

The lobbyists and our Representatives all piously agreed that better roads are absolutely vital.

They also agreed that it was absolutely vital that somebody else pay for constructing them and that it was absolutely vital that everybody get reelected.

Realizing what they had done, after they had made sure they had done it, the Congressmen pointed at the trucking industry lobby as the villain.

And the truckers, after the bills were well sunk, issued statements that Congress should never have acted like that; that President Eisenhower was right when he criticized Congress and demanded reconsideration of its failure to pass a bill.

The same people who caused 100,000 telegrams to flood into Washington demanding the defeat highway legislation, issued press releases that said the recipients of the telegrams must have misunderstood.

The 100,000 telegrams came from a tiny minority of the American business industry.

We wonder what might happen if the American people sent in telegrams themselves, preferably after a frustrating, dangerous day on the roads the Congressmen refused to improve.

In fact, why don't you do it right now?

We don't know whether you mean as much as a lobbyist does to your Congresman, but we're pretty sure a lot of you acting together mean more, much more.

Why not let your Congressman know what you think about the House action last week and tell him to start all over again right now and pass a bill?

And tell him to stay in Washington until he does.

Water Problems in My Soil Convervation District and on My Farm

EXTENSION OF REMARKS
OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, August 2, 1955

Mr. NEUBERGER. Mr. President, conservation is a broad subject. It has many phases. Those who subscribe wholeheartedly to the gospel of conservation are numbered in the millions. Realizing the fundamental feeling man has for the land, the National Association of Soil Conservation Districts asked churches to observe Soil Conservation Sunday this year in May. Thousands of ministers reverently observed the occasion.

Further emphasis on the philosophy of conservation has been stimulated by NASCD through its annual speech contest. Last year's national winner was Clarence Rogers, Salem, W. Va. Mr. President, I ask unanimous consent that his speech Water Problems in My Soil Conservation District and on My Farm, be printed in the Appendix of the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

WATER PROBLEMS IN MY SOIL CONSERVATION DISTRICT AND ON MY FARM

(By Clarence M. Rogers, Salem, W. Va.)

(Condensation of winning speech, 1954 national speaking contest)

The power and usefulness of water were introduced to me in an unusual way. In 1943 I left the practice of law in the city of Clarksburg, W. Va., to begin three very interesting years of service with the United States Navy. As ofttimes occurred, the Navy did not need the service for which I had been trained. So they placed me in the growing and vital field of aerology—the Navy's name for the study of the weather. One of the most acceptable parts of my training, provided at the University of Chicago, was the study of cloud formations. This made clear to me the tremendous part that water plays in the energy transfers which occur in the atmosphere around and above us. I still stand in awe as I look at a towering cumulous cloud rising 30,000 to 40,000 feet above me, a sheer white mountain made of water suspended in air but containing enough pent-up energy to light a dozen cities a month or more. Rain to the aerologist was not nearly so much of a problem as fog, ice, or snow, but whatever its form, water causes us great concern.

After leaving the Navy I purchased a small farm about 1 mile from the city of Salem, W. Va. In was apparent to me from the first that water was going to be just as much of a problem on the farm as it was in the Navy, and I began to investigate ways and means for handling it. In this manner I came to know of the work of the West Fork Soil Conservation District and of the related services with which it cooperates.

"FEAST OR FAMINE"

Our major water problems appear to be basically two in number. First, how can the small tributaries of the West Fork River in Harrison and Lewis Counties, of Middle Island Creek in Doddridge County, and of the Little Kanahwa River in Gilmer County, be so controlled during periods of heavy rainfall that downstream flooding and soil erosion are avoided? Second: How can those same watersheds provide reservoirs which will supply the surface and subsurface water for periods of drought?

Since 1896 the city of Salem and lands lying along the banks of these streams have been subject to repeated floods. These floods occur more frequently in June than in any other month of the year. Seldom a year has passed during the last 58 when we have not had a flood. Damages over that period of time have been enormous. It is estimated that the annual loss of soil material is approximately 23,000 tons from that watershed alone. Sedimentation damage caused by the deposit of silt in the hay crop and the filling of stream channels is extensive. The 1950 flood alone damaged 73 houses and 65 business places within the city of Salem and caused a total damage of approximately $233,000. A small community cannot withstand such losses and survive. It becomes a matter of concern to every citizen to seek ways to prevent such catastrophes.

A somewhat similar picture can be painted of every community within the West Fork Soil Conservation District. Clarksburg and Weston, the two most populous areas within the district have been the victims of frequent and oftentimes very damaging floods. Hundreds of acres of bottom land have suffered too, and countless tons of soil have been carried downstream.

But let us return to our illustration. When it is not too wet in Salem, it is often too dry. The shortage of water for the city of Salem has been almost as much a problem as the floods. Water for the city has in the past been obtained from deep wells, and as the demand has increased the supply of ground water has diminished. During recent years the water supply has been so low during the dry periods that the householders have not had sufficient water for everyday use and a serious fire hazard has existed within the town.

This situation, too, is not peculiar to Salem. The city of Clarksburg only last year was considering the piping of water many miles from the Buckhannon River in order to alleviate a serious shortage caused by the drying up of the small streams throughout the watershed and an insufficient flow in the West Fork River to provide for the needs of the city. Farm wells and springs which have never been known to go dry, are year-by-year, in increasing numbers, ceasing to produce water.

SOIL CONSERVATION IS THE ANSWER

As a result of this condition throughout the watershed area, there has been a growing conviction in the minds of farmers and cityfolk alike that the answer to the twin threats of flood or drought is soil conservation. The West Fork Soil Conservation District, for many years now, has been working patiently, thoroughly, and democratically to bring about the feeling and the desire within the minds of the people that these perennial problems do not have to be—they can be beaten. This beating is now being administered by the West Fork Soil Conservation District in cooperation with many public and private agencies in the area and with the active participation of many cooperators.

There are again two main attacks to the problems. One is to work directly with the cooperators in the use of soil conservation practices. The other is to provide the public with effective information on the prime and basic importance of soil conservation to our entire economy. These have been initiated, planned, and encouraged by the supervisors of our district.

The first approach brought about within the district during the year 1953 not less than 35 different types of soil conservation activities carried on by the cooperators and the district, with the technical assistance of the Soil Conservation Service and the help of other agencies. Contour farming, strip cropping, tree planting, pasture improvement, building of farm ponds, digging diversion ditches and constructing open and closed drains—these are a few of the many scientific practices undertaken. Today in the West Fork Conservation District there are 4,000 active cooperators with more than 430,000 acres of land under a planned soil conservation program. This acreage represents 46 percent of the total area in the district. Although there is much, much more to do, this is no mean accomplishment and does not yet tell the whole story.

I should pause at this point to say a word about the individual employees of the Soil Conservation Service. Time after time, I have found them out in all kinds of weather, working from early in the morning to late in the evening, assisting the farmer and landowner with his problems in soil conservation and farm planning. It seems to be characteristic of their lot that each has a cheerful disposition, a keen desire to cooperate, and a willingness to be patient with the demands and eccentricities of the individual cooperator. As a group, these men seem to have caught the spirit of a democratic society, as few Government-employed groups have done in the past. Our district supervisors meet regularly and, though unpaid, spend many valuable hours in planning and directing the work of conserving our land and water.

The second approach to our water problems is through the activities of the soil conservation district in making known to people throughout the district the importance of soil conservation and the urgent need for constant and active endeavor to practice it wherever it is possible. This has been accomplished by planned tours of the pilot watershed project at Salem; by regular news articles in the daily and weekly newspapers covering the areas; by demonstrations made by trained Soil Conservation Service employees cooperating with the district planning committee; by the use of visual aids in schools, churches, civic clubs, and at other gatherings; by exhibits at fairs, schools, and at other public assembly areas; by use of the radio and the speaker's platform; by encouraging participation in soil conservation contests of both local and national scope; by contact with vocational agriculture classes and other special interest groups, as the Boy Scouts, 4-H clubs, and Future Farmers of America; by cooperation with Federal and State agencies and home

demonstration and county agents; and by enlisting the interest and support of community leaders.

MANY HANDS MAKE LIGHT WORK

At home, when we all get in the kitchen, to wash and dry the dishes, the children find that the work is done before they have stopped complaining about having to do it. We are beginning to realize that the same thing is true when we face the water problems of our area. The district has repeatedly made known to us that any undertaking is a voluntary one and that its chances for success on a community level are directly dependent on the degree of total participation of the community in the conservation practice or practices started. Leading the way, the supervisors of the district have tied together for us, on an area basis, the potential of the Hope Natural Gas Co., the South Penn Natural Gas Co., the Equitable Gas Co., the Monongahela Power Co., the Baltimore & Ohio Railroad, the Eureka Pipe Line Co., and other private agencies as well as many State and Federal services to aid in the soil conservation program in the district. As an example of how this works, let us return to the upper Tenmile watershed project. Several pipelines required removal and relaying before work could be completed on the first two dams—an expensive item. The expense was largely borne by the companies involved. It was also necessary to move an electric line. This was done gladly by the company. The expenditures by the city of Salem for the building of its dam and reservoir were approved by the people of the town, and even though started as an independent project, it has been dovetailed into the total watershed development program.

Lest you think that the Salem watershed project is the only work of the district, let me point out that the practices which are used in that project are listed separately from the regular district practices and are not included in its report for the first 6 months of 1954. This report shows that 73 farm ponds have been built, 14,625 lineal feet of stream channeled, 165 acres contour farmed, 1,277 acres pasture improvement, and 241 acres of trees planted. Many other practices could be cited which indicate that the cooperators on the rivers and streams in this district are contour by contour and tree by tree adding to the ability of the land to hold its own against the recurring rains. They are by the addition of pond and tree and grass and sod permitting the land to store more water for those sunny days when it will be needed. Each cooperator makes a contribution which may be insignificant in itself but which when totaled with all the rest makes possible the control of the lifeblood of a nation—its water.

THE GREATER BLESSING

Standing beside a small stream I have many times tossed a stick or piece of wood into the water and watched it lazily ride the moving water until it is lost to sight. I have always wondered, "Where will it finally stop? Will it some day follow the Monongahela River to its junction with the Allegheny at the industrial triangle of Pittsburgh, there to become a part of the great Ohio River and finally to meet the mighty Mississippi and move, twisting and turning with that great river until it is lost in the Gulf of Mexico?" Perhaps. And then I realize that it is likewise so with the rushing turbulent waters that come from our hillsides when heavy rains are here and the small, almost silent runs, become damaging torrents which grow larger and more frightening as they sweep downstream to be joined by others.

Have you seen a house or a store or an automobile, which by chance may not have been completely destroyed, but which has been flooded by silt and disease-laden waters of some river? It is not an encouraging thing to return to, and oftentimes the property or building may be damaged so extensively that it has to be razed. The owner starts again from scratch. Far more important is the loss of life which sometimes occurs when waters rise quickly and people are unprepared. The soil conservation practices advocated and planned by the West Fork Soil Conservation District are so essentially a part of the control of floods in the metropolitan areas of Pittsburgh, Wheeling, Parkersburg, Huntington, and Cincinnati that I feel bound to recognize and use the benefits offered me through the district. Not only do these practices help to protect thousands of people and countless millions of dollars of property in downstream cities; but these same practices provide during periods of drought a more steady, even flow of water in the streams and rivers for the use and benefit of those same people and many thousands more who depend upon the rivers for water supply and recreational use; for industry, trade, and commerce.

SOIL CONSERVATION STARTS AT HOME

Even though I really began my soil-conservation work in 1947, I feel that I have been a true conservationist for many, many years. If you were to take a look at my basement and attic you would have ample proof of the fact—everything I've had for the past 30 years is still there—if you can find it.

This past year the Salem watershed project undertook the construction of one of the flood detention dams on the small stream which separates my property from that of my neighbor. This assures me that the portion of my farm below the dam will, in all probability, never be flooded again, that there will always be a permanent pool of water above the dam to be used for fish and recreational purposes and which is also available for fire protection for those neighbors who are reasonably close. Five thousand evergreen trees have been planted on the hillside above the pond. These trees will help to hold the soil, decrease the silting of the pond, and provide my children 10 years from now with Christmas tree money to attend college. In addition there are 10,000 more evergreens now being set out to complete the reforestation of the hillside that is subject to erosion.

Conservation of natural resources can give us some helpful pointers toward conservation of human resources. Just as God has created a balance between the energy which this world receives from the sun and the energy which it discharges into the outer atmosphere, so a balance must be found in our conservation practices which will assure us that there is as much being replaced or held in the soil as is being taken out. In that accomplishment we will find that we must ourselves give out as much as we take in; that we must repay to society those years of loving care that were provided for us by our parents by giving such care to our children and others. We must acknowledge God's gift of land and water and life, by humble, sincere, and intelligent use of these resources.

Third Anniversary of the Commonwealth of Puerto Rico

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Tuesday, August 2, 1955

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement which I have prepared concerning the third anniversary of the establishment of the Commonwealth of Puerto Rico.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Mr. President, Monday, July 25, 1955, marked the third anniversary of the establishment of the Commonwealth of Puerto Rico. It is a day of great significance, and of celebration and rejoicing for our 2¼ million fellow American citizens in Puerto Rico, and one of which the Senate of the United States should take cognizance, and in which all Americans can take just pride.

Mr. President, I am sure that most of the Members of the Senate will recall how the Puerto Rican people through their elected leaders submitted to the 81st Congress something new and unique to the United States political system when they petitioned for authority in the form of a compact to organize themselves into a Commonwealth Government, with all proper powers of self-determination except for certain powers reserved to the United States Government.

This petition on the part of the Puerto Rican people was something new and different. It showed political inspiration and political imagination in planning a new system of government within the American framework to meet the new and unusual problems posed by the truly phenomenal economic and cultural progress of the people of Puerto Rico in their half-century under the American flag.

As the Members of the Senate know, Puerto Rico is a land of long-established civilization in a character remindful of Old World customs and traditions. Ponce de Leon started its settlement before he set out for Florida on his legendary search. The first bishop in the New World was Alonso Manso, the first bishop of Puerto Rico. The oldest church under our flag today is the San Jose Church in San Juan.

While possessing unsurpassed beauty and charm, the island is deficient in natural resources. Two and one-quarter million people live in an area of 3,500 square miles, of which only a part is arable. So far, few mineral resources have been discovered. But the people themselves have compensated for their lack of natural resources in their spiritual, mental, and physical energy.

Today, still a long way from the ultimate goal of eliminating unemployment, Puerto Rico has made tremendous strides toward the more abundant life for her people. Everywhere in this tiny island in a large sea the signs of progress can be seen. You will find there hotels comparing favorably with any in the New World, roads rivaling our best highways, an airport second to none, modern new factories, efficient and productive, albeit tiny by continental comparisons. You will find sanitary conditions which have brought in an almost unbelievably short space of time a death rate (and this may surprise you) lower than that of the United States as a whole.

You will see also acres of sugarcane, coffee, bananas, and other crops. Almost every square foot of available land is in agricultural production.

Puerto Rico is handicapped both by the distance from raw materials and ultimate market. The people had to be trained, industriallywise. The community was a poor one in which substandard living conditions prevailed. There was a mountainous job to do in the field of education. Little by little, the problems are being overcome. They are being attacked on all fronts simultaneously.

What inspired this beehive activity in tropical Puerto Rico? It is, I think, the explosive energy of a happy people who do not carry the burden of colonialism. It is the minds and muscles of free men and women

aroused to their task by aggressive leadership. This activity will, I am sure, continue while these conditions prevail, until one day, perhaps not long from now, the children will go to school as long as do children in continental United States, and living conditions will equal those of their mainland brothers. In large measure, this depends upon the continued wisdom of this great body which is fomenting freedom, happiness, and an atmosphere of plenty for all throughout a free world.

But today, Mr. President, I want to commend both the people of Puerto Rico and the Members of the Senate for their achievements under 3 years of commonwealth status.

Massive Lodge on Mount Hood Reopened

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, August 2, 1955

Mr. NEUBERGER. Mr. President, Timberline Lodge, appropriately named and appropiately designed, is located on the slopes of Oregon's highest peak, Mount Hood. Like an inverted, frosty cone, this peak dominates the landscape that visitors to Portland find so impressive and unforgettable. These visitors, approaching Mount Hood, first sight the lodge, miles distant, from the highway that hangs like an asphalt strap across the south shoulder of the mountain. Arriving at the lodge in July or August, visitors see skiers descending the slalom courses on the summer snows that coat the glaciers. Malcolm Bauer in the July 11, 1955, Christian Science Monitor describes the unique lodge. Mr. President, I ask unanimous consent that the article be included in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MASSIVE LODGE ON MOUNT HOOD REOPENED
(By Malcolm Bauer)

TIMBERLINE LODGE, OREG.—This massive structure of rough-hewn native stone and timbers, mecca for more winter sports enthusiasts than any other resort in the Nation, reopened to the public this July in a summer blizzard that was reminiscent of the February day in 1938 when it first opened its doors.

The lodge nestles on the southern slopes of Mount Hood at the 6,000-foot elevation where the thick stands of Douglas fir meet the barren stone and ice of the mountain. From its wide windows one can see the plateau land of eastern Oregon and the valley of the Willamette to the west. The nearby mountain slopes hold snow the year around, making the lodge one of the few 12-month skiing centers in the United States.

Because of this and because of its location (less than 60 miles by highway from Portland) the lodge area is visited by more skiiers than any other national forest hotel. More than a million visitors, a third of them skiiers, passed through Mount Hood National Forest gates last year.

But early this year Timberline lodge appeared near the end of its usefulness. After a succession of unsuccessful managerships, the United States Forest Service, nominal owners of the lodge, closed its doors and evicted its most recent lessors. That was in February. The lodge had been operated, except for the war years, since its completion in 1938. It was begun in 1935 as a Works Progress Administration project. There is none other like it in the Nation. Architect was W. I. Turner, and the great amount of hand labor made possible through WPA resulted in unique features that can scarcely be duplicated today for many times the $2 million cost in depression dollars.

A towering stone chimney rears itself through the center of the structure, each of its four faces containing a fireplace on both of the main levels of the lodge. Decorations and appointments are in hand-carved timbers. The entire structure of gray stone, wood, and wrought iron is built for the centuries. The ponderosa pine timbers which support the 5 corners of the lounge are 5½ feet in diameter and weigh more than 7 tons. There are 2,200 yards of stone in the rambling Alpine-type structure.

All this sounds as though Timberline would be a resort operator's dream. But this has not proved to be the case.

Since President Franklin D. Roosevelt dedicated the lodge during a visit to the Pacific Northwest, it has been operated by a number of independent corporations on permits from the Forest Service. No single management has continued more than about 3 years. But the February 1955 closing was the first other than during the war years.

The difficulty has been lack of revenue. Although hundreds of thousands of tourists and skiers move through the lodge's corridors annually, most just come to look around. There is no charge for admission to the building. The lessor is expected to make his profit from the renting of accommodations and from the food concessions. He is handicapped at the outset by the fact that Timberline Lodge has too few guest rooms and a good number of these must be occupied by resident staff members.

But there was optimism in the reopening of the lodge over the Fourth of July weekend after nearly 5 months of being closed. The new lessor is Richard I. Kohnstamm, who has extensive plans for refurbishing the lodge and building facilities to attract guests. A new chairlift with a capacity of 900 skiers per hour will be built in Pucie's Glade near the lodge at a cost of $100,000. A sno-cat taxi service will be instituted to carry skiers the few hundred yards to the Palmer snowfields, higher on the mountain, where skiers can perform throughout the hottest summer months. These facilities will be added to those already existing on the mountain, including several ski tows and the sky-hook aerial railway which runs from Government Camp, on the through highway route, over the Cascades, to Timberline Lodge.

Already Mr. Kohnstamm has provided permanent living facilities for his staff to free a number of rooms for guests, and he has plans for further construction. It is possible that a plan for the construction of a third wing, originally projected when the lodge was built, will be revived.

If Mr. Kohnstamm is as successful in his projected operation of the lodge as he was in providing atmosphere for his "opening" this month, he has nothing to worry about. He entertained several hundred invited guests during a July snowstorm that deposited more than a foot of new snow around the lodge, dressing it in the mantle it wears most of the year. Snow plows kept the roads open, as they do all through the fall, winter, and spring months, when the white walls hemming in the Timberline Lodge road rise many feet above the macadam. It was an impressive reenactment of the rebirth of the lodge that first opened to the public in a swirling snowstorm in February 1938.

Expanding the Civil Airport Program

EXTENSION OF REMARKS
OF
HON. OREN HARRIS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. HARRIS. Mr. Speaker, announcement that the President has approved S. 1855, to amend the Federal Airport Act, is welcome news to all of those interested in the development of civil aviation in the United States.

The action of the President in approving S. 1855 assures a substantial 4-year airport construction program. It will not only permit expansion of civil aviation, but will promote safety by providing more adequate facilities.

In 1946, Congress enacted the Federal Airport Act to authorize $520 million in Federal grants for the development of a nationwide system of civil airports. That was sound legislation, needed to insure the development of civil aviation in this country, but as of today, some 9 years later, we must face the fact that we do not have an adequate airport system to permit the continued expansion of civil aviation.

One reason for this situation is that less than half of the amount authorized by the Federal Airport Act has been appropriated. Congress has appropriated for Federal aid to sponsors the sum of $256,221,154.

Federal funds made available varied from $45 million in 1947 to nothing in 1954. Last year the appropriation was $22 million and this year the budget estimate was for $11 million.

It is easy enough to see that developing a sound, long-range program was impossible on that basis. Sponsors of airport projects obviously could not anticipate with any certainty the amount of Federal funds which might be available in the future.

Early this year representatives of airport sponsors and users appealed to Members of Congress to work out some solution to this problem. The result was that on May 16 I introduced H. R. 6260 which proposed a new approach to the problem. My bill was a companion bill to S. 1855.

This legislation proposed to abandon the old system of making annual appropriations for Federal-aid grants and instead give the Department of Commerce authority to make contract obligations amounting to $63 million a year for 4 years for such grants.

The principle of allowing contract obligations for Federal aid is not new. It has been in effect in the Federal highway program for years with great success.

Before the Committee on Interstate and Foreign Commerce of the House was able to hold public hearings on the legislation, the Senate passed S. 1855, with certain amendments.

The Subcommittee on Transportation and Communications, of which I have the honor of being chairman, held pub-

lic hearings on the legislation on July 6, 8, and 14. The subcommittee felt that the Senate amendments improved the bill and recommended favorable action on the Senate bill. However, subsequent to the Senate action on the bill, an appropriation of $20 million for fiscal year 1946 was made, and S. 1855 was amended to cut back the contract authority granted the Department to $42,500,000 for the present fiscal year. The provision for annual contract authority of $63 million for the 3 subsequent fiscal years was left unchanged. The Senate later accepted the House amendments.

In addition to making a substantial increase in Federal-aid grants available, the bill makes it clear that the Department of Commerce is not to consider ineligible for Federal aid the development of any class of public airports, the construction, alteration, or repairs of airport terminal buildings, or the accomplishment of any other type of airport development legally eligible under the Federal Airport Act.

The legislation was drafted to make it clear that the Congress feels that an adequate national system of airports must include small airports, as well as the large airports serving the air carriers. An adequate national civil airport system also must take into consideration the airports needed for business flying, agricultural flying, and all of the many other types of flying included in the overall category commonly known as general aviation.

It is realized that enactment of this legislation to amend the Federal Airport Act will not solve all of our problems in developing a national airport system, but I am sure that setting up a 4-year program by giving the Department of Commerce authority to make contract obligations for the Federal-aid grants is a great forward step in the right direction.

I am sure that all of those interested in the welfare of aviation in the United States are very grateful to the President for approving this legislation.

A National Inspiration Restored

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 11, 1955

Mr. DONOHUE. Mr. Speaker, I should like to include a very short article that appeared in the July 7, 1955, issue of the Worcester (Mass.) Telegram announcing to the Nation and the world that the Old North Church steeple in Boston has now been restored.

This hallowed skymark of American freedom and dramatic reminder of the immortal ride of Paul Revere was toppled last year, not by any enemy gesture, but by the fury of nature's uncontrollable elements.

The contributions from people all over the country enthusiastically desiring to have this shrine of liberty rise again is a convincing demonstration of American respect and devotion to the patriotic traditions and symbols of yesteryear. The summit of this spire displayed the light of yesterday's freedom. Let us pray that the meetings at other summits in this modern era will provide the light for a continuing free and peaceful world.

The editorial follows:

STEEPLE RESTORED

A word of congratulation is in order, surely, to those who have been instrumental in restoring the steeple to Old North Church in Boston. Hurricane Carol toppled the historic structure last summer. Now, thousands of contributions, big and small, have come in from all over the country to make the rebuilding possible, and this week the new steeple is being hoisted into place.

This is a fast age when people and messages are whisked great distances in almost no time. We find it hard to understand a quaint little war in which a courier on horseback waited for the sight of signal lanterns in a church tower in order to know what alarm to spread. But a young Nation's history was being written in that belfry that night, and in consequence Old North Church long since became a sort of shrine.

An Old North steeple will always be necessary to the symbolism of America's epic struggle for freedom. The whole Nation can rejoice that man has restored what a thoughtless and unseeing hurricane knocked over.

Members Should Be Proud of Record Made by 1st Session of the 84th Congress

EXTENSION OF REMARKS
OF
HON. CARL ALBERT
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. ALBERT. Mr. Speaker, the end of the 1st session of the 84th Congress provides us with an opportunity to look back on the results of our labors for the first 7 months of this year, and a chance to look forward to the anticipated accomplishments in the 2d session.

While every Member of Congress has a right to be proud of the record made in the first session, I think the Democrats can take particular pride in the high quality of statesmanship they have displayed under very trying circumstances. Under the leadership of our great Speaker, SAM RAYBURN, and of our distinguished majority leader, JOHN MCCORMACK, we have demonstrated for all to see that ours is the party of responsibility, the party of good government, the party of the people.

We have established beyond doubt that Democrats are not obstructionists; they do not carry on cold wars of partisan politics. On the contrary, our splendid record of cooperation with a Republican President in both the foreign and domestic fields proves that our sole objective is to do what we think best for the American people.

The Democratic record of supporting a nonpartisan policy in foreign affairs is unblemished. Our first major act in the last session was to pass a resolution, at the President's request, authorizing him to use the Armed Forces in defense of Formosa and the Pescadores Islands. Many held that the President needed no such grant of authority from the Congress, contending that he already had that power; but when the President sought affirmative action, Democrats voted to grant it to him.

We succeeded, over much Republican opposition, in passing a 3-year extension of the Reciprocal Trade Agreements Act, giving the President new authority to cut tariffs. The President had asked a Republican Congress to approve that recommendation last year, but the Republicans did not do it for him. We did.

We put through an extension of the foreign-aid program in substantially the form requested by the President, and we backed him to the hilt in his negotiations with our potential enemies. Criticism for carrying on these negotiations came not from the Democrats, but from Republicans. We on the Democratic side take considerable pride in the fact that the Eisenhower-Dulles foreign policy is, in the main a continuation of the foreign policies carried on under the previous Democratic administration.

Our support of a strong national defense has likewise been unstinted. We passed a law setting up a new Reserve program; we extended the draft; we insisted on the maintenance of a powerful fighting force despite the tendency in the Pentagon to put economy ahead of defense.

True, there were differences between the Democrats in Congress and the President on many domestic issues. The House, I am happy to say, passed a bill to restore the 90 percent price-support program on basic farm commodities. The Senate did not on this item in the last session, but I feel sure action will be taken next year. The income of the farmers continues to slide downward, while Secretary of Agriculture Benson stands idly by.

The Democrats put through in the closing hours of the session a housing bill which will do much to provide better homes for thousands of our citizens. We passed a new minimum wage law, setting the floor on wages at $1 an hour, compared with the 90-cent recommendation of the President and the 75-cent floor in the old law.

We raised the pay of Federal employees, going beyond the recommendations of the President to establish fair-pay scales for postal and classified Federal workers. We authorized a special commission to investigate the much-criticized Federal employees security program.

We continued the Small Business Administration and the Defense Production Act, and we voted to extend the corporation- and excise-tax rates at the 1954 levels. We tried to give the little fellow a slight tax break to offset the tremendous windfall given the rich by the Republican Congress last year, but a powerful campaign led by the White House was too much for us to overcome with our paper-thin majority.

We passed a law providing for a fair distribution of Salk polio vaccine. In the House we passed a bill providing new social-security benefits for women and for the disabled. The retirement age for women would be reduced from 65 to 62 years. House action came too late in the session for the Senate to put that bill through this year, but action on it is certain to come early in the next session.

Congress also will be ready to act early next year on a big school construction program. The House Committee on Education and Labor has approved this program, and it will be before the House early in the next session.

Whether we can get a fair and equitable highway construction program through in the next session remains a question mark. We tried to put through a pay-as-you-use highway construction bill in the last session, but it was defeated late in the session. I sincerely hope we can agree on road legislation next year for, as everyone agrees, we badly need a big highway construction program.

One of the last acts of the House was to approve a bill freeing natural gas producers from Federal regulation. It took a lot of work for us to get that one through, but I am happy to say it was done. The bill is now ready for the Senate to consider.

With a presidential election coming up next year, it is expected by many that politics will play a big part in 1956 legislative deliberations. It is my prediction, however, that when the record is written at the end of the next session, it will show that the Democrats in Congress have continued to conduct themselves in an efficient, responsible manner. The White House will continue to get the aid of the Democratic leadership when it is deserving of that aid; yet we reserve for ourselves the right to make the legislative decisions. For myself, I have no doubt but that the Democratic record will be a persuasive factor when we go before the voters next year.

The Voice of the Teachers

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 11, 1955

Mr. DONOHUE. Mr. Speaker, I should like to include a very timely article that appeared in the July 8, 1955, issue of the Christian Science Monitor which commendingly comments upon the patriotic activities of the Parent-Teachers Association and the National Citizens Commission for the Public Schools.

The editorial follows:

THE TEACHERS MEET AND SPEAK

Part of the genius of America is the gift of doing things by voluntary organization. One of the things that has needed doing has been to support the public schools. The Parent-Teachers Association and the National Citizens Commission for the Public Schools, for instance, have rendered yeoman service for the layman. The National Education Association, with its 612,000 members, is certainly the largest and probably the most influential organization of the teachers themselves.

Since most members are public school classroom teachers, the NEA knows what it means to grapple at closest quarters with the most extensive and most difficult problems that face American education. Some 15,000 have been assembled in convention during the last several days. And it is hardly surprising that, in their insistence that help is urgently needed for schools sadly outrun both by population and by economic competition, they are not being too fine-haired about how much of that aid comes from whom—from local or from Federal sources.

Help to provide quarters where burgeoning classes can meet. Help to pay better salaries, not simply as justice to those who have served but to encourage new recruits to enlist in an army of teachers that is falling short by 90,000 a year.

These needs are tangible. They are not easy to meet, but they can be handled in terms of dollars and cents. But the NEA sees other needs. The first is epitomized in President-elect John Buford's slogan: "Make teachers proud to teach." And that is not a matter of salary alone. It is also a matter of how important and how dignified a nation considers teaching as compared with other professions and careers.

And there is another need, a startling one, found by a study committee the most pressing facing classroom teachers: the need for discipline. The cause of this can be found partly in the failure to meet other needs, of course—in overcrowded classes, understaffed schools, and underexperienced teachers. But the roots of this problem reach deep in the whole of American life. And here is something that will take more than an act of Congress to solve.

Hope Springs Eternal in the Human Breast

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. NEUBERGER. Mr. President, the public utilities commissioner of Oregon may be at this very moment wrestling with the question as to whether the Southern Pacific should be permitted to discontinue its nightly passenger run from Ashland and Medford to Portland. Two months ago the lumbermen of the area served by this same railroad in southern and western Oregon were inundating me with wires pleading urgently for immediate assistance in getting the Southern Pacific to make available more boxcars for the shipment of lumber. Annually at the same season of the year, lumbermen have faced the prospect of slowing down or closing their operations because the inadequate supply of freight cars left lumber piled high on every foot of available storage area. One veteran lumberman wrote that his has been a familiar pattern in the industry for the 47 years he has engaged in the lumber business. Confirming his statement, Mr. President, is this amusing verse which appeared 40 years ago in a 1915 issue of the Pacific Coast Lumber Digest, written by the publisher, C. C. Crow. I ask unanimous consent, Mr. President, for its inclusion in the RECORD.

There being no objection, the verse was ordered to be printed in the RECORD, as follows:

HOPE SPRINGS ETERNAL IN THE HUMAN BREAST

A poor old man with trembling limbs
And stooped decrepit form
Stood on a weather-beaten dock,
And faced a wintry storm.

He minded not the icy winds
That fanned his snow white beard,
But holding high a telescope
Straight down the track he peered.

The scene about the place he stood
Was one of desolation,
But patiently he took his stand,
Such was his occupation.

Off to the right there stood a mill,
The roof had blown away,
And where they once had piled the lath,
Now grew a crop of hay.

Grey timber wolves in howling droves
Were living in the stable,
Wood rats through the plant had eaten
All except the cable.

The pond which once had held the logs
And germs of typhoid fever,
Now formed a quiet breeding place
For several dozen beaver.

The boiler room was cold and chill,
The flues were full of bats;
The office with the windows out
Had been sealed up with slats.

Long moss upon the planer shed
In great abundance grew,
And from her nest on the old sidetrack
The timid pheasant flew.

Here and there, all weather worn,
And piled high on the dock,
Was what had in the bygone days
Been the ready-for-shipment stock.

The poor old man with his tottering frame
Through the tall grass trudged each day,
And he'd take his place with telescope
And he'd only look one way.

He would look 'way off t'ward the sunkist South
And his face was filled with sorrow
And the only thing that he would say
Was "They promised me some tomorrow."

A stranger passing by one day
Inquired of a native son.
"Who is that man who sits over there
With the antique vision gun?"

"My friend," the native answered,
As he wiped away the tears,
"You shouldn't speak of him that way,
For he's been there fifty years.

"Why that man's story to us here
Is as common as the stars.
He's a western Oregon lumberman,
Looking for S. P. cars."

(The above was originally written and published about 1915 by C. C. Crow, editor, Crow's Pacific Coast Lumber Digest.)

Weep and Cheer

EXTENSION OF REMARKS
OF
HON. H. ALEXANDER SMITH
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Tuesday, August 2, 1955

Mr. SMITH of New Jersey. Mr. President, over the past year there have been

numerous developments of great interest and value in the general field of civil liberties and Government security. Our Nation has been faced in the last 6 years with the difficult task of resolving a dilemma of how best to protect our Government from those who would destroy it from within, without sacrificing our cherished traditions of individual freedom as handed down to us by our forefathers in the Bill of Rights. There have been instances in the past where many believe damage was done to the reputation of Federal employees who turned out to be completely loyal. There have also been cases in the past where some individuals were allowed to gain or remain in positions in the Federal Government where they did great harm to our Nation's security. This administration has been and continues to be dedicated to finding a fair but firm middle way whereby our agencies and departments will be manned by loyal, efficient, and dedicated individuals, but where these public servants will be assured of fair and just treatment at all times. We do not want subversives in Government, but at the same time we want to prevent injustices to innocent public servants committed in the name of security.

Mr. President, it is indeed gratifying that our Government has within its ranks courageous and devoted men who are dedicating themselves to helping this administration find the answers to this problem of Government security, and individual rights. Very high in the ranks of those who are working on this problem stands the name of our good friend and former colleague in the Senate, Harry P. Cain. As a member of the Subversive Activities Control Board, Harry Cain is making a great contribution to good government.

On June 27th of this year Senator Cain delivered an address on this all-important subject before a meeting of the American Civil Union in Los Angeles. I believe this interesting address should be given consideration by all Members of Congress, and I, therefore, ask unanimous consent that it be printed at the conclusion of my remarks in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

WEEP AND CHEER

Mr. Chairman and my fellow Americans, a happy pleasure comes to me from being in your company and I shall remain grateful for your invitation.

It is an understatement for me to compliment the contributions which the American Civil Liberties Union has made and will continue to make to our American way of life. The essence of this life is your respect and mine for the right of every other citizen to be as free and unoppressed as we are. I gladly share your battles to keep all other citizens free and unoppressed.

I am here to benefit from your views and to pass along to you a justifiable excitement and satisfaction over what is presently being undertaken and accomplished, by public and private authorities and leaders, in your Nation's Capital, to reconcile and harmonize the contradictions which have historically existed between the requirements of internal security and the personal, individual rights to which every citizen, famous or in rags, is entitled.

In recent months, my voice has been but one of many which has given expression to the disquieting apprehension that in our Nation's determined effort to remain strong at home so that we may prevail and succeed against the world domination intentions of internal communism, we have borrowed, without being conscious of the development, from Communist and Fascist origins some of the weapons we now employ in this conflict.

Reactions to these observations have been as spontaneous and varied as they have developed a healthy and widespread body of public and private controversy.

As an outraged citizen who is a proud and loyal public servant, I went last January to Spokane in my home State to publicly explore the question: "Can freedom live with internal security?" My view was then and is tonight that freedom and internal security can be made to be compatible but not unless we make absolutely certain that American principles and good purposes are supported and advanced by traditional American procedures and methods.

It is becoming undeniable that from our recent fear of the Soviet philosophy and in our anxiety to fight communism, we have adopted some totalitarian methods to carry out American purposes. If we are to prevail, as I know we shall, we must rely entirely on those procedures which are the natural byproduct of our own American philosophy. The only method which will remain deserving of our confidence and respect is to utilize no weapon and follow no course which violates the freedom and dignity of any American citizen. This is the American way which may be the more difficult to consistently observe but it stands out as the only conceivable way through which we can stand firm and resourceful against all enemies while causing those enslaved to continue their yearnings for the day when they, like us, may be free.

There is good news to talk about tonight.

Official papers have been filed to annul what has been the polygamous and regretable marriage between internal security and both political parties. An announcement that an absolute separation has been agreed to by the several parties concerned can be expected before the Congress adjourns probably next month. I shall return to this invigorating news.

Do you share the depth of my appreciation over what the United States Court of Appeals said on last Thursday when it ruled that a denial of a passport application from any citizen must conform with the provision of the fifth amendment that "no person shall be * * * deprived of * * * liberty * * * without due process of law?"

A man by the name of Max Schachtman claimed he was denied a passport solely because he was the chairman of the Independent Socialist League, an anti-Stalinist organization, on the Attorney General's subversive list.

The appellate tribunal in remanding the case to the district court for a trial on the merits held that membership in an organization on the subversive list is not sufficient grounds in itself for denial of a passport.

Said Chief Justice Henry W. Edgerton, "freedom to leave a country or a hemisphere is as much a part of liberty as freedom to leave a State."

The jurist asserted that the State Department's action in the Schachtman case was not in accordance with due process of law for several reasons, including the fact that the "Attorney General's list was prepared for screening Government employees, not passport applicants."

The court disposed of a Government intention that a passport involves foreign relations and is in the exclusive control of the State Department by declaring:

"But the State Department's control of activities that involve both foreign relations and domestic liberties is not exclusive. If it were exclusive, the State Department could put an American citizen in jail and keep him there permanently on the mere request of a foreign government."

The appellate court's decision gives rise to speculation in which all of us should indulge.

If the Attorney General's subversive list was prepared for screening Government employees but not passport applicants, by whom other than the Government should that list be employed? A screen is something through which an object can pass; it is not a barred door. But the subversive list is being used by agencies other than the Federal Government to deny employment and to cause a deprivation of liberty, without due process of law, that a citizen otherwise would have.

It is encouraging that the court of appeals has denied a fashion in which the subversive list has been arbitrarily employed by the State Department. Now that the question has been scrutinized by a high court, we can expect other phases of the same important question to be explored by other courts in the future.

I ought to mention in passing that Public Law 176, the Independent Offices Appropriations Act of 1954, includes this language:

"No housing unit constructed under this act shall be occupied by any person who is a member of any organization designated as subversive by the Attorney General."

Though an applicant for the Federal service may be employed after satisfactorily explaining his membership in a listed organization, this same person, if otherwise eligible, is flatly denied, if he seeks an accommodation in a public-housing project, any opportunity to explain his membership in any listed organization. The door, by law, is literally slammed in his face.

This contradiction does not strengthen our security posture at home; it adds to a confused public mind and imposes injustices which are as unwise as they are unnecessary.

I know persons who think they belong to a listed organization where an examination of the facts establishes that they do not belong. I know others whose membership dues, usually a dollar, have been paid without their knowledge. I know those who have joined as an accommodation to some personal friend or business acquaintance. Such persons have never attended meetings, belonged to committees and they couldn't tell you where the organization has its headquarters. The very least to be done is to examine the circumstances surrounding any membership before denying to any individual a job or a passport or a bed.

When I stated earlier that in our national desire to be safe we have adopted some methods which are unbecoming to every citizen, I was thinking partly and pointedly of the un-American way in which the Attorney General's list is being shamefully utilized.

There are many citizens who are inclined, I think, to confuse a determination to be fair and decent to other citizens with a softness on subversion. Permit me, please, to reflect on this question.

Have you ever heard of the special bar committee for legal aid in employee security matters? It was established on January 12, 1955, by the Bar Association of the District of Columbia, with encouragement from the American Bar Association, and immediately after the President's January message to Congress in which he stressed the necessity of protecting the rights of workers in the employee security field.

The President's remarks were obviously directed at those who administer our several internal security programs but his admonitions were persuasive to the legal fraternity,

in your Nation's Capital, which has no connection with the Government.

This committee of truly public-spirited members of the bar does not concern itself with efforts to reform prevailing security systems. This task must be and is being assumed by the administration and the Congress. The committee deals only with public servants who are accused of being security risks by some branch or agency of the Government. It represents only public servants who are helpless because they are without funds or who otherwise are unable to secure qualified legal assistance.

In the first 5 months of the committee's existence, 11 of its members have volunteered and devoted more than 1,500 hours to explore and evaluate the entire life, activities, and associations of accused employees who have turned to them in desperation and as a final hope.

For as long as there remains a need for this committee, as there is now a pressing need, no thoughtful or fair-minded citizen must permit himself to believe that his Nation has yet established security systems which are as just as they are firm. In a republic, it is not to be desired nor should it long be allowed that public servants be forced to seek donated legal assistance from the outside in efforts to establish their innocence and loyalty to their country.

Our Government has a responsibility, or so I do believe, for seeing to it that those accused of being security risks are provided with every reasonable opportunity to clear themselves. Certainly it must be the hope of the Government to find that its servants are dependable and loyal rather than a determination, as flagrant abuses would imply, to find them disloyal and a risk to our security. In the absence of the fullest opportunity to establish their devotion and reliability, men and women who are totally innocent of any wrongdoing have imposed upon them a stigma which will hound and harass them and their families for as long as they live.

There is more to be said about what the committee has done in 5 short months. It has consulted with 285 present or former Government employees. For a small percentage of these nothing should have been done. They were quite apparently undeserving of the confidence of the agency for which they worked. For most of them, nothing could be done. A majority could not be helped for they had previously forfeited their rights by submitting resignations on request during or after a security investigation. Others had attempted to represent themselves without counsel and had been unsuccessful. But 22 security cases were set for hearing by the committee. Ten of these cases remain under advisement. Decisions have been rendered in 12 cases and the verdict in each instance was in favor of the person accused.

These 12 human beings would have been immobilized for extended periods or their reputations destroyed completely but for the availability of those dedicated practitioners who are willing to defend accused public servants who are unable to afford or know not how to defend themselves.

Some among you might consider 12 persons to be a small and perhaps unimportant number. Yet, in the future, you, as an individual, might find yourself in such a dozen. Among the dozen who have been saved by this committee since January, one or more may live to make outstanding contributions to the health of their Government and to your own welfare. The others may be unpossessed of any particular talent, but they are as important in being individuals as any among us.

In the week before the bar committee was established, the Civil Service Commission announced that some 8,000 employees had left the Government, during the previous 16 months, as being security risks. Of this total, about 5,000 quit. How many of this number resigned after being suspended, or resigned on request before being suspended, has never been disclosed. How many among the 5,000 might have been cleared of every charge had they been heard by a hearing board one can only guess. How many quit after being suspended because they had a family to feed at home and not a penny with which to employ counsel is likely to remain an unfortunate mystery. How many among the 5,000 might have been restored to their jobs and respected again by their friends and associates had the bar association committee been available to them in their time of agony we shall never know. We have every cause, however, to assume that a large number among these 5,000 would have been restored. How could you make any other assumption when the bar committee has yet to lose its first case?

But it has been stated officially too often that the security program under Executive Order 10450 is working well on the average. This kind of an average isn't good enough. When people are saved at the last moment by outside help, there is something basically wrong. No individual is so unimportant that he can be junked without solid cause and before he has been assisted to defend himself. A public servant isn't a number; he acts and looks and is just like you and me.

The experience and success enjoyed by the bar committee requires that I offer this advice to any public servant who is alleged by his Government to be a security risk: If this public servant believes that he is loyal and reliable, he should, under no circumstances, resign after being suspended or following an investigation which may result in his being suspended. This person should ask that he be heard before a security hearing board. If he has faith in himself and his conduct, there is always reason to believe that the hearing board will concur in his opinion of himself. Fully half, and probably more, of the cases which have been decided by security boards have cleared the person accused.

It logically follows that where an individual's entire future is at stake he can ill afford, unless he is unusually skilled as a lawyer or logician in the fields of evidence and conjecture, to represent himself. If he has the money with which to employ counsel of his own choice, that is a desirable course of action. If he is penniless or living from limited savings, he should take his story without hesitation or delay to the bar committee which has been so sympathetic and helpful to others.

There is something meaningful in that age old legal adage:

He who serves as his own counsel has a fool for a client.

I wouldn't urge a friend to act as his own counsel before a court of law where the admissibility of evidence is sharply defined and where the charges must be specific. Such rules are not in force before a security hearing board where an accused who is without counsel can be likened to a skipper of a ship which is without a rudder in a heavy sea.

Does this character of advice constitute a softness on subversion? Is it not rather in support of the January declaration by the President of the United States that the rights of every worker shall be protected? Those among you who feel as deeply as I do about the need for giving any person the benefit of the doubt until it shall have been established in fact that he is guilty of some act of disloyalty or unreliability have a continuing responsibility of our own. It is for us to convince the uninformed that firmness by any government in security prosecutions which is not accompanied by the fairest possible treatment of the individual accused leads only to tyranny and oppression. When fairness is joined with firmness, and only then, it becomes possible to distinguish intelligently and accurately between those who are faithful public servants and those who intend harm to our Republic.

Perhaps before this week is out, Senate Joint Resolution 21, which establishes a Commission on Government Security, will have been approved by one or both Houses of the Congress. If not this week, then next week, or the one after that, but surely the action will be taken before the Congress has adjourned.

As a citizen, and as one who is employed within the executive branch of the Government, I consider the intended action to be as splendid a step in the direction of equating the requirements of security with the rights of freedom as has been taken in my lifetime. It will, in fact, be the first real step so taken.

The Commission can be expected to be nonpolitical and bipartisan. Politicians, and I am one, will in the future have small and unpersuasive opportunity to talk about security and liberty from a foundation of political bias. I think it so that much of our sorrow and many of our mistakes have resulted from well-intentioned politicians playing politics with the precious reputations of individuals. All of this represents the annulment of the marriage between security and both political parties I mentioned earlier.

The Commission's function will be to study the entire Government security program, including the various statutes, Presidential orders, regulations, and directives under which your Government seeks to protect the national security, national defense secrets, and public and private defense facilities against loss or injury from espionage, disloyalty, subversive activity, sabotage, or unauthorized disclosures, together with the actual manner in which these statutes, orders, regulations, and directives are being administered, to determine whether the overall security program is in accord with the stated policy of the Congress that there shall exist a sound Government program—

(a) establishing procedures for security investigations and clearance for Government employees and persons privately employed or occupied on work requiring access to national secrets or affording significant opportunity for injury to the national security;

(b) for vigorous enforcement of effective and realistic security laws and regulations; and

(c) for a careful, consistent, and efficient administration of this policy in a manner which will protect the national security and preserve basic rights.

It has been said too often that those who attempt to constructively criticize existing security practices and procedures are giving aid and comfort to the Communist cause. When someone in authority offers such a nonsensical comment it is picked up, repeated and believed by many a citizen who knows absolutely nothing about the problem.

The Commission resolution is notice given by the Congress to every citizen in the land that there does exist an imperative requirement to integrate the 5 security and 2 loyalty programs which are now in existence and to adopt security standards, policies and procedures which are both uniform and consistent.

The resolution is the frankest sort of admission that our Nation has developed a security apparatus which is lopsided, unwieldy and capable of defeating the understandable purposes for which it was created.

In the years since the close of World War II, you citizens have had no part to play in formulating those security policies and practices which necessarily bear so heavily on your careers, freedoms and conduct. There has been no central place to which you could submit your views, advice or criticism.

When the Commission has been established, it will speak as much for you and freedom as it does for Government and security. Of its 12 members, 4 will be appointed from the Congress, 2 from the executive branch, and 6 from private life. The President, the Speaker of the House of Representatives, and the President of the Senate will make the appointments. The Commission will elect its chairman and vice chairman from among its members.

I must restate my enthusiasm and conviction about the promise of good things to be expected from the labors of the Commission. Its primary and continuing function will be that of preventing license from running riot in the guise of liberty while preventing tyranny from oppressing citizens in the guise of authority.

I seldom deal in names but it deserves to be mentioned as a compliment that a companion resolution to the one authored in the Senate has been offered in the House by Representative WALTER who is the chairman of the House Committee on Un-American Activities. He does not maintain that his committee is the answer to what plagues us.

When the Commission speaks, every citizen will, for the first time, begin to comprehend and understand the true nature, significance, and ramifications of internal security in the United States.

The Johnston committee of the Senate is currently endeavoring to determine the need for reforms in and the abuses developed under Executive Order 10450 which inquires into the loyalty and security status of the 2,300,000 men and women who are employed by the Federal Establishment. The work of this committee is exceedingly important but it has no authority to undertake a similar study of the industrial security program, where as many other persons are convered, or the Atomic Energy Commission program, or the maritime security procedures or the practices being followed by the military services. The Johnston committee is not wasting its time or squandering your money. Its obvious weakness is a narrowness of jurisdiction and a lack of time. But from its well spent effort you may expect a report and recommendations to stir and please you all.

Once the Commission on Government Security has been launched, it can look anywhere and everywhere with ample authority to pursue its work. There is reassurance in the feeling that we may soon be guided by advice from a Commission whose single mission is to lay down policies and approve methods which will help to keep us strong and free.

In the meantime, sizeable improvements in national attitudes and reforms within our internal security system can be brought about and all of us can help by talking about them.

We are constantly being told that the difference between us and our enemies is that they are slaves while we are free. We must insist that those who so declare act in accordance with their declarations.

Without premeditation, and despite such glowing declarations of support for man's dignity, we have taken the dignity and self-respect to which every human being is entitled and twisted it in thousands of post-war instances into forms which are as unrecognizable, when judged by historic standards of fair play and simple justice, as they are totalitarian in practice and result.

I do not know nor do I believe that a single Communist or Fascist can be found among the leaders in the Congress or the administration. It is very unlikely that many, if any, can be found who are leaders in States or municipalities or private life. Yet it seems apparent to me that we are permitting totalitarian practices to enter our American way of life.

In the years of the past, as a student in Germany and Italy, and as a soldier who saw some service by the side of the Russian, I was exposed to Communist and Fascist attitudes which I have since abhorred.

The Nazi wouldn't think first, let alone twice, about throwing a public servant out of government service on a mere suspicion resulting from undocumented allegations.

The Communist wouldn't think it normal or desirable that an accused public servant should be provided with an adequate defense.

I think we have become inclined to adopt such practices when we had no such intention in mind. No Fascist, Nazi, or Communist would think the following four hopes of mine to have any merit whatsoever. I think they go to the heart of our trouble.

1. Public Law 733 provides the authority from which Executive Order 10450 was written. The law requires that an accused public servant must be suspended before a hearing if the charges preferred may lead to his separation from the service.

Why shouldn't the law be so amended that an agency head could either suspend an employee summarily, if there is reason to believe that he is engaged in some subversive activity, or retain that employee on the job until his reliability for future service has been determined through a hearing?

To my knowledge, employees have been suspended where the agency head would have retained them on the job had the law permitted a hearing without first suspending the employee.

The percentage of hearing board clearances, which appears to be better than 50 percent, makes it too plain that far too many employees have been suspended without valid cause and that these persons have suffered needlessly and often tragically at the hands of their Government.

The period of suspension is for a minimum of 3 months and often staggers on for longer than a year. During his suspension the employee is often without income, unable to secure work, and suffers from the agony of being thought by his neighbors and erstwhile friends to be disloyal or a security risk.

Any likely act of treason is one thing but a question of reliability is a far different thing. By simply amending the law, we can summarily remove those assumed to be traitors while pursuing a far less drastic and inhumane course in examining questions of reliability.

The practice of suspending employees indiscriminately is totally repudiated for the Constitution, as amended, speaks out against cruel and inhumane treatment and promises a speedy determination of any allegation of wrongdoing.

It is possible and, I trust, probable, that the administration will recommend that Public Law 733 be amended and that the Congress will so agree before it adjourns.

2. The Department of Justice has urged Congress to adopt a public defender system for the courts so that indigent defendants can obtain full justice under the law. Who, may I ask, is more entitled to justice from his Government than the public servant?

Any Federal employee is more in need of competent legal advice before a security hearing board than before a court of law because the employee will be confronted with matters and questions which are often not admitted in a courtroom.

The function of a Federal security hearing board is to get at the truth. The purpose of the security program is to distinguish between those who are innocent and those who are guilty. I naturally assume that any hearing board is delighted and feels better when it finds reason to acquit the accused.

Is there not reason to agree that every employee accused of being a security risk should be provided with counsel?

As a taxpayer, I feel strongly that the cost of providing legal representation for those accused is a legitimate and reasonable charge to be borne by the Government.

We must not permit ourselves to be unimpressed by the large number of those accused who have been restored to duty. In every such case, the individual has suffered a financial loss of an unreasonable character.

Many accused persons have resigned before getting a hearing only because they could not afford to hire counsel. Can you think of this pitiful circumstance as being anything but unintended persecution by authority?

I have petitioned both the Justice Department and the Johnston committee in the Senate about this recommendation. I know they are giving serious consideration to the proposal.

3. Would it be in the public interest to provide hearing boards with the power to subpena witnesses whose appearances would not jeopardize the national security? I can think of no finer way through which the truth would prevail and the public's confidence in authority would be refreshed and enlarged.

The Attorney General recommended in March that every effort should be made to produce witnesses to testify in behalf of the Government so that such witnesses may be confronted and cross-examined by the employee. How can this well-intentioned effort be successful unless it is backed by authority sufficient to produce a reluctant witness?

Who are these witnesses the Attorney General wants to encourage to appear? The only way to find out is to clothe hearing boards with the power to call witnesses.

As matters now stand, hearing boards can piously request the appearance of an adverse witness. The complete decision remains with him as to whether he will come forward. Does this situation add to our national security? Does it prvoide jusitce or increase a citizen's trust in his government? It does neither for it actually weakens the former and destroys the latter.

This question is basic in our concern over the natural conflict between security and freedom. The Government says it wants to keep its undercover agents and paid informers undisclosed. They are a minority among adverse witnesses. Such other persons are often next-door neighbors or fellow workers. How could their testimony endanger the national security?

I would place the power for calling witnesses where it logically belongs, with the hearing boards. If the Justice Department has good reason to oppose the appearance of a given witness, let it so convince the hearing board.

One must take for granted that a number of separations from the Federal service have resulted from unsworn testimony taken from casual informers who never face the accused. Was such a practice ever dreamed of by those men of courage, faith, and vision who established a bold, exciting experiment in restrained government back in 1791? What gives us reason to destroy some individual with testimony which isn't willing to submit itself to cross-examination?

I hope I live long enough to see the day when any person who dares to accuse another is required to face and speak out in the presence of the one accused.

4. If our Government is to grow in health, strength, and intelligence it must create procedures through which is screened or evaluated the derogatory information which is provided by an applicant or filed against him.

There is no such common practice today. An outstanding exception is the Atomic Energy Commission, which has the greatest need for being secure, but where an applicant is advised of the nature of the derogatory information in his file and provided, if he so requests, with a hearing to clear it away.

The turnover in Federal employment is so large that 400,000 new employees were taken

on by the Government last year. How many more were turned away? How many of those denied employment might have made the larger public service contributions had they been given a chance to explain their past?

Can the Federal establishment continue to condone a system which leads to mediocrity rather than to excellence? Of course, it can, but only at the loss of vitality, stamina, and strength.

Would you say that these four sought-after fundamental improvements softens the firmness of the internal-security posture every American desires? Are these recommendations not in full support of the high principles we are constantly pledging allegiance to? Can you point to any sign of weakness in what has just been said?

These improvements would amount to a practical bar to persecution and they would make hasty, thoughtless, and obviously bad judgments less likely. They would better equip us to work together as a Nation in conquering the sometimes bewildering and always difficult problems of the future.

Will you let me, please, talk just a little about the past before I conclude.

Little has happened to us in recent years which hasn't happened to us before. A look at the past gives me renewed reason to be of good cheer about the present and to have a firmer faith in the future.

We are now concerned by the same basic questions which troubled and inspired those determined builders and dedicated dreamers who hammered out our Federal Constitution and blessed it before adoption with the Bill of Rights.

The Constitution was a sucessful attempt to establish order and protect the national security.

The Bill of Rights, without which there would have been no Constitution, were the guaranties that a law-abiding citizen need not be afraid or have his confidence in authority abused because the power of the State to oppress him was to be, forever and a day, restricted.

Those who pondered, late in the 18th century, over the needs of what was shortly to become a new nation wondered whether it was possible, most of recorded history to the contrary, to establish a free society in which there could be a lasting balance between the contradictory forces of national discipline and justice.

Our Constitution, as amended before ratification, became the best affirmative answer the world has yet seen.

Our forebears became convinced in 1791 that the rights of freemen were, in practice as well as theory, compatible with the requirements of national security.

We sometimes bypass the significance and importance of the obvious. As the Constitution has added immeasurably to our strength and the ability to act as a whole, the Bill of Rights has enabled the individual within that Nation to remain free and venturesome.

We should not assume, as many do, that the Constitution and the Bill of Rights represent one and the same thing.

Since the close of World War II, many Americans, including national, State, and community leaders, have been inclined to forget, not in words but in deeds, that the Federal Constitution, without the first 10 amendments, would have led inevitably to despotism in the United States.

The body of the Constitution speaks out in support of unrestricted government which must sooner or later result in tyranny wherever it is practiced.

The Bill of Rights when taken in the aggregate represent man's dignity and rights to be respected as an individual human being. Without these guaranties, no man would have a chance to protect himself reasonably against the arrogance, greed, fear, and unselfishness of unrestricted authority.

From the past and out of the present, there has been achieved what is called a free society. We pride ourselves that good fortune has enabled us to live in such a climate. The only tendency we must be careful to avoid is to take our free society for granted. We must recognize that a free society is not possible unless given principles and practices are rigidly adhered to.

To put it very simply, a free society is certain to lose its strength, prostitute its purpose and then wither away unless its atmosphere permits and encourages dissent and debate; welcomes criticism and controversy; assumes that the other person is innocent of wrongdoing, except as supportable facts prove otherwise; moves with considered relentlessness against those whose conduct represents conspiratorial or rebellious activity against the state; and maintains a mutual feeling of trust, confidence, and respect between citizens and those who speak and act in their name—the Government.

In this monumental ask of equating security with freedom so that our free society can long remain to inspire future generations, every citizen has a big contributing part to play.

Throughout the history of the world, where citizens have allowed their government to think for them, that government has been unsuccessful. A large part of the success of America lies in the undisputed fact that our Government permits the people to think for themselves.

That's what we've been doing tonight—thinking out loud about our heritage and of the ways in which we can pass it on untarnished to those free men and women who follow us.

I wish you well.

A Welcome Display of Patriotic Color

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 11, 1955

Mr. DONOHUE. Mr. Speaker, I am pleased to include an article from the Christian Science Monitor of July 7, 1955, commenting upon the new color designs that will be used by our Post Office Department on their mailboxes and vehicles. This is one color scheme I feel sure the American people will welcome in their everyday observation. The editorial follows:

LONG MAY THEY WAVE

The United States Post Office chose Independence Day for a bit of justifiable flag waving which will operate to keep the national colors in the eyes of the public 365 days a year. Street letterboxes (pillar boxes to our English friends), which long have worn olive drab (used by the Army for camouflage), will be repainted in red, white, and blue, Postmaster General Summerfield announced.

They will not blossom out all at once in the new colors; it will take more than a year to get around to all of them. But one by one they will take on a new gleam—red tops, blue bodies, and white letters, "U. S. Mail." This not only will make it easier to spot a mailbox on an unfamiliar street; it will serve to distinguish the collection boxes from the postmen's storage boxes (which will retain the olive-drab uniform and the quaint legend, "Not for Deposit of Mail").

For all its gray pavements and walls, one cannot exactly say that the urban landscape needs brightening up—what with neon signs, theater marquees, orange fireplugs, and colored reflectors on traffic markers. But if anything will remind friends and relatives that servicemen on overseas duty or elderly people living alone like to get frequent letters, that will be like mail from home.

First Session, Eighty-fourth Congress, Has Constructive Record

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include a radio address that I made over station WORL, Boston, Mass.:

Ladies and gentlemen of the radio audience, the 1st session of the 84th Congress, without fanfare or sensationalism, and without political bitterness has been a constructive one.

The Democratic-controlled Congress has enacted important legislation with a minimum of friction, bickering, or political conflict. This has been healthy, not only for our country but for the world.

As a passing observation, in the disturbed world of today, the most severe criticism of President Eisenhower has come from certain prominent or vocal Republican Members from both branches of the Congress.

The Democrats have legislated constructively, and criticized temperately. However, when there was Democratic criticism, it was justified and constructive in nature.

During the campaign of 1954, in the last days of the campaign, in his fervent and frantic desire and attempt to elect a Republican Congress, President Eisenhower while speaking in Denver on October 8, 1954, and calling for the election of a Republican Congress, declared that if the Democrats gained control, politics would "run riot in Washington and result in a cold war" between the Congress and the White House.

That somewhat reckless statement should never have been made. It was made in an attempt to put fear in the minds of the voters as to the motives of the Democrats if the people voted to give the Democratic Party control of Congress—and an attempt to have voters, through fear, and by way of reaction, vote for Republican candidates.

The people exercised their judgment and wisdom, and wisely elected a Democratic Congress.

The history of this session shows that the people used excellent judgment. The record of this session has also shown how intemperate the President was when he made that scarecrow charge, and how unsound his judgment was. Even on the ground of politics such a statement should not have been made, particularly by the leader of the Republican Party who is also the President of the United States.

For the people must bear in mind that as a politician, the President is the political leader of the Republican Party.

You will note that I say "political leader" because there are many other leaders in the Republican Party who are not elected by the people—certain big businessmen, bankers, and financiers, who pretty well determine the policies of the present administration. And the people are commencing to catch up with the fact that the present Republican admin-

istration is a "big business" administration. Certainly, the evidence already existing supports that statement, and within the next 16 months it will be disclosed further.

Before the present session of the 84th Democratic controlled Congress started (and we have only a 1-vote margin in the Senate) that great American, who is "Mr. Democrat"—Speaker SAM RAYBURN, of Texas, said, in substance, that the Democratic Party would be a constructive influence, a constructive supporter, when we agreed, and a constructive critic and proposer, when there was a disagreement.

That is the role of a party not in control of the White House—that acts consistently with the finest traditions of American political life.

The record of the 1st session of the 84th Congress clearly shows the Democratic Party lived up to that role.

In this session just closing there has been a tremendous amount of legislation enacted into law. In comparison with the 1st session of the 83d Congress, which was under the control of Republicans, this session has been outstanding.

While you have read articles and heard over the radio statements from commentators that there has been an absence of fireworks and lack of sensationalism, such statements are a credit to the Democratic Party in Congress. For it must be remembered that it is the duty of the Congress to legislate and not just to make sensational headlines that appeal to the emotions and not to reason.

And the Democratic Party has done its job well; it has given an exemplary example of party responsibility.

In keeping with Democratic tradition that foreign affairs stop at the water's edge, we have acted with vision and courage in meeting the world's problems created by the leaders of international communism.

The present Republican administration is following in this respect the sound policies of past Democratic administrations.

The quick passage of the Formosa resolution; the ratification of the German treaty and numerous other treaties; defense appropriations; the reciprocal trade agreements extension for 3 years, weakened by the President in the Senate after the bill had passed the House; the foreign aid or mutual assistance legislation and appropriations; the Inter-American Highway; and many other pieces of legislation are evidence of the fine work of this session in the field of foreign affairs under Democratic leadership.

In the field of national defense, in addition to necessary appropriations, the extension of the Selective Service Act; the Military Manpower Reserve Act, both of which are most important in our national defense and preservation; appropriations for research by the Atomic Energy Commission, and other agencies of the Government engaged in this field, so that we will remain in advance of the Soviets; in providing for a vast constructive program for our far-flung network of airbases throughout the world, are further evidence of the accomplishments of the first session of this Congress.

In the field of internal security a number of important bills have been passed. A special commission has been authorized to study the question of internal security so that the guilty will be vigorously detected and exposed and at the same time the reputation of the innocent will be protected.

There are many persons justifiably concerned with the large number of mergers taking place. There is no question but what some of them violate the Sherman antitrust law, and yet they are "getting away with it."

The Democratic Congress, recognizing the seriousness of this problem, has passed a law increasing the penalties of the violation of antitrust law; investigations are now being made by the Democratic-controlled committees of both the House and the Senate. The results will be disclosed later on.

And in other fields, such as the field of labor, the passage of the $1 minimum-wage law, the Democratic-controlled Congress has done outstanding work this session. And there is still another session of the 84th Congress to come, during which the people of the country will be assured that in the Halls of Congress the same kind of progressive and constructive action by the Democratic Party will continue in the best interests of our people. For the Democratic Party is truly the party of the people.

The National School Crisis

EXTENSION OF REMARKS
OF

HON. HAROLD D. DONOHUE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 27, 1955

Mr. DONOHUE. Mr. Speaker, without question, one of the gravest domestic situations facing the Nation today is that of providing vitally needed educational facilities for the youth of America.

The educational authorities of the Nation are practically unanimous in their testimony that there is a deplorable lack of qualified teachers and a disgraceful lack of proper classroom space; the statistics backing up this testimony are so overwhelming that no sensible person even begins to think of questioning them.

It is only too obvious that the teacher shortage arises from the continuing low pay level and discouraging teaching conditions. It has been authoritatively estimated that only about 6,000 classroom teachers in the entire country are paid as much as $6,500 per year, and in a great many instances the starting salaries are lower than that of the unskilled laborer. In contrast, the attractiveness of industrial offers compel legions of those best qualified to forsake heartfelt teaching ambitions in order to provide for their own families.

In the matter of physical schooling facilities, the most conservative figures show that the Nation's public schools will require additions of more than 40,000 classrooms each year until 1960. This need develops, of course, from the unprecedented enrollment increase coming from our ever-advancing birthrate. The number of school-age children, 5–17, will rise by 13.6 million during the current decade, 1950–60. This compares with an increase of only 9.4 million in the preceding 50 years 1900–50. Those are the simple figures.

From the numerous reports of the various educational commissions and committees studying the subject these past few years, it becomes apparent that most of the States and school districts have demonstrated inability to cope with the increase in school population, a shifting school census and a teacher shortage.

Recognizing then, as we must, this schooling crisis that has come upon us, we face two very serious questions. First, it is a matter of Federal Government concern and obligation; secondly, if it is, then in what manner and to what extent should the Federal Government participate toward its solution?

As to the first question, surely the adequate education of all American youth is essential to the Nation's preservation. Unquestionably, the country's most fundamental resources and strength lies in its youth, rather than in the soil or in the climate or any other material thing. Certainly, every American child has a right to pursue and to have made available for such pursuit, an adequate educational opportunity. Undeniably, the Federal Government is charged with the obligation of promoting the general welfare and it would seem axiomatic that the promotion of the general welfare embraces assistance for the education of American children, more especially when the denial of educational opportunity is near to a national disgrace.

If we accept the principle of Federal obligation, as I believe in conscience we must, then we can find the ways and the means for the extension of reasonable assistance to States from the National Government. School financing naturally presents great difficulties as, indeed, does the financing of all essential services these days. There are in existence numerous financial plans and programs drawn up and suggested by experts in the field of both finance and education and they need no recitation here. I will be the last to pretend infallibility in pointing out the wisest and the best. I will be among the first to lend my modest talents but unrelenting efforts in persevering study and work for the enactment of a Federal legislative program to aid the satisfactory solution of this school crisis.

Properly educating our youth is the best possible investment the National Government and the individual States can make for the future of this blessed country. With Christian generosity we have poured our resources into hamlets at the ends of the earth for the rehabilitation of people less blessed than we are. We can surely, then, afford to reasonably pay for the education of American youth and provide higher teaching salary levels for the heroic group of men and women who would loyally devote their lives and their learning to the instruction of the Nation's children if they could decently live within that holy vocation.

Mr. Speaker, there are, indeed, many pressing problems still facing this Congress. In my opinion, the national school crisis is, perhaps, our paramount domestic challenge at present. I earnestly hope, therefore, that the Congress will stay in session until, at the very least, some temporary or emergency legislation may be passed to begin the fulfillment of the moral and patriotic obligation resting upon all American units of Government to insure adequate educational opportunities for the youth of America.

The Spirit of Freedom Lives On

EXTENSION OF REMARKS
OF
HON. CLEMENT J. ZABLOCKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. ZABLOCKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a draft of a statement issued by the Committee for Aiding the Defense of Bern Young Anti-Communists.

The struggle for man's mind has characterized the entire history of man. Yet the struggle was perhaps never as intense and extreme as in our own day and age. It is intense in the efforts of the free people to further the attainment of complete independence by the Communist-dominated nations; it is extreme in the efforts of the Communists to force their ideology upon millions of captured peoples.

Man has always resisted oppression and will continue to do so as long as the spirit of freedom shall live in even a single human heart. We have seen this demonstrated in the riots in Berlin; in the refusal of Polish soldiers to drive Soviet tanks and to fire on workers uprising against the Soviet regime; in the burning of the Communist banner and raising of the American flag in Pilsen; and in other open demonstrations of resistance against oppression within and without the Communist-enslaved nations.

Mr. Speaker, the people of the Soviet captive nations and their relatives and friends on this side of the Iron Curtain will continue to speak and demonstrate against Red tyranny and oppression. These demonstrations should have our attention, and our sympathy must always lie with those who struggle for freedom and for the recognition of the dignity of man.

DRAFT OF A STATEMENT ISSUED BY THE COMMITTEE FOR AIDING THE DEFENSE OF THE BERN YOUNG ANTI-COMMUNISTS

The Soviets' barbaric tyranny in Eastern Europe and their ruthless subversive methods in the free world, have not yet been able to crush the spirit of anti-Communist resistance on both sides of the Iron Curtain. The slave-labor camps, deportations, mass massacres all over the Red prison of nations, the assassinations in the Katyn Forest and all the other crimes against freedom and human dignity, which are going on even today, have not extinguished that burning flame of resistance in Eastern Europe, nor has the new campaign, waged by the Soviets among the exiles, of intimidation through blackmail and murder, shaken the faith and determination of the refugees.

But this overwhelming criminal pressure brought to bear both on the captive peoples themselves and on the escapees, has driven them to the verge of despair. Two years ago the despondent people of East Berlin attacked with their bare hands the oppressor; this year young anti-Communist refugees rising in utter desperation raided a Communist Legation in Bern, Switzerland, exposing its subversive activities. These explosions of the strangled urge for freedom should be taken into serious consideration as they are warning signals of a general situation and not just isolated cases. In fact incidents such as that of Bern, are the expression of the deep instability, misery, and tension created by the Soviet aggressive intrusion in the free countries of the eastern part of Europe, and by the shortsighted indifference shown by the free world. After long years of Soviet despotism and Western abandonment, these people are reaching the end of their tether.

Moscow is at this precise moment waging a powerful propaganda campaign to recruit among the unsettled, bitter, and frustrated refugees, those desperate enough to accept "repatriation" with assurances of forgiveness and good jobs. The real aim of the Soviets in this maneuver is to get a corps of anti-Western, especially anti-American propagandists, as being direct witnesses of the failure of the West in dealing effectively with the problem of those who have chosen freedom. There is no doubt that the Soviets badly need new instruments of propaganda to keep down the fermenting discontent behind the Iron Curtain and kill the ever-renascent hope in the West. But neither is there much doubt that the program for handling the refugee problem is clearly inadequate.

There is therefore a most urgent need to strengthen the badly strained morale of both the enslaved and the refugees. We are upholding this cause as being of vital importance in the battle for men's minds. We must give comfort and encouragement to those who, fighting for freedom, are serving as well the best interests of the United States. Such are the young patriots in the Bern incident, who courageously tore off the mask of Red diplomacy. They are awaiting trial in Switzerland and we are sure that the Swiss courts will grant them a fair trial in accordance with their laws, products of a life of freedom and normalcy. But our purpose is especially to draw the attention of the public to the tragic background of the abnormal existence of terror and enslavement in which lies the motivation of their action.

The Soviet subjugated peoples have no longer the possibility to express their will, as they are the object of the most intolerant totaliatarian rule. The technically legal facade, such as Constitutions on the Soviet pattern, peace treaties, diplomatic relations, etc., corresponds in no way with the rights and free will of the people. As a matter of fact the people are deprived of all normal legal channels of expressing their feelings or defending their interests. As it has happened in the significant moments of history under such circumstances, the natural inalienable rights of man are asserted by the resistance to oppression. The people, seeing that all legitimate juridical ways of defending their liberties have been denied them, are making use of the means forced on them by the very slavery to which they have been reduced, namely, passive resistance, sabotage, and direct action. The incident in Bern is due to this tragic situation in which the victims of tyranny are compelled to make use of their sacred rights to resist oppression.

It is tyranny, persecution, and the fake legality of totalitarian conformism, which push people to insurrection, rebellion, and violence. It is indeed by now established that the "law" in the Soviet orbit is the mere instrument of absolute dictatorship. The American people, as inheritors of the Declaration of Independence, feel deeply that the honor and dignity of the captive peoples are not in their conformity to this fake Communist legality but in their very acts of revolt and violence against the oppressor. This is the real and dramatic background which caused the action of the young exiles in Bern. Aiding in their defense by giving them our moral support, we recognize the spirit of resistance and self-sacrifice which animates them and all their like behind the Iron Curtain.

We appeal to our public to give its traditional understanding to these brave young men who, in their fight for freedom, lost both home and country, and thus bring a message of encouragement and hope to all our secret allies, the captive peoples.

"Blind Spot" in American Education

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. METCALF. Mr. Speaker, a letter to the editor of the Washington Post calls attention to a most unfortunate and longstanding "blind spot" in American education.

Mr. Frederick D. Eddy, of the Institute of Languages and Linguistics, School of Foreign Service, Georgetown University, Washington, D. C., uses these words to describe the absence of foreign languages from the curriculums in our elementary schools.

Such courses, he says in the letter which follows, would "give an increasing number of our citizens the linguistic equipment to live with and to understand foreign peoples":

"BLIND SPOT" IN AMERICAN EDUCATION

News items such as President Eisenhower's appeal in Geneva for a free international flow of visitors, your July 20 article on Briefing To Mend Ways of Yanks Abroad and the report by Miss Emilie M. White on Languages in the District Schools in your June 13 edition keep bringing up a most unfortunate and longstanding "blind spot" in American education.

I mean a blind spot for the teaching of foreign languages in the elementary schools, for giving an increasing number of our citizens the linguistic equipment to live with and to understand foreign peoples.

Why, it may be asked, should foreign languages be started in elementary school? The answer, put very briefly, is that understanding and speaking a foreign language is not learned; it is blotted up with ease by youngsters under 13 or 14. After puberty it becomes increasingly more difficult to learn a new language well.

In other parts of the world, including the U. S. S. R., it has long been realized that putting off foreign language learning until high school is an obvious case of "too little and too late," and so outside our borders most spoken languages are started in grade school, and are continued for 6 to 10 years.

Inside the United States there is a young but rapidly growing trend in this direction, and Washington, D. C., can indeed take pride as Miss White says, in being one of the pioneer cities in the movement. Let's put it more accurately: Washington can take pride in having school personnel with the vision, competence, and devotion shown by the two heads of the department of foreign languages, by other administrative officers, and by some parent groups; Washington can take pride in a civic-minded and world-minded station like WRC-TV that has cooperated so effectively in the citywide grade school foreign language program.

But little pride can be taken in the facts behind some telling phrases in Miss White's report "the program * * * is being conducted without financial support; * * * regular elementary classroom teachers * * * offered to do the language teaching on a

purely voluntary basis * * *; we might hope for the kind of community support which would lead before too long a time to the inclusion of provision for a continuing program of languages taught by trained teachers in the regular school budget."

Commissioners of Washington, a world Capital, please take note. Citizens of Washington, speak up to your Commissioners.

In the suburban areas near Washington a situation exists that, far from arousing any kind of pride, should make world-minded citizens in these parts sit up and take alarmed notice.

In Maryland—specifically, in Montgomery and Prince Georges Counties—there is no official plan whatever to introduce foreign-language study into the elementary schools—in spite of real personal interest in the matter shown by many school officials from the highest ranks to the lowest.

The Maryland State Department of Education committee report, The Place of Foreign Language in the Total School Program, offers a promising and forward-looking plan. A few tentative steps have been taken by the education department to explore ways and means of implementing it. In short, the blueprint for Maryland schools is there, but action on it seems to be very slow.

Action will almost certainly come faster if the citizens of Maryland, aware of the linguistic provincialism in their elementary schools, will make their voices heard by local and State school officials.

For further information on this subject, interested persons or groups may contact their District, State, or county education department, or the Office of Education Committee on Foreign Language Teaching, United States Department of Health, Education, and Welfare, Washington, D. C., or they may write to the Foreign Language Program, Modern Language Association, 6 Washington Square North, New York 3, N. Y.

FREDERICK D. EDDY,
Associate Professor, Institute of Languages and Linguistics, School of Foreign Service, Georgetown University, Washington.

WASHINGTON.

Our colleague from California [Mr. ROOSEVELT] has introduced a resolution which would eliminate this "blind spot." House Joint Resolution 305 would make it United States policy to encourage the study of foreign languages by citizens of the United States.

The present position of the United States in world affairs necessitates greater contact between our citizens and those of other nations. Increased knowledge of foreign languages will help our peacetime policy and will be invaluable in event of war.

Record of the 84th Congress

EXTENSION OF REMARKS
OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. PRICE. Mr. Speaker, the 1st session of the 84th Congress has ended with a record in which most Members, I think, feel a sense of achievement.

It has been a Democratic Congress serving with President Eisenhower, a Republican. Not for generations, not since the 46th Congress in 1879 when Rutherford B. Hayes was President, has there been a session where both Houses were controlled by Democrats working with a Republican Chief Executive in the coordinate business of Government.

The record shows how wrong President Eisenhower was in the last campaign in predicting a "political cold war" unless the people followed his bidding and elected members of his own partisan group to control.

There has been no political cold war. The people's business has been handled carefully but without stalling. Under the firm and experienced leadership of House Speaker SAM RAYBURN, House Floor Leader JOHN MCCORMACK, Senator LYNDON JOHNSON, and Senator EARLE CLEMENTS, the necessary appropriation bills and many bills on basic legislation were expeditiously managed.

On foreign policy, Democrats in Congress gave Mr. Eisenhower support at many critical moments when he could not depend on his own Republicans.

On domestic policy, Democrats changed, corrected, and revised Mr. Eisenhower's programs. For this we have no apology. The President is surrounded by people from a particular group—big-business men and big-business men's lawyers—and he listens to no advice except the advice from this special-interest group. We in Congress have been forced to correct him.

There has been a vast difference between this Democratic 84th Congress working with a Republican President and the Republican 80th Congress working against former President Truman.

Mr. Truman got victory in vital foreign-policy matters in the 80th Congress by holding the solid support of Democrats and winning just a handful of Republicans. On domestic policy he was ruined; the Taft-Hartley law was driven through over his veto; the way was paved for other laws to go through over his veto.

In the 84th Congress President Eisenhower began on foreign policy with a badly split group of Republicans. The senior Republicans in the Senate—his floor leader, many ranking leaders in the GOP policy committee and the important Appropriations and Finance Committees—were against him. Democrats saved him.

Let us look at the record. If President Eisenhower had been compelled to follow the pressures exerted by his own Republicans, he would have attempted a naval blockade of Red China. He would have attempted atomic bombs or ground troops to save Indochina. He would even have rejected the idea of conversations at the summit with the Russians at Geneva.

It was the solid support of Democrats in Congress that enabled him to follow Harry S. Truman's policy in rejecting the idea of rash warfare in the Formosa Straits and the Far East. It was the wise words of a Democrat, Senator WALTER S. GEORGE, of Georgia, chairman of the Senate Foreign Relations Committee, that encouraged him, reluctantly, to go to Geneva for the conference at the summit.

In the field of foreign policy the official GOP congressional leaders were silenced, at last, and forced to abandon foolish talk about appeasement. Democratic support set the President free from the chains his own party tried to fasten on him. Is this the political cold war Mr. Eisenhower predicted? The President has reason to be grateful that the people ignored his requests and elected Democrats who have a sense of national responsibility in the field of foreign policy.

This Democratic Congress has not been a rubber-stamp Congress. There are five issues in which I disagreed with the President on domestic matters. In each of these five matters we in Congress have reversed and rejected the President's notions or he has belatedly confessed he was wrong.

He made a shocking departure from precedent when he named an Iowa Republican figure, Allen Whitfield, as a member of the Atomic Energy Commission. I have no opinion about the matters brought out about Mr. Whitfield in a trustee's capacity, involving an estate. I know that the appointment was wrong for the Atomic Energy Commission because it was strictly a political appointment. Mr. Whitfield had been an active Republican partisan and had been urged on Mr. Eisenhower for partisan reasons. Mr. Whitfield finally asked the President to withdraw his name, and Mr. Eisenhower obliged. A place on the AEC is no place for a partisan, and I would be as firmly opposed to nomination of a Democratic politician as a Republican politician.

As a member of the House Armed Services Committee, I disagreed with the President's proposals to take a go-slow policy on the Air Force and to chop down conventional military ground forces.

We were told, sometimes with something like contempt, that we in Congress should not question President Eisenhower's judgment as a military man. But we have our own responsibilities in Congress, and we may reasonably take account of the fact that although a soldier the President never before had the job of making decisions for the civilian high command.

Before the session ended, the Air Force admitted we were right in protesting the go-slow policy in equipping our fliers with modern, high-speed jet planes. The Russians surprised some of the self-proclaimed experts—but not our committee—by their show of modern airpower last May. The administration had to come to Congress and ask permission to spend more money to speed up procurement—the very money we had tried to give them and they insisted earlier they did not need.

The administration was forced to accept an authorization of a bigger Marine Corps than it recommended. We in Congress cannot compel the administration to spend the money; we could not save the Army from the slash in its size that General Ridgway vehemently protested. But we know that the administration was wrong about the Air Force and we have urged it to maintain at least

the present strength of the Marine Corps.

On the Dixon-Yates contract, I fought the President since the day the ill-fated private utility deal was anounced. Representative HOLIFIELD, of California, and I raised the first warning flags, last year, that an attempt to cripple the TVA through the Atomic Energy Commission was a gross abuse of the AEC, an independent agency, for political purposes.

The longer and harder the President pushed Dixon-Yates, the deeper he fell into trouble. His subordinates were shown to have falsified the record at least by omission; they were shown guilty of a lack of candor. The President himself repeatedly promised that the "full record" would be made public, but a special Senate subcommittee kept on revealing inconsistencies, deceptions, and improper interference by the White House itself with the independent agencies, including the Securities and Exchange Commission.

The President finally ordered the Dixon-Yates deal canceled, using as a lame excuse the determination of the city of Memphis to build its own power plant rather than buy Dixon-Yates electricity. The plain fact is that the deal had to be canceled because it had landed the administration in a mess. If the President had listened to Congressman HOLIFIELD and me last year, he might have got out of the mess more quickly.

One other matter I feel deeply about. I made the first public protest in 1953 when Mr. Eisenhower in his first state of the Union message, misrepresented and distorted former President Truman's purposes in sending the 7th Fleet in 1950 to guard the Formosa Straits. Mr. Eisenhower pretended that Harry S. Truman's orders had the effect of "shielding" the Chinese Communists from the Nationalists on Formosa. This was a gross misstatement of fact, and President Eisenhower has now admitted it.

What Truman did was to use the 7th Fleet to prevent the war in Korea from spreading southward to the Formosa Straits. He ordered the 7th Fleet to enforce a kind of cease-fire. And what is Eisenhower trying to get now? He is trying to get by negotiated agreement exactly the cease-fire that President Truman imposed. He has ordered a special ambassador to meet with a special Chinese Communist ambassador in Geneva to discuss first our prisoners in Chinese jails and then other subjects, including whether the Reds will agree to a Formosa cease-fire.

He began talking about a cease-fire as early as last January, at a news conference, and he has repeatedly indicated that he wants such a cease-fire. We Democrats do not insult Dwight D. Eisenhower by charging that this is appeasement, that he is "shielding" the Chinese Reds. I simply wish he had not distorted former President Truman's motives about the 7th Fleet.

Let me reiterate these matters. I publicly disagreed with the President on five issues—the Whitfield nomination to the AEC, the proposed Air Force cuts, the proposed cuts in military ground forces, the Dixon-Yates contract, the misrepresentation of Truman's orders to the 7th Fleet. As the Member of the House directly responsible to the people of the Illinois 24th District, I have no reason to regret or withdraw anything I said publicly on these items. I can point to the record to show that subsequent events have proven my position correct.

When we turn to the field of social legislation, domestic legislation for the general welfare, we Democrats again have proved ourselves something more than rubber stamps. Here we have a great group of issues—housing, minimum wages, social security, public health, highways, unemployment insurance, farm program, taxes. These are programs which Democrats nourished through the New Deal and Fair Deal years.

Very frequently we Democrats declined to accept the President's advice on legislation on such matters. We knew his advice arose from that narrow little group of inner-circle counselors. We broadened and liberalized Mr. Eisenhower's recommendations.

Minimum wages is a good example. The President proposed an increase in the minimum wage in interstate industry from 75 to 90 cents an hour. The Democratic Congress thought that was inadequate.

The new figure of $1 an hour was justified by increases in the cost of living and by increases in productivity of workers—the output of workers per hour. It was justified by the doctrine of supporting purchasing power so that the corner grocer, the corner druggist, has good customers who can pay their bills.

The only employers in interstate industry the $1-an-hour rate can hurt are sweatshop employers. The bill for $1 an hour seemed to us a fair compromise below the $1.25 urgently requested by both the American Federation of Labor and the Congress of Industrial Organizations.

I must add a word about the performance on this bill of Secretary of Labor Mitchell. He refused to endorse the $1-an-hour figure until after it had been voted by both the House and the Senate. He finally disclosed that he would recommend that the President sign the measure, but he coupled with this snide comments that it was only half a bill, because Congress did not widen coverage of protected workers as well as raise the minimum rate.

Secretary Mitchell was given every chance by our senior Senator from Illinois, Senator DOUGLAS, to endorse specific proposals on broadening coverage. He ran away from the chance, and he has little excuse now to criticize what the Congress did in passing a better minimum-wage law than he recommended.

The House passed by an overwhelming vote a new bill to liberalize the social-security system. The chief provisions were to provide benefits to totally disabled workers at the age of 50—instead of making them wait until age 65; to make benefits payable to women workers or wives and widows at age 62 instead of age 65; to provide for benefits for incapacitated children beyond the present cut-off age of 18 years.

This bill did not get through the Senate this year. It did not get through because the Eisenhower administration opposed it. It failed to pass because the resigned Welfare Secretary, Mrs. Oveta Culp Hobby, fought it in both House committee and Senate committee.

Secretary Hobby's technique was to complain that the changes had not been studied enough, and besides she had some 17 other proposed changes she wanted the committees to consider. The three major changes proposed by the House bill actually have been studied for years, and everyone's arguments and all the cost estimates are in the record. A bill to improve the social-security system undoubtedly will be passed by the Senate next session, and we in the House helped contribute by pushing the issue this session.

The housing bill was blocked until near the very end of the session by the opposition of all four Republicans on the House Rules Committee. The stalemate was finally broken only Thursday, July 28, when a few of the Republicans on the committee surrendered and agreed to let the whole House of Representatives vote on housing measures. The housing bill finally adopted was better in many of its provisions than President Eisenhower's proposals—and Republicans fought it both because of that and because of its authorization of 45,000 new public housing units this year. The Democratic Senate bill would have authorized 145,000 units per year, but the Republican opposition in the House blocked this figure. Even so, we boosted the President's request by 10,000 units—above the 35,000 he asked—and got rid of some old restrictions that had the effect of crippling execution of public housing programs.

The highways bill eventually fell by the wayside, but it will be brought up again next year in the second session, and I am sure a sound bill, with adequate provision for financing a great new highway network by pay-as-we-go revenues, will be passed.

The key fact is that both the House and the Senate this year rejected President Eisenhower's insistence on "gimmick" financing, through a 30-year bond issue outside the so-called national debt and with the taxpayers burdened with a tremendous interest load of $11.5 billion to carry the 30-year bonds. We in Congress were unwilling to authorize a so-called highway program in which 55 cents would have gone for interest charges in payment for every dollar actually invested in roads.

It is costing the people a great deal less to wait for a few months for new highways, unpleasant though the wait may be, than if Congress had adopted the "gimmick" financing proposed by the White House.

The record of Congress in the public-health field is spotty—but once again the results arise principally from the shortsighted proposals the administration insisted on. President Eisenhower's inadequate program of health reinsurance involving private insurance companies was firmly rejected. It never came out of either House or Senate committees.

A sharp issue was the handling of the Salk polio-vaccine program. Here again

the Eisenhower-Hobby proposals were inadequate and lacking in generosity and humanitarianism. Our great neighbor to the north, the Dominion of Canada, handled the inoculation of Canadian children with a minimum of fuss and error and a maximum of efficiency. One of our Atlantic neighbors, the small country of Denmark, gave all Danish children practically complete immunity from polio by using the Salk vaccine technique wisely. But Mrs. Hobby claimed that she could not possibly have foreseen the demand of American parents for protection of their children.

On unemployment compensation, a necessary part of our modern system to safeguard families from temporary industrial layoffs and to protect purchasing power, Mr. Mitchell's Labor Department opposed Federal action. But hearings were held which will form a groundwork for progress in the future by Congress.

The House passed a bill to repeal Agriculture Secretary Benson's so-called flexible farm price support plan passed last year by the Republican 83d Congress. We Democrats do not believe that the way to handle the problems of farmers is to cut their support prices ruthlessly by calling the new plan "flexible." I have no doubt that the Democratic Senate will move in the same direction as the House next year.

The House this year passed a bill to override the common Eisenhower practice of granting most tax relief to corporations and corporation stockholders. Corporations and stockholders deserve fair and equal treatment, but no more. The House tax bill, enacted after Speaker RAYBURN made a dramatic personal appeal, would have chopped a flat $20 a year from the payable taxes of everybody. If anyone thinks this is trivial, let him remember that even a well-paid factory worker with 3 children may make only $3,700 a year. To him, a tax benefit of $100—$20 each for himself, his wife, and his 3 children—would be a welcome gain in what he is able to spend for food, housing, and clothing. Once again, I have no doubt that the Senate will join the House in moving in this direction next year.

One other matter should be mentioned about the relations of President Eisenhower and Democrats in Congress. Most of us have given strong support to the President on many issues. I myself am listed by Congressional Quarterly, an independent research group dealing with Congress, as having supported Mr. Eisenhower much more frequently than the average of Illinois Republican Members of the House.

It is necessary to say frankly, however, that many Democrats were infuriated by President Eisenhower's stern schoolmaster attitude toward us after we had saved one after another of his foreign-policy programs.

The very day the President chose to pull out of his pocket an obviously prepared list of measures, and to complain to a news conference that we were stalling about these measures, was the day when his own housing bill was blocked in the House Rules Committee by the votes of all four Republicans on that committee. The Democrats voted 6 to 2 in the committee to send the housing measure to the floor; all 4 Republicans voted to stall.

It is all very well for President Eisenhower to pay frequent tribute to Senator GEORGE's kindness to him. Speaker RAYBURN of the House has also been kind—kinder than the President seems to realize. It was SAM RAYBURN who saved Mr. Eisenhower's foreign-trade bill in the House, against the opposition of most Republicans. We Democrats have no apology, I repeat, for liberalizing Mr. Eisenhower's domestic programs or at least blocking them in the shortsighted form he proposes.

As many of you know, much of the work of Congress is done in committees. That is how we divide up the tasks and try to become well-informed in the fields to which we are assigned. I am fortunate in my committees—Armed Services, which covers the defense of our country, and the Joint Congressional Committee on Atomic Energy, which has jurisdiction over and responsibility for all our programs on atomic energy for defense and for peaceful use of the atom. I am chairman of the Atomic Energy Subcommittee on Research and Development.

All through a session of Congress, and particularly toward the end, the burden of the important committees is a serious one. On last Thursday, for example, when the House itself held a long session involving important bills, I was in five separate committee and subcommittee meetings.

My own Subcommittee on Research and Development was given the last-minute task of devising ways and means to end the stalemate over President Eisenhower's proposed atomic-powered merchant ship. The President's original proposal was not a sound one, and most of us on the Atomic Energy Committee recognized it—both Republicans and Democrats. But we also realized that we had a responsibility to work out the soundest substitute we could, so that we could both demonstrate America's good intentions regarding the atom and advance the development of practical atomic engines for merchant vessels. This is the kind of purpose for which our Subcommittee on Research and Development was created, and we accepted our job.

At the same time the work of the House as a whole is important, and we had to leave our committee work occasionally to go to the floor and cast our votes, on rollcalls, on measures of intimate concern to the people of our districts. I was present to vote against the natural gas bill, which would reduce Federal regulation of gas prices and eventually lead to the piling up of new charges to people who heat their homes and heat their water or cook their meals with natural gas.

As this report is written I am preparing to leave for Geneva, Switzerland, to participate in the first international conference on the creative, civilized use of atomic energy for the benefit of men everywhere. This conference will be held under the auspices of the United Nations.

I will be back in the 24th District of Illinois as soon as my duties in Geneva permit, and I will be available for many months, before the next session of Congress convenes in January, for reports to the people of our district.

Interview for Everybody's Daily

EXTENSION OF REMARKS
OF

HON. CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1955

Mr. ZABLOCKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a copy of the interview which I granted to Everybody's Daily and which appeared in the July 27, 1955, edition of that Buffalo newspaper:

AS MEMBER OF FOREIGN AFFAIRS COMMITTEE CONGRESSMAN ZABLOCKI PRESENTED MANY ANTI-RED BILLS

(Exclusive interview with Congressman CLEMENT J. ZABLOCKI, of Wisconsin)

Question. Undoubtedly, this has been one of the most interesting sessions you have ever attended. How many years have you been serving as a Congressman?

Answer. I am presently serving my fourth 2-year term in the House of Representatives. Prior to my election to Congress, I served two terms in the Wisconsin State Senate.

Question. Inasmuch as the important work of Congress is done through the committee system, of what committees are you a member, and what are their special purposes?

Answer. I am a member of the Committee on Foreign Affairs, and chairman of the Subcommittee on the Far East. The Committee on Foreign Affairs is in charge of legislation dealing with our foreign policy—with such measures as the mutual-security program, the point 4 program, and so on.

Question. As one of the ranking more important members of these committees, and because legislation is always introduced through the committee function, what legislation have you been responsible for, and why?

Answer. That is a very broad question. I have sponsored, among others, bills calling for the establishment of a United States Foreign Service Academy, for the investigation of Communist atrocities in Korea for the condemnation of the Soviet domination of Poland for the admission of Spain into the North Atlantic Treaty Organization, for the creation of a Pacific pact union on the style of NATO, and a number of others.

Question. Undoubtedly you are planning to introduce other legislation. Would you want to tell us what it will be and the purpose of it?

Answer. I have no immediate plans for the introduction of new legislation dealing with foreign policy issues. As you know, the present session is rapidly approaching an end and for that reason it would not be feasible to introduce new legislation at this time. Further, I have a number of bills pending and pertaining to other fields, and I will try to secure consideration for those measures before Congress adjourns.

Question. Would you say that the present session, which is considered an off-year as far as elections are concerned, is going to be as productive of good work for the country and American people as some of the other ones you have been a member?

Answer. I believe that this session will go down into history as a constructive and pro-

ductive session. Congress has done a considerable amount of work on various important measures. A comprehensive defense budget has been approved; the reciprocal trade-agreements program has been extended; a number of vital treaties have been approved, the mutual security program is in the process of being continued, and so on. In addition, progress has been made on social security revisions, on increases on the minimum wage, on hospital and school construction assistance program, and the reorganization of the military Reserves, and on the housing legislation. This, in my estimation, is a considerable record of achievement in an off-year session.

Question: As a member of the majority party, would you say that the average Congressman is first concerned with the political significance of everything that comes before him, or is he more interested in the overall legisaltion to be considered, with the effect on his own constituents, or his country as a whole?

Answer. I would say—and I am very sincere in saying this—that by and large, the average Congressman is primarily interested in seeing that the legislation he supports is sound, and in our national interest. There are, of course, exceptions to this rule. In some cases, individual Representatives will fight for bills which would benefit some segments of the country and particular groups, even though such bills may not be consistent with the overall interests of the Nation. Generally, however, they look first to see if a particular bill will serve the interests of the country, and vote for the bill if that is the case—even though their vote may not be fully understood or appreciated by some of the people back home in their district.

Question. Inasmuch as your own constituents elected you to Congress, would you say your first consideration on all legislation, or the majority of legislation is to your constituents or your country as a whole? What are good examples of this type of consideration on your part?

Answer. Now to logically answer your question, I must first point out that what is good for our Nation, at the same time benefits each and every one of us. In other words, there is very seldom any clash between a local and a national interest. Legislation which is good for the Nation as a whole, is not harmful to the people of a given locality, because the people of that locality benefit from the healthy state of the Nation.

There are, of course, times when local and national interests do not appear to be identical. We had an issue of this type arise recently in conjunction with the reciprocal trade-agreements program. Now our trade program has definitely benefited our Nation during the past two decades. There is little doubt about it. Nevertheless, there are some firms which are hurt by foreign competition. In order to ascertain to what extent the people of the Fourth District of Wisconsin are affected by foreign trade, I asked the Library of Congress to conduct a thorough study of this subject. With the cooperation of my office, the Library of Congress for 8 months studied the impact of foreign trade on Milwaukee. The results of the study surprised many people. The study showed that the majority of our manufacturing industries, employing a vast majority of our industrial workers, are deeply interested in foreign trade and benefit from it to a large extent. To vote against the reciprocal trade-agreements program, therefore, would be against the interests of the majority of our workers—even though one company felt that it would not benefit from such a vote. For that reason, I voted for the program.

Question. What do you think is the most important legislation matter that has come before you in this session, and has it been worked out correctly and constructively?

Answer. I feel that some of the important pieces of legislation have not been worked out as yet during the present session. The issue of aid to school construction, the question of the highway program, the minimum wage increase, the subject of social-security revision—these and other vital measures are still being worked on. We will not be able to accurately evaluate the fruits of this session until final action will be taken on these bills.

At this point, however, I would say that the action on the defense budget, on the trade program, on the mutual security program, and the plugging up of the loopholes in the Republican Revenue Act of 1954, constitute constructive actions on the part of this Congress.

Question. Being a member of the opposition party of the President, would you say the present handling of the Far East and European situation has been in the best interests of the country. If not, what suggestions do you offer?

Answer. This again, is an extremely broad question, and it is difficult to answer it briefly. Generally, I would say that the present handling of the European situation has been much more constructive and sensible than our country's actions with regard to the Far East. In that area, we have been, in effect, retreating for 3 years. The Korean truce was not satisfactory, as the subsequent events have clearly shown. The Indochina truce gave the Communists a new conquest to boast about, and consigned several million peoples to Communist domination and slavery. In addition, it has imperilled the rest of Indochina and southeast Asia in general. Neither has much progress been made in resolving the critical issues between Formosa and Red China.

As to the suggestions that may be offered on this subject, I would like to refer you to the two reports issued by the Special Study Missions to the Far East, of which I was a member. Some of the actions recommended by my committee have been taken by the administration—unfortunately, these actions came late, and fell far short of our recommendations. The problem of doing "too little, too late" has been at the bottom of the difficulties which had to be faced in that area today.

Question. Do you agree with a recent survey that 91 percent of the Americans are willing to risk war, if all peaceful means of releasing our prisoners of war in China fail?

Answer. The thought of an all-out war is to borrow a phrase from one of the statesmen, of our times, "unbearable." A nuclear war may actually destroy our entire civilization. There is no doubt about this—the unleasing of the deadly weapons which we possess, as well as those which the Communists possess, may bring about such destruction that it may take centuries to rebuild the world.

Knowing this, I do not believe that our people would lightly recommend that our Government plunge our Nation, and the entire world, into an all-out conflict with the Communists. I firmly believe that we must leave no stone unturned to secure the release of our men held by the Communists in China. I have repeatedly urged that this be done, and I am confident that our Government is doing everything possible in this respect. Whether an all-out war should be started if these peaceful efforts fail, is something that cannot be decided on the strength of a public-opinion poll. This is an issue of the utmost gravity, and can only be resolved—if the occasion for it arises—by Congress and by our Chief Executive.

Question. Include all suggestions you may have that President Eisenhower should discuss at the forthcoming Big Four meeting concerning all of the captive countries.

Answer. In reply to this question, I wish to call to your attention the enclosed copy of the remarks which I have recently made on the floor of the House, urging the President to exert every effort during the forthcoming Big Four meeting to secure the withdrawal of Soviet troops from the captive nations of Eastern and Central Europe.

In addition, I would like to mention that I have joined with other Members of Congress in urging the President to discuss, during the conference, the possibility of initiating an exchange of visitors between the free world and Communist-dominated nations. Such an exchange of people and of views could greatly help in lessening the tensions presently existing in the world.

H. R. 7000, To Provide for the Strengthening of the Reserve Forces

EXTENSION OF REMARKS
OF

HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. DORN of South Carolina. Mr. Speaker, H. R. 7000 is about to become law. When this bill is law then it will be my duty as a Representative in Congress to do everything possible to see that the law is properly administered. I believe that should be the attitude of every Representative and every American concerning any legislation that he or she might have opposed. After giving such a law our backing and a fair trial, if it is then found unworkable, we should have the courage to repeal it and substitute something more in the national interest. In a democracy such as ours, this should be the attitude of every loyal American.

However, it is proper as one of the small minority who voted against H. R. 7000 to give my reason for so doing. The bill has now gone to the President for signature. When he signs it, it will be the law of the land for the next 4 years. As a bill, it is satisfactory to no one, not to the Pentagon, which asked for something very different; not to the President, who wants a strong Reserve to make up for his weakening of the Regular Military Establishment; and not to the Congress, which passed this bill solely as a compromise. As a law, it will prove unfair, unworkable, and ill-timed. It will create confusion, breed resentment, and work great hardship on the Armed Forces.

The day of large Reserve forces is past. The very idea is becoming outmoded. The most effective Reserve forces would have been of no assistance on the day of the Japanese attack on Pearl Harbor. If Japan had the same industrial potential that the United States possessed, she would have won World War II in 5 minutes at Pearl Harbor. There would have been nothing that the United States could have ever done to overcome the disadvantages of the Pearl Harbor defeat. We were saved because we had years to build bomber plants, train pilots, and again enter the war in the Pacific on

more favorable terms. But had Japan possessed the ability to come on and control the air over America, we could have never mobilized and the war would have been over with America the loser. The usefulness of unmobilized Reserves disappeared with the development of the long-range bomber aircraft and nuclear weapons. If Russia should attack us, only two forces would be of any avail: the Ready defense force, alerted by the radar warning system that we are building across our northern approaches, and the Ready strategic air forces, that can deal an immediate retaliatory blow. In an atomic war, the need for Reserves would pass before they could be mobilized. The Military Reserve Act of 1955 represents the sort of legislation that would have been useful in preparing us to meet the challenge of 1914, but not even the challenge of 1941. We are still thinking of Chateau-Thierry and of sending great masses of men over there with plenty of time to mobilize and train them.

We should be preparing for a war of the future. Philip of Macedonia and Alexander the Great developed something new—the Greek Phalanx. With this new development Alexander was able to conquer the world with a very small force. The Roman Legion was something new. It dominated the world for 500 years. Britain was a small island, a dot on the map of the world with limited manpower, but her leaders were farsighted and developed through science and skill a navy which controlled the 7 seas for 400 years. This my friends is the age of airpower, guided missiles, rockets, germ warfare, and scientific development. The nation that can plan ahead and excel in these military fields of endeavor, that nation will control the world for peace.

Mr. Speaker, I remind you that in 1934 and 1935, one of the major courses taught at West Point was the horse calvary. While Hitler was building Panzer divisions and Stuka dive bombers, these great military minds, including that of our great President, were thinking too much in terms of the trench warfare of World War I. Had Germany been contiguous to the United States in 1940, we would not have lasted as long as France with our horse calvary, a few outmoded tanks and no air force.

I appeared on a national television show not long ago with a retired general who openly advocated a reactivation of the horse calvary. We must put aside this thinking and with imagination, determination and science prepare for a war of the future as the best means of preventing that war. I think I should say at this point that it was my opinion in 1944 and the opinion of many experts that World War II could have been won in Europe without the loss of a single infantry soldier wading across the beaches of Normandy and sloshing through the mud of northern France and the Rhineland. If the leaders of America at that time and before had possessed the imagination of the British when Britannia ruled the waves, they could have put the B–29 in operation over Germany and Germany would have been forced to capitulate. This plane, which later destroyed Japan, had been in the blueprint stage years before the Normandy invasion. We only needed leaders with the courage to develop it and put it in operation over Europe. Germany was a small country, highly industrialized and could not have long withstood TNT dropped by thousands of B–20's, much less thousands of atomic bombs from the same source. But our military thinking was geared to the Meuse-Argonne, so we lost nearly a million men, killed and wounded on the battlefields of western Europe.

Let us be realistic. Our only potential enemy is Russia and her satellites. She has overwhelming superiority in ground troops, tanks, and tactical aircraft. We cannot, by any stretch of the imagination, match on land, in numbers or in firepower, the overwhelming masses of Russia and China. Our only alternative is to balance this preponderance of strength, not by building an air force equal to Russia's but by building an air force many times larger and superior in technology to counterbalance her vast land superiority. The situation is too delicate, too precarious, to waste money on a vast, cumbersome reserve that could only be in action after months of mobilization and training.

America needs long-term enlistments, if we are to survive, for our mechanics, our airmen, our scientists, our radar specialists, and our technicians. We need a force ready to move this minute, this afternoon, for tomorrow may be too late. We need men with years of intense daily training. Six months of active duty with a night a week for several years cannot possibly give our national defense the highly skilled men needed. It takes 5 to 10 years of constant training to develop a good pilot, a good scientist, or a first-class technician in any category. Yet this is the type of man who will save America—not the ones who only know left-face and right-face.

Adequate national defense costs money. The United States is already hopelessly in debt. Every dollar must be made to count. After several years the Reserve program under this bill will cost huge sums of money. I believe this money could be better spent on a force in being ready to move at a moment's notice. I greatly fear that a tremendous retirement burden will be fostered on the American taxpayer under this vast Reserve program. Also, a retirement that might become unfair to those in Regular service. In other words, a man in the Reserve can build up and eventually draw retirement by being in the Reserve and at the same time continue his civilian occupation and provide for old age. For instance, men can be found today who draw Reserve retirement, social security, State retirement, possibly congressional retirement in some cases and at the same time amass a personal fortune. This is practically impossible for a Regular in military service. He does not have time to carry on a business on the side nor is his salary such that he can save up to provide real security. So, often a man in Regular service, after 20 or 30 years of such service, will find it necessary to get a job to support his family.

Many of those advocating this bill stated the necessity of having an organized group in every section of the country to keep order in case of an atomic attack. This is negative thinking. This is admitting failure in the first instance. This is tantamount to an admission that we are not making proper preparations to prevent such an atack. This is the thinking of prophets of doom. This theory is fallacious in the extreme and will lead to the wrong psychology. Our National Guard and civil-defense organizations will take care of any such emergency. Before the National Guard is inducted into Federal service a home guard should be organized as during World War II. On this point, Mr. Speaker, I think every citizen should be required to belong to a local organization to render first aid, do patrol duty, and things of this nature. This organization should function as a patriotic service without compensation. I do not believe that real patriotism can be bought. We owe something to America and to our way of life. It would be a privilege to serve in such an organization to prevent chaos at home in time of dire emergency.

Without adding this confusing bill, our national defense is cumbersome and clumsy to say the least. We have four Air Forces, the Regular Air Force, the Navy Air Force, the Marine Air Force, and the Army Air Force. In the interest of saving money and in striking power, theses should be consolidated into one force with a terrific punch. It would be absurd and ridiculous to further divide command by giving each field Army control of a certain number of tactical aircraft as advocated by some. Many of the technical schools of the Army could be consolidated and our ground forces in general consolidated into one highly skilled, highly mobile striking force with the same training areas and same uniforms, saving million of dollars. Attention should also be given to uniform lines of supply and a common warehouse system for all services. Likewise, I believe our lady organizations should be consolidated and reduced, as civilian help can be acquired more cheaply, or men inducted into service with minor physical defects. The hour is too urgent to continue to play politics with the taxpayers' money.

This bill comes at a time when we desperately need a highly skilled, thoroughly trained, mobile Army with emphasis on airborne troops. It comes in a hour when our great Navy needs long-term enlistments of technicians who can handle proximity fuses, radar, rockets, and Nike. This bill will furnish no branch of our service with the kind of men needed.

We, as representatives of the people, will not be able to escape the condemnation of history if we fail to meet this crisis with a streamlined 1975 national defense.

Mr. Speaker, let me emphasize again that if we dissipate our resources all over the world among doubtful allies and further scatter our striking potential among several air forces and many branches of the service, we will be inviting disaster. If Russia succeeds in her

initial attack on the United States and our industrial potential is destroyed, then the greatest reserve in the world would be of no avail. We must be able to repel this initial onslaught from the air, whether it be conventional aircraft or guided missiles, and instantaneously launch a counterattack through the air that will paralyze the heart of Russia.

This Reserve measure places emphasis on land surface forces. At one stage the legislation included the provisions of a bonus for individuals enlisting in the Army and the Marine Corps. The thinking that inspired the bill is the thinking of surface force adherents, who have so far failed to comprehend the role of air power in a modern Military Establishment. The thinking that dominates the bill, as enacted, is the thinking of men oriented to the land masses type tactics. The bill fails completely to recognize the needs of the Air Force, even that the buildup of the Reserve in certain categories will make it diffcult for the Air Force to enlist the men it needs for regular service. There is less comprehension of the requirements of airpower in this bill than in the President's budget message.

The bill is unworkable. Its provisions are complex, and many of them still are subject to legal interpretation. No one can yet be sure what final effect the bill will have upon our military structure. It is easier to be sure of the effect it will have on the young men whose lives it will overshadow for the better part of a decade. Abraham Lincoln is credited with the authorship of the statement that a house divided against itself cannot stand. This Reserve bill will divide this Nation into two groups: Those affected by it and those who manage to escape its provisions. This bill sets brother against brother.

I say this because this bill does not provide either for universality of service or equitable service. Some men will volunteer for 3 or more years' active duty. Some will be drafted for 2 years. Some will volunteer for 3 to 6 months active duty training. Some will serve their entire time in the Reserves with no extended period of active duty at all. Some will receive one rate of pay, some another, and some will not wear the uniform at all—either in active or Reserve service. Admittedly, it sets up alternative choices for young men facing the draft. Unfortunately, it requires nothing of young men who, somehow, miss the draft entirely.

The administration of this law will impose a very serious burden on the Military Establishment. New offices will have to be created to handle the personnel records of the men who serve under its various categories. I can anticipate that the law will also impose a very great burden on the Members of Congress. Parents will demand explanations; men affected by it will complain of the inequities; we will be asked to take steps to see that justice is done, and yet we will remain as confused by the complicated provisions of the compromise we have erected into a juggernaut as those who direct their questions to us.

Mr. Speaker, I do not question the desire of my colleagues to insure the security of the United States. I do not question their eagerness to create a strong military force to augment the Regular forces of our 2½-million-man Military Establishment. But I do question the farsightedness of many who advocated this bill. I question whether they had the proper concepts of future war or were acquainted with the facts. I know the political pressure groups were active. Russia is talking soft these days. Were my colleagues so bemused by the coo of a mechanical dove that they no longer realize the need for Reserve service that strengthens the Armed Forces, and Reserve legislation that can be translated effectively into combat power as quickly as needed?

No, Mr. Speaker, I fear that many Americans failed to support adequate Reserve legislation because they fail to appreciate what is needed to guarantee the security of this country. They see armed soldiers on the land, tanks and guns ready for action, warships riding at anchor. They do not see the aircraft that fly out of sight; they object to the noise of jet aircraft crossing the sonic barrier; they complain of the necessity of placing air bases near centers of industry and population. They have not yet come to understand that air power and air power alone can defend the United States against attack that comes through the air. They neither realize that air power won the decision in World War II, nor that world war III may well be ended before any surface forces could be employed. Lacking thorough study, they would establish a Reserve Army, to be composed of a high proportion of green young men, with very short active duty training periods, who may well never be needed, or if needed, will be impotent to add strength to the Regular Military Establishment.

Mr. Speaker, an air force in being is not an air force in action, though it is ready for action. A strong air force ready for action is the strongest kind of a reserve force. It can do for our country what the Reserve force to be created by this new law can never do. It is a police force, to keep the peace. It is a riot squad, ready to meet an emergency. It is a guaranty that peace will be preserved or, if once disturbed, quickly restored. It is the only Reserve force we need to guarantee our security.

The money spent on spasmodic training of part-time participants is money down a rathole. The funds we will need to appropriate for this measure would build aircraft; they would provide air wings; they could stimulate research and development to give body to weapons as yet on the drawing board or in the mind's eye of a laboratory scientist.

Mr. Speaker, I cannot believe that Russia is placing major emphasis on reserve training. Russia is building aircraft. We all know now of her new long-range strategic bomber, of her new jet interceptor, of her new all-weather fighter. We know that she has built these planes at a rate surprising to us, that upset all our expectations and calculations. We know that Russian technology is excellent. We know that Russia has an enormous, and an enormously strong air force in being. We can be sure that the masters of the Kremlin are pleased with the fumbling that has gone on, on Capitol Hill.

Reserve forces at any time are intended merely to occupy an important secondary role in our Defense Establishment. In the age of jet aircraft and nuclear weapons, regular, full-time professional forces, ready instantly to fight, must have the major emphasis and the highest priority.

It is ironic that while the overall size and the overall capabilities of forces are being reduced—with further reductions scheduled—this Congress should have passed a hybrid and unsatisfactory Reserve bill, satisfactory to none, questioned by all, and sure to plague this and future Congresses so long as it remains on the statute books.

The 10th General Assembly of the United Nations: Challenge and Responsibility

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. MERROW. Mr. Speaker, I have been privileged to be appointed by the President, along with the Honorable BROOKS HAYS, or Arkansas, as a United States representative to the forthcoming 10th session of the General Assembly of the United Nations, representing the United States Congress on the delegation. Heading the delegation will be the Honorable Henry Cabot Lodge, Jr., who is the permanent United States representative to the United Nations, and the other members are Gov. Dennis Joseph Roberts, of Rhode Island, and the Honorable Colgate Whitehead Darden, Jr., president of the University of Virginia. I appreciate deeply the opportunity which this will present, and I shall strive to bring into the deliberations of the United States delegation the congressional point of view reflecting the public opinion of our people. I believe it is essential that those of us who represent the United States at the United Nations, and indeed before other international bodies and conferences, must always bear in mind the central fact that whatever we decide upon in such international bodies vitally affects every man, woman, and child in the United States. It is equally important that our people be kept as fully informed as possible on the activities of its Government, particularly those activities concerning the maintenance of international peace and security.

Mr. Speaker, the organization that the people of the world have chosen as the primary agency for the maintenance of international peace and security is the United Nations. Over and over again the United Nations has been declared to be the cornerstone of American foreign policy. I am in full accord with this principle. Too often the organization has been attacked by those who have not had the facts. During the 83d Congress, I was privileged to serve as

chairman of the Subcommittee on International Organizations and Movements of the House Foreign Affairs Committee. Our subcommittee held extensive hearings covering the whole range of United States participation in international organizations, including the United Nations. Testimony was received from individuals and organizations representing a cross-section of American life and activity. These people and organizations are to be commended for the time and effort which they took in presenting their views to the subcommittee. I felt it was extremely important to make available these views to the American people and to our own Government officials. These hearings were printed, and the demand has exceeded the supply. During the course of the hearings, it became apparent to me and to other members of the subcommittee that while it was true that there exists certain shortcomings in the United Nations, nevertheless its record of accomplishment far outweighs its shortcomings. I believe firmly that we must put forth every effort to improve the organization in every possible way, at the same time recognizing that the organization has served mankind well.

Mr. Speaker, I think it is well at this point to summarize the major accomplishments of the United Nations over the past 10 years. President Eisenhower, in a recent message to the Congress transmitting the ninth annual report on United States participation in the United Nations, stated:

> In a decade of trying years, the United Nations has developed from a blueprint for peace into a living, functioning organization.

It has done so in spite of such unforeseen and major problems as mankind's entry into the atomic age with all its potential for good or evil, and the Soviet inspired cold war which has attempted to frustrate international cooperation. The United Nations over the past 10 years has amassed this impressive record in carrying out the obligations assumed under the charter:

MAINTENANCE OF INTERNATIONAL PEACE AND SECURITY

In carrying out its obligations to maintain international peace and security the United Nations has established and maintained a truce between Israel and the Arab League. This continues to be an uneasy truce but one which has effectively prevented open conflict. United Nations intervention in the dispute between India and Pakistan over control of Kashmir has prevented the outbreak of war in that sensitive area. The United Nations successfully mediated between the Dutch and the Indonesians, and this mediation has resulted in the establishment of an independent Republic of Indonesia.

SUPPRESSION OF ACTS OF AGGRESSION

The United Nations played a key part in 1946 in ending Communist aggression and threats of aggression in Iran and forcing the withdrawal of Soviet troops in that area. Likewise, Communist hostilities and subversive activities against Greece were brought into the open by the United Nations and the threat against the independence of that country effectively stopped. The invasion of the Republic of Korea by Communist forces in 1950 was the most direct and serious challenge to the authority and power of the United Nations. This challenge was met by the united action of the free countries of the world with the United States taking the leading part and making the major contribution. The aggressors were thrown back beyond the point from which they started. This action proved that the United Nations, unlike the League of Nations, could take military action when necessary to resist unprovoked aggression. An important by-product of the Korean action was the passage of the uniting-for-peace resolution whereby the General Assembly is empowered to deal with acts of aggression when the Security Council is prevented from doing so by the veto.

INTERNATIONAL ECONOMIC COOPERATION

The United Nations through the Economic and Social Council has developed effective plans for economic cooperation between nations to carry out the United Nation's responsibilities for creating conditions of well-being and raise standards of living. Regional economic commissions have been established for Europe, Latin America, and Asia and the Far East to determine the factors retarding the economic development of the areas and to make recommendations for improving these conditions. Because much international tension has economic roots, these cooperative economic efforts are effectively dealing with these problems at the point of origin.

The specialized agencies such as the World Health Organization, the Food and Agriculture Organization, and the International Labor Organization, to mention three, have established far-reaching programs to help underdeveloped areas raise their standards of health, nutrition, labor, and education. In general, the United States contribution to the work of these agencies, which we have strongly supported since the beginning, has been progressively reduced while the contribution of those countries which benefit directly is increasing. The work of these agencies is contributing importantly to an increase in political and economic stability with food production rising through the use of modern agricultural methods and debilitating diseases such as malaria being progressively eliminated.

In the fall of 1953 I served as chairman of a special study mission on international organizations and movements, which included the Honorable ALBERT P. MORANO, and the Honorable ALVIN M. BENTLEY. The group made a study of seven specialized agencies of the United Nations in Europe and issued its report—House Report No. 1257, 83d Congress—on February 25, 1954. This report records the high degree of accomplishment achieved by the specialized agencies.

PEACEFUL USES OF ATOMIC ENERGY

At the initiative of the United States and with the unanimous cooperation of the United Nations, atomic energy is being harnessed to serve the ends of peace rather than war. The Peaceful Uses Conference convening in Geneva on August 8 is the greatest scientific conference of this kind ever called. It holds within it the potential for vast benefits to mankind. At the same time progress is being made toward establishing an international agency for the peaceful uses of atomic energy.

WORLD FORUM OF PUBLIC OPINION

The United Nations, and within it the General Assembly in particular, has developed into a sounding board of public opinion which has served the interests of the free world well. In this forum the Communist cold war has been revealed for what it is, and the peaceful aims and cooperative endeavors of the free world have increasingly won the support of the majority. The recent release of the 11 American fliers illegally detained by the Chinese Communist is due in part to the pressure of world public opinion as applied through the General Assembly and carried out by the Secretary General.

DISARMAMENT

Effective disarmament under safeguarded controls is one of the major tasks which the United Nations has undertaken to achieve. While it has not yet succeeded in reaching this universally desired goal, there are increasing signs that the long-drawn-out negotiations under the Disarmament Commission of the United Nations are making progress. It is hoped that, faced with mutual annihilation in a modern atomic war, the powers principally concerned may come to terms in a program safeguarded by the United Nations.

THE UNITED NATIONS AND UNITED STATES FOREIGN POLICY

The United Nations has been effective in furthering important aspects of United States foreign policy objectives. This is particularly so in the various regional organizations which the United States has taken the initiative in establishing in our national interests as well as to insure the security of nations threatened by Communist aggression or subversion. These regional arrangements are specifically permitted under article 52 of the charter and they exist, so to speak, "under the umbrella" of the United Nations.

As I have indicated earlier in my remarks, the United Nations is far from a perfect organization and of necessity reflects within itself the many imperfections of our international society. However, it has proved to be a going and a growing organization which is working effectively for peace and for establishing conditions of well-being and security among nations. Its first 10 years have proved beyond doubt that there is universal recognition of the need for an international organization such as the United Nations. As far as I know, no member of the United Nations has threatened to resign and no member has been threatened with expulsion, while the waiting list of those desiring to join the organization is long. The elasticity of the United Nations Charter has enabled the organization to cope successfully with unexpected difficulties and it has become increasingly a source of strength to which mankind looks for harmonizing the action of nations.

This forthcoming session of the General Assembly of the United Nations may well be the crucial one in the history of the organization. It will call for steadfastness of purpose, adherence to principle and clear recognition of the best interests of the United States and of the United Nations. I look forward to the challenge it will present and realize full well the heavy responsibilities which will be ours.

Security and Peace Problems of 1953 Are Still With Us in 1955

EXTENSION OF REMARKS
OF

HON. LEROY JOHNSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. JOHNSON of California. Mr. Speaker, I insert in the RECORD a reply to a high-school student in my congressional district, who was concerned as to what was the greatest problem facing a Congressman today.

Mr. Speaker, I do believe that my reply may be enlightening to other students, and those who review the CONGRESSIONAL RECORD in the public libraries and elsewhere. It has been written in language that is understandable to the average layman, one who desires to know and interpret this document in his everyday life in this great country of ours.

FEBRUARY 25, 1953.

Mr. SAM DICKSON,
Takoma Park, Md.

DEAR SAM: This will acknowledge your letter requesting my views on what I consider the greatest problems facing a Congressman today.

World peace is the most important subject today and while many of the problems involved are confined to Congress and the representatives of our Government at the present time, I feel that every young man and woman who will soon be taking an active part as citizens will want to do everything possible to contribute toward this end.

As I discuss this with you, I will mention some of my own experiences and observations to illustrate how I believe the United States of America, at this crucial period, can play a role that might solve the most staggering question of all time.

As I see it, the problem is how can this generation develop world stability that will take away forever the threat of war as a mechanism for the solution of international disputes. In this scientific and atomic age, the sphere of our world is rapidly becoming more and more confined. We must explore every possible means of settling our affairs in a peaceable manner.

My connection personally with the problem arose 35 years ago. After struggling hard to get through college, to get through law school, to get my law school debts paid, on January 2, 1917, I started practicing law in San Francisco, Calif. Within a few months the United States declared war on Imperial Germany. It was a terrible disappointment and shock to me that after all my struggles to get started in the practice of my chosen profession, a war should break out. Of course, as you and your classmates realize too well, the threat of war has never ceased since then, and the planning of your future must still include a period of service in the Armed Forces.

Following the outbreak of World War I, I decided to enlist and I was sent to the first officers' training camp at the Presidio in San Francisco. I took infantry training there and one of the first exercises we had was to learn to plunge a bayonet into a dummy hanging from a rod. This, of course, was to train us in the technique of killing an enemy soldier with a bayonet. The exercise, although it was in the interest of my own self-protection, repulsed me. I could stand the marching, the shooting, the sleeping out in the open, but to stab a human being was something that I rebelled against. I learned from some pals of mine that across the bay the Army was conducting a ground school for aviators. I contacted the commandant and asked him if he thought I could pass the examination and get into the course. He said he thought I could. I enlisted in the Signal Corps and in a few weeks I was attending ground school and in several months was sent to San Diego, Calif., where I learned to fly. When my training was completed, 67 of us were ordered overseas. We sailed out of New York Harbor on March 1, 1918, and by the 15th of March we were learning to fly Neuports, Spads, and other French planes. In August, I was sent to the front and early in September we were ordered to the St. Mihiel front. There I had my first flight on a military front and flew a few missions. We were then transferred to the Argonne front where I made the first flight for our group on September 26, the morning of the commencement of the final drive that won World War I. I flew all during the time of that drive, making the last flight for our group on November 10, 1918. I was more fortunate than some of my buddies. I lost one man in my plane who was shot in the arm and who died from the loss of blood.

During those flights, I viewed the devastation and the ruin that that war had caused to that portion of France. I saw the numerous cemeteries throughout the area and, when the armistice came, I saw the refugees coming through into our area looking for their loved ones and wondering if they were alive or dead. The terrible tragedy of war—the dead, the wounded, the ruined towns, and the sorrowing people—overwhelmed me.

Of all the nations involved in that war, France suffered the most. The cream of the crop of that generation went into early graves and today, France is still suffering from a lack of leadership by reason of the loss of young men during that period from 1914 to 1918.

President Wilson had said it was "a war to end wars" and in my youthful confidence I felt sure that the losses in the countries involved had convinced the people of the world that war was a futile, barbaric method of settling international disputes.

I was very anxious that the United States enter the League of Nations. To me this was a vehicle that would tie the great countries of the world together and formulate the public sentiment, as well as the necessary mechanisms to settle international disputes by peaceful means. As you know, the League of Nations was rejected by the Nation whose President had been the one who initiated its creation. This was a great disappointment, but I did not believe the consequences would be too great. I felt sure that the great nations of the world would never start another war. From the ruination I had witnessed, I was certain that no nation would be foolish enough to involve itself in another war which undoubtedly would be more destructive than the one we had just won.

Of course, you know the history—when we were just recovering from the many post-war problems, another war developed which almost wrecked our Nation from an economic standpoint. The depression struck us and Germany became influenced by a dictator who cried, "Follow me and I will bring justice to Germany. I will take the Reich into better days which Germany and the Germans deserve." Soon another war was upon us. Vastly more devastating. Tremendously more costly and much more prolonged than the first one. Inevitably we were drawn into it and it practically encompassed the entire earth.

During that war it was stated that we had learned our lesson and that means would be provided to safeguard the world against another catastrophe. The Atlantic Charter was promulgated. Many conferences were held at which various broad principles were adopted in the interest of unity among nations for the preservation of peace in the future. High, broad, noble principles were set forth by the leaders of the various nations to indicate that no longer would the world be afflicted with the curse of legalized murder, known as war.

Local autonomy in the selection of officials in each community had been practically guaranteed by ourselves and our allies. However, soon Poland held an election to select its officials and this was supervised by Russia. The government thus created by that election, was and now is, a Communist government, completely dominated by the Soviets. Estonia, Lithuania, Latvia, Czechoslovakia, Bulgaria, Albania, Romania, Yugoslavia, all met with the same fate and are now, except Yugoslavia, dominated by Russia and each of those countries has Communist regimes. We failed to carry out the basic principle of local autonomy and freedom and it is now blacked out in those countries.

A conference at Cairo was held between Churchill, Roosevelt, and Chiang Kai-shek. China was assured that the rape of China by Japan would be avenged. China would get back Manchuria. She would get back Formosa. China was so important that in the organization of the United Nations in 1945, she was one of the Big Five that composed the majority of the Security Council. This was to be the group which would maintain the peace of the world. China today does not even have its own government on the mainland. Communists have taken over in China and the former President of China, Chiang Kai-shek, is now located on Formosa, hoping that some day he may recapture the government he once controlled.

In setting up the United Nations, high hope was held out to the people of the world, that here at last was created a nucleus for international protection of small nations against larger nations going to war. It is unfortunate to observe that the United Nations has not made much progress in this direction. To over 90 percent of the steps proposed that might lead to control of atomic weapons, the limitation of armaments, the reduction of military forces, Russia has exercised its veto. The United Nations Forum is a world soundingboard and no other nation has taken so much advantage of it, or gets as large results from it, as the Soviets. Men are getting discouraged as they look into the future.

It is recognized that some form of political organization, which would have the authority to see that its members abide by the rules laid down by the organization, must be formed. This is not new to the older Members of Congress. In 1915, under the leadership of William Howard Taft, and one of America's outstanding men and Presidents was organized a group known as the League to Enforce Peace. That group recognized that there must be some power that could enforce the peace. Just as behind our domestic law, we have the sheriff, the National

Guard, and those who can enforce the rules laid down by a court in a decision. It is seldom ever used in any part of our Nation. Why? Because our people have become so accustomed to respecting the law that when a decision is made, in the overwhelming majority of cases—probably 99.99 percent of the cases, the litigants abide by the decision. We are law conscious and therefore, we are respectful of the law.

In looking for a way to handle this problem, Congressmen and Senators took a look at history to see if there was any precedent for a situation such as we are in, where a change in legal technique might bring the desired results.

We found the precedent right near here—in Philadelphia. You remember that between November 15, 1777, and July 8, 1778, the Continental Congress drafted and adopted the Articles of Confederation. These articles gave the Thirteen Colonies the name "The United States of America," and the Articles, generally known as the First Constitution, remained in force until March 4, 1789, when the Constitution of the United States was proclaimed in effect. When I say "we" I mean, of course, the Colonies that fought and won the Revolution. The Articles of Confederation were loosely drawn. They recognized, in too large an extent, States' rights. The result was that after a trial, it was found that instead of being unifying, the government set up by the Articles of Confederation, was divisive. Shay's Rebellion occurred. Some States threatened to set up tariff barriers; interstate commerce was impeded. In other ways, instead of binding the States closer together, the States seemed to get themselves into more and more quarrels and to create suspicion among each other. Our young nation had won the war and the independence, but it was losing the peace for which our men had fought.

Then action was taken that I believe does not have a precedent in the entire world. The government in power actually voted to call a convention, the result of which could be and did happen to be, to oust that government. The Congress, under the Articles of Confederation, called a convention to determine what, if any, changes could be made in the Articles of Confederation. The foremost man of his day, the greatest hero in America, George Washington, was asked to, and did, preside over the Convention. This group sat, I believe, from April to September 17 of 1787. It wrote the Constitution of the United States, one of the great documents of the world. In the preamble it said that one of its basic purposes was "to form a more perfect union." When the Convention concluded its deliberations, George Washington was a little doubtful as to the outcome of its efforts. He was not certain in his own mind whether the new government that the Constitution created would be lasting. But he expressed the hope that it would. The two great dominant characters in that Convention were George Washington and Benjamin Franklin. The Constitution proved to be adequate, although it took a mighty devastating Civil War to finally determine that the United States was a Nation that could not be dissolved and one that had the possibility of lasting for all time.

As we look around us today, we are wondering if some type of world organization of the federal type, could not be organized for the limited purpose of getting the nations to agree to some type of unified effort that could prevent war. Owen Roberts, former member of the United States Supreme Court, one of the intellectual and legal giants of today, has taken the leadership in this work. One hundred and twenty-six Senators and Congressmen, including myself and then Senator, now Vice President, NIXON of California, sponsored a resolution requesting the President to call a convention to explore. I wish to emphasize the word "explore," the possibility and perhaps the feasibility of having a meeting of the free nations of the world with a view of organizing some kind of a federal group, primarily for the purpose of maintaining the peace and resisting aggression. It would make rules and regulations and provide means which would require nations to submit their disputes to some type of court or to arbitration. It would probably explore the possibility of how to implement the decisions of this type of court. They would consider means, which should be mandatory, that would require nations, before they went to war, to submit their dispute to the court, or other tribunal or the federal group. It would also consider the matter of pooling the resources and the manpower of the members to compel a belligerent to submit to a ruling in deciding a matter which might otherwise result in war. The concept is not new, but the idea of using it to settle today's problems is new and has the effect of frightening a great many sincere people. They are afraid such an organization might assume local authority in domestic affairs. Our immediate purpose is only to explore the idea. The federal principle has been operated successfully in a large nation like the United States and in a small nation like Switzerland. In Switzerland, as you know, four languages are spoken, yet they maintain their solidarity while each canton or province has almost complete autonomy in handling its own municipal affairs. This convention would explore the idea of also making a very limited type of world government, that would be based upon the basic principle of the United States Constitution; namely, our national central Government is a government of limited powers and all powers not expressly enumerated or necessarily implied in the Constitution are reserved to the respective States and to the people.

Through international organizations, such as the Boy Scouts, International Rotary, and the like, groups of men of all peoples pledge that men are brothers and that understanding one another is the greatest way to promote harmony and good will. That tolerance is probably the greatest virtue of an individual as well as of a nation.

I am convinced that you cannot stop wars by building larger and larger armaments. You cannot scare another nation or a group of nations into settling a dispute by merely threatening them with atomic warfare and other weapons of the kind. You cannot stop wars by talking about the economic cost, which is so staggering, that a modern war in this atomic age would practically bankrupt every participant nation. You cannot do it along the lines of merely using force to make people agree with you. You cannot scare a nation away from war simply because it is shown that war depletes the manpower of the nation and tends to disintegrate the economy.

Therefore, I have concluded that you can stop war in this world by organizing. I am confident that the organization of the free nations of the world into some type of federal union, with limited powers to handle security questions and to provide means of hearing and deciding disputes between nations, would bring about the peace that we have been looking for for generations. I emphasized limited powers, because it should be set up so as not to interfere with the domestic government of the individual nations, but at the same time it must be authorized to enforce international security.

The freemen of today have a challenge to perpetuate the freedom which they cherish so much. The free countries of the world have the challenge to unite to develop ways in the international field that will safeguard the freedom of the individual countries as these countries safeguard the freedom of their citizens.

War is out of date in a free world in the industrial and the atomic age. We must be courageous and ingenious enough to discard old orthodox thinking and prejudices and come up with some new approach if we are to meet the challenge that faces us.

Our forefathers did and I think we should be able to enlarge the principle to fit our modern world. The law of the jungle is too old for the age of science and Christianity. This matter is like all complicated disputed problems. But it can be settled by the commonsense, the tolerance, and the attitude of those involved. I simply cannot believe that the organization genius of the United States and other free countries cannot work out a plan that will promote the safety of each country against aggression and guarantee its sovereignty and independence, and automatically outlaw war forever.

Of course, the sovereignty which we talk about is not in the government, the sovereignty is in you, me and all the people who comprise the United States of America. We have given a part of our sovereignty to the National Government and set it down in writing in our Constitution and the 23 amendments thereto. The sovereignty of California resides in the people of California, who have given to their State government a certain amount of that sovereignty. In California we have local autonomy of cities, if they wish to have charters of their own, they may take the steps provided by the State of California and elect a board of freeholders to draft the charter. That charter becomes supreme law in the municipality and the State cannot interfere. We recognize that there are several layers of government. The cities have local autonomy, the counties have local autonomy. The State has a wider range. Then there is the Federal Government that controls the whole country to the limited degree provided by the Constitution. Is there any reason why this cannot be expanded to an international government to protect the interests of the free nations of the world?

I am sure that the young people, now graduating from high school, all over the world, would have a much happier outlook today if we could have found the solution to this problem by now. But we are learning by experience and perhaps the younger generation will be able to contribute a great deal to the final realization of this essential objective.

Because of the destructive effects of war, most of the nations of the world must look to us, not only for money, but for help, suggestions and as an example to follow. My travels into every continent during my service on the House Armed Services Committee have indicated to me, that while many nations want to take our money, want to get help that they may not be entitled to, they all basically respect the United States of America. They all know that America has no designs to take advantage or to take property from any other nation. We are able to handle ourselves and we have no so-called imperialistic designs to either take away or dominate any other nation of the world.

Therefore, I believe we are in a position to lead the way for such a discussion. Nothing can be harmful in it and it may be productive of good that will last on down through the generations.

I am enclosing copy of an article written by Dorothy Thompson which appeared in the Washington Star on February 3, 1953, and which I asked to be reprinted in the CONGRESSIONAL RECORD. If you and the members of your class have not had an opportunity to read this thought provoking article, I hope that you will do so.

With best wishes to you and the members of your graduating class for a happy and prosperous future, I remain

Sincerely yours,

LEROY JOHNSON,
Member of Congress.

Congressman Dollinger's Report to His Constituents

EXTENSION OF REMARKS
OF

HON. ISIDORE DOLLINGER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. DOLLINGER. Mr. Speaker, under the present Republican administration we have suffered 2½ years of broken promises. It is guilty of failure to correct immigration and labor laws, reneging on the tax relief assured wage earners and those in the low and middle income brackets, giveaways involving natural resources of our Nation, such as tidelands, natural gas, and Dixon-Yates.

The people must have learned by this time to distinguish between sincere promises and campaign oratory; they know now that the assurances given them by the President during the 1952 and 1954 campaigns were merely oratory.

Democratic Members of Congress have urged revision of the Taft-Hartley law and are anxious to reinstate the good labor-management relations which existed before enactment of the law. However, White House support has been completely lacking despite the fact that Candidate Eisenhower definitely assured members of the A. F. of L. and CIO at their national conventions that union-busting provisions of the Taft-Hartley law must be repealed and amendments adopted so that the law would be fair to both management and labor. When former Secretary of Labor Martin Durkin found that his efforts were futile, that big business brain trusters were guiding the policies of the Republican administration, and that promises to labor were being cast aside, he resigned. Since then, legislative proposals, appointments on the National Labor Relations Board, and every step taken by the administration affecting labor has been antilabor.

The best illustration that big business is truly in the saddle was the administration's successful opposition which prevented a $20 tax reduction to the small-bracket taxpayers. This fight was waged by the administration in spite of the fact that 90 percent of the tax bill which they enacted was a windfall to the high-bracket taxpayers who have been heavy contributors and supporters of the Republican Party. The public should know that Secretary of the Treasury Humphrey engineered the excess-profits tax repeal which was approximately a windfall of $2 billion. This administration, under the runaway-plant program to big business through tax concessions, has given handouts of about $19 billion. Most of the $30 billion spent for new plants are in open-shop areas for the purpose of escaping union wages and union labor conditions. Hundreds of thousands of working men and women have been thrown out of jobs—mostly in Northern States.

The Republicans will try to take credit for a number of beneficial bills passed during this session. Remember that heretofore the Republicans branded as "socialistic" such beneficial programs as social security and public housing; they vigorously opposed the legislation in the beginning and tried to sabotage it through the years. In supporting such legislation now, they are only following the old Democratis programs, and they give their support grudgingly.

The President is, however, entitled to special credit for overruling some of his party leaders and following the foreign policy program of his Democratic predecessors. The President has been subjected to the same criticism by some Republican leaders as they directed against President Truman during the time he was the Chief Executive, in the matter of foreign affairs.

We have had a continuation of the Republican policy of "handouts to the greedy, brushoffs to the needy." Big business is helped at every turn, the vast majority of people have not benefited under the Republican program, nor have their problems been considered or their needs taken care of as they were led to believe they would be.

In this report, I shall try to cover major bills and problems so that my constituents may know of my efforts in their behalf.

GIVEAWAYS

Giveaways under the Republican administration again hold the spotlight. During the closing days of the session, the White House and the Republican leaders in Congress as well as some Democrats supported the so-called Natural Gas Act, exempting producers of natural gas from regulation by the Federal Power Commission. Consumers of natural gas face increases in costs which will put huge profits into the coffers of the very small number of producers who control the industry.

I fought in committee and on the floor of the House during debate, to defeat the measure. I stated:

> The issues of the bill are beclouded and confused to such an extent that intelligent action is precluded. The provisions of the measure would have such stupendous and immeasurable ill effect upon millions of consumers of natural gas that hasty and impulsive action on our part would be unforgivable and a betrayal of the American people.
>
> We have been told that the oil companies who are pushing the measure are spending $1,500,000 on their campaign. This is an indication of what they stand to gain, for they know they will get this investment back plus the estimated profits of the increase to consumers which is bound to come—a bonanza of anywhere from $200 million to $800 million a year. Those advocating passage of the bill refer to a 2 cents a day increased cost to consumers, but multiply this by the millions of residential customers and you get a huge profit running into the millions of dollars.

This bill is more or less of a duplicate blueprint of the famous tideland oil legislation which had the questionable distinction of being the first major legislation passed by the Republican Congress in the spring of 1953 and signed by President Eisenhower. It is another example of the administration helping big business at the expense of the consumer.

You are all familiar with the Dixon-Yates special-privilege grab. Due to Democratic watchdog tactics and vigilance, the Dixon-Yates contract has now been killed. The White House and the Republicans are trying to take credit for ending the controversial contract—they know what their scheming and manipulations are powerful weapons for the Democrats to use against them in the 1956 campaign. It is significant that the White House announcement came 3 days after the start of Senator KEFAUVER'S investigation of the financial inception of the contract. The Republican retreat is a victory for the Democrats who bitterly opposed the contract.

TAXES

The Republicans' promise to lighten the tax load of the American people remains unfulfilled. The heavy tax load is being shifted more and more to the shoulders of the low-wage earner, no relief has been given him, and he and his family continue to struggle for a meager existence.

Under the Republican policy of help the rich—forget the less fortunate the Republicans did help corporations and stockholders and gave them a nice present of liberalized tax deductions. Nothing was done for those in the low-and middle-income brackets.

Early in 1955 the Democrats proposed a $20 tax cut for each taxpayer and each dependent. The Republicans brought about the defeat of the tax reduction, basing their action on the argument that the budget had not been balanced. They inferred that it might be possible to afford such tax reduction next year. It is safe to predict that they will vote for such tax reduction legislation next year, whether or not the budget is balanced, because 1956 is an election year and they will expect votes in return for their much-delayed generosity. It would have been far more equitable to have cut the tax relief they gave to corporations and to have allowed the little fellow the benefit of a tax cut. I shall continue to press for individual income-tax reductions which the vast majority of our people must have if they are to maintain decent living standards.

I introduced the following bills in an effort to ease the tax burden: A bill to repeal certain miscellaneous excise taxes; a bill to grant additional income-tax exemption to taxpayer supporting dependent who is permanently handicapped; to provide additional income-tax exemption to certain physically handicapped individuals; to grant exemption from income tax in amounts up to $2,500 in the case of retirement annuities and pensions; to increase deductions for personal exemptions.

I am hopeful that we shall be successful in our efforts to pass helpful and remedial tax legislation during the next session of Congress.

IMMIGRATION

The un-American, inhumane McCarran-Walter Immigration Act still remains intact upon our statute books—a blot upon our Nation. It contains more inequities than any bill ever passed by Congress.

The Presidential Commission of Truman, in January of 1953, reported that the McCarran Act discriminates against human beings on account of their national origin, color, and religion; is based on hatred and distrust of all aliens; contains unnecessary and unreasonable restrictions and penalties and creates second-class citizenship; is badly drafted, confusing, and, in some respects, unworkable. The law has been in effect long enough for us to realize its disastrous results, the grave disappointments to aliens who looked to us for haven and refuge and to their relatives here, the lack of protection to those threatened with deportation, and the threat to naturalized citizens regarding revocation of their United States citizenship.

We recall the promise of President Eisenhower that corrective legislation would be passed. That promise was ignored, despite the attempts of many, including myself, to have the law changed.

I voted against the law and voted to sustain President Truman's veto. Thereafter, I introduced bills calling for repeal of the McCarran Act and also introduced a measure to completely revise it. I shall not relax my efforts. I shall continue my endeavors so that we may have a fair and humane immigration policy and so rights of aliens, as well as citizens, will be fully protected.

When President Eisenhower signed the Refugee Relief Act of 1953—2 years ago—he pointed out that its purpose was to welcome to our shores and give asylum to over 200,000 victims of Nazi and Communist oppression. These political refugees and escapees from behind the Iron Curtain were to be permitted to come to the American haven during a 3-year period ending in 1956. President Eisenhower said pridefully in August 1953:

> The law demonstrates again America's concern for the homeless, the persecuted, the less fortunate of other lands. This is a great humanitarian act.

Nothing could have been further from the truth. We have proof now that it was an immoral deception and a fraud. It has been called a phony refugee law which stands on our books as a national disgrace. Of the 200,000 aliens it purported to help, only 1,000 had been allowed to come here from the time the law was passed until early in 1955.

MINIMUM WAGE

As early as 1949 I introduced a bill to establish a $1 minimum hourly wage; in 1953 I introduced a bill providing for $1.25 and reintroduced it in 1955.

When the minimum-wage bill was being considered by the Committee on Education and Labor, I urged the committee to vote out a bill providing for at least $1.25. I said:

> The President of the United States has recommended a 90-cent minimum wage. This is grossly inadequate. Decent living standards cannot be maintained on less than $1.25 per hour.
>
> The low-wage earner has been staggering under an overwhelming burden of high taxes and ever-rising living costs and no relief by way of increased earnings has been given him. Low-income families have been suffering privations; they cannot afford adequate medical care or the necessities that we have come to take for granted as part of the American way of life. During the past 2 years, under the Republican administration, the rich have become richer while the poor man's lot has become more and more intolerable—low income families have had to battle for a meager existence.
>
> We must come to the rescue of the laboring people of the country. The wage earner should be adequately paid for his labors and efforts; this is only his just share of the profits reaped as a result of his labors. Justice demands that we set a minimum wage of $1.25 per hour. Anything less would be wholly inadequate, futile, and a betrayal of the workingmen who must rely upon us for protection.

The administration fought to limit the minimum wage to 90 cents. However, by strenuous effort on the part of the Democrats who wanted an increase to $1.25 per hour, we were able to get a compromise figure of $1 per hour. While this is inadequate, it is more than the President wanted to allow. The minimum-wage battle was another example of the Democrats recognizing the plight of the little fellow and wanting to help while the Republicans would give him as little aid as possible.

SOCIAL SECURITY

The Democratic-sponsored bill liberalizing social-security benefits and enlarging coverage passed the House and awaits Senate action.

I introduced a bill providing that monthly benefits should be payable at age 60 in the case of men and at age 55 in the case of women.

The measure which passed, provided that women workers could receive benefits at age 62, instead of 65. The bill also provides additional disability benefits for workers, continues children's disability benefits in cases where children become totally and permanently disabled before age 18, expands coverage to include certain self-employed professional groups and others previously excluded, and will benefit millions of workers and their dependents.

I realize that there is still room for improvement in social-security legislation, but was happy to have the opportunity to vote for these benefits.

Let me repeat, the social-security program was started by the Democrats, furthered by them, in the face of Republican opposition. The Democrats have again acted to increase benefits in order that our older needy and disabled workers and their families may have the assistance and security they should have.

HOUSING

The Federal public-housing program was started under Democratic leadership. A critical housing shortage has existed for many years; millions of Americans are without homes or suitable housing. That our people do not have decent homes or shelter is a national disgrace.

The Republicans scuttled the program at the first opportunity, and building of new housing units as provided originally by the law came to a standstill. The Democrats, during the session just ended, did their utmost to force action on the proposed amendments to the Housing Act so that the original building program could be resumed.

The administration wanted 35,000 new units per year for only 2 years while the Democrats wanted far more in order that the needs of the people could be met. As usual, the bill met with stiff opposition by the Republicans, the measure was bottled up in the House Rules Committee for weeks due to the failure of a single Republican to vote it out. Finally, a compromise bill providing for 45,000 units for 1 year passed, over strong Republican objection.

This is far short of the goal originally set by the 1949 Housing Act passed under Democratic leadership, which provided for 810,000 units, 135,000 per year. So far, only 245,000 have been started and now we have provision for merely 45,000 more, which is totally inadequate and a great disappointment to all of us who wished to see the original housing program carried out. Since coming to Congress, I have fought for adequate Federal public housing and my efforts will continue.

I also introduced a bill to establish a program for the housing of elderly persons of low income. I urged that the Federal Government take immediate steps to assist in alleviating the present situation by providing housing which is specifically designed for such elderly persons. There is a great lack of sufficient housing for elderly persons in the low-income bracket, those who must exist on social-security payments, small retirement annuities or other income. The health, safety, welfare, and comfort of the people are menaced, and they should be provided with housing at rents they can afford.

POSTAL AND FEDERAL PAY INCREASES

On January 5, 1955 I introduced a bill providing for an increase in pay of $1,000 per annum for postal workers.

Last year, when the postal and Federal employees pay increase bill was vetoed by the President, a grave disappointment was suffered by employees and Members of Congress who were anxious to help. The pay raise was long overdue and employees were entitled to it.

When the pay raise bills were being considered by the Committee on Post Office and Civil Service this year, I urged that they grant a pay raise of $1,000 to postal and Federal workers. I pointed out that these employees were many years behind in catching up with the cost of living; that they could not meet their obligations or give their families adequate care or support on their pay; that they suffered real hardships and anxiety. I stated that there was no reason why the Federal Government should not provide its postal and Federal employees with a justified wage increase so that they could enjoy a decent standard of living. When the bill came before the House, I again made the plea that an increase of $1,000 be granted and stated that this sum would bring their pay only to the level of pay they would receive from private industry for similar effort on their part.

The bills as passed did not provide an adequate pay raise for postal and Federal employees, but they were the best we could get, and because of the stand taken by the administration, it was necessary to accept the compromise.

I also introduced a bill providing for merit promotion of employees in the postal service, and will continue to work for its passage.

I repeat my promise to keep the needs and problems of postal and Federal employees in mind and to continue to do all in my power to help them.

CIVIL RIGHTS

I reintroduced all my bills to prohibit discrimination and have continued to fight for civil rights at every opportunity. However, the Eisenhower administration again ignored its responsibilities and 7 of the 8 Government departments or agencies invited to testify on civil-rights bills pending in the House refused to appear. This apathetic and unbending attitude is deplorable.

The charge was made that the administration was afraid to come before the Judiciary Committee and approve proposals which it dared not oppose. By their unconscionable attitude, the Republicans have succeeded in obstructing progress on civil-rights bills which must be passed if we are to have true equality and freedom in our country.

Until the last vestige of discrimination is wiped out, countless persons cannot enjoy the democracy we profess to have in the United States.

FRAUDULENT RADIO AND TV ADVERTISING

I submitted to Congress a resolution to authorize the Committee on Interstate and Foreign Commerce to investigate and study the broadcasting of false, fraudulent, misleading, and deceptive advertisements by radio or television.

Such investigation is vitally necessary. Millions of dollars are stolen annually from the pockets of those who fall prey to fraudulent advertising. Although the big networks claim they do not permit fraudulent advertising, the fact remains that dishonest persons and companies do manage to get their ads broadcast or televised. So far, no real progress has been made in stopping the rackets, prosecuting the offenders, or fixing blame; there is confusion as to who is supposed to act, to whom those defrauded can look for redress, and where the responsibility lies to prevent such fraudulent practices from continuing.

Inasmuch as the individual stations, the networks, local communities, and authorities have not rid themselves of the frauds and dishonest practices of some advertisers, it is the duty of Congress to give the problem its attention so that the people can be protected against continuance of such frauds.

Under my resolution the committee would—

First, determine the extent to which the public is exposed to false, fraudulent, misleading, and deceptive advertising by radio or television;

Second, determine what steps licensees of radio and television stations have taken in order to protect the public from such advertising; and

Third, investigate and study the practice of the Federal Communications Commission with respect to the renewal of radio and television licenses of persons who make no effort to protect the public from such advertising.

Upon receiving the committee report, Congress should pass necessary remedial legislation to prevent further injustices to the public. I shall continue to work for passage of this measure which would be beneficial to all.

GENERAL TOPICS

The Republicans wiped out the protection afforded consumers by price controls, and living costs have continued to rise. I again introduced my bills providing for a Consumers' Advisory Bureau and a Joint Committee on Consumers which would enable consumers to get full value for their money and would furnish information helpful to them when making purchases.

Another grave problem is that of our older, able citizens who are denied the opportunity to work, solely on the basis of age. An increasing number of people who are too young to retire are being told that they are too old to get jobs in business and industry. Employers are setting rigid age limits and a man of 45 and a woman past the age of 35 are being refused jobs because they are over the age limit arbitrarily set by employers. I reintroduced my resolution providing for a commission to study the entire problem, to the end that obstacles to the employment of available and qualified older workers may be wiped out, and so that their right to work and their right to the dignity and status of self-support may be recognized.

Air pollution continues to be a menace to the health and welfare of the people and represents a problem of increasing concern to the residents of many areas and communities throughout the United States. I resubmitted my resolution to create a committee to conduct a full and complete investigation of air pollution in the United States. Congress finally passed legislation authorizing a 5-year program of $3 million per year for research into the causes of air pollution, and I am pleased that this serious problem will now be tackled by the Federal Government.

Veterans received additional assistance under laws passed by Congress since January. GI education benefits were extended to those in service as of January 31, 1955; the VA direct-loan program was extended for 2 years; disabled veterans' were given assistance with auto purchases.

There are many other major questions and problems as well as additional efforts on my part, which I should like to discuss, but space does not permit.

BRONX CONGRESSIONAL OFFICE

I continue to maintain a congressional office at 938 Simpson Street, Bronx, which is open daily. My constituents are invited to call there and discuss their problems, which will receive my best attention. I also urge my constituents to write me so that I may have the benefit of their views and suggestions regarding legislation.

I appreciate the confidence placed in me by the people of the 23d District of New York who have chosen me to represent them in Congress, and shall continue to render conscientious service and try to fulfill my duties to their satisfaction.

Un-American Activities Hearing, Los Angeles, Calif.

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. DOYLE. Mr. Speaker, several weeks ago I had the responsibility of presiding as subcommittee chairman of the House Un-American Activities Committee hearings in Los Angeles County, Calif. The other committee members sitting with me were Hon. GORDON SCHERER, Ohio; Hon. DONALD JACKSON, California; and Hon. MORGAN MOULDER, Missouri. At the press table throughout these 5-day hearings was Mr. Rolph Fairchild, executive editor of the Daily Report, a newspaper published at Ontario, San Bernardino County, Calif.

I received the following letter from this newspaper editor in California, who, it will be noted, traveled a considerable distance daily from Ontario to Los Angeles to attend these hearings. He frankly told me at the time that he was coming to listen and to learn and to appraise what he saw and heard and learned throughout those hearings. Here is the letter:

THE DAILY REPORT,
Ontario, Calif., July 1, 1955.

Representative CLYDE DOYLE,
Twenty-third Congressional District Office, Post Office Building, Huntington Park, Calif.

DEAR MR. DOYLE: I have three objects to write to you.

1. May I congratulate you on your handling of your House subcommittee hearings in Los Angeles. While you expressed your awareness of the hostility to your committee in the hearing room, I believe you perhaps missed the silent but solid support of many others who were also present. The support was there. It was just that you did not hear much from these people, or have opportunity to listen to them outside the hearing room, as I did. They were a most effective damper upon the injured minority with whom you were dealing, with the result there were no speeches and few uncomplimentary remarks; there was no sympathy for that sort of stuff.

2. I wish to thank you personally for your courtesy in facilitating my coverage of the hearings, and particularly to mention the unfailing courtesy of Mr. Tavenner. I made some unusual demands upon him at a time when I knew he was under great pressure and tension. Although I felt these requests were justified in connection with covering the hearings, I do want both the committee and Mr. Tavenner to know I was well aware of this and appreciated his able assistance.

3. Enclosed is an editorial from the Daily Report on the opening session of the Los Angeles hearings which may possibly be of some interest to you.

Sincerely yours,

RALPH FAIRCHILD,
Executive Editor.

And here is the editorial referred to published in this paper which, by the way, is in the congressional district so long a time and so ably represented in this great legislative body by Hon. HARRY SHEPPARD, our distinguished colleague who informed me before I left Washing-

ton to go to the hearing that Mr. Fairchild, a newspaper reporter and editor, would be there from his congressional district:

UN-AMERICAN ACTIVITIES HEARING

The House Un-American Activities Subcommittee had 1 of each of the 3 major types of witnesses before it yesterday when it opened its hearings in the Federal Building in Los Angeles. Yet the most important fact revealed at yesterday's hearing was never mentioned by anyone, nor recorded in any of the news reports. That was the plain fact revealed by the whispered comments and suppressed groans in the audience that a good many hard-rock devotees of the Communist program in America quite definitely are still among us.

Second most significant fact, again untouched by testimony or committee comment, was the fact that 2 of the 3 witnesses called by the committee yesterday came from the staffs of two of southern California's institutions of higher learning. One came from the University of Southern California and the other from California Institute of Technology. Both of these were the fifth amendment witnesses, while the third was an FBI informant who had played her role so successfully she even had the committee fooled when it was here last year.

First to take the stand was what the average citizen considers the typical fifth amendment witness, a man named Paul Orr, supervisor of the biology department stockroom at Caltech. With a thin slit of a mouth and a face set like granite, he was accompanied by an attorney whose character acting was a sad loss to the motion picture industry. This man Orr fought off every effort of the committee to learn whether he was the same Paul Orr who wrote for both official Soviet Russian and United States Communist Party publications over a long period of years. He could not be dragged from under the fifth amendment to give the committee the slightest inkling of the opportunity he may have to affect the outcome or even sabotage either the classified or unclassified work for the United States Government that is being performed at Caltech.

The fifth amendment does not provide blanket cover for a witness who simply does not wish to answer questions put to him by elected representatives of the American people, two of them Representatives from California. It provides only that a witness need give no testimony which would tend to incriminate him in an illegal or criminal activity. This witness specifically said that it was to prevent incriminating himself that he took the fifth amendment. Then he refused even to describe his duties as biologic stockroom supervisor. That put him in the ridiculous position of taking the fifth amendment because Caltech was conducting some sort of illegal or criminal activity in the field of biology, and he would incriminate himself if we were to tell anything about his job there. He refused even to admit there was a signature on a Communist Party voter registration, let alone that it was his own.

While his monotonous reply, "I refuse to answer on the grounds I have already stated" may have seemed dull to the layman in the audience, every word this witness uttered etched deeper the clear fact that while the Communist Party record of the Paul Orr about whom the committee counsel was asking went back to 1932, the Paul Orr from Caltech was as determined to reveal nothing even of his activities today. The witness grew flushed—his only sign of emotion—when the committee counsel tried to establish that the Paul Orr of Communist Party affairs and the Paul Orr of Caltech were one and the same. But he did not deny it.

The second of the fifth-amendment witnesses was a completely different type, already all too familiar to investigators of subversive activities. His name was Andries Denium, a teacher of cinema arts at the University of Southern California. A tall, rather handsome man who spoke with a thick Dutch accent, he spread his hands in pleading gestures to the committee as he described his great love of his adopted country, his tremendous curiosity that led him into the Communist Party, and the disillusionment that brought him out again.

Yet with that curious, misguided loyalty that marks a definite stage in the return of the former Communist to the ranks of normal citizenship, Deinum refused flatly to tell anything about his activities in the Communist Party or of the people with whom he was associated in it. Deinum told the committee he knew exactly his legal position under the fifth amendment, that he knew it did not cover him with immunity on personal grounds, and that he had "faith in my position—I'm not dumb."

Then he turned around and told the committee that if even once he had heard or seen anything he considered subversive during his more than 4 years in the Communist Party, he would have "gone straight to the FBI." Perhaps it was weariness in the committee and its legal counsel that kept it from pointing out that either Deinum had absolutely no right to protection of the fifth amendment because he actually did not see or hear anything subversive during his years in the Communist Party in Los Angeles and could not incriminate himself by testifying, or else his plea that he would have gone to the FBI with any information regarding illegal or criminal activities by the party was utterly false.

Whether Deinum's almost desperate anxiety to convince the committee of his sincerity and the honesty of his declarations had its effect, no one could say. He did, however, arouse a rough sort of sympathy in one ex-Communist at the hearing yesterday. "The poor, dumb ———," the ex-Communist said softly as Deinum passed. "I went through the same thing myself—only it's something you've got to face. As far as the party is concerned, you're either for it, or against it. There's nothing in between, only he hasn't found that out yet. They'll teach him, though."

There is no middle ground. That lesson still has to sink into the minds of a great many Americans, particularly those who call themselves liberals. The ex-Communists know it. The Communists know it. The House Un-American Activities Committee knows it. The great question raised again here in Los Angeles yesterday, and still unanswered, is whether enough of the American people know it.

Champion of Plain Talk

EXTENSION OF REMARKS

OF

HON. EDWARD P. BOLAND

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. BOLAND. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by Mr. Davidson Taylor, Reader's Digest vice president in charge of public affairs, and an article from the August edition of the Reader's Digest about Theodore Granik, creator of American Forum of the Air and Youth Wants To Know:

STATEMENT BY DAVIDSON TAYLOR, VICE PRESIDENT IN CHARGE OF PUBLIC AFFAIRS, READER'S DIGEST

American Forum of the Air has become a national institution in the 27 years it has been on the air. Youth Wants To Know, launched in 1951, has already become established as one of broadcasting's most worthwhile undertakings.

Both programs are important elements in the National Broadcasting Co.'s public-affairs schedule. Both reflect our conviction that enlightenment is broadcasting's most meaningful task.

As creator of American Forum of the Air and Youth Wants To Know, Theodore Granik is a man to whom our industry owes a debt of gratitude. I am proud to bring to your attention the attached Reader's Digest article about Mr. Granik.

CHAMPION OF PLAIN TALK

(By Lois Mattox Miller)

Three years ago, Theodore Granik, founder and moderator of the popular radio-TV programs, American Forum of the Air and Youth Wants to Know, was stricken by a heart attack. He was then 45 and still had a lot of things he wanted to do in life.

After a spell in the hospital, he went to Florida. His law partners and broadcast associates were sure he was in the first stages of retirement. But he fooled them. The next thing they knew, he had teamed up with local businessmen and started a television staion in West Palm Beach. Then the memos and phone calls began to pour into Washington and New York, and Ted was on the way back.

Today he is going stronger than ever. In addition to his two weekly forums and his TV station in Florida he has started three new programs. He is a successful Washington attorney and the friend and confidant of Government leaders.

"When I was flat on my back," says Granik, "I found wisdom in the doctors' bromide that a coronary is the greatest lifesaver of middle-aged men. I've learned to conserve energy and make it produce more than ever before."

Theodore Granik is a sturdy man with thinning sandy hair, an engaging smile and a mission in life that won't let him sit still. He got into radio on the ground floor in 1925, and for the past 30 years he has been the champion of plain talk on the air.

While still in law school, he was hired as secretary to Lee Adam Gimbel of the famous New York department store. To lure customers to bargain sales, Gimbel's had just set up a new radio station, WGBS. Granik was given the chore of keeping the station on the air between commercials with poetry readings and newscasts. Broadcasting fascinated him. He sensed its enormous educational possibilities. "There were so many things people ought to know," he says, "and no one was telling them."

He set out to remedy that by arranging a program called "Law for the Layman." With himself as interrogator, he lured his professors from St. John's Law School to the microphone to inform the public about wills, leases, contracts, debts, alimony.

When WGBS was sold in 1928, Granik was invited to bring Law for the Layman to station WOR. Prohibition was then a controversial issue, and Congressman EMANUEL CELLER, of New York, was scheduled to speak against the 18th amendment. The Woman's Christian Temperance Union demanded equal time for its representative to defend the amendment.

"Let's put them both on my show at the same time," Ted suggested. "Then we can present both sides of the issue."

That broadcast made radio history. Facing her angry opponent at the microphone,

the temperance lady let loose the charge that, in Washington, underground passages connected Government buildings with nearby speakeasies. The press took it from there, and next morning the Nation was aware of a new type of broadcasting.

Granik convinced the broadcasters that there was a place for controversy on the air so long as the proceedings were kept under control by an impartrial moderator. The program became the American Forum of the Air; its shelf of transcripts represents a lively history of the past 27 years.

Arranging and moderating the weekly forum could have been a full-time job; Granik managed it in his spare moments—with the help of his wife, Hannah. Then, with a sheaf of glowing letters from members of the bar, he applied for the post of assistant district attorney of New York County and got the job.

In 1937, when he was appointed counsel of the United States Housing Authority, he took the forum with him to Washington, where it became a network feature. With the New Deal controversies raging and a war brewing in Europe, Granik was able to bring to the microphone an increasing number of Congressmen and Cabinet officers who were willing to speak out on everything from social security and farm policy to neutrality and armed intervention. The CONGRESSIONAL RECORD reprinted the proceedings, and the program became known as the Unofficial Congress of the United States.

Sometimes the debates taxed Granik's adroitness as moderator. Once the late Gen. Hugh S. Johnson, an irascible ex-New Dealer, tried to beat Senator Claude Pepper over the head with a table microphone. During the bitter wrangles between the isolationists and interventionists in 1940–41, the American Forum was also the scene of some dramatic conversions. Clarence Streit, founder of Union Now, converted an isolationist Senator in the course of the broadcast. On another forum, Mrs. Irving Berlin, an ardent interventionist, persuaded her opponent to resign publicly from the America First Committee.

Granik retired from the United States Housing Authority in 1941 to enter private practice. But his impulse to give friends in Government a hand with their problems left little time for his clients. He helped Maj. Gen. Lewis B. Hershey launch the selective service program. When Mario Giannini, president of the Bank of America, told him of the problems of small-business men of California were having getting war contracts, Granik went to California and organized scores of little firms into subcontractors' pools that became models for the entire Nation. This job so impressed the Senate Committee on Banking and Currency that he was retained to help draft the Smaller War Plants Corporation Act. Meanwhile, the American Forum served a vital purpose in wartime information and morale.

After the war Granik's friends tried to persuade him to forget public service and concentrate on his law practice. Nearly 20 years of broadcasting had been carried on at a personal financial loss; his out-of-pocket expenses represent a fabulous sum. Ted rejoined: "Can't a man have a hobby?"

For a few years he concentrated on the law and the American Forum. Then in 1951 he had another broadcasting idea. When lining up speakers for the forum, he was frequently accompanied by his teen-age son, Bill. Often he was amazed by the clarity and directness of Bill's questions and the respect with which they were answered.

The result was Youth Wants To Know, which made its debut on the NBC radio and TV networks in 1951. On the first broadcast Senator Robert A. Taft faced an audience of Washington teen-agers who asked searching questions about the coming presidential campaign, General MacArthur's recall from the Far East and the liberal-conservative struggle within the Republican Party. After the broadcast, switchboards were swamped with calls from enthusiastic listeners. Senator Taft remained in the studio with the kids for 2 hours. Later the Senator told Granik: "I've never been questioned so intelligently in my entire public life."

The youth program gives Granik more satisfaction than anything else in his career. The youngsters' questions go directly—sometimes ruthlessly—to the crux of the matter. They are quick to spot evasions. One lad stopped a famous public-relations expert: "Please, sir, quit filibustering."

This year Youth Wants To Know attracted a sponsor, the General Dynamics Corp., which is considering sending it on a nationwide tour, enabling youngsters in many cities to participate.

With State Department blessing, Granik is planning a TV program which will take the public to a party in a different Washington embassy each week. He has another program planned with the Overseas Press Club, in which leading journalists will talk things over with foreign statesmen.

Last year Granik logged 100,000 miles of air travel, and 15,000 more by sea. Yet he seems calm and never in a hurry. The doctors say that he never has been in better shape.

Herbert Hoover

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AVERY
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. AVERY. Mr. Speaker, because Herbert Hoover has spent so many years as a servant of the people, I wish to pay special tribute to him on his coming 81st birthday, August 10, 1955. I think it is unnecessary to list here his many contributions to the United States of America. His life, as Linclon's, is another example of the opportunity that exists for every youth in America.

As the son of a blacksmith, he advanced to the position of greatest responsibility and honor in the world—the President of the United States. He has been criticized and accused of many things but his convictions have remained firm and his desire to further serve his country has never faltered. I am most grateful that his life span has been long enough that he has lived to see the time when his great service has become recognized and appreciated by the rank and file of the American people.

To further emphasize the public service record of this great American, I would like to include in the RECORD an editorial appearing some weeks ago in the Topeka Daily Capital and reprinted later on July 5, 1955, in the Atchison Daily Globe:

HERBERT HOOVER

Herbert Hoover has retired after spending 41 of his nearly 81 years in almost constant public service. The Commission on Organization of the Executive Branch of the Government expired on the last day of June. The former President has twice served as chairman of commissions designed to improve efficiency. About 70 percent of the recommendations have been accepted, and 26 bills based on the Hoover Commission studies now are pending in Congress.

On his 80th birthday, August 10, 1954, Mr. Hoover spoke at his birthplace at West Branch, Iowa, where a great celebration was held in his honor. This bit of philosophy was typical of a great President and a great American:

"Eighty years is a long time for a man to live. As the shadows lengthen over my years, my confidence, my hopes, and dreams for my countrymen are undimmed. This confidence is that with advancing knowledge, toil will grow less exact; that fear, hatred, pain, and tears may subside; that the regenerating sun of creative ability and religious devotion will refresh each morning the strength and progress of my country."

As he now retires from public life, Herbert Hoover can look back on a post-Presidential career that has had much to do with restoring national checks and balances. Congress has twice adopted resolutions congratulating Hoover on his birthday. The first was in 1949 when he was 75, the second last year when he was 80.

Probably no man in American history has endured so much abuse and calumny from political opponents as ex-President Hoover. But no other man has had the respect and affection from so many of his fellow Americans. Even many Democrats who gloried in his 1932 defeat have since regretted their roles in a disgraceful episode.

Hoover, the only Quaker President, was the blacksmith's son who became a multimillionaire early in life. He was the first President elected from west of the Mississippi River and the first to have been trained in science. It is said that during his entire public career he has returned his salary checks to the Government.

In his birthday message in 1954, President Eisenhower said: "Few men in our country's history have been privileged to serve the Nation in so many important capacities as have you, and certainly none with greater brilliance and devotion."

Resolutions of the Polish Legion of American Veterans, U. S. A.

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. BOLAND. Mr. Speaker, I would like to direct the attention of the Members of the House to resolutions addressed to me from the Polish Legion of American Veterans, U. S. A., Department of Massachusetts:

MASSACHUSETTS STATE DEPARTMENT,
POLISH LEGION OF AMERICAN
VETERANS, U. S. A.,
August 1, 1955.

Hon. EDWARD P. BOLAND,
House of Representatives,
Washington, D. C.

SIR: Whereas it has come to the attention of the American people that American citizens are being held prisoners in Red China, Russia, and other Communist countries: Therefore, be it

Resolved, That the United States take effective and immediate action to obtain the release of American citizens imprisoned by the Communists; and be it further

Resolved, That a copy of this resolution be forwarded to the President of the United States, the Secretary of State, the United States Senators and Congressmen from Massachusetts.

Whereas there have been many instances on the part of some legislators and other

individuals to cut back on veterans' benefits; and

Whereas there actually have been a number of cutbacks effected; and

Whereas certain veterans affected by these cutbacks of benefits have been hurt and have suffered hardships: Therefore, be it

Resolved, That the Department of Massachusetts, Polish Legion of American Veterans go on record as opposing further cut backs in veterans' benefits; and be it further

Resolved, That a copy of this resolution be sent to the United States Senators and Congressmen from Massachusetts.

Whereas by the terms of treaties with certain foreign countries, United States military personnel are tried by the courts of those countries for offenses committed therein; and

Whereas there have been instances where certain American military personnel did not receive justice as justice is known in the United States at the hands of those foreign countries: Therefore, be it

Resolved, That the Massachusetts State Department, Polish Legion of American Veterans go on record as opposing the provisions of these treaties under which certain American military personnel are tried by foreign courts; and be it further

Resolved, That a copy of this resolution be sent to the United States Senators and Congressmen from Massachusetts.

Very truly yours,

FRANCIS R. DOBROWSKI.

Cargo Preference: Whipping Boy of the Uninformed

EXTENSION OF REMARKS
OF
HON. JOHN MARSHALL BUTLER
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Tuesday, August 2, 1955

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Cargo Preference: Whipping Boy of the Uninformed," which I prepared for the August 1955 issue of Marine News magazine.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CARGO PREFERENCE: WHIPPING BOY OF THE UNINFORMED

(By Senator JOHN MARSHALL BUTLER)

Attacking the cargo preference bill (Public Law 664 of the 83d Cong.) seems to be the fashion of the day on Capitol Hill. In repelling each assault upon the bill, the proponents of 50–50 have been able to graphically demonstrate its value to the taxpayers of this country, its importance to the American merchant marine, and its essentiality to our national defense.

Since 1948 nine statutes covering Government-generated cargoes have provided that at least 50 percent thereof be shipped on United States flag vessels. This principle, the roots of which go back approximately half a century, was extended in the cargo preference bill which I sponsored last year to cover all Government cargoes, including agricultural surpluses, financed directly or indirectly by United States public funds.

Such aid to American shipping is the most practical method by which we can maintain an adequate merchant marine. This is so because without cargoes—no matter the extent of monetary subsidies—American-flag vessels will not long sail the seven seas.

There is no doubt as to the identity of the group which is behind these wanton attacks on our cargo preference bill. Certain maritime nations, which have benefited enormously by our largess, not only want our aid—they insist that they have an inalienable economic right to carry our bounty from our shores to theirs, in their ships.

As a result of getting nowhere by frontal attacks on the cargo preference principle, this foreign shipping group has cleverly succeeded in getting certain well-intentioned but poorly informed American agriculturists to do their fighting for them. As a result of a complaint from the Department of Agriculture that the 50–50 provision was impeding the disposal of surplus agricultural commodities, the House Merchant Marine and Fisheries Committee early this year held extensive hearings, and in its report, dated February 28, 1955, said:

"There was unanimity from among all witnesses from both Government and industry on one point: there is no basis in fact whatever for the charge that shipments to foreign countries of surplus agricultural commodities are being delayed by reason of the Cargo Preference Act. The plain truth is that the act could not operate as to have any such effect unless it were being administered improperly."

Public Law 664 provides that the 50–50 principle shall be observed only to the extent that United States-flag vessels are available. It also provides that whenever Congress, the President, or the Secretary of Defense declares that an emergency exists justifying a temporary waiver of the law, preference for American-flag vessels shall not apply. Therefore, it is obvious that the act cannot operate to impede the disposal of surplus agricultural commodities.

There is absolutely no basis for the contention that the cargo-preference bill has impeded the surplus agricultural program. Approximately 70 percent of the 3-year authorization was committed in the first year, 17 nations having made agreements for the purchase of $468,800,000 worth of agricultural surpluses. Equally unfounded are the rumors that foreign nations will not purchase our agricultural surpluses if 50 percent must travel abroad on American-flag vessels.

Two other red herrings should be canned and filed away. In the first place, cargo preference does not increase the cost to the foreign country purchasing our agricultural surpluses at knockdown prices. This is self-evident in view of the fact that transportation costs are paid by the purchasing nation at world market rates regardless of the carrier's flag; the United States making up the slight difference where the cargo travels by nonconference American vessels. Second, since 80 percent of the agricultural surplus cargoes move on liners, they are transported on American ships at the same cost as if they traveled by foreign-flag vessels.

Now, here in the closing days of the session, the same foreign shipping groups have again persuaded various congressional leaders from agricultural communities to attack the cargo-preference bill. If the proposed amendments to the Agricultural Trade Development and Assistance Act of 1954 which were embodied in Senate bill 2253 as reported by the Senate Agricultural Committee had been enacted into law, they would have scuttled 50–50. In doing so, 5,000 to 10,000 American seamen and shoreworkers would have been deprived of their jobs. In addition, the Maritime Administration would have been deluged with requests for permission to transfer approximately 60 to 70 additional American-flag ships to foreign registry. Fortunately, we were able to persuade the Agricultural Committee to voluntarily eliminate from its bill the anti-50–50 provisions.

While we expect further unfounded attacks upon the cargo-preference bill, rest assured that those of us who fought so hard for its enactment will fight with equal vigor for its preservation.

Bernard M. Baruch's 85th Birthday

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1955

Mr. ROOSEVELT. Mr. Speaker, on August 19 one of America's great elder statesmen of all times, Mr. Bernard M. Baruch, will celebrate his 85th birthday. This is a milestone which few among us are destined to reach. In this respect Mr. Baruch is one of the few who was blessed by the Almighty, and he has utilized these bountiful years for a most constructive life and the welfare of humanity.

Bernard M. Baruch was born on August 19, 1870. As he reaches the age of fourscore and five, the people of this country know him as a stalwart American, a philosopher-statesman, a philanthropist, and a master mobilizer of our national strength. We know him also as an adviser and personal confidante of the last seven Presidents, both Democrat and Republican, and as the man who by his wisdom and patriotic deeds has influenced American life and American leaders for the past half century.

Of him, Dwight D. Eisenhower said in August 1952:

I was one of those who for the past quarter century has had the privilege of sitting at his [Baruch's] feet and listening to his words of wisdom, words that are still mighty. Beyond this, he is one of those who has shown to us that if a man forgets all else except service to country, then indeed the country will remember him with respect and affection.

The people of America, indeed, think of Bernard M. Baruch today with respect and affection and will always so regard him. He had endeared himself in the hearts of our people nearly four decades ago when he played such a major role in mobilizing our country's resources during World War I, and in subsequent loyal and unselfish deeds and services to our Nation in times of peace or in times of peril. He is one of the great architects of our Nation's strength who helped defend our freedom and preserve our national security.

Baruch was among the first to recognize and to warn against the danger of totalitarian aggression to the United States and the other democratic nations of the world. He has repeatedly made this warning, which contains a good deal of commonsense philosophy:

There is only one way to protect yourself from a possible aggressor. Be strong. Be so strong he cannot dare attack you without fear of self-destruction. In that way you achieve peace, and only in that way. There are certain people who only understand strength. They sneer at weakness, no matter how noble the aim of the seeker after peace.

"Peace through strength" was written about Mr. Baruch by Morris V. Rosenbloom. This is an apt and timely title.

On the occasion of Mr. Baruch's 85th birthday, I take this opportunity to extend to him my heartfelt greetings and sincere wishes. I consider it a great honor to pay public tribute to him as one who has made such a marked imprint on American life and statesmanship. His is the guiding hand of a great master, the tireless devotion of a great patriot, and the boundless enthusiasm of a great humanitarian.

May he continue to be with us for many more years to come. May he live to see the fulfillment of his noble ideals of a mankind truly at peace and enjoying the fruits of human freedom.

For a Department of Peace

EXTENSION OF REMARKS
OF
HON. WILLIAM M. McCULLOCH
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. McCULLOCH. Mr. Speaker, yesterday my colleague, Representative HAROLD C. OSTERTAG, of New York, introduced a bill calling for the establishment of a Department of Peace. This is a dynamic proposal, consonant with the spirit of our times and reflecting the aspirations of people throughout the world. I hope that this measure will be widely studied and discussed while Congress is in recess, and given early and careful consideration when we reconvene next year.

Under leave to extend my remarks, Mr. Speaker, I include in the RECORD an article about this proposal from the Rochester (N. Y.) Times-Union of Monday, August 1, 1955:

PEACE DEPARTMENT BILL BY OSTERTAG GOES TO CONGRESS

(By Paul Martin)

WASHINGTON.—A serious proposal was laid before Congress today to create a Department of Peace in the Federal Government.

Representative HAROLD C. OSTERTAG introduced a bill to establish the department as a Cabinet-rank agency in the Eisenhower administration in the light of developments at the recent Big Four Conference in Geneva.

OSTERTAG, a Republican, represents New York's 39th District, including a part of Rochester and Monroe County, plus Genesee, Orleans, and Wyoming Counties.

OSTERTAG said the new department and its activities should "provide a channel through which the plain people of our country can make known their yearnings for peace, and cooperate actively, and I believe effectively, in helping to realize them."

His bill stipulates that the new department should work through the United Nations and its specialized agencies "at all times and to the greatest extent consistent with the interests of the United States," but should "not be limited to such activities in achieving the purpose of this act."

Many proposals have been submitted in the past for a peace department. Some have suffered from poor sponsorship in Congress, or because the international situation at the time seemed against a successful peace effort.

OSTERTAG is a member of the highly respected House Appropriations Committee, and in particular of its subcommittees on atomic energy and the armed services.

His proposal for a new Government department to wage peace instead of war is in line with an idea which Frank Gannett, the publisher, has been championing for years.

As long ago as 1934, in a nationwide radio address before an international gathering of the Young Men's Christian Associations in New York City, Gannett said:

"Is it any wonder we have wars, when we consider the governmental setup of all nations? Every nation has its department of war, the business of which is to prepare for war and to make war. Has any nation a department of peace, whose business it is, not to make war, but to make peace?"

OSTERTAG's bill lists specific Government agencies and functions which would be assigned to the new department.

He wants to create with it a National Peace College, something like the existing National War College in Washington, but dedicated to the "grand strategy of waging peace."

The college would compile and consult a roster of nongovernmental organizations throughout the country, "with recognized competence in the field of international affairs," in the development of its program.

The bill was not introduced for immediate action with the thought of rushing it through in the closing days of this session.

Instead, OSTERTAG hopes that it may be considered throughout the Nation, and be before Congress next year for action in the light of whatever may develop from conferences to be held this fall between the Western Powers and the Soviet bloc nations.

Among existing Government agencies which he would incorporate in the proposed department are:

International Cooperation Administration—successor to the old Foreign Operations Agency—in handling the United States foreign-aid program. Its functions were transferred to the State Department on July 1, when FOA ceased to exist.

ICA has approximately 6,000 employees and an unexpended backlog of approximately $14 billion in funds for various foreign-aid programs. The funds include 2.7 billion in new money voted by Congress last week.

United States Information Agency: This agency, reporting directly to the White House, handles the United States information and education program overseas, including Voice of America broadcasts in 38 different languages.

It spends approximately $100 million a year, has more than 10,000 employees, and maintains 216 posts in 80 different countries. It uses radio, motion pictures, libraries, and distributes American newspapers and periodicals, in its program.

International Educational Exchange Program: This State Department unit supervised the exchange last year of more than 6,500 persons, both Americans and foreigners, with 76 countries of the free world, mostly under the Smith-Mundt and the Fulbright Acts. Persons exchanged include students, teachers, government leaders, and technicians and professional people, to broaden scientific, cultural, and educational contacts between America and the rest of the world.

In introducing the bill, OSTERTAG commented:

"We need to stop thinking of peace merely as the absence of war, and think of it in terms of the establishment of justice and freedom under law."

Status of Forces Treaty

EXTENSION OF REMARKS
OF
HON. HAROLD C. OSTERTAG
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. OSTERTAG. Mr. Speaker, there has been a good deal of concern over the so-called Status of Forces Treaty, under which American servicemen overseas may be subjected to the criminal jurisdiction of foreign courts. In my judgment, the treaty and the agreements which have been made collaterally with it, are a flagrant violation of the Bill of Rights. It is immaterial whether the men who run afoul of the treaty provisions have committed offenses in foreign countries. They are Americans, they are overseas in protection of American interests, and our country should not permit their constitutional rights to be abridged.

Under leave to extend my remarks, Mr. Speaker, I include in the RECORD a letter from a former serviceman who served abroad under the Status of Forces Treaty. It should dispel any illusion as to the effect of this international arrangement on the morale of American servicemen overseas.

[From the Rochester (N. Y.) Democrat and Chronicle of July 31, 1955]

MANY A GI IN FOREIGN JAIL THROUGH STATUS TREATY

Since I was directly concerned with the Status of Forces Treaty and since it is presently being debated, perhaps I may help some uncertain readers as to the nature of this treaty in practice and in particular, article 7 of the same.

From June 1954 to March 1955 I was stationed in Japan with the Army. During this period, I witnessed and was informed of several cases where American soldiers were victims of this viciously designed treaty.

In every weekly session of information and education class and on every payday, every soldier in every unit was reminded and warned of this treaty and the latest results of its wrath were passed on to us to serve as prominent examples.

Let me say here that when the shoe is on the other foot, so to speak, the actual practices of such a treaty are more frightening than we protected Americans here at home can imagine. This same treaty is as has been said many times, completely un-American, unconstitutional, and undeserving of our men overseas. It is no fun being in a foreign country in the first place for their protection. Being subject to their laws and type of justice, especially when the United States Uniform Code of Military Justice is so effective in dealing with crimes of any nature, is beyond my understanding.

For those who will say, "Defender or not, if a crime be committed toward the people of a foreign nation, the violator should pay by the design of the court of such foreign nation," I say "Fooey," I do not believe in kangaroo courts and that's precisely what they are, the majority of them at least. For example: a delinquent soldier in my overseas division frightened a Japanese cab driver into emptying his pockets without an inch of assault or physical violence. His yield was about 75 cents in yen. The Japanese authorities apprehended, tried, convicted,

and sentenced that soldier to serve 4 to 6 years in a Japanese jail. Many are the stories of the hardships and nauseating food in these jails. Relating them would seem to be gross exaggeration which I know they are not. Pick almost any case you will where the Japanese have exercised their terrible authority and the results in themselves would seem massively exaggerated.

I was lucky enough to conduct myself properly during my stay there and of course there were and will be many thousands of soldiers who will do the same. But situations exist over there that could easily send a conscientiously decent person to prison for many years unnecessarily and unjustly. Most Japanese girls love the money a GI gets each month and many times loves to get him into trouble when these finances dwindle or when he displeases her. They are not at all hesitant to call the always available Japanese police before the poor soldier can seek refuge with the military police lest she prefer outrageous charges. Granted many servicemen do deserve punishment for most of their acts that are criminal but why so shamefully? Regardless of the opinion of anyone, I believe in complete justice the American way for those who are overseas defending that very idea.

There are many more American soldiers in Japanese jails alone serving unfair sentences than in Red China. Let this be the answer to the administrative spokesman who claims that in most cases the nations involved waive jurisdiction.

ARTHUR R. INGUAGGIATO.

4554 CULVER ROAD.

Swiss Independence Day, August 1, 1955

EXTENSION OF REMARKS

OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, August 2, 1955

Mr. LEHMAN. Mr. President, I ask unanimous consent that a statement I have prepared in connection with Swiss Independence Day, August 1, be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

SWISS INDEPENDENCE DAY, AUGUST 1, 1955

(Statement by Senator HERBERT H. LEHMAN)

The Swiss in their own land, and Swiss-Americans in ours, will celebrate again this August 1 the anniversary of Switzerland's Independence Day. Six hundred and sixty-four years ago the people of 3 small northern Swiss cantons struck a blow for freedom against their alien oppressors much as did the people of the Original Thirteen United States almost 5 centuries later. Today the Swiss nation includes 22 cantons. America has 48 States, and the citizens of both share a common devotion to the democratic way of life which has proved so beneficial to their development.

In the knowledge that the peoples of both nations shared common ideals and desirous of expressing this fact in the form of a written document, the Swiss and United States Governments signed on November 25, 1850, a treaty of friendship.

Five months before the signing of this treaty, United States Secretary of State Clayton sent a letter of instruction to his special agent in Bern which I would like to read excerpts from now since they so clearly and brilliantly expound the basis for the strong bonds which tie our two nations:

"We owe it to the character of our own free Government," Secretary Clayton said then, "as well as to the commercial interests of our country to strengthen, by all the means at our disposal, the ties which bind us to the Swiss Confederation, which like our own happy land is the home of the free. * * *

"We regard as brothers and benefactors of the human family those enlightened and inflexible patriots in continental Europe, who have continued steadfast in their purpose to give their countrymen such permanent institutions as Washington and his contemporaries gave to America. * * *

"You will renew that proposition [of 1847] as it was approved by the Senate, combining with it such stipulations of a commercial character as may be deemed just and liberal, and best calculated to strengthen the bonds of friendship and alliance between the two sister Republics."

Five months later, the plenipotentiaries of both nations, meeting in Bern, signed the friendship treaty, the very keystone of the amicable and mutually profitable policy we have pursued toward each other ever since.

I would like to read to you from this treaty, because I believe that it is especially important now. It is so important, because only a year ago its message was temporarily forgotten, and the policy of our Government unfortunately veered somewhat from the announced intentions so warmly and sensibly expressed over a century ago. For it was last summer that this administration approved a tariff rise against Swiss watch imports, a serious misstep which must be corrected.

I think the eloquent language of the treaty will help to set matters in proper perspective and encourage us to return once more to the path charted for us back in 1850 by wise and farseeing Swiss and American statesmen.

I will now read excerpts from the friendship treaty:

"The United States of America and the Swiss Confederation, equally animated by the desire to preserve and to draw more closely the bonds of friendship which so happily exist between the two republics, as well as to augment, by all the means at their disposal, the commercial intercourse of their respective citizens, have mutually resolved to conclude a general convention of friendship, reciprocal establishments, commerce, and for the surrender of fugitive criminals. * * *

"The citizens of the United States and the citizens of Switzerland, as well as the members of their families, subject to the constitutional and legal provisions aforesaid, and yielding obedience to the laws, regulations and usages of the country wherein they reside, shall be at liberty to come, go, sojourn temporarily, domiciliate or establish themselves permanently, the former in the Cantons of the Swiss Confederation, the Swiss in the States of the American Union, to acquire, possess and alienate therein property * * * to manage their affairs, to exercise their profession, their industry and their commerce, to have establishments, to possess warehouses, to consign their products and their merchandise, and to sell them by wholesale or retail * * * they shall have free access to the tribunals and shall be at liberty to prosecute and defend their rights before courts of justice, in the same manner as native citizens. * * *

"No pecuniary or other more burdensome condition shall be imposed upon their residence or establishment, or upon the enjoyment of the above-mentioned rights than shall be imposed upon citizens of the country where they reside, nor any condition whatever, to which the latter shall not be subject. * * *

"The Swiss territory shall remain open to the admission of articles arriving from the United States of America; in like manner, no port of the said States shall be closed to articles arriving from Switzerland, provided they are conveyed in vessels of the United States or in vessels of any country having access to the ports of said States. * * * In faith whereof the respective plenipotentiaries have signed the above articles."

Irresponsible Criticism of Social Security

EXTENSION OF REMARKS

OF

HON. CECIL R. KING

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. KING of California. Mr. Speaker, I have recently received a letter from Mr. Carl P. Miller, president, Los Angeles Chamber of Commerce, in which Mr. Miller purports to speak for the membership of his organization in opposition to the social-security system.

The tenor of Mr. Miller's observations on social security are set forth in the first paragraph of his letter which reads as follows:

> The Los Angeles Chamber of Commerce has consistently withheld endorsement of the social-security system, and has, in the past, opposed broadened coverage, liberalized benefits, and a widened tax base. We are deeply concerned over fundamental defects of the system and the philosophy on which it rests.

Mr. Speaker, I view with some concern such attacks on social security based on unfounded and false grounds. The reactionary opposition to the system that has existed since the inception of the program has continually resorted to misinformation and unwarranted criticism in a futile attempt to defeat a program that 20 years of experience and careful actuarial study have proved is sound.

Because I doubt that Mr. Miller was expressing the views of all the members of the Los Angeles Chamber of Commerce in his letter and because I believe the time to set the record straight is long past, I answered Mr. Miller at some length.

I am, Mr. Speaker, at this point in the RECORD inserting my reply to Mr. Miller and the text of Mr. Miller's letter to me for the information of any interested persons:

AUGUST 1, 1955.

MR. CARL P. MILLER,

President, Los Angeles Chamber of Commerce, Los Angeles, Calif.

DEAR MR. MILLER: I have your letter of July 14 in which you once again attack the fundamental concept and philosophy of the Federal old-age and survivors insurance system. Your letter repeats the absolutely false statements you previously have made regarding this great humanitarian endeavor.

It is positively incredible that you and the great business organization for which you presume to speak still do not accept the basic tenets of social security. Millions upon millions of people, young and old alike, look upon this great program as the solid rock upon which they can fasten their hopes for the future; yet the Los Angeles Chamber of Commerce views it as fundamentally defective and philosophically unsound.

You are entitled, of course, to express your opinion regarding social security. However, I call your attention to the fact that even the Republican Party, including some of the most reactionary of the Old

Guard elements, has at last recognized in the social security system a sound program that is not only good, but is here to stay. President Eisenhower made this quite clear in a message to Congress in 1954 in which he described the old-age and survivors insurance system as "the cornerstone of the Government's programs to promote the economic security of the individual." The President further stated: "The system is not intended as a substitute for private savings, pension plans, and insurance protection. It is, rather, intended as the foundation upon which these other forms of protection can be soundly built. Thus the individual's own work, his planning, and his thrift will bring him a higher standard of living upon his retirement, or his family a higher standard of living in the event of his death, than would otherwise be the case. Hence the system both encourages thrift and self-reliance, and helps prevent destitution in our national life. In offering, as I here do, certain measures for the expansion and improvement of this system, I am determined to preserve its basic principles. The two most important are: (1) It is a contributory system, with both the worker and his employer making payments during the years of active work; (2) the benefits received are related in part to the individual's earnings. To these sound principles our system owes much of its wide national acceptance."

I trust that your constantly repeated criticism of this program will be to no avail. I assure you that I shall do everything within my power to see that social security continues to serve the great humanitarian purpose for which it was designed. It is operated at an administrative cost ratio of 2¼ percent (far less than that of any private insurance company) and provides protection against loss of income due to old age or premature death to 90 percent of the workers in this country, including not only employees but self-employed persons such as farmers, small-business men, and professional groups—7½ million elderly persons, widows, and orphans already are drawing monthly benefits (600,000 in the State of California). These benefits are coming not from the general revenue fund created by the taxpayers, but from the trust fund to which the self-employed and employees and employers alike have contributed.

I have served on the Committee on Ways and Means for 9 years. I participated in extensive hearings conducted by our committee for almost 6 months in 1949, during which many of these ridiculous charges were made and successfully refuted. I participated again in the consideration of the social security amendments of 1952. Once again, in 1954, I participated in consideration of social security amendments, and in 1955 I played a part in the formulation of H. R. 7225, which, incidentally, was approved not only by the majority but by all but four of the minority members. As a result of these many years of study of the subject I am convinced, as are most Americans, that the OSAI system is sound. As a Democrat, I share the belief that improvements in the coverage and benefits of the system can be made without impairing its soundness. The Los Angeles Chamber of Commerce is completely out of step with the times in being against social security.

As I have said, you are entitled to continue your opposition to social security, futile and misguided as it is. But I maintain you have no right to spread the fallacy that this great social insurance system is unsound financially. The facts on this are readily available to you, as they are to any American who is broadminded enough to seek the truth. Actuarial estimates presented to the Committee on Ways and Means of the House of Representatives, of which I am proud to be be a member, and to the Senate Committee on Finance, show that the contribution rates now in the law make the system wholly self-supporting. These actuarial estimates do not take into account the probability of a continuing rise in wage levels as has occurred throughout all American history. An increase in wage levels would have the effect of increasing income in relationship to outgo in the future.

There similarly is no excuse for your repeated fallacious assertion that there is no real reserve fund. This misstatement has been refuted time and again by such authorities as the American Life Convention, the Life Insurance Association of America, the National Association of Life Underwriters, the Advisory Council to the Senate Committee on Finance of 1938, the Advisory Council to the Senate Committee on Finance of 1948 (appointed by the Republican chairman of the committee, Senator MILLIKIN), and more recently by the Secretary of the Treasury, George M. Humphrey. Secretary Humphrey has specifically endorsed the investment of the reserve trust fund in Government bonds, saying "I'm sure it's a good way, and in fact I think it's the only way to do it." (NBC television program Meet the Press of May 24, 1953, and pp. 18, 19, and 20 of the House Appropriations Committee hearings on the Treasury and Post Office appropriations bill for 1955.)

The bonds in the trust fund, like all other United States Government bonds, represent the safest investment in the world. In fact, they are the only practicable investment for the funds of the program. In this connection I hope that you and your colleagues will study carefully the section on Reality of the Trust Fund in the enclosed copy of the 15th Annual Report of the Board of Trustees of the Federal Old-Age and Survivors Insurance Trust Fund which was signed by George M. Humphrey, the present Secretary of the Treasury and a former businessman. This report completely repudiates your contention. (S. Doc. No. 39, 84th Cong., pp. 7–9.)

The charge that benefits and contributions are badly out of balance usually rests on illustrations that in individual cases the value of the benefits paid may greatly outweigh the value of the individual's contributions, or even of those paid by him and by his employer in his behalf. It is, of course, true that for individuals near retirement age in the early years of the program, and for workers with large families, the value of the benefits paid may greatly exceed the value of the contributions. I'm sure you know that this is so, also, in retirement plans established by private industry. If it were not so in OASI, the program could not be effective in preventing need, and in relieving the general taxpayers of much of the burden of support of the aged and widows and orphans for many years. In general, the payment of benefits in excess of the contributions received in individual cases is possible because workers who are now young, and who will contribute to the program over most of their working lifetimes, will as a group very nearly pay for their benefits out of their own contributions. The contributions paid by employers with respect to their wages can therefore be used in large measure to finance the excess of the benefits paid to workers now old and those with large families.

I am proud to say that the Ways and Means Committee, in its consideration of social security, has always taken the position that the benefits provided should be based on a sound system of financing. In the words of the committee report on H. R. 7225, "Your committee has always very strongly believed that the system should be actuarially sound. Your committee continues to believe that the tax schedule in the law should make the system self-supporting as nearly as can be foreseen, or in other words, actuarially sound."

In 1955, as in all previous years, the committee was very careful to provide adequate financing for the new benefits provided. Actuarial testimony presented to the committee indicated that the system would be actuarially sound if the contribution rate was increased beginning with January 1, 1957. The committee nevertheless concluded that in order to be asolutely certain of the fund's actuarial soundness the increase in the rate should go into effect on January 1, 1956. As stated in the committee report on the bill, "the old-age and survivors insurance program as amended by this bill would be actuarially sound, and in fact its actuarial status would be improved since the cost of the liberalized benefits is more than met by the increased contributions scheduled (with such rise going fully into effect immediately with the inauguration of the new benefit provision)."

Since the contribution rates are being increased to pay for the additional protection, your statement is not true that funds committed to pay for the protection already provided are being diverted to another purpose.

With regard to your criticism of the current plan to provide benefits to the totally and permanently disabled and to reduce the retirement age for women from 65 to 62, my reaction is this: You have consistently opposed social security; it is to be expected that you would oppose any improvements. I predict that despite your opposition these improvements will be enacted into law next year, the House of Representatives having already approved them.

I realize that this letter will not alter your attitude with respect to social security; you will continue to preach your philosophy of "ragged individualism"; you will continue to argue that, as a wry humorist put it, everyone should be permitted to work out his own destitution. I must demand, however, that you desist in making false and misleading statements, which can only have the effect of causing needless worry for thousands of present and future beneficiaries of this great and beneficent law.

In my opinion the OASI system is specifically designed to prevent the kind of dependency and loss of initiative you fear. The Los Angeles Chamber of Commerce doesn't seem to recognize the facts of life that the social-security program helps to preserve our system of individual initiative. In this connection I would like to quote the findings of the Ways and Means Committee in 1949 as expressed in its report on the bill which became the Social Security Act Amendments of 1950:

"The time has come to reaffirm the basic principle that a contributory system of social insurance in which workers share directly in meeting the cost of the protection afforded is the most satisfactory way of preventing dependency. A contributory system, in which both contributions and benefits are directly related to the individual's own productive efforts, prevents insecurity while preserving self-reliance and initiative.

"Under social insurance, benefits are computed individually in each case, on the basis of earnings in covered employment. Because benefits are related to average earnings and hence reflect the standard of living which an individual has achieved, ambition and effort are rewarded; since they are also related to length of service in covered work, individual productivity is encouraged and the Nation's total production is increased.

"Because benefits under the insurance system are paid as a matter of right following cessation of substantial covered employment, the worker's dignity and independence are preserved."

The mistaken charge that OASI is not an insurance program generally rests on either the fact that there is no contract involved or the fact that there are differences between OASI and individually purchased private insurance. To conclude from this, however, that OASI is not insurance is not sound. It fails to take into account, for

example, the basic similarities between old-age and survivors insurance and private group insurance. It ignores the facts that the social-security insurance system, like other insurance systems, is a means of pooling risks; that the risks covered—loss of familiy income at death, retirement between the ages of 65 and 72, and attainment of age 72—are insurable; that, just as in group insurance, contributions are made by workers and employers and that they are made regularly and beforehand; that there is a definite overall relation between contributions and benefits.

I am convinced that the changes provided in H. R. 7225 are sound and desirable. I am proud to have been a member of the committee which saw the need for this additional protection and took steps to provide it. I am proud to have helped improve the social-security benefits for millions of persons. I hope that this explanation of the real facts about the program will persuade the Los Angeles Chamber of Commerce to reexamine the provisions of H. R. 7225 and to endorse the bill. There are many Americans in the Los Angeles area who will benefit by the bill. I hope the Los Angeles Chamber of Commerce will see the light and try to support measures for the betterment of our senior citizens of Los Angeles.

Since I have little confidence that you will actually cease presenting these falsehoods to the public, I am having this exchange of correspondence inserted in the CONGRESSIONAL RECORD. It then will be a public record for one and all to see—an unpleasant monument to what should be a great organization.

Sincerely yours,

CECIL R. KING.

LOS ANGELES CHAMBER OF COMMERCE,
July 14, 1955.

Hon. CECIL R. KING,
Member of Congress, Representative, 17th District, California, House Office Building, Washington, D. C.

DEAR CONGRESSMAN KING: The Los Angeles Chamber of Commerce has consistently withheld endorsement of the social-security system and has, in the past, opposed broadened coverage, liberalized benefits, and a widened tax base. We are deeply concerned over fundamental defects of the system and the philosophy on which it rests.

It is our opinion that the responsibility to provide for future personal needs rests primarily with the individual. This concept must be constantly fostered if the individual is not to become more dependent upon the Federal Government to solve all his problems—a trend which we believe could lead to the destruction of our tradition of individual initiative.

In addition, the entire social-security structure is based on unrealistic financial concepts. Major defects of the system are summarized as follows: OASI is not an insurance program; there is no real reserve fund and no program for protecting future excess income; benefits and contributions are badly out of balance, and future costs are sure to rise sharply.

With respect to the proposals under consideration which would broaden coverage, lower the benefit age for women, and add coverage for permanently and totally disabled workers, we wish to point out our belief that broadened coverage and heavier benefit commitments are dangerous and could well be disastrous to the system. Lowering the benefit age for women would result in unanticipated cost increases and, therefore, less adequate benefits for those in need. While we are sympathetic with the plight of disabled persons, we believe it would be wrong to divert to this purpose social security tax revenues and trust funds which have been collected for and previously committed to old-age benefits.

These changes would compel Congress to increase taxes on the productive workers and employers in order to protect the benefits now being paid to some 7 million individuals, as well as the many millions who look forward hopefully to receiving social-security benefits in their old age.

We believe sincerely that coverage and benefits should not be further liberalized until the commitments and implications involved are fully understood by all. We respectfully urge your opposition to these broadening amendments.

Sincerely yours,

CARL P. MILLER,
President.

Freight Cars Needed for Grain Harvest in Midwest

EXTENSION OF REMARKS
OF
HON. WILLIAM G. BRAY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. BRAY. Mr. Speaker, the State of Indiana and the Midwest in general are having one of the most bountiful grain harvests that we have ever had. We are deeply appreciative of this; but we are sorry to say that the transportation necessary to move this grain harvest has proved totally inadequate. The elevators are filled to capacity and there is a shortage of available freight cars practically as great as during the war years. I have received numerous complaints from farmers and elevator operators. I have made many requests in an attempt to get cars into southern Indiana to meet the great demand. Although the railroads did cooperate, it was obvious that there was not a sufficient number of available cars, at least in the Indiana area, and I understand that the situation is rather general. I believe it is apparent that steps must be taken to bring in more railroad cars. I believe that the railroads are aware of this, and in time this condition will be at least partially alleviated.

However, I have found that there are steps that can be taken now to help solve this very serious problem. The Commodity Credit Corporation has contributed materially to this great shortage of freight cars at harvesttime. They apparently have not planned the movement of their grain at a time which would cause the least congestion in shipping. In the Grain Belt it is common knowledge that there is always congestion of shipping immediately after the harvest. It is also common knowledge that at times between harvests, there is relative inactivity in the shipping of grain. I personally checked the situation in my district and found that from one elevator the Commodity Credit Corporation shipped 19 cars of corn just as the first wheat moved into elevators. This corn was available in the elevators awaiting movement 6 weeks before, at which time there were sufficient cars in that immediate locality.

I have discussed this matter with various officials of the Commodity Credit Corporation and the Department of Agriculture, and I have been assured that the Commodity Credit Corporation will take into consideration the general movement of grain in making their grain transportation plans. Everyone realizes that the Commodity Credit Corporation must ship their grain, and I do not want to be unduly critical of the situation in the past, but I do believe that the American farmers have a right to insist that they time their shipments so as to interfere with the general movement of grain to market as little as possible. There is going to be a large soybean and corn harvest in the Midwest, and the Commodity Credit Corporation should take that into consideration. The farmers and the people generally have a right to insist on this.

Appraisals of the High-Level Conversations at Geneva

EXTENSION OF REMARKS
OF
HON. JOHN MARSHALL BUTLER
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Tuesday, August 2, 1955

Mr. BUTLER. Mr. President, sharing as I do the fervent hope and prayer that the recent summit meeting will ultimately raise the curtain on an endless age of peace and good will for all men, I ask unannmous consent to have printed in the Appendix of the RECORD several editorial appraisals of these recent high-level conversations at Geneva.

There being no objections, the editorials were ordered to be printed in the RECORD, as follows:

[From the Washington Evening Star of July 25, 1955]

WEST WINS MORAL TRIUMPH, BUT SOVIET RULERS GAIN A NEW PRESTIGE: EQUALITY WITH LEADERS OF THE NATO

(By David Lawrence)

There's one real disappointment about the Big Four meeting at Geneva—that the dramatic talks had to come to an end. The world would have been glad to see them go on. The pressure for peace is so intense that any amount of inconvenience to the statesmen involved—any delay in other official business—would seem to have been justified if there was a chance for worthwhile agreements.

But the sad truth is that the Soviet rulers, unlike their western colleagues, represented only themselves. They could not make agreements on substantive questions without confessing publicly to their peoples a certain responsibility for some of the evils they have wrought in the last 10 years, especially among the satellite states where they have imposed a system of slavery.

So far as the western governments were concerned, their representatives achieved a moral triumph. It was not a triumph merely because they helped to create an atmosphere or spirit of peaceful purpose. The Geneva Conference may be termed a success from the western viewpoint only because it concentrated the attention of the entire world for a full week on the issues that separate the East and the West.

This is no ordinary achievement. Not in 10 years has the Iron Curtain been penetrated so as to enable American and British

and French viewpoints to be printed at length in Soviet newspapers. Whatever the Soviet people have been told about the "warmongers" of the West must now seem untruthful to the readers of the newspapers and the listeners to radio broadcasts behind the Iron Curtain.

There were, to be sure, risks involved. What a mischievous use the Soviet propagandists can make now, for example, of those snapshots showing Ike and Bulganin and Khrushchev hobnobbing and smiling and fraternizing. They can display those photos all through the satellite countries as if to say to the oppressed peoples—"Don't depend on the United States and the West to help you out—they're playing ball with us now. Better accept your fate."

There were, on the other hand, to offset such an impression plenty of significant statements made by President Eisenhower in his addresses at Geneva to indicate clearly that the United States has not lost interest in what is happening to the peoples of the satellite states.

Analyzing the Geneva Conference—what Russia got out of it and what the West derived—the diplomatic scoreboard looks something like this:

WHAT THE RUSSIANS GOT

1. A new prestige inside Soviet Russia for her rulers—equality with the heads of the western states. A certain respectability was bestowed on the Kremlin group by President Eisenhower's conspicuous gestures of personal and official friendship. This is important to enhance the domestic position of the Kremlin as against the restless elements of the people who believe western charges that Communist imperialism has brought the world to the brink of a nuclear war.

2. A spectacular chance to restate the Soviet position for unification of Germany, which is whenever the Kremlin chooses, and on its own terms and conditions. This is important in future maneuvers inside both East and West Germany in attaining the main Soviet objective—detaching Germany completely from the North Atlantic Treaty Organization.

3. A widely publicized endorsement by Russia of the demand for admission of Red China to the United Nations. This together with defiant comments about Formosa assures the Peiping government that Moscow is still intent on challenging the position of the United States in the Far East.

4. A strategy of confusion to assist the Soviet propaganda machine in Eastern Europe. By putting forth the proposal for a 50-year all-European collective security treaty, the Russians meet head on the argument that they want only to break down NATO and to leave the satellite states as well as Germany unprotected against a future aggressor.

5. The raising of Soviet hopes that the United States arms effort will be slowed down so that Russia can catch up.

WHAT THE WESTERN ALLIES GOT

A. Worldwide publicity for the viewpoint of the West with a reiteration of basic principles originally proclaimed in the Atlantic Charter. This is important inside the satellite states where unrest admittedly can be the biggest headache for Soviet Russia and eventually be the means of breaking down the present regime in the Kremlin.

B. A dramatic rebuttal of the Soviet propaganda of the last 10 years that America is a warmonger and aggressor engaged in building alliances which encircle Russia with air bases just for the purpose of attack. Even the Russian spokesmen at Geneva had to say publicly many kind words about the peaceful purposes expressed by President Eisenhower. This alone was worth to America the entire trouble of a Presidential trip to Geneva. For the worldwide propaganda battle is more important than most Americans realize.

C. An effective manifestation of the moral force of the free world with a spectacular display of allied unity. This is of incalculable value in building a demand for peace that must inevitably overflow the borders of the Iron Curtain countries and seep through to the peoples beyond.

D. The decision to put the same issues as were discussed last week before another four-power conference of foreign ministers at Geneva in October. This means that the pressure for peace continues with intensity.

E. Relaxation of war tension for the time being. This is an advantage, but it also has its dangers. For if the West gives the impression that it will accept the Russian concept of peaceful coexistence it could be interpreted by the liberty-loving elements behind the Iron Curtain as an acceptance by the West of the status quo, a freezing of the existing condition of slavery in Eastern Europe, and a removal of all hope of liberation as the West may allow trade in strategic goods to build up the power of the Kremlin over the people.

American statesmen, however, can be expected to exercise care in the next few months to eliminate any such misunderstandings.

Based on what has been revealed thus far and assuming that there have been no promises made in private by the United States delegation, Geneva's conference on balance appears to have been more of a plus than a minus for the West.

[From the U. S. News & World Report of July 29, 1955]

How—

(By David Lawrence)

Assuming the sincerity of a Soviet desire for peace and not for just a breathing spell, how can such a goal be achieved?

The statesmen at the summit have struggled with that dilemma. They have tried conciliatory words. They have tried fraternization. They have tried earnest argument. The net result thus far has been little change on substantive matters from the fixed positions that have prevailed now for several years.

Why? The simple answer is that, while the desire for peace may be strong on both sides, the instinct for self-preservation—a defense against possible attack—is still stronger.

Try as President Eisenhower might to persuade his former comrade in arms, Marshal Zhukov, to see that the North Atlantic Treaty Organization could protect Soviet Russia against a rebirth of German militarism, the Russian Defense Minister can hardly accept such a thesis if he is convinced that behind NATO is a military alliance aimed at Soviet Russia alone.

Conversely, when Marshal Bulganin proposes a 50-year collective-security treaty for Europe which is based primarily on the abrogation of the North Atlantic Treaty and the Paris accords, the President and his western colleagues naturally brush it aside as devious.

What we are witnessing is a demonstration of the impossibility of negotiating any important agreements when there is basic distrust.

How, then, can distrust be removed and trustfulness substituted? The Big Four meeting would have made more progress had it engaged in an analysis of what brought about the present differences of viewpoint rather than a discussion of proposals which, however meritorious in themselves, cannot be accepted on a background of bad faith.

Doctors tell us that, before they can prescribe a cure, there must be a diagnosis. Can the statesmen bring out the facts and outline accurately the points of digression since 1945 so that both sides may see clearly why there is an impasse?

They can, of course, yet they have preferred to assume that by wishful thinking the past can be made to seem nonexistent.

But the past is there—before our eyes. So is the present. The satellites in Eastern Europe are there—oppressed and tyrannized—notwithstanding the pledges of the Atlantic Charter.

The situations in other vital areas are there—from North Korea to Indochina and from one end of North Africa to the other, where Communist subversion has stimulated uprisings and aroused national passions.

The situations inside Latin America and, indeed, inside the United States are there, too— plain to see as the Alger Hisses and the Klaus Fuchses and the whole Soviet espionage system have infiltrated our institutions.

These pages of history must be re-examined and the facts hammered home. We must acquaint the people of Soviet Russia with the whole background of Communist faithlessness which has brought us to the point where today we hesitate to accept the word of the Moscow regime.

How can we make worthwhile agreements with a group of evil men who run a police state and keep millions of persons in Siberian prison camps? A dictatorship can arbitrarily start a war of aggression without giving the people a voice in such a momentous decision. We can photograph each other's military installations to satisfy a world craving for steps toward preventing war, but nobody can photograph the minds of evil men who can conceal from the camera their satanic purposes. How can we negotiate effectively with rulers who permit no political opposition, no free elections, no guarantees of individual rights?

The answer is that we cannot achieve peace with such a government, and the sooner we acknowledge that fact the clearer will be the air.

We should, moreover, use every device of publicity and communication to analyze the causes of the tension of today between East and West and carry the case to the court of public opinion throughout the world—and this includes Soviet Russia.

Why not ask the Soviet regime to permit inside all countries a free discussion of the causes of mutual distrust? Why not urge Moscow to stop "jamming" the Voice of America and our radio broadcasts? It's a simple way to bring out the truth. And if the Soviet rulers aren't afraid of argument—if they think they can answer it all persuasively—why should they not welcome the chance for the moral forces of the world to pass judgment on the debate?

War is not a solution. Compromise with principle is not a solution. But the building of a bridge of trust with the Russian people is a solution. Governments come and go—but relations with peoples can be placed on a basis of enduring and understanding friendship.

[From the Wall Street Journal of July 25, 1955]

THE VALUE OF GENEVA

The meeting at the summit seems to have ended pretty much as it began—as little more than a breaking of bread between adversaries who will agree on nothing except that they would like to agree.

This has given to the Big Four meeting an air of futility. When the statesmen departed over the weekend, nothing was settled. Germany is still dismembered. The satellites are still under the Russian thumb. NATO and the Warsaw Pact nations still face each other as opposing military alliances. The armaments, East and West, are being piled up as rapidly as before.

And this is bound to make the return of the statesmen something of a disappoint-

ment. For in spite of all their efforts to caution against hope—in Premier Bulganin's words it was "naive to look for settlements"—some hopes nonetheless had been raised that when the statesmen did sit down face to face perhaps something could be done. Nothing was. What was proposed by one side was disposed of by the other. On any tangible scoreboard, the score was zero.

Nevertheless, we think, there was an accomplishment in the meeting at Geneva. And the fact that it is largely intangible does not make it less something of value.

There are three things we might have found at Geneva.

We might have found the Russians actually ready to agree. Or we might have found them as belligerent as ever with no desire at all to agree on anything. The first would have been a miracle; the second would have at least had the virtue of removing uncertainty.

Finally, there is what we did find—Communist leaders apparently desirous of agreeing on something, for their own private reasons, but unwilling to do now any of the things necessary to make agreement possible.

This may seem like no gain at all. Of what earthly use is agreeableness that comes to no agreement? Does it not lead to an even more frustrating kind of futility than more straight-forward obstinacy?

We do not think that is necessarily the case. Whenever an adversary in a struggle finds the struggle oppressive or frightening and wishes to lessen it, it does not follow that he will promptly yield everything. He will still seek the most favorable bargain. He might not yield at all because he may think yielding worse than the struggle. But certainly a gain has been made when he once reaches the point of considering how he might settle. Then there is a chance which before did not exist at all.

Geneva showed the Russians in this mood. They would agree to none of our proposals on Germany. But it was not so long ago they considered East Germany their permanent domain and the price of unification was adding West Germany to it. Today they demand all sorts of impossible conditions, but they have got around to talking about a unified Germany as a distinct nation. That the Russians would do this was unthinkable not so very long ago.

The pattern was alike on other subjects. They were seeking hard bargains. But they did propose—and counterpropose. They were seeking, nonetheless, to bargain.

The reasons for this are obscure. But we will venture two possible ones that have nothing to do with a change in Russian ethics or good will.

One could be an awareness that the cold war has been going against them; that communism, while perhaps still undaunted, is not after all the swift wave of the future. Men experienced in power have taken the measure of opposing power.

The other, and the one to be most devoutly hoped, is that these men may have taken the measure of modern war and found in it no victory. They would not hesitate to murder, slaughter, or enslave. They pause before a war that could gain them nothing and lose them all.

Indeed, the most heartening thing to be found at Geneva is the feeling buried among the debris of words that a world war no longer offers to conquerors even the promise of a prize. This may not banish wars, for there are other roots to them than greed. But it does hold hope that wars have ceased to serve as instruments of ambition.

It would have been happier, it is true, to have the statesmen come home from Geneva with the deeds all done. And it is true that the peace we reach for still lies beyond the grasp. But surely there is some value in finding, after all these years, that the reach can be extended.

[From the Washington Evening Star of July 25, 1955]

SOVIET WANTS PEACE ON OWN TERMS—SIDETRACKING OF GERMAN UNITY QUESTION IS TIP-OFF ON REAL RUSSIAN ATTITUDE

(By Constantine Brown)

The evidence is plain now that the Russians really do want an end to the cold war—if they can have it on their own terms.

To be sure, there were a few apparent concessions offered in the Geneva talks, enough to set the Western world aglow with renewed hopes that the Communist chieftains had experienced a change of heart, that all the wickedness and stubborness, the aggression and subversion of former days was the fault of Stalin and Beria, both now happily deceased.

The first unmistakable tip-off to the real Russian attitude came when the question of German unity was sidetracked. Despite the new tactics of the Soviet strategists in allowing the question to remain open rather than abruptly slamming the door on it as in the past, the fact remains that there will be no German unity unless and until the West, or the Germans, themselves, meet the Soviet terms.

When Chancellor Adenauer journeys to Moscow, he will be told those terms. And his Moscow hosts will know that rejection of those terms will mean serious political trouble for the Adenauer coalition government. The Kremlin can afford to wait on the German question, since they can hardly lose in any event. The one thing the Soviet Union fears is a reunited Germany allied with the West and rearmed. Even the Eden plan, providing for a reunited Germany with the entire Eastern Zone demilitarized, was rejected by Molotov as it obviously had to be if the Russians plans for Germany were to be realized.

The smiling, jovial, informal manner adopted so surprisingly by the Russian delegation was simply putting a more graceful facade on the same old grim building. Of course, the new Soviet attitude of eased restrictions on travel, easier-to-get visas, cordial welcomes for foreign visitors and all the other startling departures from the usual Red police suspicions will ease tension, so far as they go. But the basic character of the Communist bear remains, and as our American national parks warn, it is not wise to feed the bear even when he appears friendly and harmless.

The Russians, of course, were unable to summarily reject President Eisenhower's surprise disarmament proposal. To do so would have been a damaging propaganda blow to the Red pose as the world leader in the fight for peace. But neither could they accept the proposal at its face value.

The Soviet Union as of today is known to be extremely well informed on the details of American military facilities and dispositions. Our security setup has never been strict enough to prevent their knowing almost anything they want to know. Communist traitors in our midst have fed the facts of America's Military Establishment very efficiently into the Kremlin's spy network.

Thus Russian acceptance of the President's plan would have meant great advantage to the United States, and very little to the Reds. Our Air Force would like nothing better than to get a good close look at the Soviet forbidden atomic areas in the Urals and in Siberia. And the Combined Chiefs of Staff could do their defense planning a lot more easily if they could know the military strength and dispositions existing in the satelite countries.

Oddly, the member of the Soviet delegation who appeared to most observers at Geneva as the real boss of the quartet was Marshal Zhukov. Although silent at official gatherings, his demeanor and obvious self-assurance at social gatherings set him apart from his sometimes-uneasy colleagues, who appeared to look to the doughty marshal for guidance. It was being speculated, of course, that Marshall Zhukov might well emerge as the successor to the Stalin mantle after the next Soviet purge.

Geneva has shown that the Russians have not really changed. They are only using a genial, almost capitalistic smile to mask the same old Communist intrigue. And, as usual, they have once again confirmed what all who deal with them have long known—that they are willing to settle any problem around a conference table, so long as the settlement is made on their own terms.

Wisconsin Dairy Farmers Are Making a Comeback

EXTENSION OF REMARKS
OF
HON. GLENN R. DAVIS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. DAVIS of Wisconsin. Mr. Speaker, on Sunday last, it was my privilege to participate in the annual picnic of the Jefferson County, Wis., Farm Bureau held at Firemens Park in Waterloo.

After sharing in a buffet-style luncheon for which the farm women of Wisconsin are so justly famous, I attempted to outline the significant legislative developments affecting the Wisconsin dairy farmer, as we approach adjournment of the 1st session of the 84th Congress.

My remarks, as reconstituted from the notes which I used, were substantially as follows:

A TRIBUTE TO FARM BUREAU LEADERSHIP

I am pleased to come here today as a member of your organization, a member of the farm bureau in your neighboring Waukesha County. I am proud of that membership, because in my opinion no farm organization in Wisconsin has furnished more responsible leadership during this period of rather difficult adjustment for the Wisconsin dairy farmer.

On this beautiful summer afternoon, and in this fine company, there is only one sour note to mar the pleasure of this occasion. That is the retirement of Art Graper as your organizational director. I was, indeed, sorry to read the announcement of his retirement in October. In a sense this is a rather informal farewell party for Art, but I hope that as the time for his leaving approaches you will arrange the kind of farewell ceremony that he deserves.

JEFFERSON COUNTY, A SIGNIFICANT DAIRY AREA

This week there came to my desk a copy of the 1954 preliminary census of agriculture for Jefferson County. It was most timely that this preliminary report for Jefferson County, the first such report among the counties of the Second Congressional District to reach me, should arrive just prior to my trip here. This census indicates that there are about 2,800 farms averaging approximately 115 acres in Jefferson County. Almost 90 percent of the land in Jefferson County is in farms, utilized for agriculture. Five-sixths of the farms in Jefferson County are operated by the people who own them. In 1954, Jefferson County had 43,000 milk cows, an increase of about 4 percent in the last 5 years. In that year, Jefferson County produced about 305 million pounds of milk. These figures will come as no particular surprise to you. They simply bear out what we

already know—that Jefferson County is a significant dairy area of comparatively small farms, largely operated by the people who own them.

AGRICULTURAL LEGISLATION IN THIS SESSION

I had expected Congress to adjourn prior to my trip here, but we just didn't quite make the grade last evening. It looks now as if we'll adjourn within the next 2 days. The record of agriculture legislation is now complete, so it is probably appropriate to mention some of the legislation of this session of particular interest to farmers. Actually there hasn't been a large volume of legislation directly affecting agriculture in this session. Among the legislative enactments of the 1st session of the 84th Congress have been, first, the so-called Holland amendment to the Agricultural Adjustment Act was repealed. Through this repeal, agricultural conservation payments are now permitted even if the acreage allotment on any particular crop is exceeded. The so-called cross-compliance provision has been removed.

Second. The law authorizing emergency loans to farmers and stockmen was extended, with interest rates reduced from 5 percent to 3 percent.

Third. Construction loans and insurance for farm housing were authorized.

Fourth. The imports controls of section 22 were successfully protected. This is the authorization which President Eisenhower has used effectively for import quotas on dairy products.

Fifth. In continuing the Selective Service Act, Congress inserted a provision which prohibits the consideration of agricultural scarcities and surpluses in agricultural deferments.

There are now pending two measure of general interest to farmers. One of them is the bill to exempt wheat from marketing penalties if the wheat is used for feed. This is of particular interest to those of us in this area of Wisconsin where most of the wheat is used as livestock feed.

The other significant pending measure is H. R. 12, which would fix the price supports for the so-called basic commodities (wheat, corn, cotton, rice, tobacco, and peanuts) at 90 percent of parity. Strictly for sugarcoating, the bill provided a section to increase the price supports for dairy products to 80 percent, increase the authorization for the brucellosis control program and increase the authorization for the special school milk program.

THE STORY OF H. R. 12

It is obvious that these extra provisions were added strictly for an enticement to get Dairy State Congressmen to support H. R. 12 for the benefit of the basic commodities. Actually, the increase to 80 percent price supports for milk would not put an extra dollar in the pockets of Wisconsin dairy farmers since the existing market level exceeds 80 percent of parity. The brucellosis and special school milk provisions do not belong in a price-support bill and should have been handled separately.

It is interesting to note that one of the chief witnesses in support of the 90 percent price support provisions of H. R. 12 was Walter Reuther, the national president of the Congress of Industrial Organizations. He testified before the House Agriculture Committee at some length. During his testimony he was highly complimented by Chairman COOLEY, of the House Agriculture Committee, and then Mr. Reuther in turn highly complimented Chairman COOLEY. This pleasant exchange was then printed in a slick looking brochure by the CIO, and has, I understand, been mailed to thousands of people throughout the country under the frank of the chairman of the House Agriculture Committee.

Along that same line, you will be interested to know that the Representative from the northwestern part of Wisconsin spoke about 3 or 4 minutes on the House floor this past week but then his statement with a great deal of embellishment, including complimentary statements by other members of his political party, appeared the next morning as a very complete and comprehensive statement in the CONGRESSIONAL RECORD. This same Congressman then requested others of his colleagues to make flowery, complimentary statements about his efforts in behalf of Wisconsin dairy farmers and all these are being made up into a 16-page reprint to be broadcast among the farmers of the State of Wisconsin. Probably many of you in this audience will be receiving copies of that reprint, sent out under the frank, and I thought you ought to know the background of that falsified document before you receive it.

Between now and next January when the 2d session of the 84th Congress will convene, there'll be a considerable amount of propaganda in support of H. R. 12. During the month of November, hearings will be held by at least two separate subcommittees here in the State of Wisconsin, and I hope that the leaders of your organization will be alerted so that they can present the farm bureau point of view so that a balanced presentation of views of Wisconsin farmers will be made.

H. R. 12 WOULD BE A STEP BACKWARD

In my opinion the enactment of H. R. 12 would represent a serious setback to Wisconsin dairy interests. It would place Wisconsin dairy farmers in a less favorable relationship with those who produce the basic commodities. It would nullify many of the encouraging developments that have taken place in dairying in the past 2 years.

Early in 1953, dairying was a sick industry. Milk production was climbing rapidly. Government warehouses were bulging with dairy products. Consumption of dairy products through the normal channels of trade was greatly declining. At that time Secretary Benson, who had inherited this great problem from his predecessor, seriously considered reducing the support price of dairy products. However, he was prevailed upon to continue the 90 percent price supports for another year, to March of 1954, on the assurance of leaders of the dairy industry that a program would be developed during that time. During that year of extended 90 percent price supports from the spring of 1953 to the spring of 1954, the situation was not alleviated. In fact, it was greatly accentuated. The Department of Agriculture found itself with more than a billion pounds of dairy products in its warehouses. Production continued to climb. Consumption continued to decline. During that year, the consumption of oleomargarine exceeded the consumption of butter. In short, things got a great deal worse instead of getting better.

Accordingly, a year ago this spring Secretary Benson reduced the support price for dairy products to the minimum under the law, 75 percent. To many this seemed like a very harsh step. However, as we look back upon it now I think we recognize it as being comparable to other things with which we are familiar, steps that are less painful because of their suddenness. For instance, those of you who participated in athletics will recall that the total hurt is less if you remove adhesive tape with one sharp quick pull, rather than pulling it gradually from different angles. The surgeon, when he operates, makes the incision with one swift, complete stroke—so with the reduction to 75-percent support prices for dairy products. It may have seemed harsh but it reduced the total pain of the cure. I'm satisfied today that the worst is over and the dairy farmers of Wisconsin now face an encouraging future.

SURPLUS VANISHING

A most encouraging development has been the sharp reduction in Government holdings of dairy products in the last year. On June 30, 1954, for instance, the Government held about 440 million pounds of butter, 412 million pounds of cheese, 300 million pounds of dry milk. Contrast this to the picture at the end of last month, June 30, 1955. Butter holdings had been reduced to 171 million pounds, cheese holdings to 264 million pounds, dry milk holdings to 143 million pounds. Overall, the holdings of the Government of dairy products were about one-half of what they were a year ago. This was accomplished by the same means as you would reduce the supply of grain in one of your bins. It was accomplished by taking more out of the bottom and putting less in at the top.

INCREASED DISPOSALS AT HOME AND ABROAD

During the year just completed, from July 1, 1954, to June 30, 1955, the Government succeeded in disposing of approximately 445 million pounds of butter, 290 million pounds of cheese, and 740 million pounds of dry milk.

Of this, about 200 million pounds of milk was accounted for by the special school milk program. Quite appropriately, Wisconsin was the first State to participate and our neighboring community of Lodi was the first school system in the United States to become a participant. So effectively did the schools of Wisconsin cooperate with and participate in this program that the Department of Agriculture made a reallocation of funds for Wisconsin's benefit in the spring of this year. This permitted the expanded program to continue to the end of the school year, using funds unused by other States whose cooperation and participation had been limited.

Another 50 million pounds of milk during the 5 months prior to March of this year is accounted for through increased use of milk in the Armed Forces.

It is encouraging to note that just within the last couple of weeks that a substantial amount was sent overseas to Hong Kong where milk powder and butter will be used to reconstitute milk for the people of that British colony. Then too, a supply of Government-held stocks of dairy products have been disposed of to Japan, where the products will be used in the school-lunch program of that country.

LESS GOVERNMENT PURCHASES

This year, through the month of June, the Government price support purchases have been about 123 million pounds of butter, 75 million pounds of cheese, and 384 million pounds of dry milk. This contrasts with 273 million pounds of butter, 302 million pounds of cheese, and 452 million pounds of dry milk in the comparable period of last year. Thus the reduction in butter purchases during the first 6 months of this year, over the first 6 months of last year, has been about 60 percent. Reduction in cheese purchases have been 80 percent and reduction in dry milk purchases 17 percent. Overall the Government has purchased about one-half of the dairy products that it did during the comparable period last year.

SUPPLY HAS LEVELED OFF

The best available estimate we have is that there are now about 22.1 million milk cows in this country. This figure is down about 1½ percent from a year ago. Total milk production has continued high, about the same level as last year.

The reduction in the total number of milk cows means that there has been a higher rate of culling. The production of about the same amount of milk with less cows means that the production per cow has increased. Both of these things, higher culling, and greater production per cow, bespeak a greater efficiency in production with accompanying reduced production costs.

CONSUMPTION OF DAIRY PRODUCTS UP

The most gratifying development of all has been the increased consumption of dairy

products. In the year ending March 31, 1955, butter consumption had increased 9 percent over the preceding year. Cheese consumption had increased 14 percent, and fluid-milk consumption had increased about 4 percent over the previous year.

The reports on June Dairy Month are now available. Your organization can take pride in the significant part it played in helping to make the American people conscious of quality dairy products. The figures on June Dairy Month indicate that the consumption of butter and cheese have increased about 14 percent over the month of June of 1954. This means that the American people ate 8 pounds of butter and cheese during the month of June 1955 for each 7 pounds of these dairy products which were consumed during June of 1954.

These three significant factors then, the increase in the consumption of dairy products, the leveling off of production, and the reduction of Government-held surpluses, are beginning to be felt in the place where it can do the most good for the dairy farmers of Wisconsin—in the market place.

In April of 1955 the price of wholesale milk was about 2 percent higher than it was during April of 1954. This is the first time since November of 1952 that the price of wholesale milk in any month has been higher than it was in the similar month during the previous year.

During May of this year, the price of wholesale milk was about 3 percent higher than it was during May of 1954. The presence of the three factors mentioned above, increased consumption, leveled off production, and reduced surpluses, give us reason to believe that this healthy improvement in prices at the market place will continue throughout the year of 1955.

OPTIMISTIC FUTURE FOR GOOD DAIRYMEN

As I see it the efficient dairymen of Jefferson County can look forward to the future with optimism. The end of heavy Government-held surpluses is in sight. Consumption is catching up with production so that with a balancing of supply and demand the price in the market place will supersede Government price supports as the measure of the dairy farmers income. In short, a healthy situation is beginning to succeed a very unhealthy one. In its report issued in June of this year, the American Dairy Association pointed out that nearly all leading agricultural economists are agreed that the end of the surplus of dairy products is in sight. The report states "the only major disagreement is whether the surplus situation will vanish in 1955 or 1956."

There are favorable prospects for greatly increased consumption.

The special school milk program, already in effect in 47,000 schools and accounting for 200 million pounds of milk in the last year, will help to develop the milk-drinking habit. Thus, its significance goes much beyond the number of half pints of milk that might be consumed in this year or next year. It will help to increase the per capita consumption of milk in the years ahead. It is something that we cannot discount.

During the past months, the trend of consumption of dairy products has moved steadily upward. In the year ending March 31, 1955, Americans consumed 6 million pounds more milk than they did in the previous year. Economists have credited about one-third of this amount (2 million pounds) to the increase in population. Another third has been credited to the more favorable prices of dairy products prevalent throughout the past year. The final third has been attributed to the effects of the intensive advertising program such as those sponsored by your organization.

If similar strides may be made during the next year, if Americans will consume 6 billion pounds more in this year than they did last year, the surplus of dairy products will be wiped out. We can anticipate that one-third of this increased amount, 2 billion pounds, will be consumed through the normal increase in population in America. That leaves a little over 4 billion pounds of additional dairy products to be consumed by the American people. What does that amount to? It amounts to about 26 pounds per person, or in terms of glasses of milk it means one glass of milk per week for each person in the United States. That really is not very much. A glass of milk a week more could be quite a bit if we were already consuming anything approaching a maximum amount. However, that is not the case, and there is plenty of room for increased consumption on the part of the American people.

INCREASED CONSUMPTION SHOULD NOT BE DIFFICULT

The per capita consumption of dairy products among the American people is less than one-half that of Ireland, the leader in this respect. We rank 12th in our per capita consumption of dairy products, behind nearly all of the countries which have a standard of living quite similar to our own.

This is an expanding, growing country. It has been estimated that our population in 1960, just 5 years from now, will be about 177 million people. Even if dairy farmers continue to produce at 1954 levels, we will need 9 billion pounds more of milk in 1960 to meet the demand. However, if pricing is reasonable and satisfactory, and a vigorous advertising program is continued, there is no reason why the market, and the per capita consumption, cannot be much more than what they are at the present time.

In fact, if the per capita consumption for the next 5 years increases in the same ratio as it did in the year ending March 31, 1955, and if dairy farmers were to continue at their 1954 level of about 123 million pounds of milk, there would be a deficit of 14 billion pounds of milk in this country in the year 1960.

In summary, this means that we will need some where between 9 and 23 billion pounds more milk in this country 5 years from now. By that year the problem might well be a shortage of dairy products rather than a surplus of them. I am satisfied that if Wisconsin dairy farmers, under the leadership of groups such as your own will continue a vigorous advertising program, will insist on a program which puts dairy products into the stomachs of the American people and not into Government warehouses, and will depend primarily on efficient production and increased consumption, rather than upon Government price supports, that dairying will soon be a growing, healthy, and free industry. In my opinion, dairying is on the way up, and I predict in the months ahead that dairy farmers everywhere will come to recognize their debt to the farm bureau for keeping them free from production controls and the heavy hand of Government.

Milestones on the Road to Peace

EXTENSION OF REMARKS

OF

HON. ROBERT B. CHIPERFIELD

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. CHIPERFIELD. Mr. Speaker, in the July 18 issue of Life there appeared an article entitled "The Peace We Fought for Is in Sight and We Can Win It" by Mr. Paul C. Hoffman in which the following accomplishments for bringing about permanent peace were cited and which serve as a reminder of our efforts in that direction:

MILESTONES ON THE ROAD TO PEACE

Forcing Soviet Army to evacuate Iran: May 1946.

Economic recovery of Europe through United States aid: April 1948 to date.

Survival of Yugoslavia outside the Soviet orbit with Western aid: June 1948 to date.

Breaking Soviet blockade of Berlin by airlift: June 1948–August 1949.

Armistice in the Jewish-Arab war: February 1949.

Creation of NATO: April 1949.

Defeat of the Communists in Greece: October 1949.

Settlement of Dutch-Indonesian war: November 1949.

Halting aggression in Korea: June 1950–July 1953.

Settlement of Kashmir war between India and Pakistan: August 1953.

Cease-fire in Indochina: July 1954.

Settlement of Trieste dispute: October 1954.

Agreement on rearmament of West Germany: May 1955.

The Report of the President's Commission on Intergovernmental Relations

EXTENSION OF REMARKS

OF

HON. JOHN MARSHALL BUTLER

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Tuesday, August 2, 1955

Mr. BUTLER. Mr. President, the recent excellent report of the Commission on Intergovernmental Relations, dealing with Federal-State appositions, has provoked numerous editorials, most of a favorable tenor, some of which I ask unanimous consent to have included in the Appendix of the RECORD.

There being no objection, the editorials are ordered to be printed in the RECORD, as follows:

[From the New York Herald Tribune of June 29, 1955]

STATES RIGHTS VERSUS STATES WRONGS

(By Roscoe Drummond)

WASHINGTON.—The long-in-the-making report of the Commission on Intergovernmental Relations proves to be realistic and valuable.

It is realistic because it spurns the extremist views of two doctrinaire groups. The report gives no comfort to those whose instinct is to solve all problems by concentrating more and more power in Washington and those who want to see the Federal Government substantially dismantled and handed back to the States to do with as they wish. Based on past experience, this often would be nothing.

It is a valuable report because it points to the only practical way that a balance of political power between Federal and State and local government can be achieved; that is, by so improving and strengthening State and local government that they will draw to themselves functions which have gone to Washington mostly by default.

While there are some dissents over particular proposals, this basic, undoctrinaire, middle-road view reflects the unanimous thinking of a 25-man Commission which embraced governors, Senators, and Congressmen of both parties plus a number of citi-

zens outside the Government. As the Chairman of the Commission succeeding the controversial Dean Clarence Manion, of Notre Dame Law School, Meyer Kestnbaum, a progressive business leader who heads the Committee for Economic Development, obviously extracted the very maximum of agreement from his colleagues.

The Commission frankly recognizes that most of the enlargement of Federal power during the last 20 years has come about because of the vast industrialization of the Nation, because of the acute social and economic problems created by the depression, because of the population shifts from farm to city, because of advances in transportation and communication—that is, Federal power has grown out of necessity, not primarily out of political theory.

Federal powers have also been expanded because of the failure of the State governments to perform the governmental services which many of them now complain that the National Government should not be performing.

Nearly a half-century ago Elihu Root, a Republican and a conservative, put it this way:

"It is useless for the advocates of States rights to inveigh against the supremacy of the constitutional laws of the United States or against the extension of national authority in the fields of necessary control where the States themselves fail in the performance of their duty. The instinct of self-government among the people of the United States is too strong to permit them long to respect anyone's right to exercise a power which he fails to exercise."

When he was Governor of Illinois, Adlai E. Stevenson put the same view succinctly when he suggested that there would be less talk about States rights if there had not been so many States wrongs.

What they were both saying is what the Kestnbaum Commission is saying today: that self-government does not permit a vacuum, that if the States will not discharge the functions the voters require, the voters will turn elsewhere.

The Commission points to several vital reforms which the States will have to make if they are to begin to arrest the trend to Washington:

1. Restore representative government. In a majority of the States today city dwellers decisively outnumber the rural population and yet the rural population decisively dominates the State legislatures. Reason—refusal by the legislatures to obey their own States' constitutions to reapportion the legislatures equitably.

2. Give the Governors authority equal to their responsibilities. In 40 States as many as 5 to 15 of the Governor's administrative aids are elected and thus not subject to his control.

3. Straighten out the bewildering duplication and confused overlapping of the Nation's 109,000 local governing units—counties, towns, townships, and school districts.

The Kestnbaum Commission does not propose less government; it proposes a better distribution of the functions of government. Better State government alone will mean more State government.

[From the New York Herald Tribune of June 29, 1955]

STATES AND FEDERAL GOVERNMENT

None of the broad investigatory commissions which President Eisenhower set on foot after taking office held out in his mind greater promise than that dealing with Federal-State relationships. The resignation of the first chairman, Mr. Clarence Manion, was an unfortunate setback; but under his successor, Mr. Meyer Kestnbaum, the work has gone forward diligently and a 300-page report was issued yesterday. The document merits the most careful study; it deals with much that is basic in our American life.

The Commission (with Senator WAYNE MORSE dissenting on this broad, philosophical point) holds firmly to the view that our society is enriched, and our political system strengthened, in proportion as the States and localities have a vital role to play. Many modern developments have tended to decrease their role; but it is the basic assumption of the report that by forethought and planning the equilibrium can be reestablished.

It is hard to disagree with this. Political and social systems are made by men; they are the product of his underlying values and, in part at least, of his deliberate acts. Certainly the values inherent in individual participation and local responsibility are fundamental. Ans as a people we do not lack the social inventiveness which can keep these alive even amid the greatest technological changes.

One of the major needs, if the States and localities are to play their part, is an adequate financial base. Much had been expected from the report in this regard. State governors had hoped that as a result of its recommendations new ways of balancing their budgets could be found. But the report speaks only in general terms on this score. It accepts the burden of present-day taxation, realizing that there could not be a sharp delineation of fields left to the States and those left to the Federal Government without substantially reducing the total tax take. Yet its discussion of the taxes open to the States, many of them still unused, should help in securing financial resources comparable to responsibilities; and the general emphasis on Federal economy reiterates a healthy warning.

The report stresses the States—how to save them from undue pressures, how to make them more vital and efficient, how to help them get the means to carry on their work. But it is aware, too, that modern developments place on the Federal Government tasks which formerly did not exist and which cannot now be escaped. Particularly it insists that civilian defense and a program of urban decentralization rests with Washington. It sees duties for the Central Government in such fields as health and roads.

The President has taken the report under advisement, and many of its recommendations may subsequently appear in recommended legislation. Meanwhile it stands for every citizen to ponder, who cares about the fundamentals of his Government and the effects of that Government upon the welfare and happiness of his own life.

[From the Wall Street Journal of June 29, 1955]

THE PHILOSOPHY AND THE PRACTICE

Mr. Eisenhower's Commission on Intergovernmental Relations, after a 2-year study of the proper functions of National, State, and local governments, yesterday set forth this philosophy:

"Leave to private initiative all the functions that citizens can perform privately; use the level of government closest to the community for all public functions it can handle; utilize cooperative intergovernmental arrangements where appropriate to attain economical performance and popular approval; reserve national action for residual participation where State and local governments are not fully adequate, and for the continuing responsibilities that only the National Government can undertake."

As a general and theoretical proposition, this philosophy is one with which only the crustiest advocate of central power and big government will disagree. Yet when the Commission attempted to put this proposition into practice in advocating reforms in the present relationships among the different divisions of Government, it found itself in the position of advocating, in many cases, continued aid by the Federal Government with less control.

Thus while the Commission "recommends that responsibility for providing general public education continue to rest squarely upon the States and their political subdivisions" and opposes a "general program of Federal financial assistance," where States do not have sufficient tax resources Washington is justified in assisting in assisting in financing construction of school facilities. At the same time the Commission recommends that Federal grants-in-aid be continued for State forestry, for management of fish and wildlife resources, for general health purposes, and for specific categories, though tapered off as their objectives are achieved; for construction of hospitals and other health facilities, and for certain welfare services. In most cases strengthened State and local supervision of funds is suggested.

If this seems a bit like supporting local level government responsibility in principle and ignoring it in practical application, there is understandable reason for the dilemma facing the Commission.

The nut of the problem is found in the comment the Commission makes on the fiscal problems of the Federal, State, and local Governments: "If State and local governments are to absorb additional functions or to take on an increasing share of emerging governmental responsibilities, the question arises whether they are financially able to carry the load."

Many of the States and local communities have restricted themselves in the use of taxing and borrowing powers and so their officials go to the Federal Government for assistance.

Yet it may be doubted whether the States could financially carry the load even if they lifted their restrictions on taxation and debt limitation. The answer to fiscal problems in the lower divisions of government hinges directly on the tax division of the dollar. There is a point beyond which the taxpayer must go into debt to meet all his different tax obligations. The Federal Government takes by far the largest share of the average taxpayer. There is little left with which to assume additional responsibilities.

The Commission didn't go into this question of tax dollar division nearly as far as we would have liked to see it go. The answer to the problem of responsibilities of the Federal, State, and local Governments lies only in less Federal spending. As long as Federal taxing and spending remains as high as it is, there can be no proper balance in State and Federal areas of responsibilty.

[From the Christian Science Monitor of July 9, 1955]

SOAP AND WATER FOR STATE GOVERNMENTS

(By Richard L. Strout)

WASHINGTON.—In my clipping files I have an excerpt from the New York Times of October 11, 1953, telling how a circuit judge in Oregon ruled that a constitutional amendment providing for legislative reapportionment of the State the year before was valid. Thus, Oregon was about to have the first legislative reapportionment in 42 years.

I ran across the item in searching for a way to dramatize the meaning of a blue-covered, paperbound book that just came across my desk. It is the report to the President of the Commission he set up on intergovernmental relations. It was headed by Meyer Kestnbaum.

The report goes out of its way to give sympathy and encouragement to State government as against Central Government. But with the sad fondness of a mother for a favorite child that isn't doing so well at school, the report warns that improvements are in order. Big improvements.

Now let me go back to the Oregon clipping again, as an illustration. The Oregon constitution required the State legislature, the clipping said, to make a legislative reapportionment every 10 years. But the 10 years rolled around and the State legislators did nothing. The constitution said, Do this. The legislatures didn't do it. The last reapportionment had taken place in 1911, the clipping said. The voters had intervened and now a way had been cleared to get a reapportionment in 1961.

Everybody knows that urban areas are growing in the United States and rural areas diminishing. But State constitutions, in many cases, still allocate representation on a rotten borough system. Like Oregon, many ignore the requirements of their own constitution to equalize matters. In Oregon a third of the population now lives in the city of Portland, but Portland has nowhere near that representation in the legislature.

I cite this case to give a specific instance for the generalities of the Kestnbaum report: "The constitutions of 43 States call for some reapportionment in at least 1 house as often as every 10 years. In nearly half of these States, reapportionment lags behind schedule."

This is only the beginning of the detailed story of why State governments need a good scrubbing. Some State constitutions look like the cobwebby loft windows of an old barn that hasn't felt soap and water for 40 years.

There is an almost universal sentimental bias in the United States in favor of letting the States do it, if the States can do it. But the State governments, according to the Kestnbaum report, have been putting their own powers into straitjackets for years.

It seems good to one legislative session to impose a rigid limit on the amount of taxes, or the amount of debt, or the length of time a legislative session can meet, or the term of the Governor. Some constitutions earmark so high a proportion of tax revenues the report says, that the legislature's power to appropriate money applies to less than half the State's expenditures. Colorado is a good example of that.

The Kestnbaum report raises the suspicion that part of the drive for turning over troublesome social problems to the States springs from the knowledge that the States won't, or can't, do anything. But the report points out that you can't end matters this way. If the States won't act, Washington will. In fact, one of the big discoveries of the report is that big cities are bypassing the States already, and making direct cooperative arrangements with the National Government.

So there you have it. We all have a sentimental attachment to the States (as contrasted to Canada, where undelegated powers automatically belong to Ottawa). But Americans' instinct for self-government is so strong that no legislative power is likely to hang around loose for long without somebody grabbing it. That is already happening.

[From the Washington Post and Times Herald of June 30, 1955]

WATCHDOG FOR FEDERALISM

It is not surprising that the long-awaited report of the Commission on Intergovernmental Relations should have provoked a good deal of dissent. The subject with which it deals has been a source of controversy throughout our history. It will, of course, continue to be controversial in the decades ahead, but the Commission has found some substantial areas of agreement, made many valuable recommendations, and given the country a great deal of information that will be useful in discussing different facets of the problem.

In general, the report is a ringing indorsement of federalism. It finds that the Federal system invented by the Founding Fathers has given the National Government more power than it really needs to meet the changing demands of nationhood. At the same time, this system has retained within the States and local governments responsibility for a vast number of governmental services that are close to the interests of the people. Chairman Meyer Kestnbaum and his colleagues, with one possible exception, are most eager to see this relationship preserved.

It is when the Commission comes to applying this principle to specific policies that disagreement arises. For example, the Commission opposes any general Federal financial assistance to elementary and secondary education. It believes the primary responsibility for education should rest squarely on the States, and it challenges the States to rise to their obligation. Federal aid, it says, should be confined to cases in which States are found to have insufficient tax resources to support an adequate school system, and this aid should be temporary. Similarly, the Commission wishes to transfer the school lunch program to the States, with the Department of Agriculture continuing to supply surplus commodities. However sound these recommendations may be in principle, they come at a time when emergencies in the schools forbid their acceptance in practice.

In the long run the most useful part of the report may be that dealing with the shortcomings of the States. Many of them are bedeviled by obsolete constitutions, outmoded governmental machinery, unrepresentative legislatures, and tax systems that do not adequately tap their resources for revenue. Failure of the States to supply the needs of their people is probably more responsible for the overcentralization of government than any grasping for power in Washington. If the people are eager to maintain the Federal system, with its great advantages in terms of freedom and home rule, they should concentrate more effort upon the improvement of State and local governments.

The commission offers no magic formulas or panaceas. It would continue, with some changes, the grants-in-aid principle. It would continue the present tax immunities, but urges Congress to make payments in lieu of property taxes to State and local governments, a recommendation of special interest to the District of Columbia. The commission does not believe it would be feasible to divide tax sources between National and State Governments, but suggests that Congress keep in mind the need for eliminating duplication of taxes when reductions are made. While the commission has attempted to define in general terms the area in which the National Government should operate, its most significant recommendation may be the creation of a special assistant to the President to give day-to-day advice on intergovernmental relationships and become a sort of watchdog of the Federal system.

[From the Business Week of July 9, 1955]

THE TREND: TO DECENTRALIZE GOVERNMENT

One of the most important investigations instituted by President Eisenhower when he took office concerned the pressing problems of Federal-State relationships. Now, after 2 years of study, the Commission on Intergovernmental Relations has issued a report and a series of recommendations aimed at improving the complex machinery of government.

The Commission's report is especially valuable because of its commonsense, undogmatic approach. It points out the expansion of Federal power over the past 20 years has been largely inevitable. We have been living through an incredible era of sweeping change—of industrial advance and agricultural decline, of depression and war and defense for peace. Under these conditions, the Federal Government has naturally expanded its functions and activities.

The report also states that expansion has been accompanied by encroachment and extravagance. It is convinced that Federal activity can, and should, be reduced. The Commission agrees with the administration's view that government should not be doing what private enterprise can do at least as well. And it holds that the fundamental objective should be to keep centralization to a minimum and State-local responsibility to a maximum.

It is the Commission's opinion that governments at different levels should not be regarded as competitors. Rather, they must seek to coordinate and cooperate. It is only through a concerted effort that all levels can operate most effectively.

THE FAILURE OF THE STATES

The greatest need is the development of State and local responsibility. Federal power has expanded in many areas simply because the States failed to do their job. It is not enough to criticize the concentration of Federal power, or to seek to reduce the programs now operated from Washington.

Most programs operated by the Government are, in fact, essential. And if Federal activity is to be reduced, the States must develop the capacity to handle a larger share of the functions of government. Unless they do so, Federal power is bound to continue growing, if only by default.

One vital area where the States have been remiss is in the field of taxation. If they take over functions now performed by the Federal Government, it will mean a cut in our Federal taxes. But this cut will largely be offset by increases in State and local taxes. Those States that are eager to assume increased responsibility without adequate financial resources are only courting disaster.

These general ground rules are applied to many specific issues involving the Federal Government and the States. For example, the Commission recommends that civil defense be shifted from the States to Washington, which is better equipped for the job. On the school-lunch program, it recommends that State and local aid should be expanded and Federal aid dropped, except for the donation of surplus foods. On public housing and slum clearance, it urges that the States take over full responsibility and lend financial and technical help to localities.

Undoubtedly President Eisenhower will incorporate many of the Commission's specific proposals in his legislative recommendations to Congress. But no real reduction in Federal activity can be achieved without careful planning on State and local levels. This is a basic tenet of the report. As such, it serves as a valuable guide to all citizens who are intent on increasing the effectiveness and decreasing the cost of Government at all levels.

[From the Christian Science Monitor of July 25, 1955]

MAKING FEDERALISM WORK

Proper adjustment between the posers of the States and the National Government has been at the heart of the tremendously successful experiment launched by the framers of the American Constitution. Of recent years many thoughtful citizens have been asking whether the balance was not swinging too far toward centralization of authority in Washington. One of the early major projects of the Eisenhower administration was to set an able Commission to studying this question.

Those who wish to find political devils in the situation may not be satisfied with the Commission's report recently issued. For it appears more interested in such causes of

centralization as the growth of an industrialized society and the failure of the States to meet the needs of their people. But when the group, led by Meyer Kestnbaum, sets forth a basic guide it should satisfy opponents of big government:

"Leave to private initiative all the functions that citizens can perform privately; use the level of government closest to the community for all public functions it can handle; utilize cooperative intergovernmental arrangements where appropriate to attain economical performance and popular approval; reserve national action for residual participation where State and local governments are not fully adequate, and for the continuing responsibilities that only the national Government can undertake."

When it comes to application of this philosophy, the Commission finds practical difficulties. For instance, it recommends continuation of the present Federal-aid highway programs and financing with an increased Federal gasoline tax. Certainly Washington has a legitimate role to play in coordinating road building for a national highway system, but the success of toll roads proves that the States have not fully used means available to them.

Similarly with the question of schools. The Commission may appear reactionary to people who see only the need for schools when it says that Federal aid to education should be confined to States which have been found to have inadequate tax resources. But it seems to us that it is entirely sound to insist that education should be primarily a local responsibility.

This newspaper has for years campaigned for better public support of schools, particularly for more adequate pay for teachers. But we are convinced that the basic solution for this problem lies in the awakening of necessary appreciation for the schools. There is no magic in the travels of a tax dollar that is collected locally and goes to Washington to be trimmed and sent back home. Federal aid might level up school standards in some poorer States, but it should be hinged on the amount of effort they are making in their own behalf.

Indeed, in this field and many others one reason that the States do not supply some services demanded by the people is that so large a share of the citizens' taxes goes to Washington. But it is by no means the sole reason, and the Kestnbaum Commission renders a real service in pointing up deficiencies in State government. Those who believe that keeping government close to the people is a safeguard of democracy should give earnest attention to these findings and to the necessity for reform in local government.

[From the Dallas (Tex.) Morning News of June 30, 1955]

BLUEPRINT FOR SOUND REPUBLIC

No perfunctory report emerged from the President's Commission on Intergovernmental Relations submitted Tuesday. This is the study authorized by the 83d Congress, the first official one of our National-State-local relationship since the Constitutional Convention of 1787. Of the 15 members appointed by the President, 5 are governors or former governors of States (1 is our own Allan Shivers) and all are men and women of exceptional experience in Government, industry, or education. The other 10 members include 5 United States Senators and 5 Representatives.

Initially it should be said that this is perhaps the most important report Congress will have before it for many years. It is a survey of the present in the interests of the future. It is the first serious proposal to take the field of government out of the area of dispute and make it the subject of permanent policy by defining clearly the boundaries within which Federal, State, and smaller governmental units will function.

Even Congress has noted that the problem of federalism must be faced and settled. It has become an issue of paramount importance as it was in the original Constitutional Convention. Whatever else may be argued about the verbiage of the Constitution, there can be no question from the debates that the majority decided against centralized Federal power. They believed the member States to be paramount against the Federal Government. The Constitution could not have been adopted but for the belief of the people of the 13 new independent States that this was true. The present and growing centralization of power in Washington has been made possible by a new clause. Whatever else they may argue, every jurist that has given that view his stamp of approval has been fully aware that he has held contrary to the opinion of the Constitutional Convention.

The report will be discussed on this page in a series of editorials dealing with various phases of it. It has offered an excellent blueprint for a sound republic summary of the boundaries that should be set up for our entirely logical theory of interrelated governments:

"Leave to private initiative all the functions that citizens can perform privately; use the level of government closest to the community for all public functions it can handle; utilize cooperative intergovernmental arrangements where appropriate to attain economical performance and popular approval; reserve national action for residual participation where State and local governments are not fully adequate, and for the continuing responsibilities that only the National Government can undertake."

Annual Appropriations and Congressional Responsibility

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1955

Mr. DONOHUE. Mr. Speaker, a continuing problem of major importance annually facing the Congress is proper supervision and control of the budget.

Many suggestions have been made as to how Members of Congress may develop a better knowledge and understanding of the complex features of our annual appropriations bill. As we all know, the experiment of one omnibus appropriation bill was tried a couple of years ago, but it appears that a majority did not feel that method accomplished its intended purpose. I personally do not believe the experiment was carried on long enough, and I earnestly hope consideration will be soon accorded the wisdom of reviving it.

Meanwhile, it is practically universally agreed that one of the most baffling facets of this whole appropriation business is the carryover problem, the granting of moneys to the various agencies for purchase commitment in the future and beyond the fiscal year period. In relation to that problem, I should like to include a very timely editorial entitled "Control of the Budget" that I think all Members would find interesting, which appeared in the June 21, 1955, issue of the Wall Street Journal.

The article follows:

CONTROL OF THE BUDGET

If Congress voted not a nickel more for foreign aid, the foreign-aid dispensers could theoreticaly spend something like $8 billion in the fiscal year beginning July 1.

Other Government agencies, notably the Defense Department, are similarly well fixed. Altogether, the Government could spend nearly $54 billion, as against the $62.4 billion it plans to spend, in the new fiscal year without another cent from Congress.

Clearly, then, Congress has abdicated a considerable measure of its control over the budget. Not all its control, for Congress can still determine the amount that will be spent over a given number of years. What it cannot effectively control is how much will be spent in any 1 year.

This has come to be known as the carryover problem. Congress authorizes money for Federal agencies for payment of goods that may not be delivered until a year, 2 years or 3 years later—and payment is usually made on delivery. Hence the huge backlogs of funds carried over from fiscal year to fiscal year.

The Eisenhower administration attacked the problem when it came to office, gradually reducing the annual carryover from around $80 billion to the current $54 billion. But the latter figure indicates how far the administration is from having licked the problem. Now the Hoover Commission urges a frontal attack on the carryover practice itself. It advocates that the Government convert to cost budgeting. Under this system, budgets would be constructed on the basis of money actually to be spent during the fiscal year, instead of on the combination of expenditures plus new obligational authority.

The unspent appropriations—the carryover—would be rescinded. An agency like the Defense Department, which must contract for planes and ships that won't be delivered until future years, could still submit planned expenditures over a period of years, but it would get only the amount that has to be paid out during the year in question. Both the administration and Congress would continue to review such programs every year.

That such a reform makes sense hardly needs saying. The way things are now, it is a little silly to talk of appropriations for the "1955–56 fiscal year" when actually they are for 1955–56 plus part of 1956–57, a hunk of 1957–58, and maybe a bit of 1958–59. This is not an efficient way of doing the world's biggest business.

The change would also result in more economical operation. The Hoover reports so far have been, among other things, studies in waste so monumental as to give pause to even the most resigned taxpayer. Part of that waste comes simply from the fact that so much money, so inadequately managed, is available to the agencies. It is true that the funds are under annual review now, but there is a world of psychological difference between reviewing something Congress has already O. K.'d and having to justify expenditures for which new congressional appropriations must be voted.

The Hoover Commission estimates the savings from the adoption of cost budgeting and related reforms could run as high as $4 billion a year. That alone would more than cover the estimated deficit for fiscal 1956. But important as that would be, the chief significance of the Hoover proposal is not that it might make possible a balanced budget in one particular year.

The greater significance is that by restoring to Congress its control of annual expenditures it would offer some hope of restoring the principle of balanced budgets as a rule rather than as an exception.

Report to the People of the Second Congressional District of Wisconsin

EXTENSION OF REMARKS
OF

HON. GLENN R. DAVIS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. DAVIS of Wisconsin. Mr. Speaker, I include herein my seventh annual report to the people of the Second Congressional District of Wisconsin. In the six immediate preceding years I have prepared, and made available to my constituents, reports on my voting and attendance records for the sessions of Congress. This is a similar compilation for the 1st session of the 84th Congress complete to the date of sine die adjournment on August 2.

By means of newsletters and scheduled office hours for conferences throughout the district during congressional recesses I have attempted to inform my constituents and make myself available for questions relating to my work in Washington. This voting report is another attempt to keep the people of the second district as fully informed as possible on my stewardship in their behalf.

It is a complete official record. It is not a handpicked list of a few so-called committee votes compiled by some lobbyist, pressure group, or political campaign committee.

It has been my practice, and it shall continue to be my purpose, to furnish further information or explanation relating to any vote I may have cast, upon request.

My voting and attendance record for 1955, compiled from the official CONGRESSIONAL RECORD, is as follows:

Voting record, 1st session, 84th Congress

Roll-call No.	Date	Identification and result of vote	My vote
1	Jan. 5	Quorum call	Present.
2	Jan. 5	Election of Speaker of House	Martin.
3	Jan. 25	H. J. Res. 159, authorizing the President to employ the Armed Forces of the United States for protecting the security of Formosa, the Pescadores, and related positions and territories in that area. (Adopted 409 to 3.)	Aye.
4	Jan. 27	H. R. 587, to provide that persons serving in the Armed Forces on Jan. 31, 1955, may continue to accrue educational benefits under the Veterans Readjustment Assistance Act of 1952, with Jan. 31, 1955, cutoff date. (Passed 365 to 0.)	Aye.
5	Feb. 8	H. R. 3005, extending the Selective Service and Dependents Assistance Act for 4 years. (Passed 394 to 4.)	Aye.
6	Feb. 16	H. R. 3828, to adjust the salaries of judges of United States courts, United States attorneys, and Members of Congress. (Passed 283 to 118.)	Aye.
7	Feb. 17	Quorum call	Present.
8	Feb. 17	Motion for previous question on H. Res. 142, providing a closed rule, prohibiting amendments, for debate on H. R. 1, to extend authority of President to enter into trade agreements. (Not ordered 178 to 207.)	No.
9	Feb. 17	Brown amendment to H. Res. 142, providing a closed rule for debate on H. R. 1, to extend authority of President to enter into trade agreements, which amendment would provide open rule to permit amendments to bill. (Rejected 191 to 193.)	Aye.
10	Feb. 17	H. Res. 142, providing a closed rule, prohibiting amendments, for debate on H. R. 1, to extend authority of President to enter into trade agreements. (Adopted 193 to 192.)	No.
11	Feb. 18	Motion to recommit H. R. 1, extending authority of President to enter into trade agreements, with instructions to strengthen the escape-clause provision by making findings of Tariff Commission binding. (Rejected 199 to 206.)	Aye.
12	Feb. 18	H. R. 1, extending the authority of President to enter into trade agreements. (Passed 295 to 110.)	No.
13	Feb. 23	Quorum call	Present.
14	Feb. 24	Quorum call	Present.
15	Feb. 25	Motion to recommit, H. R. 4259, to provide 1-year extension of existing corporate normal tax rate and of certain excise tax rates and to provide a $20 credit against individual income tax for each personal exemption, with instructions to strike out the $20 tax credit provision. (Rejected 205 to 210.)	Aye.
16	Feb. 25	H. R. 4259, to provide 1-year extension of existing corporate normal tax rate and of certain excise tax rates, and to provide a $20 tax credit against individual income tax for each personal exemption. (Passed 242 to 175.)	No.
17	Mar. 1	Conference report on H. R. 3828, to increase the salaries of justices and judges of United States courts, United States attorneys, and Members of Congress. (Adopted 223 to 113.)	Aye.
18	Mar. 10	Quorum call	Present.
19	Mar. 10	H. R. 4720, to provide incentives for members of the uniformed services by increasing certain pays and allowances. (Passed 399 to 1.)	Aye.
20	Mar. 16	Quorum call	Present.
21	Mar. 18	Preston amendment to H. R. 4008, making supplemental appropriations for fiscal year 1955, for an additional $4 million for United States contributions to United Nations program of technical assistance. (Agreed to 174 to 107.)	No.
22	Mar. 21	Quorum call	Present.
23	Mar. 21	Motion to suspend rules and pass H. R. 4644, to increase rates of basic pay of postal employees by an average of 7.6 percent and authorize reclassification of positions. (Rejected 120 to 302.)	Aye.
24	Mar. 21	Quorum call	Present.
25	Mar. 21	Motion to suspend rules and pass H. R. 4951, directing a redetermination of the national marketing quota for burley tobacco for the 1955-56 marketing year. (Rejected 260 to 151; ⅔ vote required.)	No.
26	Mar. 22	Quorum call	Present.
27	Mar. 22	H. Res. 170, declaring that the House of Representatives does not favor sale of Government-owned synthetic rubber plants, as recommended by the Rubber Producing Facilities Disposal Commission. (Rejected 132 to 283.)	No.
28	Mar. 23	Quorum call	Present.
29	Mar. 23	H. Res. 171, to disapprove proposed sale to Shell Oil Co. of certain synthetic rubber-producing facilities in California, as recommended by the Rubber Producing Facilities Disposal Commission report. (Rejected 137 to 276.)	No.
30	Mar. 24	Quorum call	Present.
31	Mar. 28	Quorum call	Present.
32	Mar. 29	Quorum call	Present.
33	Mar. 30	Conference report on H. R. 4259, to provide for a 1-year extension of existing corporate normal tax rate and of certain existing excise tax rates. (Adopted 386 to 8.)	Aye.
34	Mar. 30	Phillips amendment to H. R. 5240, independent offices appropriation bill for 1956 fiscal year, to limit to $1 per month the fee to be paid to education institutions for reports on veterans enrolled therein. (Rejected 156 to 225.)	Aye.
35	Apr. 13	Quorum call	Present.
36	Apr. 20	Quorum call	Present.
37	Apr. 20	Moss amendment to H. R. 4644, postal employees' pay increase and classification adjustment bill, increasing average raise to 8.2 percent, in lieu of 7.6 percent provided in the bill. (Adopted 224 to 189.)	No.
38	Apr. 20	Motion to recommit to Committee on Post Office and Civil Service, H. R. 4644, postal employees' pay increase and classification adjustment bill (as increased by Moss amendment). (Rejected 125 to 287.)	Aye.
39	Apr. 20	H. R. 4644, postal employees' pay increase and classification adjustment bill (as increased by Moss amendment). (Passed 324 to 85.)	No.
40	Apr. 21	Quorum call	Present.
41	Apr. 21	H. R. 4393, to provide specific authorization for the construction on conversion of the 1956 naval shipbuilding program. (Passed 372 to 3.)	No.
42	Apr. 27	Quorum call	Present.
43	May 3	Quorum call	Present.
44	May 4	Quorum call	Present.
45	May 5	Quorum call	Present.
46	May 5	Green amendment to H. R. 12, to amend the Agricultural Act of 1949 by restoring 90-percent price supports for basic commodities, to eliminate peanuts from the list of basic commodities. (Rejected 193 to 215.)	Aye.
47	May 5	Motion to recommit H. R. 12, to amend the Agricultural Act of 1949, by restoring 90-percent price supports for the basic commodities. (Rejected 199 to 212.)	Aye.
48	May 5	H. R. 12, to amend the Agricultural Act of 1949 by restoring 90 percent price supports for the basic commodities. (Passed 206 to 201)	No.
49	May 9	Quorum call	Present.
50	May 9	Motion to recommit the conference report on S. 1, postal employees compensation increase averaging 8.8 percent, to the conferees with instructions to promptly report back a new bill. (Rejected 118 to 275.)	Aye.
51	May 9	Conference report on S. 1, postal employees compensation increase averaging 8.8 percent. (Agreed to 328 to 66)	No.
52	May 9	H. Res. 223, closed rule, permitting no floor amendments, providing for consideration of H. R. 2535, to enable the people of Hawaii and Alaska each to form a constitution and State government and to be admitted into the Union. (Agreed to 322 to 66.)	No.
53	May 9	Quorum call	Present.
54	May 10	Quorum call	Present.
55	May 10	Quorum call	Present.
56	May 10	Quorum call	Present.
57	May 10	Motion to recommit H. R. 2535, to enable the people of Hawaii and Alaska each to form a constitution and State government and to be admitted into the Union. (Agreed to 218 to 170.)	Aye.
58	May 11	Quorum call	Present.

Voting record, 1st session, 84th Congress—Continued

Roll-call No.	Date	Identification and result of vote	My vote
59	May 11	Quorum call	Present.
60	May 12	Quorum call	Present.
61	May 12	Quorum call	Present.
62	May 12	Vinson amendment to H. R. 6042; Defense Department appropriations bill for 1956 fiscal year, to delete language requiring congressional justification by the Department of Defense prior to disposal or transfer of work traditionally performed by civilian employees of the Department of Defense. (Rejected 184 to 202.)	Aye.
63	May 12	H. R. 6042, making appropriations for the Department of Defense for the 1956 fiscal year in the amount of $31.5 billion. (Passed 382 to 0)	Aye.
64	May 17	Quorum call	Present.
65	May 18	Quorum call	Present.
66	May 19	Quorum call	Present.
67	May 19	Quorum call	Present.
68	May 19	Quorum call	Present.
69	May 23	S. 727 to adjust the salaries of judges of the District of Columbia municipal court of appeals, municipal court, juvenile court, and the Tax Court. (Passed 282 to 32.)	No.
70	May 25	Quorum call	Present.
71	May 25	H. Res. 244, creating a select committee to conduct an investigation and study of the financial position of the White County Bridge Commission in connection with operation of bridges and approaches near New Harmony, Inc. (Adopted 205 to 166.)	No.
72	May 25	H. R. 2851, to make agricultural commodities owned by the Commodity Credit Corporation available to persons in need in areas of acute distress. (Passed 343 to 1.)	Aye.
73	May 26	Quorum call	Present.
74	May 26	Motion to recommit to the conference committee S. 727, to adjust the salaries of judges of the District of Columbia municipal court of appeals, the District of Columbia municipal court, juvenile court, and the Tax Court, with instructions to insist on the amendments adopted in the House. (Agreed to 170 to 165.)	Aye.
75	May 26	Quorum call	Present.
76	May 26	Motion to recommit H. R. 5881, to provide Federal cooperation in non-Federal reclamation projects, and for participation by non-Federal agencies in Federal reclamation projects, to limit scope of bill to the 17 western reclamation States. (Rejected 62 to 229.)	No.
77	June 1	Quorum call	Present.
78	June 1	Motion to recommit H. R. 3990, to authorize the Secretary of the Interior to investigate and report to the Congress on projects for conservation, development, and utilization of the water resources of Alaska. (Rejected 79 to 278.)	No.
79	June 7	S. 2061, to increase the average compensation of officers and employees of the field service of the Post Office Department about 8 percent, and provide reclassification authority. (Passed 409 to 1.)	Aye.
80	June 8	H. R. 5923, to authorize appropriation of $57 million in 3 years for completion of construction of the Inter-American Highway. (Passed 353 to 13.)	Aye.
81	June 13	Quorum call	Present.
82	June 14	Quorum call	Present.
83	June 14	Conference report on H. R. 1, to extend the authority of the President to enter into reciprocal trade agreements. (Adopted 347 to 54.)	Aye.
84	June 14	H. R. 6227, to provide some control and regulation of bank holding companies as banks, and, after 5 years, limits holding companies to banking enterprises. (Passed 371 to 24.)	Aye.
85	June 15	Quorum call	Present.
86	June 15	H. Res. 210, authorizing the Banking and Currency Committee to investigate the Federal Open Market Committee of the Federal Reserve Board. (Rejected 178 to 214.)	No.
87	June 16	Quorum call	Present.
88	June 20	S. 67, to adjust rates of basic compensation (average increase 7.5 percent) of civil-service employees of Federal Government. (Passed 370 to 3.)	Aye.
89	June 20	H. Con. Res. 109, authorizing the appointment of a congressional delegation to attend the North Atlantic Treaty Organization Parliamentrary Conference. (Adopted 338 to 31.)	Aye.
90	June 20	H. R. 6295, to provide an increased maximum per diem allowance for subsistence and travel expenses for Government officials and employees. (Passed 320 to 41.)	Aye.
91	June 21	H. R. 4663, to authorize $225 million for construction of the Trinity River division, Central Valley reclamation project, California. (Passed 230 to 153.)	No.
92	June 22	Quorum call	Present.
93	June 22	Motion to recommit to committee H. R. 6040, Customs Simplification and Administrative Procedure Amendments, with instructions to strike out sec. 2, which changes methods of fixing value to which customs duties apply. (Rejected 143 to 232.)	Aye.
94	June 23	H. Con. Res. 149, expressing the sense of Congress that the United States in its international relations should maintain its traditional policy in opposition to colonialism and Communist imperialism. (Adopted 367 to 0.)	Aye.
95	June 27	H. R. 6992, to extend for 1 year the existing temporary increase in the public debt limit. (Passed 267 to 56.)	Aye.
96	June 27	Quorum call	Present.
97	June 27	H. R. 6829, to authorize certain construction at military, naval, and Air Force installations. (Passed 317 to 2.)	Aye.
98	June 28	Quorum call	Present.
99	June 28	Motion to recommit conference report on H. R. 3005, extending selective service 4 years, and doctor-dentist draft 2 years. (Rejected 171 to 221.)	No.
100	June 28	Conference report on H. R. 3005, extending selective service 4 years, and doctor-dentist draft 2 years. (Adopted 388 to 5.)	Aye.
101	June 28	Quorum call	Present.
102	June 29	Quorum call	Present.
103	June 29	Motion to recommit conference report on S. 727, raising salaries of judges in District of Columbia, with instructions to insist on lower House-approved figures. (Rejected 157 to 227.)	Aye.
104	June 30	Quorum call	Present.
105	June 30	S. 2090, Mutual Security Assistance Act of 1955, authorizing $3.3 billion. (Passed 273 to 128.)	No.
106	July 1	Quorum call	Present.
107	July 1	Quorum call	Present.
108	July 5	Quorum call	Present.
109	July 6	Motion to recommit H. R. 3210, to authorize the State of Illinois and the Sanitary District of Chicago, to test, on a 3-year basis, the effect of increasing the diversion of water from Lake Michigan into the Illinois Waterway. (Rejected 74 to 316.)	Aye.
110	July 7	Conference report on S. 2090, Mutual Security Act of 1955. (Adopted 262 to 120.)	No.
111	July 11	Quorum call	Present.
112	July 11	H. R. 7224 making appropriations ($2.6 billion) for mutual security for fiscal year 1956. (Passed 251 to 123.)	No.
113	July 12	Quorum call	Present.
114	July 13	Conference report on H. R. 6766, Public Works Appropriations Bill for fiscal year 1956. (Agreed to, 315 to 92)	No.
115	July 13	H. Res. 295, providing for consideration of H. R. 7089, to provide benefits for the survivors of servicemen and veterans. (Agreed to 376 to 24.)	Aye.
116	July 13	Quorum call	Present.
117	July 14	Quorum call	Present.
118	July 18	Quorum call	Present.
119	July 18	H. R. 7225, to amend the Social Security Act to provide disability insurance benefits for certain disabled individuals who have attained age 50, to reduce to age 62 the age on the basis of which benefits are payable to certain women, to provide for continuation of child's insurance benefits for children who are disabled before attaining age 18 and to extend coverage and increase the contribution. (Passed 372 to 31.)	No.
120	July 18	Quorum call	Present.
121	July 18	Quorum call	Present.
122	July 19	Quorum call	Present.
123	July 19	Quorum call	Present.
124	July 20	Quorum call	Present.
125	July 20	H. R. 7214, to amend the Fair Labor Standards Act to make the minimum wage $1 an hour effective Mar. 1, 1956. (Passed 362 to 54.)	Aye.
126	July 25	Quorum call	Present.
127	July 25	Quorum call	Present.
128	July 25	Quorum call	Present.
129	July 25	Conference report on H. R. 7000, providing for strengthening the Reserves of the Armed Forces. (Agreed to 315 to 78.)	Aye.
130	July 26	H. Res. 314, to provide for 3 hours debate on H. R. 7474, the Federal-State highway construction bill. (Adopted 274 to 128.)	Aye.
131	July 27	Quorum call	Present.
132	July 27	Motion to recommit H. R. 7474, the interstate highway construction bill, with instructions to incorporate the bond-financing provisions of the Clay report. (Rejected 193 to 221.)	No.
133	July 27	H. R. 7474, the interstate highway construction bill. (Defeated 123 to 292.)	No.
134	July 28	Quorum call	Present.
135	July 28	H. Res. 317, the rule for consideration of H. R. 6645, to amend the Natural Gas Act. (Adopted 272 to 135.)	No.
136	July 28	Quorum call	Present.
137	July 28	Motion to recommit H. R. 6645, to amend the Natural Gas Act, to Committee on Interstate and Foreign Commerce for further study. (Rejected 203 to 210.)	Aye.

Voting record, 1st session, 84th Congress—Continued

Roll-call No.	Date	Identification and result of vote	My vote
138	July 28	H. R. 6645, to amend the Natural Gas Act to exempt producers of natural gas from public utility regulation. (Passed 209 to 203.)	No.
139	July 29	Quorum call	Present.
140	July 29	Wolcott amendment to S. 2126, Housing Act of 1955, which struck authorization of 135,000 public housing units. (Agreed to 217 to 188.)	Aye.
141	July 29	S. 2126, Housing Act of 1955. (Passed 396 to 3.)	Aye.
142	Aug. 1	Quorum call	Present.
143	Aug. 1	H. Res. 229, to provide $35,000 additional funds for expenses of Select Committee on Small Business. (Agreed to 231 to 134.)	No.
144	Aug. 1	S. 2576, repealing franchise of Capital Transit Co., operating in District of Columbia, providing public operation, with District of Columbia obligated to make up deficits. (Suspension of rules failed 215 to 150.)	No.
145	Aug. 1	Quorum call	Present.
146	Aug. 2	Quorum call	Present.
147	Aug. 2	Conference report on S. 2126, Housing Act of 1955, including 45,000 units of public housing. (Adopted 187 to 168.)	No.

The Highway Program

EXTENSION OF REMARKS
OF
HON. FRANK E. SMITH
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. SMITH of Mississippi. Mr. Speaker, under unanimous consent, I include a letter which I have written to several newspapers over the country:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C.

DEAR SIR: I read with interest your editorial in regard to the failure of the Congress to pass a highway program during the past session.

As a member of the House Public Works Committee who took an active part in the defeat of both the Eisenhower plan and the Fallon bill voted out of committee, I would like to call attention to several aspects of the controversy which you have overlooked.

Both plans would put all the major emphasis on Federal road construction on the interstate highway system, which currently carries only 14 percent of the Nation's traffic. Dissatisfaction with this procedure was evident in the Senate which provided for an entirely different accelerated highway program. The Fallon bill recognized the weakness of the Eisenhower plan in its failure to step-up the remainder of the Federal-aid program, but the $25 million increase per year which was provided was very minor in contrast with the vast interstate expenditures.

The major opposition to the Fallon bill, at least among Democrats, was this unbalanced aid program combined with a tax program which would have collected the greater part of the revenue from highway users who would have only indirectly benefited. These influences had greater weight with the Congress than the trucking lobby.

In addition, the Fallon bill approach as well as the Eisenhower plan, seemed to many of us to break an important constitutional precedent. With minor exceptions, Federal revenues are not earmarked, and all appropriations come out of general revenue. At first thought, linking taxes to any new expenditure may sound like fiscal responsibility, but actually it could lead to governmental chaos, as has been demonstrated in France. We would have no foreign-aid program, and a very limited defense program if this procedure were followed.

It should be obvious that there were factors other than the trucking lobby which defeated the Fallon bill. The Eisenhower plan, in addition to the above objection, was defeated because—

(1) The $12 billion interest charge involved.

(2) Creation of a corporation to conduct the program, largely outside congressional review.

(3) The freeze on Federal contributions to other portions of the Federal-aid highway system which would have been necessary to finance the plan.

The major obstacle to any compromise on the legislation has been the refusal of the administration and Republican congressional leaders to consider any plan which would recognize the highway expenditures as part of the public debt. Democratic congressional leaders are not going to accept the costly fiction of the Eisenhower plan, designed to get around the public debt limitation and to put more high interest bonds on the market. If the Republican leadership will accept regular Treasury bonds as the manner of meeting any deficit occasioned by highway spending, compromise highway legislation will be quickly approved in 1956.

Cordially,

FRANK E. SMITH,
Member of Congress.

The Townsend Plan

EXTENSION OF REMARKS
OF
HON. GEORGE M. RHODES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. RHODES of Pennsylvania. Mr. Speaker, in view of the recent discussion of the Townsend plan on the floor of the House, I would like to call to the attention of my colleagues a series of three articles on this subject which appeared in recent issues of the newspaper, Labor's Daily. They were written by Mr. George B. Holcomb, Labor's Daily staff writer. The first article is as follows:

TOWNSEND PLAN MAKING A COMEBACK—LABOR-ENDORSED SOLONS APPROVE REBORN OLD-AGE PENSION PLAN

(By G. B. Holcomb)

(This is the first of a series of articles on social security and the Townsend plan proposals for its reform)

The commercial press paid little attention this month to speeches made by several Members of the House of Representatives in support of the Townsend plan.

Yet, they are among 60 cosponsors of a bill (H. R. 4471) to legislate the plan into existence—the Townsend plan is making a comeback.

The (labor-endorsed) Congressmen who discussed the plan were Representatives GEORGE RHODES, Democrat, of Pennsylvania; Mrs. GRACIE PFOST, Democrat, of Idaho; JAMES ROOSEVELT, Democrat, of California; DANIEL J. FLOOD, Democrat, of Pennsylvania; JOHN BLATNIK, Democrat, of Minnesota; CHARLES S. GUBSER, Republican, of California; CRAIG HOSMER, Republican, of California; and JAMES E. VAN ZANDT, Republican, of Pennsylvania.

Others among the backers also are on both sides of the aisle dividing Democrats from Republicans.

There are many new voters in the Nation who don't know what the Townsend plan is. Perhaps some among the older folks have forgotten.

It reached the height of popularity in the thirties, and its supporters were among the most ardent of the champions of pensions for retired citizens.

Many observers believe the present social-security system was used as a compromise to prevent passage of the Townsend plan.

NAME-CALLING WAS ROUGH

The Townsend plan was subjected to an organized campaign of name-calling the likes of which have killed a goodly number of welfare programs. The opprobrium "creeping socialism" so common today was mild compared to some of the things the Townsend plan was called.

One of the chief reasons for this is obvious: It would cost the United States industry a great deal more than the present social-security pension plan costs; it would cost United States workers a great deal less individually.

The Townsend plan, incidentally, was named after its founder, Dr. Francis E. Townsend, an old-timer who is still very active on behalf of a better deal for old folks.

The plan might be summarized as a universal, long-term, pay-as-you-go, Federal pension system, equal benefits from which would be paid under an escalator clause based on national expenditures.

In other words:

The Townsend plan would pay benefits to each of the Nation's estimated 14.5 million retired persons of age 60 and over.

The present Federal system pays benefits to about 9½ million persons of age 65 and over—7 million under old-age and survivors insurance and the others under the old-age assistance program.

(The House has passed a bill to lower the eligibility age for women to 62 years, which would add some 800,000 beneficiaries to the program as of next January 1. It also would extend coverage to some 220,000 professional, self-employed persons.)

EQUAL PAY FOR ALL

All beneficiaries under the Townsend plan would be paid an equal sum, to be found by dividing the number of beneficiaries into the monthly contributions into the plan. (The method of payment into the plan will be discussed in art. 2.)

Using 1953 national figures, the Townsend backers estimated the average monthly benefits for the year to each of the beneficiaries would have been $138.45.

Since then, the Nation's income has grown, so the benefit would be higher, for they are based on gross national sales.

But compare the $138.45 benefit to the average amount paid to a single retired worker in 1953—$48.20.

Under the Townsend plan, a retired worker and his wife would get upward of $250 a month.

PRESENT AVERAGE $84

Under the present system, the average amounts paid to a retired worker and his wife is around $84 a month. That's under OASI.

The average under OAA varies from about $7.81 in Puerto Rico to around $77 in New York, per recipient.

The Townsend plan would pay benefits to each of the Nation's estimated 2 million or more permanently and totally disabled workers over age 18.

The Federal Government now helps about 227,000 disabled workers.

(Another 300,000 disabled persons would be assisted under the House-passed bill.)

DISABLED PAY SAME AS RETIRED

The Townsend plan calls for payment to each disabled person that same as to the retired—around $138 a month, perhaps more today.

Aid now varies from about $15 a month in the Virgin Islands to as high as $106.67 in Colorado. This includes some medical-care payments.

Under the Townsend plan the number of widows and other dependent heads of families with children under age 18 who would be helped is estimated at some 1,300,000—the same as under the present system.

But the difference lies in the amount of the benefits paid.

Under the present OASI system, some 84,500 mothers with 3 or more dependent children get an average of about $100 a month. (The average for a divorced dependent woman with 4 or more dependent children to support is $90.10.)

There also are an estimated 2,226,000 children who are not covered by the OASI system but who get aid to dependent children. They comprise more than 617,000 families or about 3.8 children per family.

The average present monthly payment to these families is $83 or so, varying from an average of about $61 in North Carolina to about $140 in Wisconsin.

The Townsend plan does not consider each child as a separate beneficiary, but each family, which means that the widow would receive the regular monthly benefit received by all other beneficiaries—$138, more or less depending on national gross receipts for the month. In addition, the children might receive benefits under the aid to dependent children program in cases of larger family units in which needs beyond the value of the regular monthly benefit might exist. At present the Townsend backers do not propose that the ADC program be eliminated.

VETS ALSO COVERED

There are some 2,640,000 disabled veterans who receive Federal benefits. These too would be covered under the Townsend plan.

There are some 108,000 blind persons who get Federal aid—averaging about $54 a month apiece.

Each would receive some $138 apiece under the Townsend plan.

To summarize, there are at least 14½ million persons receiving Federal aid of some sort in the United States. The aid seldom reaches as much as $100 a month per person. It totals around $9 billion a year, perhaps more.

Under the Townsend plan, at least 18 million persons would be getting Federal assistance. The aid seldom would be as low as $100 a month per person. Usually it would be around $138 or more.

The total would be around $30 billion a year or more.

The amount would vary directly as the Nation's prosperity varies.

Resolution Adopted by the Italian-American World War Veterans of the United States, Department of Rhode Island

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein a resolution which was adopted by the Italian-American World War Veterans of the United States, Department of Rhode Island, in executive session during its seventh annual department convention held in the city of Providence, R. I., on June 11 and 12, 1955:

Whereas the Italian-American World War Veterans of the United States have long felt that certain rights, benefits, privileges, and prerogatives extended to certain other major veterans' organizations by the Congress should be bestowed similarly upon us; and

Whereas, despite the growth of the Italian-American World War Veterans of the United States in prestige, in numbers, and in prominence in increasing areas of our country, conveyance of such vital recognition is still to be effected; and

Whereas the failure of extending such recognition to the Italian-American World War Veterans of the United States has worked a considerable handicap upon us, particularly insofar as our service and rehabilitation programs are concerned in that our service and rehabilitation officers are precluded from representing claimants before Veterans' Administration rating boards and boards of appeals; and

Whereas the efforts that have been expended in behalf of the Italian-American World War Veterans of the United States by the Honorable THOMAS J. LANE, Congressman from Massachusetts, to overcome this inequity by sponsoring and introducing legislation in the United States House of Representatives is a matter which merits particular consideration by this organization: Now, therefore, be it

Resolved, That the Italian-American World War Veterans of the United States, Department of Rhode Island, in executive session during its seventh annual department convention held in the city of Providence, R. I., on June 11 and 12, 1955, do hereby unanimously extend to the Honorable THOMAS J. LANE our sincere gratitude and appreciation for his interest and efforts in behalf of this organization; be it further

Resolved, That copies of this resolution be forwarded to Representative THOMAS J. LANE and to the Speaker of the House of Representatives; be it further

Resolved, That a copy of this resolution be forwarded to the national adjutant of the Italian-American World War Veterans for presentation and adoption at the national convention of the Italian-American World War Veterans of the United States in September 1955 at Youngstown, Ohio.

JOSEPH LEONELLI,
Department Commander.

Attest:

EMILIO CAPOMACCHIO,
Department Adjutant.

Reluctance To Employ "Middle-Agers" Is Becoming a National Crisis

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1955

Mr. DONOHUE. Mr. Speaker, one of the most disturbing problems increasingly affecting our American society, from the humane as well as economic standpoint, is that of providing employment opportunities for our older citizens.

Paradoxically and unfortunately, although the blessings of advancing medical research and science serve to bestow longer lives in our times, we nevertheless have fallen into the custom, particularly in industry, of classifying men and women of 40 as "too old." When we realize that a wartime draft embraces men up to 42 years of age, it would be thought perhaps a little humorous to conceive the maturity of 40 as too old for ordinary employment, if it were not so tragic.

There are, of course, a great number of varied and practical reasons why business, industry and even the Government itself feels that those citizens entering middle age are too told to begin any new employment. Probably first of all, these older people, often with families, cannot support themselves and their families decently at a salary acceptable to a younger beginner; pension systems developed as modern blessings too often prevail upon employers to deny positions to the middle-agers; industrial insurance programs also often serve as a bar, as well as a host of other prejudices.

The closed employment door has developed through no fault of the great legion of mature Americans in the prime of their lives. It is pathetic to think that while the technological advantages of God's providence permitting ever-increasing machine production through replacement of human beings and the developments of modern medicine are adding fruitful years to the average life term, together with the greatest population increase in our history, we are, nevertheless, being unconscionably forced by bewilderment to visit severe and extreme economic hardships upon an age bracket, and their dependents, who could contribute the most to all phases of American development. The seriousness of this situation is further frightening when we reflect that we have not yet really entered into the promising era of peaceful production through the use of atomic science developments.

Mr. Speaker, our learned psychologists and psychiatrists repeatedly testify that experience and statistics clearly demonstrate that the best employee is one of maturity and stability and possessed of a high sense of responsibility. This is a summarized but exact description of the economic value of our middle-aged citizens without reference to their greater values.

This is not, indeed, the time and place to develop an extended discussion of this

grave problem. I will not pretend to have any complete solution. There have been many studies made and there are more being made now. The challenge is being increasingly recognized. It is my simple purpose here to emphasize the concern we must all have and the continuing thought we must devote to the solution of the middle-age crisis.

Ways and means to help these mature employable citizens, men and women, to find gainful employment to support themselves and their dependents must be found through encouraging the cooperation of industry, labor, and government units at all levels.

We call ourselves a Christian country. This is primarily a moral obligation upon all of us to insure that no group of citizens in this great country is denied the opportunity to work.

I would like to compliment those conscientious persons in the United States Department of Labor who are giving constant attention to this matter, as well as the great many religious, social, industrial, and labor leaders who are earnestly searching for the corrective answer. As a nation we have met and reasonably resolved many difficulties through our growing generations. We can and will find the right way to utilize the great productive resources residing within our middle-age brackets. We can only do it by persevering study and effort. Under God's guidance and inspiration, let us keep trying.

He Fights for Conservation

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. METCALF. Mr. Speaker, the current article in the He Fights for Conservation series in Sports Afield magazine is devoted to our colleague from Wisconsin [Mr. JOHNSON].

LESTER JOHNSON is a fighter for conservation of land, water, fish, and wildlife. I am pleased to see this well-deserved recognition of his devotion and ability.

The article, by Michael Hudoba, Washington editor of the sportsmen's magazine, follows:

HE FIGHTS FOR CONSERVATION

(Eleventh in series of profiles of men in Congress leading fight for vital laws to help sport, conservation)

Representative LESTER JOHNSON, Democrat, from Black River Falls, Wis., has only been in Congress since 1953 but he's working hard for conservation of land, water, fish, and wildlife.

An original member of the growing bipartisan conservation bloc in the House, Representative JOHNSON studies the complex conservation issues, and is right on the frontline in hearings and on the floor when fights for these resources are impending.

He has introduced bills for land, water, fish, and wildlife conservation, and was the first to put in the measure for the multiple-purpose use of national forests to assure that all the public values would be protected and used wisely.

Representative JOHNSON dug deeply into the duck-stamp and waterfowl refuge program to come up with data on what has happened to the sportsmen's duck-stamp dollars. He used these facts in testimony before the House Merchant Marine and Fisheries Committee on bills to make sure the duck-stamp money was used for its original purpose. He also carried this question to the floor of the House where he spoke at length to bring it into focus for Congress.

Speculation in Government Bonds Permits Big Windfalls for Gamblers Receiving Support of an Agency of Congress

SPEECH
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. PATMAN. Mr. Speaker, Government bond prices yesterday took a severe and drastic dip. The 3 percent bonds recently issued fell off 10 32s, which is considered 10 points. That is a drastic reduction in 1 day. All bonds fell in price.

Mr. HOFFMAN of Michigan. Mr. Speaker, will the gentleman yield?

Mr. PATMAN. I yield to the gentleman from Michigan.

Mr. HOFFMAN of Michigan. What particular time is the gentleman talking about?

Mr. PATMAN. Yesterday, Monday, August 1. Now, that means that the bonds, the 72 67s, September and December, are down below 94. They are 93. There is no reason on earth why these bonds should be below par. The Open Market Committee of the Federal Reserve System can, without cost—remember this, please, without cost; it will not cost the Government 1 penny on earth—keep these bonds at par. And, they should be kept at par. Here is where the Congress has a responsibility. The people who are managing the bond prices are servants and agents of the Congress. They are our agents; they are our servants. And one of these days when they take a drastic step that is devastating and destructive to the interests of the people, we are going to be blamed for it.

Mr. HOFFMAN of Michigan. Mr. Speaker, will the gentleman yield?

Mr. PATMAN. I yield.

Mr. HOFFMAN of Michigan. Now, we just turned over the transit system to the Commissioners. Is there any distinct group that we could turn this problem over to?

Mr. PATMAN. This is national, and, of course, it applies to the 48 States and the District of Columbia. It is not a local issue, of course.

Mr. HOFFMAN of Michigan. Is there a similar body that we could turn it over to?

Mr. PATMAN. Yes. We turned it over to a similar body. Now, that is the trouble.

Mr. HOFFMAN of Michigan. The gentleman means the Federal Reserve outfit?

Mr. PATMAN. The Open Market Committee of the Federal Reserve. There are five representatives of private banks on there, and they can look after their own interests on that board, which they are doing, and they are doing a good job looking after their interests, but while they are doing that they are hurting the public interest, and the Congress is letting them continue to do it.

Mr. MILLER of Nebraska. Mr. Speaker, will the gentleman yield?

Mr. PATMAN. I yield to the gentleman from Nebraska.

Mr. MILLER of Nebraska. The gentleman is an expert on finance.

Mr. PATMAN. I disclaim that part.

Mr. MILLER of Nebraska. Supposing bonds were kept above par, would that be inflationary?

Mr. PATMAN. Not necessarily so. There are several ways to keep down inflation. They could raise the rediscount rate if they wanted to, or they could change the reserve requirements of the banks. There are several ways to prevent inflation. You do not have to reduce the price of bonds to prevent inflation. This is a cruel remedy. Now, one thing that is happening now that was not known until recently, they are actually selling Government bonds short, selling them short in a market that is unregulated, an unregulated Government bond market, selling the bonds short. It is something that should receive the attention of the United States Congress.

Mr. HOFFMAN of Michigan. Mr. Speaker, will the gentleman yield further?

Mr. PATMAN. I yield.

Mr. HOFFMAN of Michigan. Now, I do not have any bonds and I do not know anything about the market or selling, but what does the gentleman mean? Does the gentleman mean that the United States Government is selling its bonds for less than they are worth?

Mr. PATMAN. No.

Mr. HOFFMAN of Michigan. Explain that to me.

Mr. PATMAN. The private dealers are selling them short.

Mr. HOFFMAN of Michigan. Short bonds?

Mr. PATMAN. Government bonds. And they are being helped by our Government, the agents of the United States Congress, the agents of the gentleman from Michigan. They are aiding and abetting the short selling of these bonds. And, he is responsible. The gentleman from Michigan and the gentleman from Texas are responsible.

Mr. HOFFMAN of Michigan. Does the gentleman mean I am responsible?

Mr. PATMAN. Yes, the gentleman is responsible. They are your agents.

Mr. HOFFMAN of Michigan. But I do not own any bonds.

Mr. PATMAN. I know.

Mr. HOFFMAN of Michigan. And I am not selling any bonds.

Mr. PATMAN. The gentleman is a very valuable and able representative of the people from Michigan——

Mr. HOFFMAN of Michigan. Oh, that I admit.

Mr. PATMAN. And the Constitution charges the Congress with a duty, and in charging the Congress with a duty the gentleman assumes a part of that responsibility when he takes his oath of office.

Mr. HOFFMAN of Michigan. What I want to know is what this short business is.

Mr. PATMAN. Well, it is selling them short.

Mr. HOFFMAN of Michigan. I do not know what the gentleman means when he says "selling them short."

FLUCTUATIONS IN GOVERNMENT BOND PRICES, 1953, 1954, AND 1955

Mr. PATMAN. The following table shows how long-term United States Treasury bond prices have fluctuated during the last 2 years of flexible-monetary and debt-management policies. June 1, 1953, represents the low point reached in the Government bond market following the tight credit policies of early 1953. July 16, 1954, marks the peak in bond prices reached during the recession in business and the Federal Reserve's temporary shift to easy money. August 2, 1955, represents the low point reached in the period of so-called mild restraint.

Bond issue	June 1, 1953	July 16, 1954	Aug. 2, 1955
2½s 62–59	98 8/32	101 14/32	95 29/32
2½s 64–69	90 23/32	101 12/32	94 6/32
2½s 67–72	90 4/32	100 23/32	93 30/32
3¼s 78–83	98 29/32	111 3/32	104

A change of one thirty-second in the price of long-term Government bonds is equivalent to $312.50 per million. The change in points in Government bond prices for the period June 1, 1953, to August 2, 1955, is shown in the following table:

Bond issue	Change in points	
	June 1, 1953, to July 16, 1954	July 16, 1954, to Aug. 2, 1955
2½s 62–59	+9 6/32	−5 29/32
2½s 64–69	+10 17/32	−7 6/32
2½s 67–72	+10 18/32	−6 25/32
3¼s 83–78	+12 25/32	−7 13/32

The 40-year 3-percent bonds were not outstanding in 1953 and, therefore, could not be included for comparative purposes in the table above. However, these bonds first issued in February of 1955 were marked down considerably as a result of heavy selling in July. As a result, the 3-percent bonds broke below their par price for the first time since their issuance. Between June 14, 1955, and August 2, 1955, the 3-percent bonds fell from 101 9/32 to 98 20/32 a loss of 2 21/32.

SHORT SELLING OF GOVERNMENT BONDS BY DEALERS

Sales by Government bond dealers for future delivery—so-called short selling—played a role in the decline of the 3-percent bonds. The American Banker, July 29, 1955, noted:

Last Friday the 3-percent bonds broke par and on Monday they were really weak and are reported to have sold as low as 99.19. This weakness was in spite of the Federal doing some buying for the Treasury trust funds; and a State fund also being a buyer.

The dealers who were selling 3's for future delivery at slightly under par have already done very well.

Smaller banks are getting a little worried by the fact that the market for their Governments is so much under the values on their books.

I have made inquiry of Chairman Martin of the Board of Governors of the Federal Reserve System as to the extent of short-selling of Government bonds by addressing a letter to him as follows:

JULY 15, 1955.

Mr. WILLIAM MCCHESNEY MARTIN, Jr.,
Chairman, Board of Governors of the Federal Reserve System,
Washington, D. C.

DEAR MR. MARTIN: It would be of great interest to me if you could let me know the extent to which the Government bond market may be characterized by short selling. I would be interested in knowing what the institutional procedures are for short selling of Government bonds, the volume of such sales, and the trend. I assume that the Open Market Committee in its dealing with recognized dealers probably receives regular reports on their financial position, and hence on their short- and long-inventory positions.

Very truly yours,

WRIGHT PATMAN.

An answer has been promised almost daily, but to date, no answer has been received.

The SPEAKER. The time of the gentleman from Texas has expired.

Trucks and Taxes

EXTENSION OF REMARKS
OF
HON. FRANK E. SMITH
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. SMITH of Mississippi. Mr. Speaker, under unanimous consent, I include a letter from one of our distinguished colleagues, published in the St. Louis Post-Dispatch:

TRUCKS AND TAXES

To the EDITOR OF THE POST-DISPATCH:

I have just read your July 21 editorial, The Truck Lobby in High. Not once in it is there reference to the arguments advanced by the trucking industry against the proposed method of paying for the new highway program through additional taxes on gasoline, tires, trucks, buses, etc.

Now I can say this with a great deal more force because I do not happen to agree with the case presented by the trucking industry, although I respect many of the facts and arguments they have advanced. Furthermore, I respect both the honesty and forthrightness of their position and I certainly respect their right, and I might add, their duty, to present their side of the case to the Congress as long as they do it fairly and factually.

I am disturbed about this method of paying for our highways because it breaches a basic constitutional Federal approach to taxation. That is, there shall be no earmarked taxes and all taxes must go into general revenue and all appropriations must come out of general revenue.

This basic approach has been breached twice in the past and, in my judgment, has led to serious fiscal troubles which are still with us and will be further aggravated. A third major breach might well mark an end to this basic approach to Federal financing.

Incidentally, I am even more opposed to the special revenue bond approach for financing the highway program proposed by the Eisenhower administration. This, in my judgment, would lead to even greater fiscal irresponsibility in the long run and will, as your editorial suggests, cost more.

THOMAS B. CURTIS,
United States Representative,
Second Missouri District.

WASHINGTON.

A Great Modern Patriot

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 27, 1955

Mr. DONOHUE. Mr. Speaker, those of us having high legislative responsibility perhaps realize the deepest how great and good a patriot and statesman was Cordell Hull.

I am pleased to include at this time a most appropriate editorial appearing in the July 26, 1955, issue of the Christian Science Monitor most deservedly praising his life and work.

The article follows:

A TOWERING PUBLIC FIGURE

Cordell Hull could well serve as a model of qualities desired in a devoted and practical public servant. He had simple dignity, political discernment, commonsense, and fairmindedness. But probably the quality which most characterized him was a kind of bedrock integrity.

He had convictions—the kind men spend a lifetime serving. But he had also patience and consideration for an opposing view. Born in a log cabin of a Tennessee mountaineer father and product of a 1-year course in law, he fought many a wily political battle to win and hold a seat in Congress for over 20 years.

During that period he earned a respect which heightened with his service as Secretary of State to President Franklin D. Roosevelt during the controversial years of the New Deal and the crucial early years of World War II. Though he had been chairman of the Democratic National Committee from 1921 to 1924, he was able to chart a bipartisan policy in the struggle with authoritarianism.

He is said to have told a close friend that he wished to be remembered most for four accomplishments: his part in the creation of the United Nations, establishment of a nonpartisan foreign policy in World War II, development of the "good neighbor" policy toward Latin America, and authorship of the reciprocal trade agreements program for tariff reductions and freer world trade.

The last is probably his most distinctive monument. It is a direct outgrowth of the first speech he ever made in the House of Representatives, an espousal of the low-tariff policy of his party in 1908. It was also a gradual rather than convulsive method which has commended itself to the Eisenhower administration.

It is perhaps less widely recalled that he took a leading part in two inter-American conferences and that he guided the dis-

cussions at Dumbarton Oaks in Washington which laid the ground plans for the United Nations. But these things, too, added to his stature in history.

Resolutions of Outdoor Writers Association of America

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. METCALF. Mr. Speaker, the Outdoor Writers Association of America is an organization composed of 2,000 authors and newspaper, magazine, radio, and television outdoor writers and editors. They know the outdoors. Many of them are experts in the field of conservation. They know the problems on local, State, and National levels.

Therefore, conservationists everywhere will be interested in these resolutions adopted by the association in convention at Rangeley, Maine, June 19 to 25:

RESOLUTION NO. 1

Whereas the highways of America are travel arteries leading through our areas of scenic beauty; and

Whereas these said highways should be a part of this scenic beauty, not scars on the face of it; and

Whereas thoughtless people despoil these highways and, with them, this scenic beauty, by scattering obnoxious debris along them and over adjacent areas; and

Whereas some States have laws against this pollution, and commendably enforce them, while other States have laws and do not enforce them, while still others do not have such laws at all; and

Whereas the Outdoor Writers Association of America represents all sections of the Nation and possesses the means of reaching great numbers of people throughout the mass media of newspapers, magazines, radio, and television, with great opportunities for public education and action, so that our combined efforts would do much to eliminate this inexcusable despoilage of our roadsides: Therefore, be it

Resolved, That the Outdoor Writers of America go on record as commending existing State and local programs and approving adoption by every State of laws against such littering and further, as demanding rigid enforcement of existing laws, and finally, as pledging ourselves to individual campaigns against such garbage dispensers and defilers while urging action upon other members of our State chapters, fully realizing that our educational efforts will in the end prove even more effective than laws.

RESOLUTION NO. 2

Whereas appropriation of public land under present mining laws is deterrent to sound management, in the public interest, of the watershed, timber, recreation, wildlife, and wilderness resources of the national forests;

Whereas there are frequent abuses of present mining laws through filing of claims for other purposes than mining;

Whereas there has been introduced in Congress S. 1713 by Senator CLINTON P. ANDERSON, and H. R. 5891 by Representative ROGERS to prevent abuses of the national forests; and

Whereas enactment of this bill would provide a minimum acceptable level of safeguards for effective national forest administration by clearing up the confusion of overlapping, poorly defined claims and by removing much of the incentive for the abuse of the mining laws, while at the same time protecting legitimate mining operations: Now, therefore, be it

Resolved, That the Outdoor Writers Association of America urges the prompt enactment of the objectives of S. 1713 and H. R. 5891; and be it

Resolved further, That a copy of this resolution be sent to all such Members of the United States Congress and to all such other groups and individuals as may be interested.

RESOLUTION NO. 3

Whereas some 180 million acres of national forest lands form unposted hunting, fishing, and recreational areas for all Americans; and

Whereas H. R. 1823 by Representative LEE METCALF would provide for multiple uses of these areas, and provide funds for a stepped-up program for wildlife habitat and recreation: Now, therefore, be it

Resolved, That the Outdoor Writers Association of America urges the Congress to enact legislation embodying the objectives of H. R. 1823 thus implementing public use of these lands; and be it

Resolved further, That a copy of this resolution be sent to all such Members of the United States Congress and to all such other groups and individuals as may be interested.

RESOLUTION NO. 4

Whereas there has been introduced in the Congress S. 890 to extend the Water Pollution Control Act to prevent or lessen pollution of the Nation's waters; and

Whereas failure of the Congress to enact such legislation would halt the progress that is being made in the fight against pollution: Now, therefore, be it

Resolved, That the Outdoor Writers Association of America requests the Congress to act favorably this session in order that the present water pollution control program may be continued without interruption; and be it

Resolved further, That a copy of this resolution be sent to the Members of Congress and to all such groups and individuals as may be interested.

RESOLUTION NO. 5

Whereas the Outdoor Writers Association of America recognizes that the national wildlife refuge system is of the utmost importance in the continued welfare of the many native species of game birds and mammals; and

Whereas there has been introduced in the Congress H. R. 5306 by Representative LEE METCALF and S. 2101 by Senator HUBERT HUMPHREY which would require the Secretary of the Interior to obtain the prior approval of the Congress before relinquishing any part of the national refuge system: Now, therefore, be it

Resolved, That the Outdoor Writers Association urges the prompt enactment of H. R. 5306 and S. 2101; and be it further

Resolved, That a copy of this resolution be sent to Members of Congress and to all such groups and individuals as may be interested.

RESOLUTION NO. 6

Whereas there have been introduced in Congress S. 1079 by Senator GEORGE AIKEN and H. R. 4004 by Representative CLIFFORD HOPE which would authorize the Secretary of Agriculture to sell national forest lands; and

Whereas the wording of this proposed legislation is vague and subject to a broad latitude of interpretation which could be inimical to the public interest in a sound national forest program: Now, therefore, be it

Resolved, That the Outdoor Writers Association of America is opposed to the granting of such discretionary administrative authority to the Secretary of Agriculture unless the legislation contains all the safeguards which would adequately protect the national forest program in the public interest; and be it further

Resolved, That a copy of this resolution be sent to the Members of Congress and to such group and individuals as may be interested.

RESOLUTION NO. 9

Whereas the Outdoor Writers Association of America recognizes the need for wise use of the water resources of the upper Colorado River Basin; and

Whereas the Congress of the United States is now considering various proposals for the development of such water resources; and

Whereas none of these proposals provide either protection for national park and monument areas or for wise development of the waters of the Colorado River: Then, therefore, be it

Resolved, That the Outdoor Writers Association of America in convention assembled, urges the Congress to defeat the pending versions of the upper Colorado River storage project; and be it further

Resolved, That the interim committee which made the preliminary survey and reported to this convention be duly designated as a permanent committee with the specific charge of preparing an alternate to existing proposals to be presented to the Congress at such time as the threat to Echo Park Dam and all other national parks and monuments permits impartial consideration of such alternatives.

As you know, H. R. 5891, subject of the second resolution, has become Public Law 167. The other legislation discussed here remains to be acted upon next year.

Continued Slander Against Free China

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. JUDD. Mr. Speaker, under leave to extend my remarks, I include a letter recently received from Dr. Marguerite Atterbury, who is now on Formosa as one of the officials of the American voluntary relief organization, Aid Refugee Chinese Intellectuals, Inc. Dr. Atterbury has been a missionary in China since 1920, with work especially among rural people. She is a graduate of Wellesley College and received her doctor of philosophy degree from Columbia. The letter follows:

It is very agonizing to me to know the basic facts about the Far Eastern situation—at least as to the constructive record of the Chinese Nationalist Government, and the bloody crimes of the Communists—and not be able to shout these facts to the world. Representative POWELL at the Bandung Conference reported later that there was little support for the Nationalist Government of China there. Papers elsewhere stated that the arch-murderer, Chou En-lai, had been applauded by 5,000 people when he arrived in Indonesia, and when he took off. Yet Mao Tse-tung and Chou En-lai have been responsible for the most hideous chapter of torture and terror in the whole history of Asia; while the stanch loyalty of the Na-

tionalists to the principles of freedom is helping to protect the flank of the free world, and to maintain the independence of the threatened countries in the path of the Red menace. Yet not one single country in the Bandung conference expressed any appreciation of what the Free Chinese were sacrificing in order to stand on the firing line against the Red tyrants.

We have been translating sickening records of our refugees, in their sufferings under the Communists. The lists of sadistic tortures is simply incredible. We have a 100-page manuscript of a Chee-loo University biology professor describing at first hand the Communist takeover of the university, then his own experience in various prisons, and finally in a slave-labor camp from which he escaped by a miracle. The systematic enslavement and degradation of China's millions should unite the free, Christian world in a storm of protest against these hideous inhumanities. Every decent human being should be bracing himself to sweep these monsters from the earth. But instead, the apathetic "good" people of America, especially the clergy, urge sitting down to negotiate with the Mao-Chou villians, and clamor to hand over the free offshore islands to this appalling fate. How can loving, kind parents and idealistic young people in America sit idly by while millions are being horribly done to death in China? Especially since it was America's blunders at Yalta and during the Marshall mission which helped to topple our China ally into the abyss, while Japan and Greece were being faithfully protected from the same Communist menace that we aided and abetted in China.

The article of Herrymon Maurer in the April 4, New Leader, Formosa and Free World Policy, comes the nearest to acknowledging the cconstructive achievements of the nationalist government of anything I have read. But Mr. Maurer doesn't begin to go far enough in his assertions that the Chiang Kai-shek regime did accomplish something on the mainland, after all. Most articles on China manage to get in some nasty digs at Chiang Kai-shek, even when purporting to be anti-Communist. K. C. Wu's interview in the U. S. News & World Report last Februahy, I think it was, managed to get in the two statements that the Nationalist Government had been repudiated by the people on the mainland and didn't amount to much on Taiwan, along with a lot of obvious remarks about the Communist menace in southeast Asia. Not a word about the faithfulness of the Nationalist Government in resisting communism from the very beginning until now. The March Reader's Digest has a fine article about Dr. Jimmy Yen's rural reconstruction work in the Philippines. But it has two absolutely unjustified slurs on Chiang Kai-shek which help to confirm the carefully planted Communist stereotypes about him. Page 142 says: "Had that program been carried out on a wider scale, with more vigorous backing, it might well have saved China from its totalitarian fate. As it was, the effort reached its peak only in the 2 years before the Red inundation in 1950. Justice William O. Douglas is convinced, he writes in the book North From Malaya, that had this program been carried out a decade or even 5 years earlier, it could easily have become the counterrevolution that could have swept communism aside."

On page 148, this article, Jimmy Yen and the People's Crusade, says: "After V-J Day, Dr. Yen set the reconstruction of the rural population of the entire country as his goal. For this he needed top government support and sufficient funds. But Generalissimo Chiang Kai-shek told him, in effect, that he was a soldier first and that his job was to exterminate the Communists. Only then could he take up such an ambitious program of present reconstruction."

Both the above quotations are entirely unjustified by the recorded facts. The abundant source materials of history establish that the Nationalist Government, from its very beginning, was heart and soul enlisted in the cause of rural welfare. It did a great job of relief and reconstruction during the flood of 1931, when as many Chinese farmers were involved as the total United States farming population. The dikes constructed would have built a wall about the earth at the Equator 6 feet wide and 6 feet high. The welfare pattern, when established, became the norm for the great agricultural extension movement of China. By 1945, a national commission of agricultural extension had been established, with organizations in 14 provinces, and 300 counties. The leaders, trained in America, were promoting better land utilization, and pilot projects in land distribution.

Hubert Freyn, in Free China's New Deal (Macmillan's, 1943) records the rural welfare work during the Japanese war. This book, of course, received no publicity in leading book reviews. Pearl Buck's booklet, Tell All the People, describes how Chiang Kai-Shek and Madame Chiang eagerly listened to Dr. Yen's account of Ting Hsien. Generalissimo Chiang sent his own cadets to train there. I know from my own 10 years' rural welfare experience how the Nationalist Government cooperated with our rural-improvement programs with great enthusiasm. I collected about 150 pounds of first-class primary source material for my thesis on China's rural reconstruction. But it has been impossible to get this vital historical material published. So the Communists and well-meaning but badly informed people spread the slander of the corrupt and inept Kuomintang. If everyone thinks the Kuomintang was a failure, the United States public says, what's the use of putting back a government that was thrown out by the people?

It is extremely important for the people of America to know the truth about their great China ally; so that the United States can support China's Valley Forge with the same faith and enthusiasm that Lafayette brought to our own Revolution.

One of the biggest assists that the free world could get would be just to publish the records which establish the truth about Free China's constructive achievements, and the criminal deeds of the Communists. I don't know any commercial publisher that will touch this material because the Communists would make him lose money. Geraldine Fitch's Formosa Beachhead is by far the best account of the China situation today, but it hasn't sold well, and has received almost no book reviews. Columbia wouldn't even put it in its university libraries when I was there, although I kept recommending it. The Ford Foundation is spending millions on anti-anti-Communist material; but no one will give voice to the authentic cry of freedom.

The magnificent schools here also need funds for libraries and laboratories, and for student scholarships. Everyone wants to go to school, and they study like mad. The schools aren't enough. One school I visited at I-lan has students coming by train from miles away. They get up at 5 and get home by 9 at night. The train was packed with these neat, alert boys in their khaki uniforms, studying their textbooks by the dim light of the car as they bounced along the tracks. The Foreign Operations Administration has given a good deal of equipment to the agricultural and industrial schools. But the students could use a good deal more.

Loyally,

MARGUERITE ATTERBURY.

Safety First

EXTENSION OF REMARKS
OF

HON. HAROLD D. DONOHUE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 27, 1955

Mr. DONOHUE. Mr. Speaker, we are all appalled at the tremendous number of deaths and the thousands of severe injuries annually occurring upon our crowded highways, but few of us ever take the time to think up constructive suggestions.

I am, therefore, the more pleased to include a very fine article appearing in the Worcester (Mass.) Evening Gazette, issue of July 18, 1955, explaining that the installation of seat belts would very probably greatly reduce this dismaying accident rate, according to the experts. This seems truly to be a most constructive suggestion, the adoption of which could very likely save the life of any one of us.

The editorial follows:

SEAT BELTS COULD SLASH OUR HIGHWAY TRAGEDIES

The year 1954 saw 36,300 Americans die in traffic accidents. Injured were more than 1,250,000. With more cars rolling off the assembly lines and onto the roads every year, this dismal story seems likely to get even grimmer in the future unless something is done about it.

According to an article in the current Saturday Evening Post, something may be done about it fairly soon. Appalled by the ghastly toll of death and destruction on the highways, the automobile companies, the National Safety Council, the armed services, and the State police of certain States are looking with interest at the seat belt. According to some experts, if seat belts were installed and used on all cars, traffic fatalities would plummet overnight.

The seat belt is, of course, standard equipment on practically all airplanes. Countless pilots have been saved from death and disfiguration by the fact that their seat belts made it possible for them to stay in their cockpits and decelerate their speed with their planes when they cracked up.

The same principle holds in automobiles. When a crash takes place, the occupants of the car are hurled forward, either through the windshield or into the lethal array of knobs and metal edges that adorn the dashboard.

According to the studies made by the automotive crash injury program at Cornell Medical College, properly installed seat belts would radically change this dangerous situation. Car interiors would automatically be transformed into "islands of safety" from the death traps that they are now.

So impressive are the tests of these simple safety devices, that more than 500 State police cars in California have been supplied with them. The Defense Department is seriously considering installing them in the thousands of military vehicles it owns. And 2 of the 3 largest automobile manufacturers are offering seat belts as optional equipment.

The biggest obstacle to seat belts, everyone admits, lies in the reluctance of the American people to change their habits, especially if the change involves even the slightest bother or expense. But there are signs that the public is waking up to the menace of the highways.

Misunderstandings and Distortions Regarding Doctors' Draft Law

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. JUDD. Mr. Speaker, some weeks ago the House bill to extend for 4 years the Selective Service Act was amended in the other body to include a title amending and extending the doctors' draft law. In conference the conferees on the part of the House accepted this title, even though the House had been given no opportunity to discuss and debate this issue on its own merits.

During consideration of the conference report, many of us, I am convinced the majority, wanted to recommit the conference report to the conferees with instructions to strike out the title on the doctors' draft, in order that it might be considered as separate legislation. Our effort failed because many Members did not want to be put in a position where their vote might conceivably be represented as a vote against extension of selective service, when it was only a vote against improper inclusion of the doctor's draft law in the bill.

The unfavorable impression created by such maneuvers is portrayed in a letter received from a distinguished physician who was in the House gallery during the debate on the conference report, and who is familiar with the whole procedure by which the Armed Forces has been securing adequate numbers of physicians during and since the war.

Under leave to extend my remarks, I include his letter:

JULY 8, 1955.

The Honorable WALTER H. JUDD,
House of Representatives,
Washington, D. C.

DEAR WALTER: I tried to call you before I left Washington last week to express appreciation and commendation for the efforts you made to have the doctor draft bill recommitted to the conference committee.

I made it a point to be in the gallery to hear the debate and felt very depressed over the tactics that were used to force that bill through. It was certainly ruthless.

In fact, listening to some of the Members appeal for passage of the bill on the basis of statements that were wholly or partially misleading make one almost lose faith in our legislative process. Among the impressions which they obviously wished to create were the following:

1. That the American Medical Association proposes that the care of military dependents be discontinued, and that the failure to pass this bill would leave the wives and children of military personnel in oversea and remote areas without medical care. This, of course, is a completely false impression. The AMA has never suggested that dependent care be discontinued. What they have suggested and feel is right is that the civilian facilities and civilian physicians be utilized to provide this care wherever available.

2. That only 1 percent of the beds in military hospitals are occupied by dependents and the discontinuance of all dependent care would save only an insignificant number of medical officers.

3. That the military services will be several thousand physicians short of their minimum requirements if this bill is not passed. The figures he used are the inflated estimates of the Defense Department and include the needs of USPHS. The fact that the Medical Task Force of the Hoover Commission and the Health Resources Advisory Committee of the Office of Defense Mobilization both stated that they are convinced that the Services can operate without the Draft Act was given no consideration at all by the chairman in charge of the debate.

4. That even if they are able to get enough physicians to meet their minimum numerical requirements, they would have only incompletely trained physicians right out of their internships. One of these speakers even asked the question, "If your boy needed an operation while in the military services, would you want him to be operated upon by a youngster just out of medical school?" They completely ignored the facts that approximately two-thirds of the regular corps officers are certified board specialists; that the military services have training programs which will provide them with several hundred specialists each year; and that in many areas they can obtain services of civilian specialists on a basis similar to the Veterans' Administration.

5. That failure to pass the bill would in essence amount to Congress passing a bill to draft the young men of the country for military service without providing them with essential medical care.

6. That failure to pass the bill would mean that the wives and other dependents of servicemen would not receive any checks for their living expenses after July 1; and that without this particular bill the selective service system would completely disintegrate and would go out of existence at midnight, June 30. Also, that "unless we pass this bill today, we imperil the safety of the Nation." Such statements are clearly untrue since in a few minutes the conference committee could have separated the general Draft Act and the doctor draft bill and obtained prompt action on them separately. In fact, the general Draft Act had already been passed by the House.

Incidentally, all three speakers for the passage of the bill stated that this law will not result in the drafting of a single physician who has had any military service. That statement, certainly, will not be true if the services are permitted to call by draft the number of physicians that they state will be needed over the next couple of years.

In the above comments I, of course, have not told you anything that you do not know far better than I, but to one who is not accustomed to this type of political maneuvering it is most disheartening to see legislation of real importance forced through Congress by such tactics.

Most sincerely.

Resolutions of the Polish Legion of American Veterans, United States of America

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1955

Mr. DONOHUE. Mr. Speaker, I would like to include a communication, containing several resolutions, forwarded to me by Comdr. Francis R. Dobrowski, of the Massachusetts State Department of the Polish Legion of American Veterans, United States of America.

The letter follows:

MASSACHUSETTS STATE DEPARTMENT,
POLISH LEGION OF AMERICAN VETERANS, UNITED STATES OF AMERICA,
August 1, 1955.

Hon. HAROLD D. DONOHUE,
House of Representatives,
Washington, D. C.

SIR: Whereas it has come to the attention of the American people that American citizens are being held prisoners in Red China, Russia, and other Communist countries: Therefore, be it

Resolved, That the United States take effective and immediate action to obtain the release of American citizens imprisoned by the Communists; and be it further

Resolved, That a copy of this resolution be forwarded to the President of the United States, the Secretary of State, the United States Senators and Congressmen from Massachusetts.

Whereas there have been many instances on the part of some legislators and other individuals to cut back on veterans' benefits; and

Whereas there actually have been a number of cutbacks effected; and

Whereas certain veterans affected by these cutbacks of benefits have been hurt and have suffered hardships: Therefore, be it

Resolved, That the Department of Massachusetts, Polish Legion of American Veterans, go on record as opposing further cutbacks in veterans' benefits; and be it further

Resolved, That a copy of this resolution be sent to the United States Senators and Congressmen from Massachusetts.

Whereas, by the terms of treaties with certain foreign countries, United States military personnel are tried by the courts of those countries for offenses committed therein; and

Whereas there have been instances where certain American military personnel did not receive justice as justice is known in the United States at the hands of those foreign countries: Therefore, be it

Resolved, That the Massachusetts State Department, Polish Legion of American Veterans go on record as opposing the provisions of these treaties under which certain American military personnel are tried by foreign courts; and be it further

Resolved, That a copy of this resolution be sent to the United States Senators and Congressmen from Massachusetts.

Very truly yours,
FRANCIS R. DOBROWSKI.

Outstanding Service of Maj. Gen. Verne D. Mudge

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Tuesday, August 2, 1955

Mr. KEFAUVER. Mr. President, I ask unanimous consent that there may be printed in the Appendix of the RECORD a resolution by the Committee on Armed Services relative to the outstanding services of Maj. Gen. Verne D. Mudge.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

Whereas Maj. Gen. Verne D. Mudge has been a professional staff member of the Committee on Armed Services of the United States Senate from 1947 until the present; and

Whereas during this period of service he has demonstrated exceptional competence in assisting the committee under the chairmanships of Senator Chan Gurney, Senator Millard Tydings, Senator Leverett Saltonstall, and Senator Richard B. Russell; and

Whereas he has given the committee the benefit of his broad military experience while maintaining scrupulously a viewpoint of complete objectivity; and

Whereas by the energetic application of his talents General Mudge has contributed immeasurably to committee and Senate action on the many items of legislation affecting the Department of Defense and the national security enacted during the period of his service; and

Whereas he has endeared himself to the members of the committee and its staff by his outstanding ability, his wise and friendly counsel, and his loyalty to the members and staff of the committee; and

Whereas after 8 years of service, General Mudge is resigning from his position on the staff of the committee: Now, therefore, be it

Resolved, That the Committee on Armed Services expresses its profound appreciation to Maj. Gen. Verne D. Mudge, United States Army, retired, for his dedicated service of the highest quality, and extends its sincere wishes for his future health and happiness.

Conflicting Transportation Policies

EXTENSION OF REMARKS

OF

HON. PAUL J. KILDAY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 30, 1955

Mr. KILDAY. Mr. Speaker, the Congress, and the country generally, should be alerted to practices of certain agencies of the Federal Government which, contrary to sound national policy, are weakening the defense potential of the Nation's essential system of common carrier transportation.

While the Congress and those administrative agencies specifically charged by law with responsibilities for maintaining a sound transport system bend their efforts toward the development and preservation of strong carriers capable of meeting the needs of the national defense, as well as of the peacetime economy, other agencies of the Government are engaging in practices which undermine this effort. The military departments, in particular, are out of step. By their transportation procurement policies, their practices with respect to leasing aircraft, and by direct competition with common carriers, the military services increasingly deny essential support to the carriers which would have to form the backbone of the logistics system in event of war.

Defense transportation was placed in true perspective as an essential element of military strength by the late Gen. Brehon Somervell, who was commanding general of the Army Service Forces in World War II, when he said, in 1944:

We in the Armed Forces of the United States think of transportation as a military tool—a weapon as important as the very tank or gun it transports from factory to fighting front.

In 1944, the peak war year, this "military tool"—our transport system—handled 76 percent more freight traffic, in military equipment, material to support defense production, and goods for civilian consumption, than in 1940. The system handled 3½ times as much passenger traffic in 1944 as in 1940, much of it troop movements. Almost all of this additional traffic was handled by carriers which operated in 1940 to serve a peacetime economy. The railroads, which fortunately had maintained spare capacity, almost doubled their freight traffic, while their passenger traffic quadrupled during the period. This remarkable performance prompted Maj. Gen. Charles P. Gross, Chief of Transportation, Army Service Forces, in 1944 to say:

Without the railroads, the war might of our country could not be mobilized.

Our declared national transportation policy recognizes the importance of anticipating transportation requirements for defense. It prescribes Federal promotion of safe, adequate, economical, and efficient service, provides that sound economic conditions in transportation be fostered, and requires that reasonable charges be established and maintained, all to the end of developing and preserving a national transportation system adequate to meet the needs of the commerce of the United States, of the postal service, and of the national defense. Although the Department of Defense is not specifically required as a matter of law to adhere to this policy declaration as contained in the Interstate Commerce Act, its principles are certainly no less valid with respect to sound military policy and practice than in any other direction affecting a sound and dependable transportation system.

Giving emphasis to this view the Presidential Advisory Committee on Transport Policy and Organization, in its report to the President in April of this year, proposed an effective transportation policy which would take defense requirements properly into account. The committee said:

While a general transportation policy should concern itself primarily with our developing national economy, it must also be concerned with potential defense requirements. In this latter context two primary objectives may be noted: (1) to emphasize the growth and development of the several forms of transport somewhat in accord with the proportional demands that defense will make upon them, and (2) to support their financial well-being to the end that they will be physically in excellent shape and possessed of a desirable flexibility and some degree of excess capacity. A policy under which the transportation enterprises generally live in precarious financial position is not a policy calculated to enhance our preparedness. Any policy which has the effect of weakening any form of transportation on which we must place major reliance in the event of war is not a satisfactory defense policy.

It is axiomatic that the basic function of the Department of Defense is to foster and protect the security of the United States. But this grave responsibility is not now being discharged effectively with respect to transportation. The military services are depriving the common carrier of traffic and revenues needed to keep them intact and strong.

For example, during the limited mobilization attending the Korean emergency, and continuing to date, the military services have made extensive use of the large irregular or nonscheduled airlines for transporting personnel. In the first half of 1954 these operators were given one-third of all organized domestic military passenger traffic, while the common-carrier railroads were able to obtain less than one-half. Yet in World War II the railroads transported 97 percent of all organized military traffic, and they would be required to handle most of it again in any other full mobilization. The nonscheduled airlines could not handle the mass movements which would be required in a large-scale mobilization. Moreover, the large four-engine aircraft of the scheduled airlines are earmarked primarily for military missions in long-range, over-ocean operations in an emergency.

My only concern is that we have in being and available for immediate use the forms of transportation which will be required in the event of mobilization or war. In the event of either contingency there will be neither time, material, or manpower to provide the same. What I have to say is not for the purpose of advocating an advantage for any form of transportation over another. My concern is solely and simply the national defense. The maintenance of such an adequate system need not do any violence to any other system.

As of the present time, and for a considerable time in the future, mass movements of troops and concentrations of heavy equipment within the United States must depend upon rail transportation. That this condition may change is probable and, I believe, inevitable. That such change is not yet here must be obvious to all. The Congress, unfortunately, at its last session, showed an unwillingness to provide a program for an adequate system of primary highway construction. Types and numbers of aircraft are surely not yet in being to handle this assignment.

If rails are to continue available for this purpose, roadbeds must be maintained and there must continue, in being, an adequate supply of freight cars and passenger cars. It cannot be contended that any of these facilities or equipment can be retained only on a standby basis. They can only be available if freight and passengers are provided in adequate quantity for profitable operation. The Military Establishment is the one agency of Government which should be alert to this situation. I doubt that it is. There is little evidence, if any, that military transportation of personnel and equipment is carried on with any idea in mind of the long-range necessity of rail transportation. There is no encouragement for individuals and organizations to bear this all-important subject in mind in any of their movements. Unless such is done we can hardly be content that this major mobilization requirement is receiving adequate atten-

tion. In each troop movement, each transfer of personnel, and each movement of freight there is more involved than the transfer of such from one place to another. Each such movement contains the element of maintaining the mobilization requirement. Whether the movement is large or small differs in degree only. All of these should be borne in mind by all of the services in all movements of persons and things. Surely prudence would dictate that a transportation system in being should be maintained in profitable operation at least until another is available to replace it.

We should not tolerate conflicting Government transportation practices which work at such cross purposes and in disregard of congressional policy. In urging that current practices be reappraised in the light of that sound policy, I will not attempt to improve upon the admonition by the Senate Appropriations Committee, which in 1954 said, in part:

While the declaration of policy by its terms is directed primarily at the establishment of principles for the guidance of the Interstate Commerce Commission in the administration of the Interstate Commerce Act and in the regulation of carriers subject to that act, other agencies and departments of the Government are expected to carry out their respective functions in relation to these carriers in such a way as to be consistent with the objectives of the transportation policy.

* * * * *

The same thing is true in connection with the exercise by the General Services Administrator or other executive department officials of the right to negotiate with carriers for transportation services at rates lower than those set by regulatory agencies for application to the general public. It has long been recognized that transportation charges may be unreasonable because of being too low, and any policy of bargaining for rates or playing one carrier off against another with the primary objective of getting the lowest possible transportation rate without regard to the consequences for the carrier is promotive of destructive competitive practices and fosters unsound economic conditions in transportation contrary to the national transportation policy.

Accordingly all Government agencies and executive departments are admonished to pay full heed to the national transportation policy in their dealings with carriers.

Military Life Is Not Proving Ground for Political Leadership

EXTENSION OF REMARKS

OF

HON. JAMES M. QUIGLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. QUIGLEY. Mr. Speaker, in January 1948, one of our greatest generals wrote a letter to a New Hampshire newspaper publisher, in which the general said, in part:

It is my conviction that the necessary and wise subordination of the military to civil power will be best sustained, and our people will have greater confidence that it is so sustained, when lifelong professional soldiers, in the absence of some obvious and overriding reasons, abstain from seeking high political office. This truth has a possible inverse application. I would regard it as unalloyed tragedy for our country if ever should come the day when military commanders might be selected with an eye to their future potentialities in the political field rather than exclusively upon judgment as to their military abilities.

Politics is a profession; a serious, complicated and, in its true sense, a noble one.

In the American scene I see no dearth of men fitted by training, talent, and integrity for national leadership. On the other hand, nothing in the international or domestic situation especially qualifies for the most important office in the world a man whose adult years have been spent in the country's military forces. At least this is true in my case.

Mr. Speaker, the great soldier who penned those words was the then Chief of Staff of the Army, General of the Army Dwight D. Eisenhower.

Silver: Monument to Inertia

EXTENSION OF REMARKS

OF

HON. THEODORE FRANCIS GREEN

OF RHODE ISLAND

IN THE SENATE OF THE UNITED STATES

Tuesday, August 2, 1955

Mr. GREEN. Mr. President, on Monday, August 1, I inserted in the CONGRESSIONAL RECORD two articles from the New York Times written by Edward H. Collins. At this time I wish to insert the third and last of the articles written by Mr. Collins, entitled "Silver: Monument to Inertia."

I believe these articles will be of interest to the Members of the Senate.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SILVER: MONUMENT TO INERTIA

(By Edward H. Collins)

Last week, in the second of 3 refresher pieces on the silver-purchase program of 1933–34 which the Green bill, now pending in Congress, proposes to repeal, the writer noted 3 factors that conspired to make possible the enactment of this iniquitous legislation. These were:

1. The power of that single-minded and narrowly self-interested Senate group, the silver bloc.

2. The widespread cultivated public confusion concerning the nature and importance of the white metal. A century and a half earlier it had been used to help stretch out the limited supply of gold in the monetary systems of the Western World, but in 1933, its only relation to the monetary systems, except for the single case of China, was the role it shared with copper and nickel in the fractional or token currency, whose circulation has nothing to do with the value of the metals it contains.

3. The fortuitous circumstance that the administration which came to office in 1933, whether from gullibility or desperation, had become fascinated by the Warren-Pearson theory, the essential principle of which was the naive thesis that by marking up the price of gold it would be possible to reflate the Nation's drastically deflated price level.

FANCIFUL ARGUMENT

Obviously, given an administration in office that was prepared to accept the Warren-Pearson gold-buying scheme, the task of selling it on the favorite of mythical arguments then in vogue of doing something for silver shouldn't have been difficult. This was the fanciful argument so painfully disproved later, that by raising the price of silver it would be possible to bring about recovery among the silver-using nations of the Orient.

By raising the purchase power of these people we would be reviving their demand for the goods of other nations (including not least of all those of the United States) and, for all anyone could prove to the contrary, getting the engine of world trade off dead center.

Whether this was the argument used by Senator Pittman, leader of the silver bloc, to win the support of the President for a silver-subsidy bill he had recently introduced in Congress, no one perhaps can say. Neither is it particularly important at this point of time.

As a matter of fact, paradoxical though it may sound, the fact that a silver subsidy did emerge before the end of that year is not the most important thing about this episode. Subsidies to organized minority interests are not exactly a novelty in American history. What made this one particularly reprehensible is that it was presented to the American people in the guise of an international agreement.

One can only speculate today as to whether the support accorded it by the administration would have assured enactment of the pending Pittman bill. At any rate, whoever had the decision to make on this question rejected the forthright course for one that was not only more spectacular, but thoroughly devious.

Instead of trying to push his measure through Congress Senator Pittman took it with him when he went to the London Conference that year as head of the American delegation. But it had now become, not the Pittman bill, but the administration's proposals for a silver agreement.

When it was announced on July 22 that 8 countries had entered into an agreement based on these proposals, it appeared that the silver question had taken on new dignity and a new importance. But disillusion was to follow quickly. Examination of its details revealed that the so-called agreement was really only an ingenious hoax—that beneath its dignified exterior lay the same old scheme for a new subsidy to the American silver mining industry.

The signatories to this amazing document were of two categories—countries known to hold sizable stocks of silver, and silver-producing countries.

The three countries that made up the first of these categories—India, China, and Spain—agreed not to sell silver during the life of the agreement, or at least not to sell more than certain stipulated amounts each year.

The countries in the producing group, for their part, made this same commitment, and also a second one. These countries—Mexico, the United States, Australia, Canada, and Peru—agreed to take off the market, among them, 35 million ounces of silver a year for the 4-year period.

But if one looked carefully at this agreement he soon discerned that, except for the United States, all that the signatories had committed themselves to do was something that either they could not possibly have done in any case or had not any logical reason for doing. To take a single typical example, consider India.

INDIA IN TRANSITION

India was in a state of transition from the silver standard to the gold exchange standard, and had been disposing of its stock of silver gradually since 1927. India was not asked to suspend these sales—she was asked merely to hold them to an average of 35 million ounces a year for the following 4 years and not to sell more than 50 million in any single year.

The hollowness of this concession by India becomes clear when we note that her sales had never reached the 35 million figure, even in 1929, when silver prices were 10 cents an ounce above the 44 cents then prevailing. Her average had been roughly 25 million ounces.

More interesting was the shadowy agreement under which the five producers committed themselves to taking 35 million ounces of silver off the market, but said nothing about the allocation of such purchases. Had allocations been based, as one might reasonably expect, on comparative production, Mexico would have been called on to underwrite roughly 19 million ounces, or some 54 percent of the whole, the United States 6,700,000 ounces, or 19 percent.

But this strange omission began to be filled in a week later when word was permitted to get out that the United States would charge herself with at least 24,400,000 ounces, or about 70 percent. One can only assume that the purpose of that report was to pave the way for what was to come later. At any rate, in a proclamation issued in December the President announced that the various United States mints were prepared to buy any silver that had been mined in the United States since July 22.

American output of silver in 1933 had been only 22 million ounces, so even with the Government pledged to take up the entire production this would still leave 13 million ounces to be bought up by the 4 other countries. Such a conclusion is a vast underestimate of the authors of this carefully planned maneuver. That contingency had been clearly foreseen. The missing piece is to be found in the price offered for the new silver, which was 64½ cents, or some 20 cents above the market price.

With that 50 percent bonus as a stimulus, production jumped immediately and rapidly. Indeed, by 1936 any newly mined silver was to come to 60 million ounces, and there have been times since when output has hit 70 million ounces, or well over 3 times the 22 million of 1933.

The writer has stressed the silver agreement here, rather than the Silver Purchase Act of the following year, despite the fact that the latter was a far more ambitious accomplishment. It directed the Treasury to buy silver, not only at home, but abroad, until our silver holdings reached a value equal to one-third our gold stocks. This agreement has been stressed because it is a particularly striking example of the degree to which the silver bloc is prepared to go in the tactics of deception, and because it is a perfect illustration of the fact that the more a subsidy-minded group gets the more it wants.

For Stronger Reserve

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. CANFIELD. Mr. Speaker, under leave to extend my remarks, I include an editorial from the Morning Call, Paterson, N. J.:

FOR STRONGER RESERVE

The Reserve bill which sailed through Congress a few days ago, while not as strong a bill as that requested by the President, nevertheless has its excellent features.

Economically the program is designed to decrease the 68 percent slice of the total budget now yearly spent for a standing army. By obligating young men to a minimum of 5 years and a maximum of 8 years of military service, the bill as well provides alternative methods for completing that service. A young man is free to choose among several combinations of active and Reserve duty. He may work from a Ready to a Standby Reserve status in fulfillment of his obligation.

Actually this service bill is a defense measure with teeth in it. The present selective service law which expires in 4 years requires 8 years of service. The 2-year active service requirement has in general been complied with. But the 6-year Reserve obligation placed upon every draftee is usually ignored, with the result that America's Reserve Army is largely an army on filing cards only. The new bill provides stiff penalties for neglecting Reserve duty.

The obligation to defend our system of liberties will no longer be the burden of a loyal few, but will be distributed, as it should be, more equally among the many who can offer military protection.

Radio Broadcast From London, England, by Eric Sevareid

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. WALTER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following CBS radio broadcast from London by Eric Sevareid on Sunday, July 31:

The 1st of August is at hand, the beginning of the real holiday season for Europeans. Here in Britain Parliament adjourned on Thursday; the big bank holiday began Friday, with hundreds of thousands of Londoners crowding every train and bus to the country, the beaches, and to the Continent, where they have been engulfed in the tide of vacationers flooding out of Paris for the mountains and the sea. No one wants to worry about anything. The shops are full and jobs plentiful in nearly every corner of Europe. Geneva has ended the cold war, so they dearly wish to believe, and the wonderful sunshine continues to bless both islands and Continent, as if authority higher even than the four heads of government has encouraged the wish and endorsed the belief.

There are shadows—but only the dreary pessimists, the * * * wish to cool their heads and fervid hopes in the shadows. Men do see ahead a little more clearly if they shade their eyes from the sun—the sun of nature or the sunshine of Bulganin's smile. But very few in Britain right now are taking the trouble to do that—and very few in America, if what one hears and reads at this distance is correct. Still, it is the function of the honest observer and the honest man of politics to watch for the light when everything seems dark and to keep an eye to the shadows when everything and everyone seems blinded by the sun.

A few in the press and Parliament of Britain this week tried to do the latter, both as to the apparent prosperity of this country and the apparent success of the Geneva Conference. No economic crisis is at hand for Britain, but the threat of more inflation is a definite shadow. British prosperity operates on the narrowest of margins—and once again the Chancellor of the Exchequer is applying the brakes. He has had to restrict credit again, including installment buying, which the British call the never-never plan of payment. He is again forcing the people to buy less of life's good things in order to force British producers to sell more abroad to build up the cash reserves of this island. They have had too easy a time with the safe home-market for their wares. This economy must sell abroad to live, and it has been losing out in the fight for foreign markets with the hard-working Germans. This island, one vast bed of coal, must still import coal from abroad. This queen—or now perhaps princess—of the seas must have some of her ships repaired in German yards.

The bland belief that British workmanship knows no peer has been shaken by the figures that show German cars driving British cars out of the American market, now out of the Swedish market. The recent strike wave made things considerably worse. But the fundamental cause is the old, old cause; it is that British businessmen and labor simply prefer their traditional ways of doing things. They will modernize, they will make capital reinvestments for expansion, they will give up featherbedding, they will learn modern selling methods only with the greatest reluctance, and they will slip back the moment the pressure relaxes.

It no longer suffices to draw spiritual nourishment from the glorious past, to feel superior to America's crass drive and bustle, to America's so-called materialistic bathtub culture. Indeed, you don't hear much of that kind of talk in Britain any more. The Britons' hard problem is a material problem. If knowing how to make and sell materials is materialism—a doubtful proposition—then they will have to accept the ism if they are going to really secure this economy and lift its standard of life still higher.

This is the immediate shadow in Britain and in France as well. But the observer does not see it with a naked eye to the surface. The surface of these two countries is a quite different sight. It is a scene of sunshine, vast gardenlike stretches of burgeoning fields, of work and fun, of crowded resorts, millions of people moving incessantly, in cars, on bikes, on foot, tanned, healthy-looking people everywhere. To see this and to think back 10 years is to know again the unconquerable spirit of the human creature. Ten years ago West Europe was all but a wasteland. Millions were dead or mained. Most of the population was uprooted. Homes, stores, offices, bridges lay in ruins all over Europe. Today only dim mementoes of all that remain. The European population is greater than ever; there were homes than ever before. In many places like Britain and Italy life has not only returned to the prewar level but surpassed it. There can be no doubt of this miracle. For millions of Europeans life is better than they ever knew it, better than their fathers and grandfathers knew it. It is their own doing for the most part. But an American driving across these sunny lands cannot help thinking of the part his own people played in this restoration, cannot help being conscious in pleasure and pride that in the Marshall plan the United States executed history's noblest peacetime act in the relations of national states.

In 10 short years all this was done—and done in the midst of the anxious condition called the cold war between East and West. Indeed, it was the cold war that forced much of the doing and drove barely recovered European society into a hastily erected military alliance. Ten years of this, and then 2 weeks ago 4 men sat down at a table in Geneva. When they rose, 1 week ago, they uttered some cautiously hopeful words. Their press agents and their personal followers uttered many incautious and ecstatic words, and millions of people everywhere, weary of worries, have sent their hats and their cheers in the air, convinced apparently that peace has come and they need worry

themselves, or even inform themselves, no longer.

To one who followed at close hand the labors and results of Geneva this is astonishing. It is also disturbing. It is possible, indeed logical, to find a degree of relief in the Geneva proceedings, but a degree not even measured, not yet tested. Geneva has given the world something positive, but just what it is, how big it is, only fools or knaves can yet pretend to know for sure. Geneva surely was the strangest top-level meeting of all time. It was not only a meeting that settled nothing, but a meeting that was never intended to settle anything. It wanted to find a way to try to settle Europe and it did not even find that. The Big Four did not agree to agree in the future. They merely agreed once again to try to agree once again.

Geneva did not begin an era of better feelings between East and West. That had already begun months ago—however long it may last. Geneva identified for history this new period of relationships, giving it a neat chapter heading in the history books, and it intensified by the hopeful world opinion it aroused the immediate necessity of both sides making some concessions. In terms of settling Europe the nut is just as hard as ever, but Geneva means that the pressure behind the nutcracker will be a little stronger than before—and that is something.

It is also a gain, no doubt, that the East-West leaders got to know at first hand the workings of each other's minds. It is a gain, at least for us, that President Eisenhower had a popular public opinion success in Europe, for this has restored his own and his Government's prestige over here, where it had been sagging, particularly in intellectually influential circles. The importance of the President's feeling of personal trust in the Russian leaders and their reported feeling of trust in him is of no great moment. Russian leaders can change or disappear very suddenly, and a totalitarian regime like theirs calculates in the scope of decades, not presidential terms.

This being said, it may be well to step off a few paces and try to take the longest look at Geneva one can from this short distance in time. Geneva dramatized the idea of peaceful coexistence between East and West. Geneva also dramatized the diametrically opposing purposes of East and West where coexistence must meet—in Germany. In the directives to the foreign ministers the Russians gave away nothing at all, not even words. They proved at Geneva they will take any number of years, go to all possible lengths short of world war to prevent the kind of Germany we seek: an armed Germany allied to the West. Geneva proved the Russian fear of it to be almost pathological. They know they cannot get a Communist Germany, they know they cannot get a neutralized Germany, they know they cannot get, at least for a long time, a Germany allied to them. They are determined to get what remains: a Germany independent of alliances, with which they will have more bargaining power than we. The Russians believe we have all but exhausted our own bargaining power with the Germans, having given them nearly all they require already. Now the Russians think it is their turn. They have the greatest bargaining power of all—German real estate. They will take their time and they will make their deal for Germany directly with the Germans, not with the Western Powers.

And now the Russians, through their new manner, have brought about a great dramatization of peaceful coexistence. It was they who started the cold war and we who accepted it. Again, it is they who started this new phase and we who are accepting that. Of course, they wish peace in the world, for they too would be destroyed in war. But the great, so far unanswerable question is this: Will they achieve through peaceful friendliness further fruits of war? These are: an amenable Germany, an even more secure grip on the satellite, the weakening of the Western alliance, the disappearance of the American military from Europe.

The first probably depends on time and the Germans themselves, but the rest of it depends on time and the Western countries, including our own. We may hold up in the peaceful struggle for Europe as well as we have in the cold war struggle for Europe. But there is a small school of thought which is terribly afraid that Geneva will turn out in the end to have been a great Russian success, which has annoying apprehension that the President, or more properly the President's press agentry, has played straight into Russia's hands. Too briefly put, the argument goes like this: Relaxation of tension is bound to mean relaxation of effort and precautions—on our side certainly, on the Russian side only possibly. Russians are playing for time, for they understand the phychology of Europeans better than do Americans. They sense what some call the secret wish of Europeans—which is to leave well enough alone. The Russians know that only America is in a hurry to have Germany reunited, that the great mass of Britons, Frenchmen, Italians, Belgians, Dutchmen, in spite of their governments' statements, don't really care if Germany is never united. The Russians know that already the tide has turned against a unified Western Europe, the one thing that would give lasting counterweight to Russian-unified Eastern Europe. They know Western Europeans are ceasing to care about the eastern satellites. They know every western parliament yearns to reduce its military budget. They know the French desperately wish to detach soldiers from Europe for use in their troubled empire. They know powerful economy forces in Washington give fervent fiscal thanks for every American soldier we could send home.

So this argument runs: Has not Geneva in the dramatization of coexistence told the satellites that all further anti-Communist resistance is useless? Will not even the western broadcast cease trying to encourage them? Will the thawing effects of time and Russia's warm smiles not take the drive and the effort right out of the NATO alliance? Will not a weakened European effort be bound to mean a reciprocally weakened American effort over here? These are the fears of those few here who look upon Geneva with doubt, the fears of those convinced that Russia has far more to gain by a strategy of relaxation than by the old strategy of tension. They sense that in the European philosophy time is life to be lived, while in the Communist philosophy time is an instrument to be used. These fears can be wrong. Maybe we shall find the clarity and the stamina to use time as an instrument to our own ends. It may be that a real lowering of the Iron Curtain, if that comes, will weaken Russia's hold on the satellites, possibly even the Communist hold on Russia. It may be that peaceful coexistence will bring even wider prosperity, weakening Marxism still further all over Europe. It may be that we shall find wit and stamina enough to see that Russian power moves back out of Europe no more slowly than American power. It is our task now to see that what may be, shall be. For as the British Foreign Secretary told the Parliament this week, the democracies face a new severe challenge—and if they relax, he said, they will be lost.

Geneva has solved nothing. What it has done is to clarify the struggle that now confronts the Western countries. It is a struggle within ourselves as much as a struggle with the Soviets. We can afford to throw our hats in the air about Geneva only if we keep our heads.

This is Eric Sevareid in London.

Location of Jet Interceptor Base in Northwestern Michigan

EXTENSION OF REMARKS
OF
HON. PAT McNAMARA
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES
Tuesday, August 2, 1955

Mr. McNAMARA. Mr. President, I ask unanimous consent to have printed in the RECORD the following communication from the Wexford Jet Base Committee, Cadillac, Mich. I hope that this very desirable site will be kept in mind by the Air Force and other Government agencies concerned.

There being no objection, the communication was ordered to be printed in the RECORD, as follows:

CITY OF CADILLAC,
August 2, 1955.

HON. CHARLES E. WILSON,
Secretary, Department of Defense,
The Pentagon, Washington, D. C.

DEAR SECRETARY WILSON: The location of a jet interceptor base in northwestern Michigan has been delayed for almost 18 months. Without a doubt, those of us who have worked in the various communities involved are sincere in our belief that all of our efforts were justified and that we are in no way responsible for the long delay.

The Wexford Jet Base Committee and the citizens of Cadillac who have worked on this committee sincerely trust that we have not, in any way, interfered with national defense or been the occasion of destructive action with reference to any national defense effort, any congressional group, or any individual.

Early in 1954, on learning that two sites at Traverse City had been made unavailable to the United States Air Force, we began our efforts to point out the advantages of a site at Cadillac. We have made a sincere effort to present our many advantages in a fair and factual manner. If we have not sold everyone else, we have most certainly sold ourselves on the fact that we have exceptional advantages for an installation of this type.

We were very pleased to learn in November 1954, that after having completed extensive surveys with the assistance of the Army Corps of Engineers and the Air Defense Command, the United States Air Force concurred with us that Cadillac was the proper place for this important installation. Secretary Talbott announced the selection of the Cadillac site by the United States Air Force on December 2, 1954.

We were greatly concerned when early in 1955 Congresswoman RUTH THOMPSON questioned the decision of the United States Air Force, leveled criticism at Secretary Talbott, and insinuated that there was something shady about the decision to utilize the Cadillac site. Our concern was greatly dissipated and our confidence that the base would be located here was increased when the House Armed Services Committee concurred with the USAF decision, and Chairman VINSON advised those seeking the assistance of the committee to protest the Cadillac site that his group would keep hands off the controversy and that they were not interested "unless someone has information to show that the Cadillac site would not serve the purposes of national defense."

Pressure on the committee continued, and eventually the matter came to a vote. The committee upheld the United States Air Forc by a decisive vote.

This, of course, was encouraging to this community, but we were not at peace for long as opponents of the Air Force selection of Cadillac concentrated their efforts on

the House Appropriations Subcommittee. Chairman CANNON, of the full committee, advised the Air Force early in January not to spend money for the Cadillac site or any other until the committee gave its approval.

Since that time Members of Congress have appeared before the House Appropriations Subcommittee in behalf of the Kalkaska, Benzie, and Manistee sites. The Cadillac committee has requested the same privilege on many occasions but was not granted the opportunity. We have been very sorry that some of the presentations have not been confined to pointing out the advantages of the other sites but have been derogatory to Cadillac and, in many instances, false.

The activity to set aside the USAF decision to locate at Cadillac reached a high point last week. This community made a final effort to have its case presented to the House Appropriations Subcommittee. We were greatly disheartened at the obstacles we encountered. The desires of Members of Congress to adjourn, the controversy surrounding Secretary Talbott and Congresswoman THOMPSON'S continued determination (although USAF personnel have stated that the Cadillac site meets military requirements and is the best site) to oppose Secretary Talbott even though it meant locating the base outside of her district, resulted in this community concluding that it is not possible for us to reopen this matter without congressional investigation. We are reluctant to engage in the type of controversy this effort would necessitate.

On many occasions we have assured the United States Air Force of the ability and the desire of this community to assist them in making the proposed base as effective as possible. We wish to take this opportunity to assure the Kalkaska-Traverse committee of our support in that direction and to repeat to the USAF our desire to be as helpful as possible on all occasions.

There are many citizens of Wexford County who have earned the sincere appreciation of this committee, and we also have feelings of deep gratitude for friends in Washington, including USAF personnel, Members of Congress, and congressional committees.

We are still of the opinion that Cadillac has the best site and is more capable of assisting the USAF in accomplishing its purposes than any other community. This feeling is not because we believe our community to be better than any other community but because we happen to be the only community having adequate facilities in close proximity to a satisfactory site.

In conclusion we wish to say that we are confident that many obstacles will be encountered in the location of a satisfactory base at Kalkaska. Should those obstacles prove to be insurmountable either from an accomplishment, a cost, or a result standpoint, our site is still available, our commitments will still stand, and this community will continue ready to welcome the base and the personnel involved.

Yours very truly,

WEXFORD JET BASE COMMITTEE,
By FLOYD J. MCCARTHY,
Chairman.

Semper Paratus

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. CANFIELD. Mr. Speaker, under leave to extend my remarks, I am pleased to include an editorial from the Herald News, Passaic, N. J., extending birthday greetings to the United States Coast Guard on its 165th anniversary:

SEMPER PARATUS

One of the best known, but least understood, security arms of the United States will be 165 years old Thursday. It is the United States Coast Guard, spawned by Alexander Hamilton on August 4, 1790.

Millions of servicemen are familiar with its achievements in World War II. Thousands of boatmen acknowledge its value in water safety, lighthouse and buoy service, and weather tracking. All who cross the ocean in ships recognize the high standards of safety demanded of commercial ships by the Coast Guard.

And hundreds of smugglers remember and respect the Coast Guard for another reason.

It is this great variety of services that makes the Coast Guard a complex organization. It was organized under Hamilton to prevent smuggling at sea. In 1915 its rather formidable name of Revenue-Cutter and Lifesaving Services was merged into the more descriptive title of United States Coast Guard.

In peacetime it operates under the Treasury Department. In war, or national emergency, it is transferred to the Navy. But in war or peace, with the reassuring motto of "Semper Paratus"—(always prepared)—it is a firm friend of the seagoing man.

Free Haircuts to Servicemen

EXTENSION OF REMARKS
OF
HON. WILLIAM G. BRAY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. BRAY. Mr. Speaker, I have introduced a bill authorizing the Army, Navy, and Air Force to give free haircuts to the men in service.

The armed services demand, and rightfully so, that servicemen be properly groomed at all times. Since this grooming is demanded of each serviceman, it would not seem illogical to allow the services to provide barbering service free of charge, just as medical and dental services are provided.

Free haircuts are already furnished in some instances, where the servicemen do not have a post exchange barbershop near at hand. The present system authorizes the post exchange to grant franchises for the operation of barber shops on military posts. The barber services offered to servicemen are not always of top quality, and the atmosphere of such shops is often incomparable to that of civilian shops.

I have received complaints about the present system not only from servicemen but from the operators of such post exchange barber shops. In many cases the post barber shops are not under the same sanitary regulations as civilian shops. The State of Indiana has one of the most rigid barber shop license and regulated sanitation laws of any State. The Fort Harrison Finance Center, however, does not allow the Indiana barber inspector to exercise supervision over barber shops on the post.

In many instances these shops, because of their cheap rates, compete with privately owned shops in the area for civilian trade, and create ill will toward the service installation. It is particularly irksome to town barbers to know the shops on the post are not held responsible to the same State regulations that they are.

I previously introduced legislation which I believe would correct some of these ills, but it was opposed by the Defense Department. Perhaps the present proposal will be acceptable. By providing free haircuts to men in service their continued good grooming will be assured, and by removing all civilian trade from barbershops on military and naval installations, this unfair competition can be halted and the ill will it creates be eliminated.

Good grooming is an important element of morale; we certainly want our servicemen to take pride in their neat appearance. Good barber service in a pleasant atmosphere should be available to them; and such can surely be made available to them without the dissatisfactions arising from the present system.

Record Federal Employee Benefits Voted by 84th

EXTENSION OF REMARKS
OF
HON. JAMES M. QUIGLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. QUIGLEY. Mr. Speaker, it is with pride that we can look to the record of the 1st session of the 84th Congress, which has approved more Federal employee legislation than any similar session in history. This is a matter of great interest to the 19th Congressional District of Pennsylvania where a number of constituents are employed at some of the many Federal establishments in central Pennsylvania.

Here is a brief rundown of the many beneficial laws the Congress approved:

Pay raises: Most classified and postal employees, except the top executives were voted pay increases. We also approved funds which can be used to raise the pay of many per diem, or blue-collar employees.

Career status: We passed a bill to make an additional 50,000 indefinite employees eligible for career status.

Retirement increases: Two bills have been approved to increase the annuities of Government retirees. One bill boosts the annuities of 300,000 civil-service retirees and survivors, and the other increases the pensions of Foreign Service members.

Travel allowances, an issue for the past 5 years, have been raised by this Congress.

Postal job classifications: These were first advocated 20 years ago. Recommendations by Postmaster General Summerfield were controversial and granted him unlimited power. The protections written in by the Congress will, I hope, allow this program to go forward so as

to achieve maximum benefits, but protect postal workers against arbitrary actions.

Surety bonds: After considering the proposition for a dozen years, this Congress has approved a bill to authorize Federal agencies to pay for blanket bonds to cover their employees.

Dual compensation: Congress has raised from $3,000 to $10,000 the combined military annuity and civilian pay an employee may earn. This is particularly gratifying for it gives military installations the opportunity to employ Reservists who are 20-year career men.

Insurance: We have approved legislation to authorize the Government to take over the 135,000 life insurance policies held by employee beneficial associations for present and former Federal employees.

State retirement: The Congress approved a bill granting retirement credits to about 5,000 former State employees.

Uniforms: A new law that extends the up-to-$100 annual allowance to all Federal employees who must wear uniforms on the job was approved.

The United Nations at 10 Years

EXTENSION OF REMARKS
OF
HON. EUGENE D. MILLIKIN
OF COLORADO
IN THE SENATE OF THE UNITED STATES
Tuesday, August 2, 1955

Mr. MILLIKIN. Mr. President, I request permission to insert in the RECORD an essay entitled "The United Nations at 10 Years," written by Greg Stephens, of Pueblo, Colo. Greg Stephens participated in the recent national United Nations essay contest. According to my information his paper tied for first place in the State of Colorado.

There being no objection, the essay was ordered to be printed in the RECORD, as follows:

THE UNITED NATIONS AT 10 YEARS
(By Greg Stephens)

The accomplishments of the United Nations in the past show that the world needs an international organization. The United Nations was formed during the last weeks of the most horrible war ever fought on the face of this earth. Nations have realized the terrible misery and destruction caused by war. They realized also that nations could no longer afford to isolate themselves from the rest of the world. What happens in one part of the world is now a major concern in all parts of the world.

The main purpose of the United Nations is to promote peace, and to use the combined knowledge of 60 nations. Think of the unlimited possibilities of such an idea. The combined knowledge of scientists, chemists, doctors, engineers, statesmen of 60 nations. The knowledge of 60 nations could be an irresistible force in the prospect of peace or war.

When you look in a newspaper or magazine you are almost always able to find instances where the U. N. has made a costly mistake, or as some would say, completely failed. You hardly ever read about times where the U. N. has helped make a better world in which to live. The United Nations is making a better world by doing the following: Sending aid to farmers all over the world, thereby helping to increase the food supplies and enabling the farmer to produce more and better crops. Sending doctors, nurses, and tons of medicine and serum to areas where such diseases as typhoid, malaria, smallpox, polio, TB, cancer, and yaws thrive. By helping people in backward areas become more interested and educated in the health and sanitation problems, the U. N. is helping to insure a longer span of life for many people. The U. N. sends hundreds of teachers and educational supplies to areas where there is much ignorance. By helping these people become educated, the U. N. is aiding in making a stronger world where ignorance is no longer found. Other fields of help and aid are in communication, narcotics and their control, civil aviation, science, culture and its preservation, reconstruction and development, world trade, labor problems, and weather problems of the world.

The work that the United Nations is doing in helping people with their problems is perhaps the most important work the U. N. could be engaged in doing. When you concern yourself with the subjects mentioned above, you are dealing with problems that affect the people of the world. The United Nations is helping to eliminate most of the nonpolitical problems, thus allowing many new areas to become stronger, to have a higher standard of living, to even take their place in the family of nations as equal, independent members.

Communism and other enemies of democracy must have an area where there is much poverty, ignorance, ill health, lack of food, clothing, and shelter before it can breed its deadly disease upon human minds. The U. N., by working in these many fields, is erasing many such breeding grounds by making the people in these areas free and strong. Communism, then, will not be able to offer anything to these people. They will not be fooled into giving up their freedom. Naturally, all problems cannot be solved overnight. The United Nations will be busy for many years to come in its program of help and aid. But think of what could be done if all nations would forget their own selfish ambitions and truly work together for the benefit of all. Much of this work could be speeded up and brought to a final close much sooner.

The United Nations made accomplishments in the following:

1. The Palestine question—Israel against seven Arab States: Fighting concluded. The real and lasting solution to this problem must be made by those directly concerned, namely, Israel, Egypt, Iraq, Syria, Jordan, Saudi Arabia, Yemen, and Lebanon.

2. India against Pakistan over Kashmir: Fighting concluded. Future status of Kashmir still in doubt.

3. The Netherlands against Indonesia: Fighting concluded. Indonesia gained independence.

4. Unofficial war in Greece halted.

5. Some progress in atomic energy has been made. Several free-world nations have joined with the United States in pooling information for peaceful uses of atomic energy.

The atomic-energy problem cannot be solved until all nations possessing atomic know-how join together in a mutual undertaking to bring into general use atomic power for peace instead of war.

6. Korea: Proposed action of the United Nations vetoed by the Soviet Union in the Security Council. Practically all free-world nations, both U. N. members and nonmembers of the U. N., sent supplies, food, doctors, nurses, clothing, and other products. Fighting has concluded. Unification of Korea still unrealized. Sixteen nations supplied troops.

Often the United States has sharp disagreements with her allies. But in a test of loyalty and one where a solid front of unity is needed, the free-world nations rally together to place a stumbling block in the path of any would-be troublemaker.

The Soviet Union has its problems with the United Nations. They can't control it, and they dare not leave the U. N. The United Nations is not a tool of the Soviet Union. Rarely can the Soviet bloc (which consists of the following nations: Czechoslovakia, Poland, Byelorussian Soviet Socialist Republic, the Ukrainian Soviet Socialist Republic, and the Union of Soviet Socialist Republics), count on more than 5 votes out of 60.

In conclusion, the United Nations has had its share of successes and failures. In the end its up to the people to decide whether the successess outweigh the failures, or vice versa.

The United Nations is a symbol of hope. As long as hope exists, people will be willing to continue to fight for peace and freedom. If that hope is removed, the willingness to go on will be greatly reduced if not done away with completely.

The United Nations has not failed, and it shall not fail as long as the public is behind giving their full support. The people of the United States, yes, even the people of the world, have every right to be proud of their world organization—the United Nations.

Happy 10th anniversary. May you have many more such celebrations.

The President Should Appoint a Special Advisory Commission on the Arts and Cultural Exchange Now Because the Idea War Needs More Firepower—I

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1955

Mr. THOMPSON of New Jersey. Mr. Speaker, I include as part of my remarks the brilliant speech made by Theodore S. Repplier, president of the Advertising Council, at the Hotel Pierre, New York City, on June 30, 1955, at a meeting of the Advertising Council's board of directors and guests.

Mr. Repplier recently returned to this country after a 6 months' study of United States information and propaganda methods in the Orient, the Near East, and Europe under the auspices of the Eisenhower exchange fellowships. He is the first nongovernment American to study our information activities abroad.

The conclusion reached by Mr. Repplier as a result of his study was that our propaganda offensive needs to sharpen its ideas. Also, we need to draw into our propaganda program more of the skills and talents of America. Mr. Repplier is convinced that no group of professional propagandists, however able, can project a true image of the country, at an art exhibit, a trade fair, or anywhere else. "In America, we have private organizations—from the Philadelphia Symphony to the Advertising Council—whose weight must be added to the idea war," declares Mr. Repplier. I agree with him completely.

We can win the cold war. But we cannot win it in a walk. It is time we started running. As Mr. Repplier says:

The idea war needs more firepower. We are terribly outgunned. We now spend less than two-tenths of 1 percent of our military budget on propaganda. How can we possibly expect that truth can triumph over falsehood with that sort of niggardliness? The propaganda appropriation should be greatly increased.

In a memorandum presented to the White House on April 5, 1955, General Sarnoff, chairman of the board of the Radio Corporation of America, urged the expenditure of up to $3 billion a year for the kind of propaganda offensive which Mr. Repplier has in mind. And, in an historic speech at the National Press Club in Washington, D. C., on February 26, 1955, William Randolph Hearst, Jr., said that our reliance upon armed strength alone as our primary concern is permitting communism to take long strides forward in those fields which we have largely neglected. He pointed out that in Russia and the satellite countries—

Sports, ballet, the theater, literature—all are shaped toward aiding communism's long-range scheme of world domination. Top artists know they are not only expected to perform, but to give their services at clinics where the plastic minds of youthful visitors can be influenced.

The U. S. S. R. not only subsidizes its theater, music, and other cultural programs but it has spent nearly $2 billion on international theater exchange alone since the end of World War II. While other countries subsidize the arts the United States imposes discriminatory and burdensome taxes on our cultural programs.

Sending our artists abroad for the sole purpose of selling American culture and combating the Russian propaganda offensive has been decried by our cultural leaders who have urged, instead, the sharing of our cultural heritage with other countries. The growing recognition by Mr. Repplier and others of the great contribution which the Philadelphia Symphony Orchestra and other leading groups and individuals in the cultural arts field can make in winning friends and allies for our country is heartening indeed. Perhaps this heralds a new period in our history when the poet, the dramatist, the painter, and the musician will be recognized as being as important to our civilization as the engineer and the scientist.

In his message on the state of the Union last January President Eisenhower said that—

In the advancement of the various activities which will make our civilization endure and flourish, the Federal Government should do more to give official recognition to the importance of the arts and other cultural activities. I shall recommend the establishment of a Federal Advisory Commission on the Arts within the Department of Health, Education, and Welfare to advise the Federal Government on ways to encourage artistic and cultural endeavor and appreciation.

The 84th Congress has taken more interest in the cultural arts than any previous Congress in our history. It appropriated $5 million for the President's Emergency Fund for International Affairs. Through this new fund we have participated in some 15 trade fairs. We have also sent abroad such things as the Philadelphia Symphony Orchestra, the Symphony of the Air, the New York City Ballet, Porgy and Bess, and many individual artists. These have achieved results out of all proportion to the amount of money involved. Senator WILEY and I led the fight in the Congress for the continuation of this fund in which the President is so vitally interested. The Congress also established a 21-member commission to plan for a civic and cultural center in the Nation's Capital when it adopted Public Law 128.

The Congress also held hearings on H. R. 6874 and some 15 related bills which would, among other things, carry out the President's recommendations in the cultural field and make the President's Emergency Fund activities a permanent part of the armament of this country in this cold war period. It is expected that this legislation will be enacted into law early in the 2d session of the present Congress.

As a result of these concrete steps the conception held abroad in almost every country that the United States is undoubtedly a fabulously wealthy nation but that it lacks any of the cultural aspects of a great nation is rapidly disappearing. That this misconception has lasted so long as been our own fault, for until this year we have done little or nothing to put an end to it.

The New York Times of August 1 carried a signed article by Harrison E. Salisbury reporting that the State Department is preparing special facilities for handling the anticipated two-way expansion of cultural, scientific, and social contacts with Russia and her satellites. Five Republican and 4 Democratic Members of the House joined with me on July 7 in urging that President Eisenhower give serious consideration to discussing exchange visits between the United States and the Soviet Union at the Big Four Conference in Geneva. Earlier Senator KARL E. MUNDT had made the same suggestion to the President. President Eisenhower wrote me on July 11, 1955, that—

When Senator MUNDT made this suggestion to me a few days ago, I assured him that we would give the proposal our earnest consideration. To you and your colleagues I gladly give the same assurance, and am grateful to each of you for giving me your thoughts on this important matter.

It is my earnest hope that the President will take the initiative and appoint immediately the Federal Advisory Commission on the Arts and Cultural Exchange which he discussed in his message on the state of the Union on January 6 of this year. Such a special commission would be of incalculable assistance to the Federal Government and to the Department of State in the two-way expansion of cultural, scientific, and social contacts with other countries which is now developing. This expansion of cultural interchange was the most important thing that came out of the Geneva Conference. Every step that will assist this expansion of cultural interchange to grow as it must should be taken at this time. Leaders in the fields of the cultural arts would undoubtedly make a significant contribution to this expansion and should be appointed to a special Presidential commission so that full advantage can be taken of their special abilities, knowledge, and skills. Scientific leaders and representatives of the Advertising Council should also be members of such a special commission on the arts and cultural interchange. With leaders like General Sarnoff and William Randolph Hearst, Jr., calling for the establishment of a planning board commissioned to formulate a strategy on all fronts for meeting the challenge of competitive coexistence now is the time to take bold action in this field. Delay can only imperil a unique opportunity for securing a significant advantage to our side in this cold war.

I include here the report by Theodore S. Repplier which may well prove to be a turning point in national recognition of the important contributions the arts can make in our relations with foreign countries. I also include a short report from the New York Times on a meeting of cultural leaders held in New York City on April 19, 1955.

[From the New York Times of April 20, 1955]

UNITED STATES POLICY SCORED ON ART MISSIONS—SELLING CULTURE DECRIED BY PERFORMERS AND ANTA AID—HERITAGE SHARING URGED

Sending performing artists abroad for the sole purpose of selling American culture and combating propaganda was decried here yesterday.

Such performances should be promoted rather to share our cultural heritage with others and to show samples of our talent, speakers said at a luncheon at the Women's City Club, 277 Park Avenue, on the assets and drawbacks of Federal subsidies for the arts.

The speakers were Blanche Yurka, actress; Isaac Stern, violinist; and Robert Schnitzer, general manager of the international exchange program of the American National Theater and Academy.

Asserting that a Government subsidy does not, as many fear, lead to Government control, Mr. Schnitzer described the independence of the French Comédie Française, and the Arts Council of Great Britain. He added that the judging panels of music, drama, and dance of ANTA, which chose those artists to go abroad under State Department subsidy, had not been coerced in any of their decisions.

Mr. Stern said that any pressure arising from Government subsidies would probably never exceed that kind of influence exerted by members of the boards of symphonic orchestras or opera companies.

"The era of great individual support for wealthy institutions is just about over and consequently the broad base of support has increased," Mr. Stern said. "We now look for a thousand persons to contribute $10 rather than one to give it all."

Discounting the merit of sending artists abroad to combat the effective efforts of another country, Mr. Stern suggested that art be used as a common meeting ground. The universal rapprochement of individuals in their sharing of art does not exclude the artist or place him above politics, Mr. Stern said. The artist, he observed, is automatically enmeshed in the international conflicts and tensions and must, therefore, accept his rseponsibility in understanding them.

The establishment of a Government-subsidized theater would come if the Government was convinced that the theater was as important as museums and libraries, Miss Yurka declared.

Only a few persons in the last 10 years have been able to produce good plays with-

out taking personal losses, she said. The financial drawbacks invariably oblige backers to invest in lesser works that border on the trivial.

"If we could persuade our Government that the theater is as important as museums or libraries, we would have a new and vibrant intellectual life," she added.

A national theater should start with a chain of traveling companies that would reach those sections of the United States not visited by existing road companies, Miss Yurka proposed, adding that traveling groups might later be replaced by subsidized theater chains.

TRANSCRIPT OF REPORT ON UNITED STATES PROPAGANDA OVERSEAS

(By Theodore S. Repplier, president, the Advertising Council, June 30, 1955)

Directors of the council and friends, I think the first thing I should tell you is that in the far corners of the world, for the past 6 months, come around 8 or 9 o'clock (because we continentals dine late), a toast has been regularly drunk to the Eisenhower exchange fellowship and board of directors of the Advertising Council.

Actually, I think I have returned just about the most grateful traveler since the invention of the nylon shirt. I am tremendously grateful to the Eisenhower exchange fellowship, and to the council for making this trip possible. I hope that some benefit will accrue to both organizations.

I think the best thing I can do, since it would probably be an undue burden to drag you screaming around the world in 30 minutes—you might emerge somewhat bruised—is to restrict this talk mostly to whatever I can tell you about Asia.

JAPAN

We left home the first of January 1955 and flew directly to Japan. We were fortunate to arrive at the time of the New Year's season, which apparently lasts in Japan from the 1st of January to about the 20th.

At this time we had a chance to see the famous Japanese courtesy in full swing. When a Japanese meets a friend he hasn't seen since the first of the year, he bows, and I mean really bows—a right-angle bow—and wishes him a very happy New Year. Whereupon his friend, Mr. B, also bows at right angles and returns the greeting. Thereupon Mr. A says that the chief joy of his life during the past year has been Mr. B's friendship. Mr. B then bows and says that his friendship is as nothing compared with Mr. A's. Then Mr. A bows again and says he hopes that in the coming year, Mr. B will continue to honor him with his respected friendship. This goes on for a period of 4 or 5 minutes. For the first several weeks I was there, I began to think the entire Japanese nation lived in a right-angle position.

I think the first thing a propagandist needs to do on arriving in a strange country is learn something about the people, something about their basic character in order to get himself oriented so he will be able to draw a few conclusions.

You notice at once that the Japanese are a very industrious people. Both officeworkers and the people in the country work terrifically long hours and seem to stop only long enough to get a few hours' sleep.

Japan also has an enormously paternalistic society. This paternalism goes to fantastic lengths. For example, the president of a large Japanese corporation actually gets a very small salary. But his house is usually provided by his company and a company car and chauffeur pick him up every morning. He gets a large expense account for entertainment. And, every so often, the company comes around and says, "Look, George, it's about time you got a new suit." When he is sick, his company takes care of him, and when he dies, his company buries him.

Excess employees are kept on the payroll even when the company is in the red. A firm will borrow money from the bank repeatedly rather than discharge anyone.

This paternalistic psychology is a part of the Japanese code, and takes a little special understanding on our part.

The most remarkable characteristic of the Japanese is, I think, their immense sense of responsibility, known as "on." A Japanese is born with an "on" to many people, and as he grows up, he acquires more and more "ons." In fact, there is a phrase: "So-and-so is my 'on' man" which means you have an obligation to him. You have obligations to teachers who have been particularly helpful to you, certainly to your parents, to the Emperor—though less so now than before—and so on.

The worst thing, perhaps, that you as an American could do in Japan would be, say, to rescue a stranger's hat from rolling under a car because the Japanese would then be under an obligation to you. Since you are a stranger and he can't pay the obligation off, he would have to stagger along under this debt.

It is significant that the word in Japanese for "thank you" is "arigato" which literally means "Oh, this difficult thing"—a reflection of an obligation. It is this extreme sense of duty which has led Japanese to plunge knives into their stomachs for generations, when they feel they have failed in their duty.

And, of course, the Japanese are a people who respect strength and authority, power and discipline.

As to what's going on in Japan—I think many of the changes taking place there at present are social changes.

For example, America's popular music has become popular in Japan as it has around the world. This means that the Japanese now occasionally go dancing with their wives, which is a staggering revolution in Japanese society. Men never did any such thing before; the wives always stayed meekly at home. The whole social system is changing.

Insofar as our propaganda in Japan is concerned, I think it has in the main, been quite successful. One of the things I tried to do in the course of this investigation was to interview anyone who I felt might have a useful opinion. I realized that I could have no valid opinions of my own on such a brief stay, and, therefore, that the best thing I could do was to become a collector of the observations of wiser men.

I soon found the American newspaper and radio correspondents around the world are a highly intelligent, well-informed group. They frequently know much more than the official crowd, they are trained observers, and they usually have valid opinions on political topics. I talked to many of them.

However, it seemed to me that their evaluation of our American propaganda program—and they all had a relatively poor or indifferent opinion of it—was not valid. I felt they were judging it on a wrong basis, and I believe this accounts for most of the criticism of the propaganda program which is given by returning tourists and other travelers.

Either consciously or unconsciously, both resident Americans and travelers tend to judge the success of the program by how well Americans are liked in a country. If America is liked, something else usually gets the credit. But if America is disliked, it is always because our propaganda program is a failure. To my mind, this is a completely wrong process of reasoning.

I soon came to the conclusion, which I am sure all of you have reached, that it is an absolute absurdity to try to buy love with propaganda. No amount of money is ever going to succeed in doing that, nor is it fair to American taxpayers to expect it to.

This misconception about the object of our propaganda accounts for much of the criticism of the propaganda program which you hear in many places.

Another things which accounts for it is that the average person has no way, really, to judge it. He gets a few fragmentary indications, and from these, leaps to a conclusion which is almost inevitably wrong.

For example, he decides that in Japan the Voice of America doesn't come in very well. He listened to it once or his local manager listened to it once, and if it didn't say what he felt it ought to have been saying—maybe it was playing some music—the whole thing, therefore, was no good.

I don't think the average person can form a true evaluation of the program. It is somewhat like an iceberg; there's more under the surface than can be seen. For example, considerable of the material that gets into the Japanese newspapers originates with the United States Information Service. It comes over the wireless file, and eventually appeals to an editor who picks it up and uses it. But people who read these stories do not connect them with USIS; there is nothing which indicates the connection.

I believe that the only test of our propaganda program, the only sensible basis of judging it, is: Is it helping to win the cold war? Certainly the supreme fact of our time is that we are engaged in a gigantic struggle, with one-half of the world against the other. We are staging a considerable propaganda program, although it is only a fraction of what it should be, and the only possible excuse for it is that we are in a crisis and are trying to use this instrument to help get us out of it.

With that test in mind, which I satisfied myself fairly early in the game was valid, and which I believe is also the sense of the presidential directive on this subject, I feel we are doing pretty well in Japan.

Actually, the percentage of Communists in Japan is quite law, according to a poll taken while I was there which asked: What do you believe in, which party do you favor, and so on? Communists and left-wing Socialists together amounted to less than 5 percent.

Now this, I think, is quite an achievement in an area where the standard of living is very low, and where life is pretty grim for the majority of the people. Despite its newness as a democracy, Japan has been kept safely in the free-world column.

I believe myself that in Japan the propaganda problem is really inside the economic problem. The supreme facts in Japan are economic ones.

Japan numbers 87 million people in an area the size of California. They can raise only 80 percent of their foodstuffs. They have to import most of their raw materials, including cotton, from high-wage countries, and they sell mostly to low-wage countries. It is true that they have cut down very considerably on their unfavorable balance of trade, and it isn't a hopeless situation.

But I came away feeling that if they succeed in solving their economic problems, we really don't have anything much to worry about in Japan.

From a propaganda standpoint, there are only two things that particularly disturb me there. As Ted Streibert (Chief, United States Information Service) perhaps will remember, I recommended that we should step up our work on two groups: labor and the intellectuals. Neither phase is good in Japan. The majority of the unions belong to a Communist federation called SOHYO. There is also an anti-Communist federation called ZENRO which has a smaller number of unions. And there is a body of unions which is sitting on the fence. I think we ought to go strongly to work on the fence sitters.

The other situation which bothered me was the extent to which the intellectuals are still what an old Japanese friend of mine calls "mystical Marxists." Although many

of them are not actual Communists, they are very close to it.

The largest Communist bookstore in Tokyo is right opposite Meiji University, and this follows a typical pattern. The Communists try to infiltrate the intelligentsia, usually with considerable success. They do the same thing with labor. They capture student bodies and use them as agitators. They infiltrate the organs of public opinion. The pattern is now fairly well known to us.

But on balance, I would say that we have done pretty well in Japan. The biggest hurdle of our propaganda program has been the achievement of practical things. One of these was to get the Japanese to agree to rearm. There was a tremendous pacifist sentiment in Japan at one point, and it took a good deal of hard work to bring the Japanese around to agreeing to rearm. However, a good job has been done there.

The President Should Appoint a Special Advisory Commission on the Arts and Cultural Exchange Now Because the Idea War Needs More Firepower—II

EXTENSION OF REMARKS

OF

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1955

Mr. THOMPSON of New Jersey. Mr. Speaker, I include herewith the concluding portion of a historic report made by Theodore S. Repplier, president of the Advertising Council, of a 6 months' study of United States information and propaganda methods in the Orient, the Near East, and Europe under the auspices of the Eisenhower exchange fellowships:

HONGKONG

We are going to jump now to Hongkong, down in southern China. The principal value of Hongkong is that it is a listening post for Communist China. Communist China is about 15 miles up the Kowloon Peninsula. You sit at the bottom of this peninsula, with the island of Hongkong, a mountainous island, before you, and this purple water in between, and it is hard to believe that Red China is breathing down your neck.

Everybody in Hongkong knows that he is living on borrowed time. Everybody knows that the Communists could take the crown colony any Friday evening if they wanted to. But that doesn't prevent Hongkong from having a tremendous boom. Capital is flowing in there at a great rate. It is mostly scared money coming from Chinese merchants in other areas. It is a rather ironic commentary that Chinese merchants from Singapore and Indonesia are investing their money in Hongkong, which is 15 miles away from the Communist zone.

New docks are being built in Hongkong. Big new buildings are being built. Everybody is acting as though the situation were completely normal even though everybody realizes that it is going to end some day with a bang. The moment it becomes disadvantageous to the Communists to permit this little free island in the great land mass of Communist China to remain, it will disappear overnight.

COMMUNIST CHINA

As far as I can find out, Communist China is making real progress, and this, I think, is the most alarming fact of southeast Asia.

Actually, there have been a great many minor revolts. At one time, inside of China, anyone who had his window open was arrested, because it was assumed that he was going to jump out. And the executions have been terrific. There have been the usual police state methods of whipping people into line, but insofar as I can tell, they have been successfully whipped into line. Apparently the Communists are convincing the majority of the people that this is a revolution which is beneficial to China.

A great many people from other Asian countries go in and out of China, and over in the southeast Asia area you read a lot more about what's going on in China than you do here. I read a series of articles in the Illustrated Weekly of India, which is certainly no Communist paper, by an Indian named Jain who had just been in China.

This is a quote from it: "Through press, radio, movies, dance, drama, billboards, wall posters, and, indeed, through every conceivable means of mass communication, a single idea has spread. It is that a long, gloomy chapter in China's history filled with stories of a few exploiting the millions, of foreigners exploiting the nation, and poverty and filth, has ended, and a new one has begun, bespeaking an era when there will be no exploitation of man by man, and each person will get his due share."

Well, this sort of incessant propaganda is, of course, most effective, as I had a chance to see over in the East Zone in Berlin behind the Iron Curtain. You are exposed to propaganda on every side. You cannot go a block without seeing large streamers carrying slogans and messages. It is extensive and never ceasing, and it is bound to have an effect.

So I think that China is going to be a power to be reckoned with in southeast Asia, and this seems to me a fact we should not forget.

There is no doubt that the Chinese have been apt pupils. The propaganda which they send out is good. For example, the magazine which they edit on Red China, and which is distributed throughout southeast Asia, is a creditable publication. It is on good slick paper and is very well done. The Chinese propagandists know what they are doing. They have been going to Red schools since 1932. China is really on the march. This is something we will ignore only at our peril.

PHILIPPINES, SINGAPORE, LAOS, CAMBODIA

Down in the Philippines things are pretty well in hand, and a most effective job has been done in which the United States Information Service has played an important part.

Down in Singapore, where 80 percent of the population is Chinese, as are many of the populations of southeast Asia, the people are constantly subjected to a drumfire of propaganda from Red China. The result is widespread disaffection among the Chinese.

Some of the heaviest contributors to the whole Communist movement are the wealthy Chinese merchants. The Chinese are, of course, the merchant class of the Orient, and they are important either from a numerical standpoint or from an influence standpoint in most of the countries of Southeast Asia.

I think it is likely that communism will filter down into some parts of Laos. I don't know how Cambodia is going to go. There is still a chance that we will hold a part of Indochina. But it's a pretty good guess to assume that there is considerable danger of communism swinging westward toward India.

BURMA

That leaves Burma, which is largely an impotent power at the moment. It's a republic and has a very able, idealistic Prime Minister. But he is surrounded by a bunch of politicians and he has a hard job. His country is constantly subjected to the activities of Communist bands who delight in putting dynamite on the railroad tracks, and coming down into the teak forests, killing the elephants and stealing the teakwood. He needs a really good army to help him as General Templer, the British general, had in Malaya. But he hasn't got much of an army and he's having a difficult time. He sits at the bottom of that particular end of the continent with solid Communist territory north of him to the Arctic Circle.

INDIA

Now we come to India. I would like to add something to your understanding of the Indian problem in Asia because I think it is so terribly important.

The leading authority on this part of the world is Professor Brown, who, I think, has done the best book on this subject. It is called United States, India, and Pakistan, published by the Harvard University Press. He says that there are less than a hundred people in the United States who are really expert on one phase or another of this whole area.

I agree with his belief that lack of knowledge of the Asian opinion, and lack of sympathy with Asians brought about the downfall of the British Empire there.

India consists, as you know, of a land mass of over a million square miles. It has a population close to 400 million. It is largely flat with mountains mainly in the north.

India won its independence in 1947 after a long struggle during which its leaders made martyrs of themselves, going to jail for periods of up to 10 years—which is one up on George Washington.

The Indian Independence Act was passed about 30 days ahead of the actual date on which India won its independence. A month after that notice, 28,000 British civil servants walked out of India, leaving only about 500 Indians who were in any way trained to govern this vast subcontinent.

They found themselves with a country which was probably the most divided of any on record. There were then about 450 separate states in India. There were 25 different languages spoken. There were 5 separate castes and 2,000 subdivisions of these castes. The Hindus and Moslems were at each other's throats, and there was endless bloodshed and civil war.

All in all, if ever there was a country ripe for dictatorship, it was India. But it had the courage to become democracy.

This is a remarkable thing when you consider that most of the countries of the world newly freed from colonialism haven't dared to give their people the franchise. India is 85 percent illiterate, yet it gave its citizens the vote.

India's constitution starts with "We, the people." And most of India's people can't even read.

This resulted in a curious situation at the first election. The symbol of the Congress Party—Nehru's party and the leading party of India—is a pair of yoked bullocks. Many peasons voted for this symbol because they reasoned: The bullolk helps me with my work; therefore I will vote for the bullock.

Despite all obstacles, India has carried on as a democracy. It has probably made the boldest plans of any country in the world. A commission was established to draw up the first 5-year plan. It surveyed the landscape and decided that the primary job was to grow more food with the secondary job one of improving the transport. Some $440 million was appropriated to try to accomplish these ends.

Now 85 percent of the people of India live in about 550,000 Indian villages. These villages are scattered throughout the length and breadth of the country. Consequently, if anything were going to be done, the improvements had to start with these villages.

The villagers live in a state which is impossible to imagine unless you have visited

them. They live in mud huts, their streets are not paved, and they are surrounded by dirt and squalor. Women wander up and down collecting camel dung and making it into large pats which are put on the sides of the walls to dry. This becomes their principal fuel. By and large, things in the villages are pretty much as they were back in Biblical times.

Nevertheless, the thing which really typifies India is the city of Chandigar, the new capital of the Punjab, which is probably the most modern city in the world. Le Corbusier, the famous French architect, headed up its construction, and it looks almost freakishly modern rising up from the plains, with mud huts to the right and left of it.

I think, the net net of India is that it is trying to compress about 2,000 years into 50 and has made enormous progress at it. About 19 huge dams are being built, the biggest of which would make our TVA look small. A network of canals is being constructed, and most importantly, men are being trained, with the aid of the Ford Foundation, as "gram Sevaks" or "village servants." They are being trained in agriculture, public health, and so on, so that they can go to live in the villages and try to elevate the standard of living.

I walked through one of these villages after some of the improvements had been made and some of the dams had been put into operation. We were met by the village headman and escorted with much ceremony through the village. The inhabitants were terribly proud because they now had a tube well, run by an electric pump. It supplies a steady flow of water which formerly had to be drawn up laboriously by bullocks turning round and round an axis. As a result of the increased water, the people get 3 crops of wheat per year instead of 1.

The streets of this little village, which wind up these mud hills about 8 or 10 feet wide, are being paved with bricks by the villagers on their own time. They put up half the money themselves and the state puts up half, and slowly but surely the village is on the march toward better things.

I think the significant point is that India is the largest democracy in the world in terms of population, and that just to the north of it is the tremendous land mass of China. What really is going on in Asia is a great backward country sweepstakes, and this is the thing that all Asia is watching.

Which way of life can most quickly transform a backward country, and make it into something which gives its people a better break?

The Communists of China have made great headway with the theory: Go Communist and all your troubles will be over. Look at us. We have subdued the black market. We have honest government for the first time in ump-teen years. We are making enormous progress.

This argument carries tremendous weight with Asians because they too are Asians. They are all people of darker skins. Consequently, the influence of India as the democratic entry in the backward country sweepstakes is something we should never underestimate.

I myself feel that, regardless of what Mr. Nehru says, we must never forget that he is sitting virtually unarmed at the bottom of a continent which is Communist to the Arctic Circle. If Mexico were in the same position and we were inclined to be pugilistic, I fancy it would keep a civil tongue in its head also.

Consequently, I think that when you take what Mr. Nehru does instead of what Mr. Nehru says, you can be quite reassured. He is far from naive about communism. He has disinfected a zone south of Communist China. No foreigners are allowed into it. All traffic into Tibet is very carefully scrutinized for any material which might be of warmaking value. Inside of India, Nehru fights the Communist Party tooth and nail, and licks it. The Congress party badly defeated the Communists recently in the Andhra elections in the south of India.

So I feel that our propaganda in India needs to say over and over to the Indian peasant, whose life is very grim: Hang on, boys. Help is on the way.

On balance, I think you can add it up like this. In Japan, despite rather grim conditions, we've done better than hold our own. Communism has been kept down to a small precentage of the voters. In the Philippines we really have nothing to worry about at the moment; communism is contained in various pockets there. In the Malay Peninsula and on through to Indochina, it's touch and go. In India, the situation is as I have described, not forgetting that a considerable victory has just been won in the south of India.

Going on to Europe, the principal fact is, I think, that in northern Italy, communism is on the wane. I drove all through the Communist belt in the north. I talked to political leaders and people in all of the Communist-held towns and villages. I think communism has really reached high tide in the north. I don't think it has hit its high-water mark in the south of Italy, and about 15,000 Communist agitators have just been transferred from the north of Italy to the south. But in north Italy, I think we are over the worst of it.

In France, there is no visible decline of Communist voters as yet, but the signs are good. The circulation of the Communist newspaper is down. Their party membership is off, and their long-range outlook is not good.

Well, does that mean we can relax? I don't think so. I think it means merely that we are over the learning period and that we ought really to begin to have at it.

The ominous signs are still many. You cannot even relax in a country like Italy because there are too many factors there that are unsound and unfavorable. Their economic ideas are still not too modern, although they are beginning to show some glimmer about such things as productivity. But as long as you have largely family-owned businesses which want to hang on to everything they have, as long as you have the intermixture of church and politics, as long as you have the Democratic Christian party which is as indecisive and badly split as it is, it would be unwise to grow complacent.

I am going to close with a few observations which I have taken the liberty of writing out.

In hotel rooms around the world I had plenty of time to think about this baffling problem of the idea war in which we are engaged. For what they are worth, here are a few conclusions:

On the positive side, we are making progress. We are over the worst of the learning period, and have profited by our mistakes. Here and there we have developed some excellent field generals in the idea war—men who have some of the skills of advertising and public relations and who also know the host country and its people, and have experience in foreign policy. This is a new breed and we do not have enough of them.

If you take a cold war inventory, country by country around the world I believe our gains at least balance our losses.

There is reason to be encouraged. And yet there is also reason to be alarmed.

In far too many minds throughout the world—and some very important minds—communism is still the white knight and capitalism is still the dragon. Communism is still the wave of the future and capitalism is still the dying way of life.

We in America know it to be the truth that since World War II we have bound up the wounds of the world. Yet millions think of the Soviets as the idealists and the United States as the dollar-mad materialists.

Too often, in too many countries, the situation is looked at in an upside-down mirror by two key groups: labor and the intellectuals.

In short, our propaganda offensive, in my opinion, still has several critical needs.

First, it needs to sharpen its ideas. There still exists an urgent need to make clear that a new economic system has been born—a system which gives more benefits to more people than any yet devised—a system I should like to call people's capitalism. In my view, experts from various disciplines should define the ingredients of this system, and a popular writer should synthesize their conclusions in the free world's "Das Kapital."

Second, we desperately need a crusade. The lack of a crusade could cost us the cold war. To many, the Communists are the champions of the common man. America appears to champion nothing but its own safety. In those areas in which we have failed, I think this largely explains our failure.

Third, the idea war needs more firepower. We are terrible outgunned. We now spend less than two-tenths of 1 percent of our military budget on propaganda. How can we possibly expect that truth can triumph over falsehood with that sort of niggardliness? The propaganda appropriation should be greatly increased.

Fourth, we need to draw into our propaganda program more of the skills and talents of America. No group of professional propagandists, however able, can project a true image of the country, at an art exhibit, a trade fair, or anywhere else. In America, we have private organizations—from the Philadelphia Symphony to the Advertising Council—whose weight must be added to the idea war.

We can win the cold war. But we cannot win it in a walk. It is time we started running.

The President Should Appoint a Special Advisory Commission on the Arts and Cultural Exchange Now Because the Idea War Needs More Firepower—III

EXTENSION OF REMARKS

OF

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1955

Mr. THOMPSON of New Jersey. Mr. Speaker, practically every major country in the world provides some direct aid in the form of subsidy to cultural programs. The United States, on the other hand, imposes discrimatory and burdensome taxes on these programs. This has provided a propaganda bonanza to the Russians who have busily spread the lie that while the United States is a fabulously wealthy nation it lacks any of the cultural aspects of a great nation.

That this misconception has lasted so long has been our own fault, for until recently we have done little or nothing to put an end to it. The Russian Government not only subsidizes its theater, music, and other cultural programs but has spent nearly $2 billion on international theater exchange alone since the end of World War II, an amount 700 times greater than the $3 million which the United States has spent on sending our cultural programs abroad.

It is becoming crystal clear that unless we do something concrete to aid our theater we will not have any cultural programs to export. The number of plays and concerts has declined sharply in recent years due to the high costs involved and, particularly, because of burdensome Federal taxes. Studies made by Actors' Equity Association and by Prof. O. Glenn Saxon, Yale University, show the extent of the serious unemployment existing among musicians, actors, and performing artists in general.

We have prided ourselves on having the highest standard of living in the world. In view of this standard of living we should be interested in what repeated surveys in the fields of the cultural arts show.

The 32 major symphony orchestras in the United States and Canada employ fewer than 2,270 musicians. These musicians work an average of only 22.4 weeks per year at an average weekly pay of $31, and an average annual wage of $1,814. Not more than 2,200 musicians in the 2,636 radio stations in the United States—less than 1 musician per station—enjoy a full year's employment. Dr. Howard Hanson, president of the National Music Council, testified at hearings held by the 83d Congress that—

There are some patrons of orchestras who prefer to support their orchestras without governmental assistance. They are, of course, entitled to their belief, but I say that in any situation where a skilled performer is guaranteed a $1,500-a-year salary that orchestra is supported not by philanthropists but by the idealism and devotion of the underpaid musician who serves them.

Over 80 percent of the membership of the American Guild of Musical Artists, the American Federation of Labor national union with collective bargaining and other contractual relations with all the professional opera and ballet companies in the United States as well as with the concert managements who present the concert artists appearing in our country, earn less than $2,000 a year. This union represents soloists, choristers, dancers, stage directors, stage managers, and choreographers in the fields of opera, dance, ballet, and the concert stage.

The employment picture in the field of the living theater is no better. According to the study made by Professor Saxon, professor of economics at Yale University, on a research grant from the National Theater Arts Council and Theater Arts magazine, the total employment of actors and actresses was only 991 in 1953. This was less than 15 percent of the number employed in the 1927–28 season. The average income of all professional actors and actresses for the 1952–53 season was only $800 per person. It is clear that incomes like this will puchase little food, shelter, clothing or the other necessities of life. It will hardly buy milk for the baby, let alone pay for his medical attention. It will certainly buy no Cadillacs, the favorite car in Washington these days.

The gentleman from New York, EMANUEL CELLER, and I have, after considering these facts, introduced legislation to repeal the 10-percent tax on concerts and legitimate theater productions. We believe that repeal of the tax is essential to the survival and growth of the living theater and concert stage in America. We believe that this is but one of a number of steps that must be taken to assist the arts in our country. We have introduced in this Congress a number of bills to encourage the growth of the arts in our country including President Eisenhower's bill to establish a Federal Advisory Commission on the Arts in the Department of Health, Education, and Welfare. I include as part of my remarks the text of the bills, H. R. 7609 and H. R. 7851, we have introduced to exempt fine arts programs from the admissions tax. A short explanation of our bill is also included together with an article by Herman Shumlin, distinguished theater producer, which appeared in the New York Herald Tribune.

A bill to exempt fine arts programs from the admissions tax

Be it enacted, etc., That section 4233 (a) of the Internal Revenue Code of 1954 (relating to exemptions from the tax on admissions) is hereby amended by adding at the end thereof the following new paragraph:

"(10) Fine arts program: Any admission to a program the principal part of which consists of—

"(A) a lecture;

"(B) an opera, symphony, ballet, concert, or musical performance;

"(C) a drama or theatrical presentation; or

"(D) any combination of the foregoing—performed in person within the place of admission. This paragraph shall not apply to an admission to a roof garden, cabaret, or other similar place, or to an admission to which paragraph (1) (C) of this subsection applies."

SEC. 2. The amendment made by the first section of this act shall apply only with respect to amounts paid on or after the 1st day of the 1st month which begins more than 10 days after the date of the enactment of this act for admission on or after such first day.

MEMORANDUM ON H. R. 7609 (THOMPSON) AND H. R. 7851 (CELLER), BILLS TO EXEMPT FINE ARTS PROGRAMS FROM THE ADMISSIONS TAX

H. R. 7609 (introduced by Representative THOMPSON of New Jersey) and H. R. 7851 (introduced by Representative CELLER, of New York) would exempt from the 10 percent admissions tax any admission to a lecture, ballet, opera, or play which is presented in person. It would thus exclude the living theater and musical performances from the existing burdensome taxes.

The urgent need for repeal of the Federal taxes has become apparent in the light of a diminishing number of concerts and plays which are being presented in the country, and the serious condition of unemployment which exists among actors, actresses, musicians and other performing artists. In the field of the legitimate theater, the number of theaters and play productions has declined sharply since the 1920's. This condition has continued and has reached even more acute stages in recent years. In many parts of the country, legitimate theatrical productions have become a rarity due to the high cost of operations, including the 10 percent Federal tax.

Competition from tax-free television and radio places the living stage at a serious economic disadvantage. The present tax laws unjustly discriminate against live musical and theatrical productions performed in the concert hall or theater.

The number of actors and musicians employed in various segments of the theater, such as musical plays, operas, concerts, and ballet, has continuously declined for the past 20 years. Many members of the actors' and musicians' unions are employed only a few weeks out of the year in their professions. The majority of the performers are forced to supplement their income from noncreative fields in order to maintain a minimum standard of existence.

Certain fine arts programs, such as opera and symphony, have already received sympathetic attention from the Congress in the way of tax relief, but the present exemptions are confined to certain types of charitable organizations receiving funds from public institutions or soliciting contributions from members of the public. The bill recognizes the important fact that there is no proper distinction in the cultural field between programs presented by charitable organizations and other groups. The existing laws unjustly discriminate against those presenting plays and musical productions on a paying basis.

It is reliably estimated that the revenue from admissions taxes on fine arts programs at the present time does not exceed more than $7 million annually. A reduction in the admissions tax would be more than made up by substantially increased employment of musicians, actors, and others once the heavy burden of the admissions tax is removed.

The present tax on fine arts programs is a serious hindrance and impediment to the element of cultural life in many communities throughout the Nation. The tax is a substantial addition to the already high cost of presenting concerts, lecture programs, and plays. Removal of the tax would be of inestimable benefit to many community projects throughout the country which seek to become established on a paying basis. The increased employment of talented performers will also stimulate creative activity. The ultimate beneficiary, however, will be the American people who would be able to participate more fully in an important phase of cultural life.

[From the New York Herald Tribune]

WANTED: OLD-FASHIONED PATRONS OF THE ARTS

(By Herman Shumlin)

(Today's columnist, Mr. Shumlin, is the producer of the drama Inherit the Wind. His subject is backers.)

I've got a million words I want to say. What subject should I choose? I could write a piece about my wonderful production, Inherit the Wind, and that would be useful to do. I could write a piece about the man I love, Paul Muni. And a piece about Ed Begley, gifted, sincere, clean-hearted Ed Begley. And a piece about the contributions of many, many people to the whole vast mural that is Inherit the Wind.

Or I could write something about the modern chautauqua stage, or, as it is now called, the Paul Gregory Theater. I could say something about the hollow impact of walking into a theater with the curtain up and then watching an actor in a tuxedo jacket craftily, cunningly, brilliantly, pick up a stool from one place and put it in another. What lecture hall memories it brings back to me. Isn't it artistic? And just look at all those microphones, hanging, standing, nestled in the footlights. How honest, how pure it all is. But I don't want to do that, because then I would be acting like a critic, and heaven knows I wouldn't want to do that.

A FEW WORDS ON CRITICS

I could do a piece about critics, too, of course, and that is very tempting. I have a lot to say about critics, about the good ones, the able ones, and the others. But then I ask myself if that is not the swift road to trouble.

And I answer that it is. And then I ask myself if that should make any difference to me, and I answer that it shouldn't. And it won't. (I have many such interesting conversations with myself.) But not today.

So what I am devoting this column to is this: Backers, and what they are not.

Last night on my way to the National Theater I stepped into a store on 42d Street that sold books for 19 cents. Any book in the store, 19 cents. The best I could come out with was a small book picturing some of the paintings of an early 16th century artist named Cranach. There is a picture of a naked woman with a dagger in her hand on the cover, but that had nothing to do with my buying it, of course.

And that's why I decided to write about backers. For in this little book there is some text which informed me that Cranach, who was born in 1472, got a job in 1505 with the Elector of Saxony, who was called Frederic the Wise.

HE WAS A BACKER

Frederic was a backer. He backed Cranach. He also started a university in Saxony, and he hired another fellow, a fellow named Martin Luther. Now, every one knows that Luther got into a peck of trouble. He said a lot of things that a lot of powerful people didn't like. The point about Frederic is that, and I quote: "He never withdrew his protection in spite of the immense difficulties it caused him as time went on." That's what I call a backer.

Down in Florida 2 weeks ago I found a perfectly beautiful library called the Johan Fust Memorial Library. And who was Fust? Well, Fust was the man who backed Gutenberg in his invention of movable type, which in importance is probably only second to the invention of the wheel. And when the experimenting didn't go so well, and Gutenberg quit for one reason or another, Johan Fust carried it through. Fust was a man of finance and a merchant. That's what I call a backer. And no royalties, either.

There used to be a fellow named Otto Kahn. He liked the theater, and he put up hundreds of thousands of dollars for Max Reinhardt's marvelous productions, and for Morris Gest, who produced great big musicals.

There are lots of investors in show business now; there are 49 of them, all very fine folks, in Inherit the Wind. Some of them put up their money regardless of the possibility of success, because they liked what the play said. But where are the real backers? The country is full of foundations; foundations for taking care of old sailors; foundations for preserving bird life, printing Bibles, teaching Yoga, helping musicians, sending missionaries to Africa; foundations for anything you can think of.

We have great big art museums and they're fine institutions. But why is it no one ever sets up a foundation for the theater? Will somebody answer that one for me? Americans did put up most of the money for the Shakespeare Theater at Stratford in England. I guess it means more when you do it in England. What art has contributed more than the theater? Does Beethoven come anywhere near Shakespeare? Does Goya?

Why aren't there some real old-fashioned backers in the theater? I don't mean to put up money for a show. I mean to set up, and build, and endow institutions. What art is more living, more meaningful? What a bang I would get from putting up the cash for a fine theater, the Herman Shumlin Theater, and cash to keep it going forever, nonprofit, a part of the community and national life. What greater joy while I was still alive, and what greater memorial after I have gone?

One fellow has struggled 7 years or so to set up a theater in Connecticut. No one believed he could do it when he started. And the Rockefeller money helped him. Langner is his name: Lawrence Langner. He broke the ice.

Let others emulate the Rockefellers. Let them do even better. Backers, that's what I'd like to see, like the backers of yesteryear.

Justice and Peace

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. PHILBIN. Mr. Speaker, the 10th anniversary of the signing of the Potsdam agreement brings forcibly to mind the principle that there can be no lasting peace without justice.

Americans have always been particularly proud of our love of justice. We have manifested this pride in many ways in the organization and conduct of our Government. The principle of justice is enshrined in the hearts of our people. It is exemplified in our oath of allegiance, "One Nation, under God, indivisible, with liberty and justice for all."

Should we wonder, therefore, that hundreds of millions of people throughout the world look hopefully toward us to manifest and implement justice in our international dealings. Should we wonder, in the light of the various conferences during and after the war and some of the unjust agreements arrived at, that many of these people should feel a sense of disillusionment in the sincerity of allied professed ideals.

Many people aspiring to enjoy the fruits and blessings of liberty bitterly protest the Potsdam agreement. Even a brief survey of the consequences of this and other agreements vividly illustrates the opportunism, the compromise, yes, the appeasement of organized world communism that pervaded these conferences and agreements.

In Western Europe and in the Orient, most unwise and unjust concessions resulted in a Marxist Iron Curtain for millions of Germans, Poles, Lithuanians, Latvians, Estonians, Rumanians, Bulgarians, and oriental peoples, whose zeal for freedom and reliance on the principle of justice deserved a better fate.

Many reasons were advanced for these concessions but none of them exemplify spiritual or democratic ideals. The sad, stark fact is that world communism secured the real substantial advantages that came out of these conferences. In the intervening years we have witnessed, not only the tragic Iron Curtain, but the fall of China to communism and the growth of an international Frankenstein, suppressing human freedom and fostering and spreading Marxism in practically every nation.

I have never felt, and I do not feel now, that the Soviet is the formidable military power many would have us believe. I think that both in military strength and war potential—economic, political, and spiritual—it is not nearly so great and powerful as it has been represented by those who are seeking to intimidate the free nations into further appeasements. Its overall potential does not compare with that of the free nations. We should not, however, underestimate any potential enemy. Neither should we permit ourselves to be terrorized by threats of atomic destruction into further concessions.

We earnestly and prayerfully seek honorable peace and we seek to avoid war by every just and honorable means. Above all, we seek to preserve our freedoms and the freedoms of the free world, our beliefs in the Almighty, our spiritual values, our free enterprise, our way of life and culture, and our profound faith that human existence is inextricably related to the spirit and is something more than the fleshpots and technology of Marxist materialism. Our free society is based on belief in the Divine Master and freedom of the individual. We reject atheism and political tyranny.

The Soviet now has its chance. It can choose peace or it can choose war. If it sincerely wants peace based on justice, it can have it. But if it still seeks by subterfuge and design, trickery, chicanery, and force to carry out further ideological penetration of free nations, incite insurrection and revolution throughout the world, and threaten aggression against free men and women there can be but one result.

Such a result is certainly not sought by any thinking American or indeed by any thinking human. To those who love liberty, death is preferable to slavery. Though atomic war, if it comes, may bring widespread death and devastation, in the end Marxist communism will never triumph over human freedom.

Neither blandishments, nor threats, nor aggressive action will ever deter liberty-loving peoples from successfully defending their precious heritage.

I hope and pray that the Soviet leaders will choose the path of peace rather than the path of war because in the peaceful path lies a better world for all.

Twinning

EXTENSION OF REMARKS
OF
HON. JAMES M. QUIGLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. QUIGLEY. Mr. Speaker, during the week of September 12—Fair Week—the people of the city of York, Pa., will be hosts to visitors from Arles, France.

York will be playing host to representatives of a city which itself was a host to visitors from York last year. The project for the exchange of visitors is known as twinning and is the result of a non-profit-making, nonsubsidized organization, the Bilingual World, with headquarters in Paris.

The idea behind the association of York and Arles is to further the understanding of peoples of different countries of one another, and to do this not on the national level, where most diplomatic

meetings take place, but on the community level, where everyday citizens can exchange culture and experience.

This is a splendid program, and I am proud that York, a community in the 19th Congressional District, has been the first American city to undertake a twinning project.

Local citizens have been working hard to prepare for the visit of the representatives of Arles. We have enjoyed excellent cooperation from the Department of State and the French Embassy officials in planning the itinerary of the visitors on the day when they will visit Washington.

One of those who has devoted untiring efforts to the success of this venture is a predecessor, the Honorable James F. Lind, who was a Member of the 81st and 82d Congresses.

John D. Faller, Jr.

EXTENSION OF REMARKS
OF
HON. JAMES M. QUIGLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. QUIGLEY. Mr. Speaker, I was shocked when today's late news dispatches from Carlisle, Pa., reported the death of John D. Faller, Jr., a long-time personal friend, fellow attorney, and an outstanding citizen. John Faller was shot to death in the county courthouse when a litigant in a case in which Mr. Faller was acting as cocounsel, pulled a gun and fired wildly.

John Dysert Faller, Jr., was a member of the law firm of Faller and Faller. He was the son of the late John Dysert Faller, a member of the Cumberland County Bar Association and secretary and general counsel to the Pennsylvania Turnpike Commission for a dozen years. He was graduted from Georgetown University and the Dickinson School of Law.

A member of the St. Patrick's Roman Catholic Church, Carlisle, Mr. Faller was general manager of the Mount Holly Water Co., a member of the Cumberland County Bar Association, the Pennsylvania Bar Association, and the American Bar Association. He was a charter member of the Knights of Columbus in Carlisle.

Mr. Faller was devoted to Carlisle and its people. He was a director of the Hamilton Library Historical Association. It was partly because of such interest that he offered to lead the legal fight for saving the market house for farmers by establishing their right to use of the site. Another community service was his acceptance of the presidency of the Carlisle Firemen's Relief Association, which deals with matters concerning compensation for injured volunteer firemen.

He was active in his church, in service club work, and in the Democratic Party. He was a citizen who will be missed in many ways.

Mr. Faller is survived by his wife, Mrs. Elizabeth Billow Faller; his son, John D. Faller III; his mother, Mrs. John D. Faller, Sr.; his brother, George B. Faller, Esq.; an aunt, Mrs. Ernest Gill, of Mount Rock, Pa., and an uncle, Dr. Constantine P. Faller.

I extend my deepest sympathies to his sorrowing family.

The President of the American Bar Association Supports Proposed Study of Archaic Copyright Law of 1909 by a Bipartisan, High-Level Commission—I

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. THOMPSON of New Jersey. Mr. Speaker, on January 20, 1955, I introduced a bill, H. R. 2677, creating a bipartisan, high-level commission to study the copyright law and make recommendations for its revision. I am happy to be able to say that my plan has been widely supported. Loyd Wright, president of the American Bar Association, for instance, is "of the opinion that in view of the frustrations that have attended attempted revisions in the past, a thorough study of the copyright laws by an impartial and qualified commission would do much to bring this subject to the attention of Congress for appropriate action." Support was also expressed for the plan I have in mind in a brilliant, hard-hitting speech at the April 1955 convention of the Music Operators of America, held at the Morrison Hotel in Chicago, by Hilmer Stark, general manager of the Billboard magazine's coin-machine division.

On June 7, 1955, Dr. L. Quincy Mumford, Librarian of Congress, and Arthur Fisher, Register of Copyrights, Library of Congress, requested an appropriation sufficient to undertake a 3-year study looking toward revision of the domestic copyright law of 1909 which they described as "archaic." This appropriation was voted by the Congress shortly before adjournment. Although the study has just been authorized, some industry spokesmen are already charging that the study, when completed, will be biased. The Billboard magazine of August 6, 1955, reported that—

> Telegrams protesting the (proposed) Copyright Office study as "biased" were sent to chairmen and members of the Appropriations Committee and subcommittee by top officers of Music Operators of America, George Miller and Hirsh De La Viez (Billboard, July 23). Other protests were wired by members of the industry and the Music Guild of America. A committee spokesman acknowledged receipt of the telegrams and said they had been called to the attention of the committee.

That the Music Operators of America, which lodged the protest, is one of the most powerful and representative organizations in the music field is shown by the fact that over 3,000 representatives of the music industry attended the fifth annual convention in April. Over a dozen record companies, 4 jukebox manufacturers, and approximately 80 distributors, leading recording artists in every category from both major and independent labels, song writers, song publishers, and other firms allied with the automatic phonograph industry got together with music operators from every State in the country to iron out common problems and discuss ideas to improve the business on every level. George A. Miller, national president and business manager, advises me that there are some 11,000 music operators in the Nation, plus many thousands of employees. Any charge of bias made by this organization must, therefore, be given considerable weight.

I hope that the Librarian of Congress will take steps to see that the 3-year study is not biased and that the fears expressed by the spokesmen for the music operators are unjustified. I can think of nothing that would be more disastrous both to the Library of Congress and the powerful industries involved than a "biased'" study of the very complex subject of copyright law.

I include as part of my remarks two of the many letters I have received, articles from Billboard magazine, and the text of my bill, H. R. 2677, creating a Federal commission to study the copyright laws and to make recommendations for their revision:

[From the Billboard magazine of July 23, 1955]

COPYRIGHT OFFICE'S PROPOSED STUDY DRAWS MOA FIRE

WASHINGTON, July 16.—Strong objection to the Copyright Office's proposed study of the copyright laws with a view to revision was voiced by the Music Operators of America this week. In telegrams to CARL HAYDEN, Democrat, Arizona, chairman of the Senate Appropriations Committee, and EARLE C. CLEMENTS, head of the Senate Subcommittee on Legislative Appropriations, MOA's vice president, Hirsh de La Viez, characterized both Dr. L. Quincy Mumford, the Librarian of Congress, and Arthur Fisher, Register of Copyright, as biased. De La Viez added that the study could not be impartial.

In addition to wiring his own protests, the MOA vice president also stated that George Miller, president of MOA, is contacting the Phonograph Manufacturers' Association in Chicago in an effort to enlist further objection against the Copyright Office move.

The Copyright Office plan to conduct its study got quietly underway recently (Billboard, July 7), with a request for an appropriation for additional personnel to help with the proposed 3-year investigation of copyright law. The Fisher request followed on the heels of an exhaustive study of the history of copyright revisions which Representative FRANK THOMPSON, JR., Democrat, New Jersey, presented to the House June 23. The THOMPSON 80-page report is background for his bill of January 20, which would set up an impartial fact-finding commission to investigate the whole Copyright Act and make recommendations for its revision.

Sections of the detailed history made by the American Law Division of the Library of Congress, at THOMPSON'S request, are being read into the CONGRESSIONAL RECORD in installments. The July 12 reading by THOMPSON included mention, without comment, of the Copyright Office request for funds, and added that the House had voted $20,000 for this study.

Fisher's original request for $40,000 was cut to half by a House subcommittee, and

has already been considered by a Senate Appropriations Committee. The appropriation request is not expected to meet opposition when it reaches the Senate floor.

De La Viez's telegram to the Senators on the Copyright Office study read: "I would like to voice my objection to the section of the appropriations bill (H. R. 7117) for the Library of Congress regarding increased appropriation for a study of the copyright law, as I feel that both Dr. L. Quincy Mumford, the Librarian of Congress, and Arthur Fisher, Register of Copyright, are biased. It could never be an impartial study of the copyright law."

LAW OFFICES OF WRIGHT,
WRIGHT, GREEN & WRIGHT,
Los Angeles, July 19, 1955.

The Honorable FRANK THOMPSON, Jr.,
House of Representatives,
Washington, D. C.

SIR: This is in response to your note to Loyd Wright asking whether he cared to comment on your three statements published in the CONGRESSIONAL RECORD on the subject of your bill to create a Federal commission to study the copyright laws and to make recommendations for their revision.

Mr. Wright and I discussed your statements just before he left town last night. We are both of the opinion that in view of the frustrations that have attended attempted revisions in the past, a thorough study of the copyright laws by an impartial and qualified commission would do much to bring this subject to the attention of Congress for appropriate action.

Very truly yours,
RICHARD M. GOLDWATER.

ROCHESTER, N. Y., *August 2, 1955.*

Hon. FRANK THOMPSON, Jr.,
House Office Building,
Washington, D. C.

MY DEAR THOMPSON: With a great deal of interest, I have learned of your extension of remarks in the CONGRESSIONAL RECORD Appendix of June 23, 1955, pages A4586–A4590; June 28, 1955, pages A4713–A4716; and July 12, 1955, pages A5080–A5085. All of this material relating to copyrights is interesting, especially the text of the study of techniques employed in efforts at major copyright law revision since 1909, which was prepared for you by the Library of Congress. All of us who are interested in copyright legislation are certainly indebted to you for making this text available to the public through the CONGRESSIONAL RECORD.

I wonder whether you have an extra copy of the pages containing your remarks. If so, I would be very happy to receive them, as I would like to preserve this material in my files for future reference.

Also, if you have any mailing list of lawyers interested in copyright matters, to whom you send material of this kind from time to time, I would be grateful if you would add my name to such list. Thank you very much.

Yours truly,
CHARLES SHEPARD,
Chairman, Committee on Copyrights,
American Patent Law Association.

H. R. 2677

A bill creating a Federal commission to study the copyright laws and to make recommendations for their revision

Be it enacted, etc., That there is hereby established a commission to be known as the Commission on the Copyright Laws (hereinafter referred to as the "Commission").

SEC. 2. (a) The Commission shall be composed of 13 members appointed as follows:

(1) Seven persons appointed by the President of the United States;

(2) Three appointed from the Senate by the Vice President of the United States; and

(3) Three appointed from the House of Representatives by the Speaker of the House of Representatives.

(b) Of the first class of members specified in subsection (a), no more than four members shall be from the same political party. Of the second and third classes of members specified in subsection (a), no more than two members from each class shall be from the same political party.

SEC. 3. The President shall designate the member of the Commission who shall be the chairman, and the member who shall be the vice chairman.

SEC. 4. Seven members of the Commission (including at least three who are Members of Congress) shall constitute a quorum.

SEC. 5. (a) Members of Congress who are members of the Commission shall serve without compensation in addition to that received for their services as Members of Congress; but they shall be reimbursed for travel, subsistence, and other necessary expenses incurred by them in the performance of the duties vested in the Commission.

(b) Members of the Commission who are in the executive branch of the Government shall each receive the compensation which he would receive if he were not a member of the Commission, but they shall be reimbursed for travel, subsistence, and other necessary expenses incurred by them in the performance of the duties vested in the Commission.

(c) Members of the Commission from private life shall receive not to exceed $25 per diem when engaged in the performance of duties vested in the Commission, plus reimbursement for travel, subsistence, and other necessary expenses incurred by them in the performance of such duties.

SEC. 6. The Commission is directed to examine, study, and make recommendations for the revision of all laws pertaining to both domestic and foreign copyright.

SEC. 7. (a) The Commission, in carrying out its functions under this act, may appoint such personnel as it deems advisable, without regard to the civil-service laws, and shall fix the compensation of such personnel in accordance with the Classification Act of 1949, as amended. The Commission may procure temporary and intermittent services in accordance with section 15 of the act of August 2, 1946 (5 U. S. C., sec. 55a), but at rates not to exceed $25 per diem for individuals. The Commission may reimburse employees, experts, and consultants for travel, subsistence, and other necessary expenses incurred by them in the performance of their official duties and make reasonable advances to such persons for such purposes.

(b) Service as a member of the Commission (except service of a member appointed by the Vice President or the Speaker of the House or appointed by the President from the executive branch of the Government), employment of an individual pursuant to the first sentence of subsection (a), and service by a person pursuant to the second sentence of subsection (a), shall not be considered as service or employment bringing such person within the provisions of section 281, 283, 284, or 1914 of title 18 of the United States Code, or section 512 of the Mutual Security Act of 1954, or section 190 of the Revised Statutes (5 U. S. C., sec. 99).

SEC. 8. There is hereby authorized to be appropriated out of any money in the Treasury not otherwise appropriated, so much as may be necessary to carry out the provisions of this act.

SEC. 9. (a) Within 30 days after the commencement of the first regular session of Congress convened more than 1 year after the date of the enactment of this act, the Commission shall make a report of its findings and recommendations to the President and to the Congress.

(b) Sixty days after submission to the Congress of the report provided for in subsection (a) of this section, the Commission shall cease to exist.

SEC. 10. The Commission or, on the authorization of the Commission, any subcommittee or member thereof, shall have power to hold hearings and to sit and act at such times and places, within the United States or elsewhere, to take such testimony, and to make such lawful expenditures, as the Commission or such subcommittee or member may deem advisable.

[From the Billboard magazine of April 9, 1955]

WHY FACTFINDING: STARK MOA SPEECH

(EDITOR'S NOTE.—Because of the unusual interest in the address made at the convention of Music Operators of America by Hilmer Stark, general manager of the Billboard's coin machine division, the complete text of his speech follows.)

Copyright legislation is one of the uppermost thoughts in your mind. Since I represent the Billboard, you will want to know why the Billboard has proposed factfinding.

Let me preface my remarks by stating that we on the Billboard cannot disagree with the stand taken by your MOA officers and by the phonograph manufacturers since obviously the current exemption, in effect since 1909, is a law which is on your side. And, equally obviously, to endorse factfinding or to take any other stand would be an admission that the law should be changed.

Why, then, does the Billboard propose factfinding? One good reason is that we believe it's time to settle this problem. We can and have placed ourselves in a position where a sincere and honest conviction may lead to a solution of this controversy.

It is interesting to note that the stand we have adopted has had two results:

1. We are charged by those who seek to obtain a performance right from the jukebox industry that we have instituted a delaying action—that a Presidential Factfinding Commission could take 2 or 3 years to study copyrights and reach some conclusions.

2. On the other hand, there have been charges that we seek to lead the jukebox industry down the primrose path to excessive performance royalty payments to ASCAP and BMI.

UNPOPULAR STAND

In other words, the stand we have taken is not popular with the leaders in either camp. By setting aside any commercial impulses to sell advertising, we prove we are sincere in the concept of solving this problem that I will unfold to you today.

Just why did the Billboard propose factfinding. Development of this policy came after years of study and deliberation. A policy for the good of our readers, not only jukebox operators, but every segment of the music industry—authors, composers, publishers, record companies, and others.

The Billboard believes that the 1909 exemption is wrong.

But two wrongs do not make a right. The Billboard recognizes that it would be an even greater wrong if the exemption were removed, exposing jukebox operators to the mercies of a virtual monopoly.

NO CHANGE

We do not believe that any change should be made in the existing law until such time as guaranteed safeguards have been erected so that you as users of music can deal as equals, individually or collectively, with the immensely powerful licensing organizations, and that these safeguards must protect you from indefinite and unreasonable fees, present and future.

That is an oversimplification of the thinking and the answering of a myriad of questions which led to our conclusion for factfinding.

Here's why, in capsule form:

1. While recognizing performance rights and, too, the unfairness of exposing jukebox operators to a monopoly, we also could not see how any conceivable solution could be reached by congressional committees who for many years have not been able to reach a solution.

2. We believe that the yearly battle is taking thousands of dollars which might more properly be devoted to building the jukebox business, and it certainly hamstrings your development into background music—music service without coin-operated mechanisms—which is subject right now to payment to the licensing organizations.

BITTERNESS OF FEUD

3. The bitterness of the yearly feud has made it impossible for either side to even recognize a valid offer by either side. The battle is waged along strict lines of either being pro- or anti-exemption.

4. We feel that while a copyright is a thing of value, it is equally valid to say that no jukebox operator should pay more for that music than it is worth to him.

If you're thinking this was a pretty big chaw, you're so right. In seeking the answers, we found that despite our years of contact with you and every other segment of the music business, we didn't know the answers. But we did have one opinion on how the answers might be found.

We don't believe that congressional committees can arrive at a conclusion that would satisfy all segments of the music industry—primarily the jukebox operators—because they are the smaller group, composed of individuals, who might well be subjected to attack as individuals by a powerful licensing organization.

OTHER SIMILAR BODIES

We believe that one form of investigation—that of presidential fact-finding committees—is probably the most free and unbiased way of seeking answers to problems of this kind. It has been done on tariffs, on juvenile delinquency, and on many other lively questions which faced even larger groups of contestants.

It is our sincere belief that such a group, composed of Congressmen, lay neutral persons, and economic experts might arrive at some way of settling this dispute, which, if allowed to continue, might damage irreparably the music industry, and I speak not only of jukebox operators and authors, but also of record manufacturers, music publishers and others in the music industry.

We hesitate to recommend anything beyond this one point to a fact-finding commission.

Find a way in which to solve this dispute; recognize not only the right vested in a copyright, but also the right of the purchaser to pay only in relationship of value. But, above all, find some way in which the user of music can deal on an equal basis with a virtual monopoly.

EQUAL BASIS

The last point is terribly important. If you and I were dealing in a tangible product which was made by 5 or 6 other producers, we would be free to tell 1 seller to go to blazes and buy from the other seller. But the product which you as jukebox operators use is pre-eminently currently popular music of which better than 90 percent is controlled by the licensing organizations, and you can't make money with Jeanie With the Light Brown Hair.

Yes; you could argue that you've fought it out for years and that there has been no change in the law. Here we enter into an area of opinion on whether this was the year in which the bill—this year called the Kilgore bill—might have passed—and still might pass.

Knowing you—and many of those authors who furnish today's popular music—we don't believe you are very far apart. Perhaps we have partially alienated both groups, but the role of peacemaker invariably finds that person in the way of the barrage. If we can in some small way help to end the copyright difficulty, we will be content. But, mind you, never until it is an equitable settlement that is mutually satisfactory.

PAY OR NOT PAY

Factfinding committee action could well find that you cannot pay additional fees, or that you can. It might find some way of coupling the mechanical royalty to a performance royalty, basing it on the number of records purchased, but it could be decided fairly. It is our contention that the jukebox operator has nothing to fear from such an appraisal of the situation.

I can promise you this: That just as we have called for stopping action on all proposals that seek to end the exemption—we're outspokenly and categorically against them—so will we maintain a vigilant watch over any straying from the path on the rights of the jukebox operator.

And if you should be thinking that the Billboard is risking your future, just hold these points in mind:

We were convinced all along that another attempt would be made by ASCAP to remove the exemption in this session of Congress. In this respect we were right.

We were mighty sure your leaders would fight this bill as openly and effectively as they have in the past. In this respect we were right.

ASCAP OFFENSIVE

But we have also been sure the offensive by ASCAP would be better organized than ever before, and thus the chances of passage were better in this session. Here again you can say we were right in view of the number of Senators sponsoring the bill.

Our proposal for factfinding does not in any way hinder your leaders in their defense. The Billboard is opposed to the Kilgore bill as strongly as they are.

And we sincerely feel factfinding may wind up your substitute safeguard if the Senate passes the Kilgore bill. It has already virtually assured your industry of fair hearings in the House, if not the Senate, whereas there was a danger that the Kilgore bill would be passed without a hearing.

The Billboard's proposal for factfinding is being heard in Washington. It may never seriously be considered, but it has already been effective in warning Congressmen and Senators alike that there is more to this problem than simple removal of the exemption.

We don't expect you to support factfinding as long as the law is on your side. Neither do we expect ASCAP nor BMI to support it. But factfinding pushed by the Billboard may very well be your refuge in case the Senate passes the Kilgore bill.

And we feel certain that you prefer factfinding to the Kilgore bill.

The President of the American Bar Association Supports Study of Archaic Copyright Law of 1909 by a Bipartisan, High-Level Commission—II

EXTENSION OF REMARKS

OF

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. THOMPSON of New Jersey. Mr. Speaker, I include as part of my remarks excerpts from a study prepared for me by the American Law Division of the Library of Congress of the major attempts to modernize the copyright law of 1909:

VIII. THE DUFFY BILL, 1936

Preliminary to considering the Duffy bill, S. 3047, 74th Congress, certain events which had occurred in the preceding Congress should be mentioned:

1. June 10, 1933, Senator Cutting introduced a bill in the Senate (S. 1928) entitled "To enable the United States to enter the International Copyright Union."

2. May 31, 1933. Mr. Luce introduced the same bill (H. R. 5853) in the House.

3. February 19, 1934. The President sent the Berne Convention as revised at Rome in 1928 to the Senate for ratification of United States adherence.

4. March 28, May 28–29, 1934. Hearings were held by a subcommittee of the Senate Foreign Relations Committee on the Cutting bill and the convention.

5. Opposition to adherence to the convention developed at the hearing and some witnesses even urged that efforts to revise the law completely be renewed. It was suggested that the Secretary of State confer with the various conflicting interests, obtain their viewpoints and report to Senate committee.

6. Accordingly an interdepartmental committee was created composed of Dr. Wallace McClure and Mr. Joseph T. Keating, of the State Department, Mr. William L. Brown, Register of Copyrights, and his Assistant Register, Mr. Richard C. De Wolf, and Mr. James L. Brown, of the Department of Commerce, who was later replaced by Mr. L. G. Koebfle, of that Department. This committee drafted a bill which became known as the first Duffy bill.[1]

On April 1, 1935, in the 74th Congress Senator Duffy introduced the first Duffy bill as S. 2465. The bill was referred to the Senate Committee on Patents which appears to have held hearings on it which do not seem to have been printed. No further action was taken on S. 2465. On June 17, 1935, Senator Duffy introduced a revised bill as S. 3047. Senator Duffy described the background of the bill starting with the hearings on the Cutting bill and the convention in the 73d Congress:

"It soon became evident from the testimony before our subcommittee that there was a very decided difference of opinion prevailing among those who might be affected by such action. There was a very marked conflict of interest as it appears here today from the discussion so far had. If this committee were to join with almost 50 other countries and become a party to the International Convention of the Copyright Union it was generally agreed that some enabling legislation would be necessary in order to adjust the provisions of our law to the provisions of the treaty.

"It was generally recognized that for a quarter of a century there had been no comprehensive revision of the copyright law and that greatly changed conditions had occurred in the means whereby artistic works are communicated to the public. Almost everyone who has given study to the question agrees that many changes in our copyright law are highly desirable by reason of these changed conditions.

"Our subcommittee of the Foreign Relations Committee reported to the full committee. We reported that there was this wide difference of opinion. The entire committee then decided to request the State Department to organize an informal interdepartmental committee to confer with the various conflicting interests in an endeavor to reconcile as far as possible such divergent viewpoints. Such a committee was formed. I desire the Senate to know the membership

---

Footnotes at end of speech.

of this committee because it is very important in the discussion of this question.

"Two of the members of the committee were from the Department of State. Two of the members of the committee represented the copyright office itself. They would be certainly as well acquainted with this subject as any man who could be chosen. The fifth member of the committee represented the Department of Commerce.

"When the bill finally took shape as a result of these hearings I introduced it in the Senate and it was referred to the Committee on Patents. The Committee on Patents then held hearings and had conferences on it [committee hearings referred to are not available in the Library of Congress and it would seem that they were not printed]. The bill was cut up to a considerable degree and revised and I then, at the request of several members of the Committee on Patents, introduced into the Senate the revised bill which is now before the Senate for consideration."[2]

Senator Duffy also indicated that the treaty had been favorably reported to the Senate on April 18, 1935.[3] It was unanimously ratified by the Senate on April 19, but on his request and by unanimous consent such action was reconsidered and the treaty was placed back on the Executive calendar to await action on the revised Duffy bill.

The Senate Committee on Patents then considered Senate 3047 and reported the same favorably to the Senate (S. Rept. 896, 74th Cong.). After considerable debate on the Senate floor the bill was passed in the closing days of the session with an amendment, known as the Vandenberg amendment providing for design copyrights, and another restoring the manufacturing clause.

In the House the Committee on Patents held hearings during the second session on the Duffy, S. 3047; Daly, H. R. 10632; and Sirovich bills, H. R. 11420. These hearings were held on February 25, 26, 27; March 3, 4, 5, 10, 11, 12, 17, 18, 19, 24, 25, 26, 27, 31; and April 1, 2, 3, 7, 8, 9, 10, 13, 14, 15, all in 1936. Some of the difficulties with which the House committee was beset are indicated by an interchange between the chairman and other members of the committee occurring during the first day of the hearings as follows:

"The CHAIRMAN. I have consulted with both the people who are in favor of copyright legislation, in favor of the Duffy bill, and other legislation, and those opposed to it, and we are giving every side an opportunity to present their side, either for or against. Every individual who is interested in copyright legislation will have his opportunity to present his side. Four or five years ago we gave every side a fair and square deal, and the opportunity to present their matter. In fact, the bill was reported out by the committee and brought on the floor. A few Members of the House objected that we had not given all the time necessary to people who wanted to be heard, and the bill was recommitted to the committee just for that purpose. We do not want to conduct the hearings in the way that the committee did 5 years ago, so we are going to give everyone an opportunity to present any views that they have for or against on the subject so that they can have a fair and square deal on both sides.

"Mr. LANHAM. May I say just a word there in explanation?

"Of course, my colleague, Mr. Church, is relatively a new member of the committee, as are most of the members. Many years ago we started in on this matter of copyright. We had 8 years of hearings, and after years of reconciliations that were effected among the divergent interests during that time, this committee was able to report a bill to the House.

"Mr. PERKINS. You refer to the Vestal bill?

"Mr. LANHAM. I refer to the Vestal bill, which passed the House with one very slight amendment.

"That bill went to the Senate. At that time the session of Congress adjourned on the 4th of March. The bill was under consideration at the time of adjournment and the filibuster with reference to another measure prevented the conclusion of the consideration of the copyright bill. The hearings during those 8 years were quite voluminous, and covered every aspect of this important subject of copyright. Those hearings are available.

"I understand that it is the desire of those who are sponsoring this legislation, the various bills, to try to get legislation at this session of Congress, if possible. From the experience we have had in this committee heretofore, knowing what a complex subject this is, if we should hear the proponents of this measure and then hear the opponents of the measure the bill would be dragged along indefinitely, because I know the ramifications of such a discussion by experience.

"My thought is, though I have nothing to do with the control of the procedure, that perhaps a more expeditious way of considering this is to hear those who object to this bill, assuming that the proponents of the bill are for it, and direct our attention to those features which are in conflict, giving the proponents the opportunity for rebuttal. It seems to me if we do not adopt some such policy as that, the hearings will just drag on and on indefinitely.

"Mr. CHURCH. Mr. Chairman, the point I make is that the public who have come from so many miles to be heard ought to know generally from the chairman your plan of dates for their hearings.

"The CHAIRMAN. We have done that already.

"Mr. CHURCH. I certainly as one member would insist that persons introducing a bill be first heard, because you have the whole world to resist and oppose until you hear the promoter of a bill.

"Mr. KRAMER. Mr. Chairman, I do not see that it makes any great difference whether we start in the middle of the hearing or not.

"Mr. CHURCH. The gentleman has intimated that I am not familiar with this procedure. I am familiar with the past hearings. I am familiar with the 16 years of legislative experience. I have never sat in a committee before where you hear the opponents first. I appreciate the statement in every way here today. There is no reflection against Mr. Buck for that information. But I do think that this committee should hear the people interested in the passage of this bill first.

"The CHAIRMAN. The Chair will recognize Mr. Perkins.

"Mr. LANHAM. May I say that I have interrupted to add that my suggestion was made merely in the interest of conserving time, because the reference in this bill is not objectionable to anyone. I think it is unnecessary to have long and tedious explanations of those passages.

"The CHAIRMAN. The Chair will recognize Mr. PERKINS.

"Mr. PERKINS. Mr. Chairman, several of the members of this committee, particularly Mr. LANHAM and myself, have been sitting on these hearings for the past 16 years. The matter of copyright legislation is now on the books. The bills before us propose changes in that legislation. I am inclined to agree with Mr. LANHAM that the more practical way is first to hear the objections to the changes and give the benefit of reply to those who suggest the changes.

"This is not exactly as if it were entirely new legislation where proponents would come in and make suggestions or would come in with a new bill. The bills before us are merely changes in the copyright law, and for the sake of conserving time and narrowing the issues and giving those who propose the changes the opportunity of hearing the objections, I think the method the committee is proceeding with is much better than to hear the proponents first.

"Mr. CHURCH. Let us hear the program of dates of hearings, then, at this first meeting before we go into the House.

"Mr. PERKINS. Of course, for the benefit of those who are here to testify before the committee and to save their time, it would be well if the committee could outline the days and the hours when the various witnesses could be heard.

"Mr. DALY. May I be heard on that, Mr. Chairman?

"The CHAIRMAN. Mr. Daly.

"Mr. DALY. I want to say in reply to Mr. Church particularly that as I understand the situation here, the copyright law of 1909 is not satisfactory to anybody. With the many inventions and various changes since 1909, I think everybody agrees there should be new copyright legislation. That assumed tangible form in the Duffy bill and was introduced and passed. There were a number of protests, particularly from the society represented by Mr. Buck, who are vitally interested in it. They have serious objections to the Duffy bill, they being of the opinion that it did not give the protection that should be given to various artists of various kinds.

"To endeavor to get really at the matter, two other bills were introduced in the House. Dr. Sirovich introduced one and I introduced the other. So we practically have before us first the copyright bill of 1909, second, the Duffy bill, and third, these two bills

"In order that everybody might get a hearing and the committee might be enlightened on all the aspects of this case, Dr. Sirovich outlined a program covering 4 weeks, 3 days a week for 4 weeks. All those who opposed the Duffy bill were asked to come here. All those who favored the Duffy bill were asked to come here. There may be serious objections to either the bill Dr. Sirovich introduced or the bill I introduced, before we get through. But he has, Mr. Church, outlined a program outlining the 4 weeks.

"Mr. CHURCH. I am familiar with that, as to the dates.

"The CHAIRMAN. You have been given the dates.

"Mr. CHURCH. You refer to the fact that we have hearings scheduled for 3 days a week for the next 4 weeks. But my people from Illinois cannot come down and spend their time here 3 days a week for 4 weeks, in addition to their mileage. I have asked the chairman to outline a plan whereby these people may get together today or tomorrow and determine the dates when they may want to be here.

"The CHAIRMAN. Let me explain that, if you will permit me to explain it:

"The program that we have outlined is to have the American Society of Composers, Authors, and Publishers, the Authors' League, and the Dramatists' League present their side. After they have finished, which will be within the next week or the following week, we are going to have the hotel owners, the department stores, the radio people, the motion-picture exhibitors and distributors, and the various other organizations who have come to our committee and who have received their turn. We wrote a letter to about 200 individuals and organizations, asking what time would be convenient for them, and we have had to establish the time that would be convenient for all.

"Mr. MCLEOD. Right there, all of these hearings and all of these dates are not centered on any one bill but on the question of copyrights."[4]

It would be too confusing to attempt to show the proponents and opponents of these

Footnotes at end of speech.

Footnotes at end of speech.

three bills. Needless to say, the witnesses were not in agreement on any one bill. The following is therefore based upon whether the witness was in favor of or opposed to the Duffy bill.

Those in favor of the Duffy bill were:

F. Ryan Duffy, United States Senator from Wisconsin.

Wallace McClure, Assistant Chief, Treaty Division, Department of State.

James W. Baldwin, managing director, National Association of Broadcasters.

Sydney M. Kaye, attorney, National Association of Broadcasters.

Louis G. Caldwell, attorney, National Association of Broadcasters.

H. B. Somerville, chairman, national legislative committee, American Hotel Association.

Carl L. Cannon, Yale University Library.

Henry Jaffe, of the firm of Whitman, Ranson, Coulson, & Goetz, New York.

Thorvald Solberg, former Register of Copyrights.

Homer E. Capehart, the Automatic Musical Instrument Association.

John E. Dowsing, tariff council, United States Potters Association.

A. D. Haake, the National Association of Furniture Manufacturers.

Harvey Willson, general manager, National Upholstery and Drapery Textile Association.

Miss Mary Vendelari.

E. L. Kuykendall, president, Motion Picture Theater Owners of America.

William G. Viederman, the Christian Science publishing interest.

Those opposed to the Duffy bill or certain features of it were:

Gene Buck, president, the American Society of Composers, Authors, and Publishers.

Deems Taylor, director, American Society of Composers, Authors, and Publishers.

William Joseph Hill, composer.

Rudy Vallee, orchestra leader.

E. C. Mills, general manager, American Society of Composers, Authors, and Publishers.

George M. Cohan, playwright, actor, and song wrighter.

Elmer Davis, vice president, Authors' League of America.

George Creel, manager, Authors' League.

Thyra Sampter Winslow, authoress.

Ben Lucien Berman, author.

Mary Heaton Vorse, authoress.

Manteel Howe Farnham, authoress.

Chester Crowell, author.

William Hamilton Osborne, the Authors' League.

Louise Silico, secretary, Authors' League.

George Middleton, playwright.

John Howard Lawson, playwright.

John G. Paine, Music Publishers Protective Association.

William Arms Fisher, Boston Music Publishers Association.

James Francis Cook, president, Theodore Presser Co., and editor of Etude.

Francis Gilbert, attorney, the Music Publishers Protective Association.

The Honorable Karl Stefan, Representative in Congress from Nebraska.

H. A. Huebner, the Brunswick Record Corp. and Columbia Phonograph Co.

R. W. Ultschuler, president, American Record Corp.

Isabell Marks, Decca Records, Inc.

Fulton Brylawski, Motion Picture Producers.

Fred Waring, president, National Association of Performing Artists.

John O'Connor, National Association of Performing Artists.

Samuel Tabak, Local No. 802, New York City, American Federation of Musicians.

Frank Crumit, singer.

Louis James, member of the Revellers Quartet.

Arthur Bryant, composer.

Gen. Samuel T. Ansell, general counsel, American Federation of Musicians.

Guy Lombardo, conductor.

Maurice J. Speiser, general counsel, National Association of Performing Artists.

Miss Mary Bendelari, National Council on Design.

Marvin Pierce, the National Publishers Association.

Melvin H. Coulston, Eastern Railroad Association.

Edward A. Brand, attorney, Tanners' Council of America.

Harry Leeward Katz general counsel, Music Users Protective Association.

R. B. Fletcher, counsel, the Association of American Railroads.

Karl Fenning, patent attorney.

S. G. Nottingham, patent attorney.

Sylvan Gotshall, attorney.

Weil Gotshal and Manges, attorneys.

Miss Irene L. Blunt, secretary, the Industrial Design Registration Bureau.

Irwin C. Fox, National Dry Goods Association.

U. Forest Walker, R. H. Macy & Co., New York.

Henry W. Carter, the Glass Container Association of America.

Charles Ballon, the Popular-Price Dress Manufacturers' Group Inc.

Mr. Golby, executive secretary, Fashion Originators Guild.

William Cheney, eastern managing director, National Retail Furniture Association.

Hugh F. Hall, American Farm Bureau Federation.

Charles E. Boyd, the Retail Merchants Association.

Milton Tibbetts, vice president, Packard Motor Car Co.

Louis Rothschild, the Retailers National Counsel.

Henry D. Williams, attorney, the firm of Williams, Rich & Morse.

Thomas E. Robertson, formerly Commissioner of Patents.

Frederick G. Melcher, National Association of Book Publishers.

William O. Tufts, Rand-McNally Co. and National Association of Book Publishers.

Hon. Conway P. Coe, Commissioner of Patents.

Edwin P. Kilroe, attorney, Twentieth Century Fox Film Corporation and Movietone News, Inc.

Fulton Brylawski, counsel, Copyright Committee of the Hays Organization.

Gabriel L. Hell, general counsel, attorney for Hays Organization.

Henry C. Harding, the Independent Songwriters of America.

Nathan Burkan.

R. S. Ould, patent attorney.

The fact that the hearings ran to some 1,560 pages and that the Vandenberg amendment for design copyright had brought in many commercial firms as witnesses made the picture even more confusing than usual. In fact, the situation generally would appear to have been summed up at the beginning of the testimony of Federick G. Melcher, the National Association of Book Publishers:

"We are appearing in this hearing to comment on the Duffy and other bills, and in doing so I am aware of the long years of discussion in which many of the opinions we might express are already recorded and have been studied by ourselves and other members of the committee, and we do not want to take your time to repeat on things which do not need new emphasis. We are aware, also, that as the years go by it does show, shall I say, our national incapacity to legislate on a very important fundamental issue. This incapacity to legislate, which is clear in my mind, having represented this industry for a dozen years and because my partner was active in the hope of our making such progress for many years before—Mr. Bowker—is not due to the partisan character of the legislation, which I think we all appreciate, as we have had equal consideration under the different administrations; and it has not been due to any lack of application on the part of the legislators, but has been due to our inability to compose urgently expressed points of view, particularly from the point of view of our new entrants into the field of copyright, and not so much on the part of book publishers, who even precede, I think, the authors in point of protection."[5]

The inability to compose urgently expressed conflicting views as indicated by Melcher seems to have been the stumbling block in each of the several attempts by legislative committees to achieve a major copyright revision. The committee did not report any of the bills to the House and they died with the close of the 74th Congress.

The President of the American Bar Association Supports Study of Archaic Copyright Law of 1909 by a Bipartisan, High-Level Commission—III

EXTENSION OF REMARKS

OF

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. THOMPSON of New Jersey. Mr. Speaker, I include as part of my remarks the concluding portion of a study prepared for me by the American Law Division of the Library of Congress of the major attempts to modernize the Copyright Law of 1909. Charles Shepard, chairman of the Committee on Copyrights, American Patent Law Association, has written to me in support of this brilliant study saying:

With a great deal of interest, I have learned of your extension of remarks in the CONGRESSIONAL RECORD Appendix of June 23, 1955, pages A4586–A4590; June 28, 1955, pages A4713–A4716; and July 12, 1955, pages A5080–A5085. All of this material relating to copyrights is interesting, especially the text of the study of techniques employed in efforts at major copyright law revision since 1909, which was prepared for you by the Library of Congress. All of us who are interested in copyright legislation are certainly indebted to you for making this text available to the public through the CONGRESSIONAL RECORD.

In include here, also, a letter I have received from Charlotte E. Gauer, executive secretary, American Patent Law Association, expressing the gratification of the members of that organization for the information made available in the able study made by Freeman W. Sharp, American Law Division, Library of Congress:

AMERICAN PATENT LAW ASSOCIATION,
Washington, D. C., August 2, 1955.
Hon. FRANK THOMPSON, Jr.,
House of Representatives,
Washington, D. C.

DEAR MR. THOMPSON: Your comments which appeared in the CONGRESSIONAL RECORD with respect to the creation of a Federal commission to study the copyright laws and to make recommendations for the revision thereof were referred to our committee on copyrights, of which Mr. Charles Shepard, of Rochester, N. Y., is the chairman. As a result, I am pleased to advise you that the members of this association who practice in the copyright field show great interest in this study and wish to commend you for making the results of this study available to the people through its publication in the CONGRESSIONAL RECORD. This is the sort of information that is not generally available in one package and it is very gratifying to have it in this form.

We will, of course, follow these matters with interest.

Sincerely yours,
CHARLOTTE E. GAUER,
Executive Secretary.

IX. THE SHOTWELL COMMITTEE AND THE LEAGUE OF NATIONS, 1937–40

One final attempt at copyright revision was made during the period under discussion, this time by a private organization, the National Committee of the United States of America on International Intellectual Cooperation. This committee was formed by the League of Nations in the early twenties. Since the United States failed to join the League at the conclusion of World War I, the committee was an unofficial body with respect to the Government of the United States. The League established an International Committee on Intellectual Cooperation under which a number of regional committees functioned. The national committee was one of the regional committees.[1]

A subcommittee entitled "Committee for the Study of Copyrights" was established by the national committee for the purpose of solving the various existing problems in achieving international copyright protection. The subcommittee also attempted to solve the United States domestic legislative problems respecting copyright protection in order to facilitate its entrance into the Berne Convention or a modified form thereof. Prof. James T. Shotwell, of Columbia University, then chairman of the national committee, also became chairman of the Committee for the Study of Copyright.[2] Professor Shotwell was succeeded by Dr. Waldo G. Leland,[3] director emeritus of the American Council of Learned Societies. Through the courtesy of Dr. Leland, permission has been granted to quote from a manuscript history of the National Committee on International Intellectual Cooperation, written by Edith E. Ware, who was executive secretary of both the national committee and the Committee for the Study of Copyright.[4] Miss Ware describes the copyright revision effort:

"Until 1938, the national committee had never made any attempt to understand the copyright situation. It had accepted the opinion of Herbert Putnam in 1926, and in 1933 had received a memorandum from Llewellyn Raney, director of the University of Chicago libraries, protesting the manufacturing clause of the United States copyright law and urging adherence to the International [Berne] Convention for the Protection of Literary and Artistic Works. In 1935, after asking for a specific provision in the Duffy bill designed to facilitate the use of microcopy for purposes of research, the national committee, without specific knowledge of all the issues involved, went on record as prepared, to testify in support of the Duffy bill and the Berne Convention. But in December 1938, the national committee had another story to tell. Its committee for the study of copyright, which had been in existence for a little less than a year, had formulated a program whose influence persisted for over a decade.

"On January 1, 1938, when the Committee for the Study of Copyright began its investigations, the International Convention for the Protection of Literary and Artistic Works was on the Senate Calendar, and several bills to amend and consolidate the copyright law, including the Duffy bill, reintroduced as S. 7, were before the Patents Committees of both Houses of Congress. But there appeared to be little likelihood of any action being taken on the subject of copyright protection, national or international. Two interesting facts appeared to be responsible for this stalemate. First, on account of an inherent opposition to legislation by treaty or to the obligation to legislate according to terms of a treaty, there was universal demand that revision of copyright legislation must precede any affirmative action in relation to international copyright protection as embodied in the Bern Convention. Second, there was quite general and determined opposition to a number of important provisions in the bills then before Congress, which were designed to amend the existing copyright legislation of the United States with a view to entrance into the Bern Union for the Protection of Literary and Artistic Works. In addition, there was divergent opinion as to the merits of the Berne Convention itself, and a shocking absence of information and interest in inter-American copyright relations.

"In view of this situation, the Committee for the Study of Copyright, at its meeting with experts and consultants on February 22, 1938, committed itself to the principle of universal protection of literary and artistics works. It did not, however, define its position in relation to proposed conventions designed for international copyright protection. Instead, it proposed to study existing laws and treaties.

"This was imperative in the face of the domestic situation, the forthcoming conference at Brussels for the revision of the Bern Convention, and the draft conventions which were being circulated to American States preparatory to their discussion at the inter-American Conference at Lima in December 1938.[5]

* * * * *

"However, in view of the forthcoming Brussels Conference which hoped not only to revise the Bern Convention but to draft a universal convention, the Committee for the Study of Copyright, as a subcommittee of the National Committee on International Intellectual Cooperation and therefore within the International Cooperation Organization, sent a representative to the meeting of the committee of experts that was to confer at Paris and Brussels, October 19 to 21, 1938, on the agenda for the Conference for the Provision of the Bern Convention. Francis Deak, because well informed through the good offices of the Committee for the Study of Coypright concerning opinion in the United States with respect to the Bern Convention, and because of previous association with the institutions sponsoring the meeting and with its individual members, was able to clarify reasons for the nonaffirmative action on the part of the United States with respect to the Bern Convention and to win restatement of certain important proposals. His Report on the Status of International Copyright Protection and on the Brussels Meeting of the Committee of Experts, published by Columbia University Press in 1938, was an important contribution to the understanding of the work of the committee of experts.

"The chairman of the national committee, at its meeting on December 10, 1938, informed the members present that Edith E. Ware, the executive secretary of the Committee for the Study of Copyright, and the committee's consultant on Latin American Copyright Relations, William Sanders, chief of the Juridical Division of the Pan American Union, were at the Eighth International Conference of American States at Lima, Peru (December 9–27, 1938), on behalf of the recommendations of the Committee for the Study of Copyright with respect to inter-American copyright relations.[6]

* * * * *

"The Committee for the Study of Copyright also attempted, in 1938, to resolve the domestic legislative problems of international copyright protection. Representatives of authors, publishers, labor, motion-picture producers, broadcasters, mechanical recorders, libraries, and scholars were invited to roundtable consultations, where in daily meetings of small committees and later of the committee of the whole that continued through 1939, a new copyright bill was drafted. It was introduced into the Senate, as S. 3042, on January 8, 1940. France fell in May.

"The Brussels Conference for the Revision of the International Convention for the Protection of Literary and Artistic Works was postponed because of the war. When it did meet in July 1948, it did not attempt to draft a universal convention, for in 1947 UNESCO had begun a study of international copyright laws and relations with a view to improving international copyright relations on a basis more inclusive than that of the Berne Convention."[7]

During the course of 1938 and 1939, many studies were made by the Committee for the Study of Copyright, and a considerable number of meetings and conferences were held with the various interests concerned in the problem of domestic copyright revision. At these meetings the following were represented:

Authors' League of America: Mrs. Louise Sillcox, Mr. John Elliott.

Labor: Mr. Michael J. Flynn, Wage Earners Protective Association; Mr. Clyde Mills, Typographical Union; Judge J. Raymond Tiffany, general counsel, Book Manufacturers Institute.

The American Society of Composers, Authors, and Publishers: Mr. John G. Paine, general manager; Mr. Gene Buck, president; Mr. C. E. Mills, chairman, board of directors; Mr. Schwartz, general counsel.

Book Publishers Bureau: Mr. Frederick G. Melcher, chairman of the Copyright Committee Book Publishers Association (magazines); Mr. Marvin Pierce, chairman of the copyright committee; Mr. George Lucas, radio (National Association of Broadcasters); Mr. Sydney M. Kaye, Motion Micture Producers and Distributors; Mr. Edwin P. Kilroe, chairman of the copyright committee; Mr. Gabriel Hess, general counsel; Mr. Robert W. Perkins, general counsel for Warner Bros.

Scholarship: Mr. Robert C. Binkley; Mr. Richard Manning, small committee (originally invited), chairman of the copyright committee which already existed; Mr. Melcher, book publishers; Mr. Kilroe, motion pictures; Mr. Pierce, magazine publishers.

Radio: Mr. Sydney M. Kaye.
Ascap: Mr. John Payne.
Labor: Mr. Michael J. Flynn.
Authors: Mrs. Louise Sillcox.

The Committee for the Study of Copyright worked very hard to achieve a general revision. Its papers, now in the possession of the Copyright Office, Library of Congress, occupy some seven file drawers. It should be

---

Footnotes at end of speech.

Footnotes at end of speech.

noted that the Register of Copyrights did not participate in the work of the Shotwell committee. In fact, he later expressed his opposition to many features of the bill drafted by that committee. The committee completed its final draft of a proposed bill on December 18, 1939. This bill, known as the Shotwell bill, was introduced in the Senate on January 8, 1940, by Senator Elbert D. Thomas, of Utah, as Senate 3043.[8]

The text of the bill together with an explanatory statement appears in the CONGRESSIONAL RECORD of that date. No action was taken on the bill during the year 1940. The outbreak of World War II in Europe during 1939 had focused attention on other and more pressing problems. At the conclusion of World War II the League of Nations expired and the United Nations was established. Dr. Leland liquidated the remnants of the national committee and the Committee for the Study of Copyright. Thereafter efforts to secure universal cooperation in copyright were continued under the UNESCO organization of the United Nations.

Since World War II the effort to secure a new international copyright convention has been successful. No general revision of the United States copyright law has been undertaken, and efforts to have the United States adhere to the Bern Convention were abandoned. Instead, the United States participated in preparing the Universal Copyright Convention which was completed in 1952 and signed by the United States and 39 other countries, including both members and nonmembers of the Berne Union. In 1954 the United States ratified the convention and implementing changes in the copyright law were enacted by Congress in Public Law 743, 83d Congress.

In reporting the bill, H. R. 6616, 83d Congress, for compliance with the Universal Copyright Convention the House Committee on the Judiciary explained its effect on the present copyright law:

"The principal amendments to the United States copyright law which are necessary are the relaxation, as to foreign works, of the requirement of United States manufacture, a slight modification of the form of copyright notice, and the elimination of the requirement of deposit of two copies of foreign works in the United States Copyright Office.

* * * * *

"The Universal Copyright Convention, in order to overcome the objections of the United States and other nonsignatory nations to the features of the Berne Convention, is based on the concept of national treatment. In other words, instead of seeking to establish uniform international standards of copyright, or, in effect, establish an international copyright law, this convention merely seeks to guarantee to works first published in any signatory nation the same copyright protection in other signatory nations as is given to works first published in such other nations or of nationals of other signatory nations. It does not seek to eliminate differences in copyright theory which exist throughout the world or to harmonize national laws, but instead recognizes existing differences. Also, it has no retroactive effect on works already in the public domain in any contracting states and does not provide for automatic copyright without formalities which rendered the Bern Convention incompatible with American copyright law." [9]

In order for the Universal Convention to become effective 12 countries must deposit their ratifications. Ten have done so to date, including the United States. The necessary additional deposits of ratifications are expected to be received soon.

Since the statement, supra, concerning the ratification of Universal Convention was written the following information has been received:

"UNIVERSAL COPYRIGHT CONVENTION RATIFIED

"Word has been received from the Director General of UNESCO that the Universal Copyright Convention will come into force on September 16, 1955, by virtue of the deposit of the ratification of the required 12 countries. The principality of Monaco deposited the 12th ratification on June 16, and the convention comes into force, according to its terms, 3 months thereafter.

"Public Law 743 (approved August 31, 1954), the recent amendment to the copyright law that implemented the United States ratification of the treaty, also becomes effective on September 16, 1955. Accordingly, on and after that date, works first published in the following countries or works by nationals of these countries will receive the benefit of the new law: Andorra, Cambodia, Chile, Costa Rica, German Federal Republic, Haiti, Israel, Laos, Monaco, Pakistan, and Spain. In essence, such works will receive automatic copyright protection in this country without the necessity of complying with the formalities of the United States law. Likewise, works by United States authors, or those first published in the United States, will receive protection in these 11 countries merely by the fact that they were published in the United States." [10]

X. CONCLUSION

The foregoing résumé discloses a variety of methods employed in the attempt at copyright revision. Briefly, they may be characterized as follows:

1. The first attempt, that of the Dallinger bill, might roughly be termed the "employment of counsel method" in that after many conferences by an industry group, one of the interested parties retained counsel to draft a bill which was then introduced by a sponsor, Representative Dallinger.

2. The second method might be termed the "expert method" in that the Register of Copyrights, Mr. Salberg, as a one-man expert drafted a bill, then introduced by Representative Perkins.

3. The next effort might be termed the "agreement within industry method" in that one of the groups within the industry attempted by conferences with interested parties to draft an acceptable bill (the Vestal bill).

4. This was succeeded by what might be termed the "legislative investigation method" in that the congressional committee, without considering a specific bill, held hearings to determine for itself the views of all the interested parties, and on the basis of these hearings drafted a bill (the Sirovich bill).

5. The next effort might be termed the "interdepartmental committee method" in that an interdepartmental committee attempted to draft a bill (the first Duffy bill) with limited objectives. Opposition, however, forced an extension of the objectives to greater areas of revision resulting in the second Duffy bill.

6. The final effort might be termed the "private party method" in that the National Committee of the United States of America on International Intellectual Cooperation through its subcommittee, the Shotwell committee, drafted a bill (the Thomas bill) which attempted to reconcile the various conflicting interests.

It should be borne in mind that while our entry into the Universal Copyright Convention did not involve a comprehensive or even a major revision of the American copyright laws it did constitute an important achievement in copyright procedure. This was done by treaty and implementing legislation. The details for the United States were worked out by the Librarian of Congress, the Register of Copyrights, and the State Department in a series of conferences involving all major interests.

Instead of utilizing any of the techniques or methods utilized the Thompson bill (H. R. 2677) proposes a Federal Commission—comprising as already indicated, both Presidential and congressional appointees—to "examine, study, and make recommendations for the revision of all laws pertaining to both domestic and foreign copyright."

---

[1] League of Nations, Secretariat, Information Section. Essential Facts About the League of Nations, 10th edition, revised. Geneva 1939, p. 265 etc. "As soon as the league was founded efforts were begun for improving the International Organization of Intellectual Workers. On December 18, 1920, the first assembly requested the council to associate itself as closely as possible with all such efforts. The assembly had in view the possible setting up for this purpose of a technical organization attached to the league."

This organization now exists in the Intellectual Cooperation Organization of the League of Nations, which forms one of the league's four technical organizations side by side with the Health, Communications and Transit, and Economic and Financial Organizations. Its constitutions received the formal approval of the assembly on two occasions, in 1926 and in 1931. It is composed as follows:

1. International Committee on Intellectual Cooperation. An advisory organ of the council and the assembly. It consists of 19 members appointed by the council. It directs the work of intellectual cooperation.

2. Committees of experts to answer special questions. Some of these are permanent while others exist only for a limited period. This organization has three working bodies (a) the Intellectual Cooperation Section which is its administrative secretariat and the (b) International Institute of Intellectual Cooperation (Paris) which is its executive organ. The institute pepares for meetings of expert committees, it arranges for inquiries that have been ordered and publishes the results. There are 44 national committees established in various countries including the United States where the committee is known as the National Committee of the United States of America for International Intellectual Cooperation.

Governor Harriman Visits Israel

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 27, 1955

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following news item which appeared in the July 22, 1955, issue of the Israel Digest:

GOVERNOR HARRIMAN VISITS ISRAEL

JERUSALEM.—New York Gov. Averell Harriman expressed his opposition to the arming of the Arab States as long as there is no peace in the Middle East and urged the United States Government to "continue its persistent efforts to bring about peace between Israel and the neighboring states."

The Governor and Mrs. Harriman, during their 3-day stay in Israel, met with President Izhak Ben-Zvi, Prime Minister Moshe Sharett, and Defense Minister David Ben Gurion.

Governor Harriman showed special interest in the projects carried out by the United States operations mission in Israel. Twenty-five specialists from the State University of New York are participating in the technical assistance program.

While touring northern Israel, Governor Harriman noted that Israel had directed United States aid into improving the water supply at the Arab village of Tira, was building a health center there and had established a tractor station to aid Arab farmers mechanize their field work.

In Nazareth, the Governor visited the Christian shrines and in Haifa toured the new campus of the Technion (Israel Institute of Technology). He also visited the Weizmann Institute of Science in Rehovot and laid a weath on the grave of the late President Chaim Weizmann.

A special flight provided Mr. and Mrs. Harriman with a bird's-eye view of Israel development as the New York Governor viewed the historic reclamation of the Huie Valley from the air.

In Jerusalem, Prime Minister Sharett presented Governor Harriman with an album of Israel photographs bound between hand-beaten copper plates.

Taking Stock

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 27, 1955

Mr. MULTER. Mr. Speaker, the following article, written by H. B. Quoyoon, which appeared in the July 25, 1955, issue of the Long Island Commercial Review, is deserving of our attention:

TAKING STOCK

(By H. B. Quoyoon)

LET THE BUYER BEWARE

Despite all the recent talk in newspapers concerning Senator FULBRIGHT's bill to further regulate unlisted securities and foreign issues—a bill which would offer greater protection to all investors and speculators—the fantastic rashness of stock promoters continues unabated.

Recently, a large investment service recommended the purchase of an issue selling well under $1 a share. In so doing, they sent out several hundred thousand copies of their favorite report on this penny stock. It is interesting to note that these reports were sent not only to subscribers—reportedly less than 20,000 in number—but to lists of names of nonsubscribers, some of whom had previously been subscribers of other investment services, while others were merely people who were recorded as being shareholders of various companies.

Despite the fact that these reports were sent out within a very short period of time, the stock failed to advance. Interestingly enough, not too many weeks before these reports were sent out, a group of people were permitted to buy close to a million shares of unissued stock at very low prices per share from the company recommended in the report.

It is not difficult to assume that the shares they purchased were sold at substantially higher prices than they paid when the investment service sent out its report shortly thereafter.

Even the scantiest degree of security analysis will reveal that the purchase of this stock by the people who received the report was more speculative than shooting craps with loaded dice blindfolded.

STRONGER SEC NEEDED

If you believe in the outmoded theory that the purchaser of any commodity must take upon himself all of the responsibility for finding out about its inherent or theoretical value, this type of stock promotion will not be disturbing.

If, however, you ascribe to the modern civilized theory that no man can be an expert in all matters—a problem which becomes increasingly difficult in the field of securities—it is plain that further protection is absolutely necessary as soon as possible.

Founded in the 1930's as a result of various congressional investigations into the fields of finance and securities, with high hopes that unethical and fraudulent practices would be greatly reduced, the SEC (Securities and Exchange Commission) has consistently shown in recent years a basic unwillingness to strengthen its powers and scope of action.

Fully realizing that the purchase of any security reveals a desire for speculative gain, that people will very often buy certain stocks despite experienced and sound judgment, and that some people will always find ways of defrauding themselves and others even if a whole new mass of laws concerning stocks were enacted, I feel that in buying unlisted securities the average investor does not even get a bare minimum of protection.

Senator FULBRIGHT's bill is a step in the right direction. Passed into law, it would provide almost the same safeguards to purchasers of unlisted securities as have purchasers of stocks traded on leading exchanges such as the American Stock Exchange.

The bill would essentially require that over-the-counter issues of companies having more than 500 stockholders and over $5 million in assets file financial statements and annual reports with the SEC, comply with existing proxy regulations, report monthly trading in that company's stock by officers, directors and shareholders owning more than 10 percent of its stock, and make the purchase of these stocks subject to the same margin requirements of listed securities.

It is almost unbelievable that some financial leaders are opposed to this minimum protection. What these people are actually recommending is that shareholders of unlisted securities should not be given the same amount of news and information about their companies that is afforded to holders of listed securities.

SOME IMPROVEMENT NOTED

It is only fair to note that the SEC has just recently started to take some cognizance of the wide demand for better regulations. Two rules it has adopted in the last 4 weeks restrict trading activity of people participating in the distribution of securities, and govern price stabilizing of a stock. (A common practice in the offering of a new issue to absorb downright price fluctuation.)

At recent congressional hearings concerning Senator FULBRIGHT's bill, Edward T. McCormack, American Stock Exchange president, stated that he endorsed FULBRIGHT'S bill (S. 2054) and said that the ASE has for many years been fostering "the idea that investors should receive from management the maximum feasible amounts of information concerning the corporations they own. We believe that, to the extent that this bill fortifies and enforces this principle and thereby removes in part the existing gap in Federal securities legislation, it is in the public interest and should be adopted by the Congress.

"Regulation of the type here proposed has been tried for many years in the field of exchange trading and has proved sound and workable. No responsible person doubts that it is here to stay."

Resolutions Adopted by the Sixth Congress of Americans of Ukrainian Descent

EXTENSION OF REMARKS
OF
HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Tuesday, August 2, 1955

Mr. CASE of New Jersey. Mr. President, one of the groups in our country which opposes aggressive Communist imperialism and represents the aspirations of a people for freedom is the Ukrainian Congress of America.

Its national chairman is Dr. Lev E. Dobriansky, who is also a professor of Soviet economics at Georgetown University.

From May 28 to 30 of this year, the Sixth Congress of Americans of Ukrainian Descent was held at the Hotel Commodore in New York City. This congress adopted a series of resolutions bearing on a wide range of significant subjects which deserve the consideration of the United States Senate.

At the request of Dr. Dobriansky, I ask unanimous consent to make the text of these resolutions available to my colleagues by inserting them in the Appendix of the RECORD.

There being no objection, the resolutions were ordered to be printed in the RECORD, as follows:

INTRODUCTION

We, the delegates representing over a thousand Ukrainian-American organizations, fraternal associations, political and citizens' clubs, veterans' organizations, religious communities, women's clubs and societies, youth clubs and leagues, sports and athletic groups and civic associations—all of which are organized into local and State branches of the Ukrainian Congress Committee of America—have assembled at this time to discuss and deliberate upon problems which are of direct concern to this great and democratic Republic of the United States of America and to us as its citizens, and of a like concern to the great nation of Ukraine and to us as having ties of blood with her people. This is a particularly significant occasion, as it marks the 15th anniversary of the inception of this unique national organization which held its first convention in the Nation's capital exactly 15 years ago, in 1940. During this entire period, the Ukrainian Congress Committee of America never deviated from its chosen path of exposing the true face of the universal and growing menace of world communism directed by the Kremlin and its Russian Communist gang of aggressors.

Our organization strongly supported our Government both in war and in its postwar efforts to secure peace, asserting without surcease that a lasting peace could not be achieved without granting freedom and independence to nations enslaved by the forces of Russian Communist imperialism.

This unshakable belief of the Ukrainian Congress Committee in the indispensability of freedom for all nations, including Ukraine and other enslaved nations of the Soviet empire, was maintained throughout the course of the 15 years' activities of this organization, as attested to by its congresses and adopted resolutions in 1940, 1944, 1946, 1949, and 1952.

Today, the Ukrainian Congress Committee of America is a strong national organization consisting of branches and affiliates in over three-fourths of the States of the Union, and representing 1½ million Americans of Ukrainian descent, has, of necessity, come to assume an extremely important role in disseminating the truth about the imperialistic and aggressive designs of Russian communism. This fact has been brought out with particular clarity in connection with hearings and recommendations of the Select Committee on Communist Aggression of the House of Representatives, 83d Congress. This unique and united organization is continuing in the task of forming enlightened and realistic policies with respect to the Soviet Union.

A most fitting expression and recognition of the magnitude of the task performed by this organization is contained in the large number of statements and messages made by leading United States Senators and House Members assembled in a brochure recently published by the UCCA on the occasion of the 37th anniversary of the establishment of the Ukrainian National Republic in 1918, and in the messages of Presidents of the United States to the Congresses of Americans of Ukrainian Descent.

I. NATIONAL SECURITY AND PEACE

Whereas the contemporary international situation, cancered by the aggressive, atheistic forces of Russian Communist imperialism and its worldwide conspiratorial network, is fraught with mortal danger to the independence, sovereignty and the free and democratic institutions of the United States which in the current power context stands as the ultimate bastion of freedom in the world; and

Whereas the maintenance of peace punctuated by the absence of global military conflict is primarily necessitated by the envisioned horrors of nuclear destruction; Be it

Resolved, That the Ukrainian Congress Committee of America extend and intensify its expenditure of resources in the continued furtherance of general public knowledge and understanding of the concrete nature of Russian Communist imperialism, of the perils posed by its criminal international conspiracy, and of the propaganda techniques of imperialist Moscow toward the prime ends of fortified internal security, moral nonappeasement, and peace coupled with the advance, not the costly retreat, of freedom.

II. POLICY OF PEACEFUL LIBERATION

Whereas the captive nations, both within and without the Soviet Union, have clearly shown by their heroic acts of resistance and just aspirations to constitute a powerful array of natural allies in the cause of freedom and justice toward all nations; and

Whereas the shortsighted policy of containment, narrowly pursued, is not only discredited by the record of Communist successes but also by its own void of moral content and sound political principles; and

Whereas by logical definition any policy other than a policy of liberation belongs to the containment species: Be it therefore

Resolved, That the Ukrainian Congress Committee of America redouble its efforts in the advancement of a steadily implemented policy of peaceful liberation which alone perceives the illusion of "peaceful or competitive coexistence" where Iron Curtains exist to divide nations and peoples, which alone extends to the captive peoples throughout the Russian Communist empire our fixed moral commitment toward their eventual liberation and national independence, and which alone provides the hope and encouragement necessary for all the captive nations to persevere in their resistance and political opposition to the present genocidal consolidation program undertaken by Moscow as the basic requisite in its calculus of world conquest. We strongly urge the adoption and implementation of the policy of peaceful liberation by our Government in a declared spirit of a universalized declaration of independence, directed especially at the captive nations in the Soviet Union.

III. ORGANIZATION AND POLICY OF THE UKRAINIAN CONGRESS COMMITTEE OF AMERICA

Whereas the Ukrainian Congress Committee of America is in function and structure a national American institution which, independent of any foreign political connections or involvements, is founded on a unique unity of all anti-Communist organizations and groups of Americans of Ukrainian ancestry and in its national representation is expressive of the basic convictions and sentiments of a million and a half American citizens; and

Whereas the Ukrainian Congress Committee of America bases its general policy entirely on the complete identity of just interests and aspirations in promotion of the forces of freedom that exists between our country and the valiant and strategic Ukrainian nation, as well as the other non-Russian nations in the Soviet Union; and

Whereas the Ukrainian Congress Committee of America views its dedication to the sacred cause of freedom, as embodied in the crowning objective of a liberated and independent Ukraine to be in the prime and vital interest of the security and freedom of our Nation: Be it therefore

Resolved, That the entire membership of the Ukrainian Congress Committee of America intensify its moral and financial support of the expansive activities of Ukrainian Congress Committee of America, uphold by local example the cherished unity of our combined strength against all divisive influences, and extend its local activities and participation among all circles of American life to advance further the dominant truths on the natural alliance binding our country and Ukraine in the struggle against the concrete enemy of Russian Communist imperialism.

IV. ENSLAVED UKRAINE

Whereas the sufferings of the Ukrainian nation have been largely due to the ruthless policies of enslavement of Soviet Russia, which fact is recognized by all save the Communists, fellow travelers, and die-hard Russian imperialists;

Whereas mass deportations and executions of Ukrainian patriots, ruthless destruction of all Ukrainian churches, russification of Ukrainian culture and language, the unrestricted genocidal policy of Moscow toward the Ukrainian people and other crimes express the fundamental and traditional Russian policy aiming at the elimination of the Ukrainians as a separate ethnic entity; and because Ukraine, by virtue of its geographical position, its numerical strength and its natural resources, has been and continues to be a natural springboard for aggressive Russian imperialism, its full and unqualified liberation from the brutal rule of Moscow would contribute to the strengthening of international peace: It is

Resolved—

(1) To support fully and unswervingly the aspirations of the 45 million Ukrainian people in their efforts to regain their political freedom and national independence. We call the attention of the United States Government and the free world at large to the fact that the Ukrainian people had achieved their full freedom when, on January 22, 1918, they proclaimed their independence, and on January 22, 1919, they united all the Ukrainian ethnographic territories into one independent and sovereign Ukrainian democratic republic, established through a due process of democratic elections and endorsed by an overwhelming majority of the Ukrainian people.

(2) To call the attention of the United States Government and of the free world at large that in Ukraine there exists in opposition to Russian domination an indomitable Ukrainian underground resistance, which opposes rule by Moscow and strives for the attainment of a free, independent and democratic Ukraine, and for a world free of the menace of Communist aggression.

V. KERSTEN COMMITTEE

Whereas the Select Committee of the House of Representatives (83d Cong.) on Communist Aggression (known as the Kersten committee) has performed extremely important work for the defense of our country by bringing to light the Communist aggression against once free and independent nations; and

Whereas the work of this select committee is by far not yet complete, nevertheless it has already provided unrefuted historical evidence not only of uninterrupted oppression practiced by Soviet Moscow, aggression and genocide of nations enslaved by Moscow, but also clearly indicates that similar plans exist against nations as yet free, including the United States; and

Whereas in order to forestall these criminal and highly threatening Soviet practices and plans, immediate countermeasures are indicated: Be it therefore

Resolved by the Sixth Congress of Americans of Ukrainian Descent to appeal to the Congress of the United States with a pleading recommendation, That (1) the existence and work of the Select Committee on Communist Aggression be continued for as long as circumstances shall demand; and (2) the findings and recommendations of the select committee heretofore made should not be permitted to gather dust, but should be transmitted to the United States Government with a recommendation to start direct and indirect action to forestall this threat, so pointedly indicated by the results of these investigations. The Sixth Congress of Americans of Ukrainian Descent particularly warmly supports the proposition already made public, that the United States delegate in the United Nations make a motion, on the basis of material already available, that the Soviet Government be officially named an aggressor and guilty of genocide, and that as a result of such motion the Soviet Government be appropriately censured by the General Assembly.

VI. VOICE OF AMERICA AND UNITED STATES INFORMATION SERVICES

Whereas in relation to the enslaved nations in the Communist empire the goals of our United States Information Agency and its Voice of America are clearly to maximize in the common cause of freedom our appeal to the peoples of these nations and to weaken the chains of bondage by which the tyranny of imperialist Moscow shackles them; and

Whereas to preserve freedom and a way of life and that of the captive peoples to regain their freedom and self-government is the natural spirit of patriotism and enlightened nationalism predicating the ends of national independence and sovereignty; and

Whereas overwhelming masses of evidence exist for ready demonstration of the predominant fact that nowhere in the world can there be found a form of imperialism and colonialism that could even be compared with the criminal and savage proportions of Russian Communist imperialism: Be it

Resolved, That the Ukrainian Congress Committee of America continue to exert its

efforts in the attainment of a maximally efficient Voice of America, especially in the Ukrainian division; also in the realization of worldwide distribution of scholarly works supporting the just cause of Ukraine and the other colonial non-Russian nations in the U. S. S. R.; and in the establishment of a Joint Congressional Committee on United States Overseas Information with structure and function similar to the joint committee in the field of atomic energy.

VII. UNITED NATIONS

Whereas at the present stage of civilization the fate of nations and their development is strictly dependent on mutuality and excludes any kind of isolationism; and

Whereas peace and security based on morality, law, and justice, dignity of men and rights of nations is possible only under conditions of orderly cooperation among peace-loving nations that subscribe to democratic principles; and

Whereas the greatest enemy of morality, law, and justice, and freedom of man and nations is Russian communism, continuing the traditions of Russian imperialism through Communist Parties and fifth column activities, which utilizes all available opportunities in order to undermine institutions dedicated to free international cooperation; and

Whereas the liberation movement of nations enslaved by Soviet Russia is a powerful factor in the fight of the free nations against the aggression of Russian Communist imperialism bound on world conquest: Be it therefore

Resolved, That the Sixth Congress of Americans of Ukrainian Descent, through its executive organs will give support to the efforts of the Government of the United States to make the United Nations an effective instrument of international cooperation based on democracy and freedom of nations and against aggressive tendencies of undemocratic regimes, and in particular of the chief enemy of world peace and international law—Russian Communists imperialism; and be it further

Resolved, To direct the attention of the Government of the United States and of American public opinion to the fact that the presence in the United Nations of representatives of Communist regimes tends to undermine the high aims and purposes of that organization, wherefore the delegations of the United States and of other democratic and peace-loving nations in the U. N. should, within the charter provisions of the U. N. proceed to eliminate all Communist representations from the U. N. on the basis of the violations by their governments of the U. N. Charter and International Treaty provisions—as contained in the testimony of Dr. L. E. Dobriansky before the United States Senate Foreign Relations Subcommittee on the United Nations Charter on April 22, 1955, and printed in the CONGRESSIONAL RECORD of May 11, 1955, under the extension of remarks by the Honorable LAWRENCE SMITH, of Wisconsin, the testimony referred to including a number of concrete recommendations on U. N. Charter revision which this Sixth Assembly of Americans of Ukrainian Descent hereby fully endorses.

VIII. THE FAR EAST

Whereas the conference of nations of reawakening Asia and Africa held in Bandung last month by its deliberations has proven to the world that the patriotism of liberated nations makes them the best actual and potential allies of the free world and of the United States, as well as a bulwark against the aggression of communism: Be it therefore

Resolved, That we voice our approval of such American policy in the Far East which cooperates with the liberated nations of Asia and Africa and promotes the cause of anti-Communist China, Korea, and Vietnam.

IX. COMPULSORY REPATRIATION OF REFUGEES

Whereas the Soviet Government recently attempted to impose upon the parties to the Austrian State Treaty a provision which would have resulted in the forced repatriation of some 30,000 anti-Communist displaced persons in Austria; and

Whereas the Ukrainian Congress Committee of America participated significantly in urging our Government to oppose so inhumanitarian a provision; and

Whereas there is now pending before the House of Representatives, House Resolution 137, introduced by Congressman ALBERT H. BOSCH, calling for the creation of a select committee to investigate the entire problem of forced repatriation: Therefore be it

Resolved, That the Ukrainian Congress Committee of America will continue to exert its efforts and influence to oppose, overcome, and precent further attempts on the part of the Soviet Government to effect forced or compulsory repatriation of refugees anywhere, in any manner, method, or form; and be it further

Resolved, more specifically, That we strongly urge the Congress of the United States to adopt the said House Resolution 137 so that such an investigation may establish once and for all the responsibility for the forcible repatriation of millions of anti-Communist refugees who met death at the hands of the Russian Communist oppressors.

X. IMMIGRATION

Whereas the McCarran-Walter Act, known as the Immigration and Nationality Act provides for a system of numerical restriction of immigrants based upon the national origins of the peoples contributing to the population of the United States; and

Whereas the said national origins quota system is based upon the Federal census of 1920, which is not a true and/or accurate reflection of the number of persons of Ukrainian stock residing in the United States at that time inasmuch as the Ukrainian immigrants were required to list as their country of origin such countries as Poland, Russia, Czechoslovakia, Austria, and others, rather than Ukraine; and

Whereas the quota area was and is definitive of a country or other independent governmental unit rather than a nation or nationality; and

Whereas the governments of such quota areas from where Ukrainians originate are and have been hostile to the Ukrainians and their aspirations, and therefore the likelihood of Ukrainians participating in and taking advantage of the national origins quota system is remote indeed: Therefore be it

Resolved, That the Ukrainian Congress Committee of America make known to the Congress of the United States that the national origins quota system of the Immigration and Nationality Act as it applies to the Ukrainians is inequitable and results in their exclusion and that some other formula or base be created to apply to Ukrainians seeking to immigrate to the United States by an appropriate amendment to the Immigration and Nationality Act.

XI. RELIEF ACTIVITIES

Whereas in Western Europe there are at present thousands of Ukrainians, displaced persons, and recent refugees and escapees who, until such time as they will be able to emigrate to the United States or Canada, will be in need of legal and material aid; and

Whereas among them there are thousands who, by reason of incurred physical disability in Ukrainian armed units or by reason of advanced age or orphan status, are ineligible for emigration; and

Whereas among the Ukrainian American community there are also numerous instances when social service aid is required for the aged or orphans: Be it therefore

Resolved by the general assembly of the UCCA—

(a) To call upon the Ukrainian Americans in the United States to make contributions for the benefit of resettlement of our brothers and sisters from Europe;

(b) To call upon all individuals and member organizations of the Ukrainian Congress Committee of America to support all Ukrainian relief organizations, and in particular the United Ukrainian American Relief Committee;

(c) To recommend to all bodies represented in the Ukrainian Congress Committee of America and their membership that they make contributions to the relief and aid of those left in Europe; and

(d) Give systematic support to the activities of an organized social service in the United States.

XII. THE CAPTIVE NON-RUSSIAN NATIONS IN U. S. S. R.

Whereas perpetuated ignorance invariably equips Moscow with a powerful weapon for successful aggression and notions identifying the Soviet Union with "Russia," the non-Russian nations in the U. S. S. R. with "national minorities," the population of U. S. S. R. with "200 million Russians," the Soviet Union with "a monolithic state" reflect such ignorance; and

Whereas the 115 million non-Russian people populating the countries of Lithuania, Latvia, Estonia, Byelorussia, Ukraine, Georgia, Armenia, Azerbaijan, Cossackia, Turkestan, and areas of the Soviet Far East constitute a tremendous centrifugal force for liberation and freedom; and

Whereas the independence and self-government of these separate and distinctive non-Russian nations in the U. S. S. R. would contribute most to the liberation and freedom of the majority of the Russian people from centuries-long tyranny and absolutism primarily sustained by the imperialist dynamics of political Russian totalitarianism: Be it

Resolved, That the Ukrainian Congress Committee of America extend further its educational campaign on the guiding concept of the captive non-Russian nations in the U. S. S. R. and advance its existing relationship with groups and institutions recognizing the moral and expedient values of this concept to the traditions and political strategy of our country, respectively.

XIII. OBJECTIVITY IN INSTITUTIONS OF LEARNING

Whereas during the period of the Czarist Empire, Russian pseudoscientific theories and teachings infiltrated the Western World, including the United States, with the objective of proving that the Russian Empire was a monolithic nation; and

Whereas subsequent Communist teachings have largely been following and affirming the propaganda formerly disseminated to the effect of an inherent "Messianism" and superiority of the Russian people over subject peoples of the Communist empire (such as, e. g., the incessant drumming into the ears of the Ukrainians that the Russians are their "elder brothers"); and

Whereas many remarks of the aforementioned pseudoscientific theories still pervade some American institutions of learning: Be it therefore

Resolved, That the Ukrainian Congress Committee of America appeal the the presidents and faculties of American universities and institutions of learning to restore in the teaching of the history of Eastern Europe, of the Russian Empire and of the Soviet Union, true scientific objectivity.

XIV. EDUCATION

Whereas Ukrainian courses and schools play an important part in the formulation of viewpoints and ideologies of American citizens by virtue of introducing a wealth of assets into the cultural treasury of America—a fact pointed out and admitted by American leaders in education: Be it therefore

Resolved, That the UCCA direct its organs and members to pay more attention to the field of culture and education, and in particular to give more active aid to the educational council of the UCCA.

XV. FALSE INDIVISIBILITY OF RUSSIA

Whereas the policy of promotion and support practiced by some private American circles in behalf of Russian emigre groups, which propagate the indivisibility of Russia as a great power, which should not be divested of its supremacy and rule over a number of non-Russian nations, including the Ukrainians, is based on an erroneous assumption of history and practicabilities of political solution, and as such plays into the hands of the present Communist rulers of the Soviet Union by weakening the chances of unification of anti-Communist forces: Be it therefore

Resolved by the sixth assembly of the Ukrainian Congress Committee, To call the attention of the United States Government's Department of State and responsible American political leaders that a policy of ignoring the just demands and aims of Ukraine and other enslaved nations of the Soviet empire by offering them a continued status of enslaved nations in a non-Communist Russian empire is detrimental to a victorious pursuit of the present cold war against Soviet imperialism and aggression.

XVI. RELIGIOUS FREEDOM

Whereas it is a notoriously known fact that the red rulers of Moscow conduct a policy of godlessness and antireligious propaganda, and, like the former Czars, deny unto the Ukrainian people the right of freedom of religion; and

Whereas the Russian Communists have destroyed the Ukrainian Orthodox Autocephalous Church and more recently following the termination of World War II, also the Ukranian-Greek-Catholic Church by physical extermination, exile, and imprisonment of the hierarchy of both churches: Be it therefore

Resolved, That the sixth assembly of the Ukrainian Congress Committee implores the Government of the United States to intervene with the Soviet Government and the Assembly of the United Nations calling for release from unjustified imprisonment of the clergy of Ukrainian churches and, in particular, the removal of restrictions upon the ecclesiastical duties of the Metropolitan Archbishop Joseph Slipyi and those bishops who are still alive; and be it further

Resolved, That the sixth assembly of the Ukrainian Congress Committee calls upon all Ukrainians to foster a spirit of religious tolerance on the pattern of religious freedom and tolerance under the Constitution of the United States.

XVII. UNION LABOR

Whereas wage-earners with their families constitute a majority of the population of the United States of America; and

Whereas in the world of labor the union movement representative not only of the factor of defense and representation of labor, but also of a social order and coordination in a democratic system; and

Whereas the labor union movement is a particularly important factor in the fight against subversive elements; and

Whereas the labor union movement is an equally important factor of peaceful international cooperation: Be it therefore

Resolved by the general assembly of the Ukrainian Congress of America, To (1) welcome the unification attempt of the A. F. of L. and CIO; (2) through a specially established labor board to maintain close relations with central bodies of the labor union movement of the United States and to give support to their beneficial community activities; and (3) call upon the members of all organizations united in the UCCA to support the labor union movement and cooperate with it in its struggle against undemocratic and subversive Communist elements.

Congress and Geneva

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1955

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following very interesting article, written by Gerald W. Johnson, which appeared in the August 1, 1955, issue of the New Republic magazine:

CONGRESS AND GENEVA

(By Gerald W. Johnson)

It is now almost 40 years since Woodrow Wilson, in 1918, started for Europe borne along by such a strong following wind of popular good will as this country has not felt since, until Dwight D. Eisenhower started for Europe on July 16, 1955, with the same sort of wind filling his sails.

The striking similarity of the two departures invites speculation as to how much further the analogy will be drawn. In the case of Wilson, we have the testimony of Corinne Roosevelt Robinson that before he had landed on the other side the majority leader of the Senate, Henry Cabot Lodge, visited the hospital where the actual if not the titular leader of the Republican Party, Theodore Roosevelt, lay on his deathbed, and there and then the two plotted to employ Senate reservations to destroy any treaty that Wilson might bring back from France.

Their belief was that if the Democratic Party got credit for making a good peace, it could not be defeated in 1920. Therefore it must not be allowed to make peace. The Senate must stall along until after the election of that year, so that the Republican Party could make the peace.

All the world knows how hideously that conspiracy backfired. It destroyed Wilson, all right, and it beat the Democratic Party; but it also destroyed the peace. Three years later, on July 2, 1921, President Harding signed a joint resolution by a Republican Congress ratifying every damnable clause of the Versailles Treaty, including the war guilt clause, and repudiating every decent clause, including the League of Nations. From that moment the Second World War was inevitable. The price in sorrow and loss that the world paid for the spite of two malignant old men is beyond human computation.

With this dismal story in mind it is inevitable that men should turn an apprehensive eye on the majority leader of the Senate and the titular leader of the opposition party. Fortunately, they are in plain sight. By a sad mischance the majority leader is in a hospital, although not, the country hopes, on his death bed. But Mr. LYNDON JOHNSON has not been conspiring with Mr. Adlai Stevenson to wreck any settlement that Mr. Eisenhower may bring back. On the contrary, both are publicly pledged to support any reasonable move the President may make to relieve the existing tensions.

So there is no trouble in that direction. If the President's work is sabotaged, it will not be by the formal opposition; yet he is an optimist indeed who assumes therefore that it will all be plain sailing. The resolution offered by Senator MCCARTHY just before Mr. Eisenhower's departure was actually a call for a vote of no confidence. Only 4 Senators supported it with their votes, but never believe that only 4 Senators favored it secretly.

The Conference at Geneva is an attempt to reach a settlement by negotiation, and negotiation in the nature of things entails give and take. But if the President gives one iota to the Russians, the extreme isolationists will instantly be clawing at his back. In that case, is it likely that the minority leader, Mr. KNOWLAND, will haul them off? There is nothing in his record indicating that he has any disposition to do so. On the contrary, he has himself repeatedly and publicly expressed skepticism of the President's program of international comity.

By the time these lines meet the reader's eye the conference may be over, but the trial of the Republican Party will be just beginning. Thirty-seven years ago it failed calamitously and there are still some men in the party as completely blinded by hatred and prejudice as were Theodore Roosevelt and the elder Lodge. The question is, do such men still dominate the party? If they do, the outlook for the Nation and the world is not encouraging.

There is a chance, of course, that Geneva will be a complete fiasco and that the President will bring back nothing requiring the attention of the Senate, but it is an eventuality that patriotic men will refuse to anticipate. It will be hard enough to accept it if it is forced upon us. The serious question is the capacity of the Republican Party to take advantage of an opportunity if one is presented. Has the experience of the tortured generation that has lived and suffered since 1918 taught it the rudiments of statecraft, or is it still the party of the Bourbons, who learn nothing and forget nothing?

It is definitely a Republican responsibility. In the Senate, in the absence of Mr. JOHNSON, Mr. CLEMENTS will certainly do what he can, as Mr. Stevenson will do what he can outside; but theirs is only a secondary responsibility. Even if their joint efforts save the President's program, as they have saved it time and again in the past, they will not acquit the Republican Party. If any considerable number of their members—one is justified in saying that if more than four Republican Senators—evince a disposition to do to Dwight D. Eisenhower what their predecessors did to Woodrow Wilson, the party will have demonstrated its incapacity to exercise power and will forfeit all claim to the confidence or even the respect of the country.

Hon. Lyndon B. Johnson, of Texas

EXTENSION OF REMARKS
OF
HON. ALAN BIBLE
OF NEVADA
IN THE SENATE OF THE UNITED STATES
Tuesday, August 2, 1955

Mr. BIBLE. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD several editorials and articles that have been written in various newspapers throughout the country about our great majority leader, Senator LYNDON B. JOHNSON.

There being no objection, the editorials and articles were ordered to be printed in the RECORD, as follows:

[From the Atlanta (Ga.) Constitution of July 8, 1955]

SENATOR JOHNSON'S ILLNESS ROBS DEMOCRATS OF A CANDIDATE

Even if he survives his serious illness, LYNDON B. JOHNSON may be lost to the Demo-

crats as majority leader of the Senate. It has been announced he will be out for the rest of this session. Since he first began service in Congress at a Member of the House in 1937, he had been known as "one of the hardest workers in Congress" and that may account in some measure for the heart attack with which he has been stricken.

In the Senate his stature has grown steadily and he was widely regarded as a possible mediator between the southern and northern wings of the Democratic Party.

He recently displayed his skill as a parliamentarian by forcing a vote on the McCarthy resolution, aimed at embarrassing President Eisenhower at the Geneva conference. Every effort of Senator MCCARTHY to obstruct a vote on his own resolution was frustrated by JOHNSON and in the vote the Wisconsin Senator was flatly repudiated by the Senate.

Democrats also got satisfaction out of Senator JOHNSON'S answer to the President's assertion that the Democrats could have done more than they have done in passing administration measures. Senator JOHNSON said Senators were not second lieutenants to be given orders on what they should do.

LYNDON JOHNSON was a Roosevelt New Dealer even to the point of supporting President Roosevelt's Supreme Court reorganization plan.

As a Senator he has been counted among those opposing the civil-rights program and as a Texan his attitude towards expansion of the Tennessee Valley Authority has not always been as clearly defined as some Midsouth Senators would like.

However, the sudden reappraisal of the Dixon-Yates contract ordered by the President brought forth statements from LYNDON JOHNSON which were comforting to the Tennessee Valley. He urged that the Senate itself pave the way for cancellation of the contract. He especially opposed appropriating money for the transmission line across the Mississippi River. The Democratic leader said, "This amounts to asking us to lay out money—the taxpayers' money—to carry power from a plant that probably will not be built to a city that doesn't want it."

Senator JOHNSON'S ability is recognized by Democrats and Republicans alike and it is possible his illness has removed a potential presidential candidate from active political life. He will be only 47 at his next birthday on August 25, and while not in the presidential picture for 1956, he still has time for advancement so as to be in line for "the summit" in a future presidential race.

The unfortunate blow dealt this stalwart by illness should disabuse many minds of the notion that the duties of a Senator are not arduous and wearing. "The hardest worker" among them all has been incapacitated and parliamentary government suffers a loss thereby. (Chattanooga Times.)

[From the Pittsburg (Kans.) Sun of July 10, 1955]

LOSS TO THE COUNTRY

The sudden and serious illness of Senator JOHNSON of Texas will be considered a blow to the Democrat Party whose leader he is in the Senate. But a more important truth is that the removal of the young Texan from active Senate leadership is hurtful to the Republican administration and to the country. JOHNSON'S leadership has not been of the type which made some of his predecessors famous. His record has not suggested that he has placed his party above his country. He has not shown the extreme partisanship which admits of no friendly relations with the opposing party.

When the Senator was rushed to a hospital, colleagues commented on the smoothness with which the Senate had been operating under the floor command of JOHNSON. It was apparent that the Texan had been able to organize his party forces in such a way that they could have the cooperation of the almost equally powerful Republican minority. A change of only a couple of Senate seats would shift the control of the Senate. There is no record that JOHNSON thought any changes might be brought about by death when he framed the program which he has been carrying through. It is more likely the young Senator, looking into the future, was more concerned with writing a record as a statesman than as a politician.

It must be apparent to all that a leader of more extreme partisanship and not so broad-minded could have created a very different situation in the Senate. He could have thrown obstacles in the way of the administration creating a situation that would be very harmful to the country's interest.

[From the Davenport (Iowa) Morning Democrat of July 9, 1955]

SENATOR JOHNSON HAS BEEN GAINING STATURE

The post of party majority leaders is not often one that leads to political advance. Senators McFarland, of Arizona, and Scott Lucas, of Illinois, found being Democratic leaders in the Senate put them on the spot so much that it led to defeat. Senator Robert A. Taft, of Ohio, saw interparty squabbles with which he had to deal as Republican leader rise up to haunt him and deny him a presidential nomination.

Senator LYNDON JOHNSON of Texas, who suffered a heart attack this week which will keep him on the sidelines during the rest of this session, had been gaining stature as Democratic Senate leader in recent months in spite of these precedents. His patience and political skill was beginning to pay dividends to his party.

JOHNSON'S leadership was most effective. He succeeded in a difficult assignment, directing Democratic forces in the Senate under a Republican President.

In this respect, JOHNSON followed a policy of constructive opposition to the Eisenhower legislative program. He supported a considerable part of this program and rallied his Democratic colleagues behind it. On and off the Senate floor, he was a deft manipulator who got restults with a minimum of fanfare.

JOHNSON'S absence from the political scene will hurt the cause of the Democrats. The Texas Senator was accepted as a standard-bearer by all wings of the party, including the several factions in his home State. He was adept at healing differences in the party and bringing unity to it.

Senator EARLE CLEMENTS, of Kentucky, his successor, may be counted on to continue the policy of constructive opposition in the few remaining weeks of the session this summer.

[From the Sheridan (Wyo.) Press of July 11, 1955]

NATION NEEDS JOHNSON

Senator LYNDON JOHNSON, Texas Democrat, who has been the Senate Democrat leader during the present session, is reported to be making satisfactory progress, but still in a serious condition. Senator JOHNSON, who suffered a heart attack, has had to take a recess from the Senate for time to recuperate.

Physicians have declared that the Texas Senator may be able to return to Congress in the next session, but that for the present he will have to take rest and time for recuperation. What he is able to do later will depend upon his degree of recovery.

The Texas Democrat has been a very important factor in making a divided Congress work with reasonable harmony. With both Houses holding narrow Democrat majorities, it would be possible for both Houses to work as a political obstruction to any program presented by President Eisenhower. But the Senate has not done so, and in a large measure, the House has also refrained from creating political opposition simply for partisan ends. The two parties, and the Democrats in Congress and the Republican President, have not agreed on all programs and measures, but there has been a lack of antagonism, and legislation has largely been measured on the basis of its real importance.

Much credit for maintaining at least a working harmony between Congress and the White House despite partisan differences must go to Senator JOHNSON. He will be gravely missed in Congress during his absence. His recovery would prove to be of tremendous value to the Nation. We join with his friends and colleagues in wishing him a speedy and complete recovery of his health and that he may return to fill his important place in Congress.

[From the Beaver Falls (Pa.) News-Tribune of July 13, 1955]

BIPARTISANSHIP AT NEW HIGH

President Eisenhower will take with him to the Big Four Conference at Geneva opening July 18 a very unsecret weapon—an almost unparalleled United States bipartisanship in foreign policy. A preliminary conference at the White House with congressional leaders serves to emphasize the foreign policy support the President has been getting at this session from Democrats and Republicans alike.

Neither President Eisenhower in the two sessions of the 83d Congress nor his two Democratic predecessors had enjoyed such uniform support on foreign policy. Only one major administration proposal on foreign affairs has been defeated thus far—the President's so-called atoms-for-peace ship—and that perhaps only temporarily, and only by a one-vote margin in the Senate.

Chairman STYLES H. BRIDGES, Republican, New Hampshire, of the Senate Republican policy committee on July 7 was full of praise for the work of ailing Senate Majority Leader LYNDON JOHNSON, Democrat, Texas. He predicted that JOHNSON'S incapacitating illness would only increase bipartisan cooperation and speed the adjournment of Congress.

JOHNSON and Senate Republican Leader WILLIAM F. KNOWLAND, Republican, California, had worked together to obtain a smashing administration victory in regard to the Geneva meeting. That was the 77 to 4 margin by which the Senate on June 22 rejected the resolution of Senator JOSEPH R. MCCARTHY, Republican, Wisconsin, demanding that the President call off the "summit" meeting unless the U. S. S. R. agreed in advance to discuss "the present and future status" of Communist-controlled countries. Only three Senators—WILLIAM E. JENNER, Indiana, GEORGE W. MALONE, Nevada, and WILLIAM LANGER, North Dakota, all Republicans and all generally regarded as isolationists—voted with MCCARTHY.

[From the St. Marys (Pa.) Press of July 7, 1955]

HOPING FOR BEST

People from all over the country are hoping for the speedy recovery of Senator LYNDON B. JOHNSON of Texas, Democrat, and Senate majority leader, stricken seriously ill last week and at present confined to Bethesda Naval Hospital.

This Texas gentleman has proven himself a most dynamic leader in the Senate and no doubt has overworked himself as is the case of many Members of Congress where the annual death toll is generally much higher than is the normal rate in men in other walks of life.

It is doubtful that he will return to Congress before the session that will open next January. Although of the opposite political

faith of President Eisenhower the two men are close personal friends and JOHNSON has been successful in getting much of the President's legislative program through the upper House.

Senator JOHNSON has been the type of man who inspires confidence from men of all parties and creeds, a typical American, doing a fine job in his Senate role.

All America wishes him speedy recovery.

[From the Fairmont (W. Va.) West Virginian of July 8, 1955]

JOHNSON STRICKEN

All Americans who are aware of the fine leadership of Senator JOHNSON in the Senate will pray for the early recovery of the personable Texan from a heart attack. The whole country owes Senator JOHNSON a debt for his statesmanship. President Eisenhower is particularly indebted to this broad-minded Democratic leader.

[From the Bradenton (Fla.) Herald of July 8, 1955]

ACROSS THE EDITOR'S DESK

JOHNSON: For some time after his election as Democratic leader of the Senate at the beginning of the 1953 session, Senator LYNDON B. JOHNSON, of Texas, was widely criticized as not being vigorous in his leadership. But in recent months there has been a considerable change in opinion about the Texan. Former critics have praised him, and observers in general have recognized his ability.

Now that he is sidelined by a heart attack, favorable appraisals are multiplying. For instance, Newsweek magazine reports that political strategists believe JOHNSON "deserves more credit than any other Member of the Senate for the collaboration between President Eisenhower and the Democratic Congress which, though certainly not perfect, was far better than most people expected."

"In guiding this policy," Newsweek adds, "the 46-year-old Texan has become next to Mr. Eisenhower the most influential man in the Government. And he has done as much as any other Senator to keep the Democratic Party from splitting into warring factions during the 2½ years the GOP has been in power."

Kentucky's Senator CLEMENTS, party whip and acting floor leader, generally agrees with JOHNSON's policy of cooperating with the Eisenhower administration. But the Kentuckian, 12 years older, lacks JOHNSON's influence, political agility, moderation, and energy. And that, as Newsweek points out, could make an enormous difference.

Texans: Despite the fact that he has been in Congress since 1937, LYNDON JOHNSON is young in both years and seniority to have held such responsibility. He was only 29 when first elected to the House, 40 when he advanced to the Senate, and he is just beginning his second term as Senator. He ranks no better than 26th in length of continuous service, and shares that rating with 9 others. But until the heart attack he seemed well on the way to long service, for Texas seldom fails to reelect its Senators and Representatives. Witness "Mr. SAM" RAYBURN, Speaker of the House, who has spent 42 of his 73 years in Congress.

[From the Wheeling (W. Va.) News-Register of July 10, 1955]

LYNDON JOHNSON

Just as the Republican Party suffered an irreparable loss in the death of Senator Robert A. Taft, the Democratic Party has been dealt a severe blow by the incapacitation of Senator LYNDON JOHNSON.

In his role of majority leader, LYNDON JOHNSON has displayed a caliber of statesmanship sorely needed in Washington in these days. In the ticklish position of representing the congressional majority in an administration in control of the opposition, Senator JOHNSON has resisted the temptation to resort to political sniping, to practice obstructionist opportunism for the purpose of partisan advantage. At the same time, he has maintained a vigorous policy of opposition to policies inconsistent with his party's principles. As a result, the Democratic Party has gained both cohesion and stature under his leadership in the Senate, demonstrating that this Nation is capable of a basic solidarity while differing on means to a common end.

It is unfortunate that Senator JOHNSON was afflicted right at a time when more and more responsible Democratic leaders were coming to view him as presidential timber. Before his illness, it seemed a reasonably safe conclusion that LYNDON JOHNSON was first choice among thoughtful Democrats for the vice presidential nomination next year, with the end in view of grooming him for the top post in 1960. Coming from Texas, he would be a natural to heal the party wounds down south.

We hope it is immature to write LYNDON JOHNSON off as a future political factor in the United States. His physical impairment happily may prove but temporary. He may be back again in harness as fit as ever. If so, the Nation will be the gainer, however the political winds of the future blow. We need men like him in public life.

[From the Terre Haute (Ind.) Star of July 10, 1955]

SAY "WATCH JOHNSON"

Senate Democratic Leader LYNDON JOHNSON, of Texas, is fast becoming one of his party's most influential and powerful figures. The Texan, who won his first term in the Senate in 1948 by only a razor-thin margin, is now recognized as being in the driver's seat as far as congressional Democrats are concerned.

His skillful maneuvering in welding together a harmonious united front of both northern and southern Democrats has represented one of the best leadership jobs either party has seen in recent years.

JOHNSON, who got his political tutelage from House Speaker SAM RAYBURN when he served in the House, already has become the subject of presidential speculation.

Those who know him closest feel that he won't try for either the Democratic presidential or vice presidential nomination in 1956 but in 1960 he may well make his move for the top spot. For the moment, Washington political observers are keeping a close eye on his rise from the ranks.

[From the Joplin (Mo.) Globe of July 9, 1955]

DOING WHAT'S RIGHT

There is a reason, and a very good one, why many nonpartisan prayers went up in Washington for the speedy recovery of Senator LYNDON JOHNSON, the stricken Senate majority leader. The Senator himself supplied the reason in an interview not long ago in which he said he has sought to live by the advice of his mother, who told him to "do just what's right."

Doing what's right as a substitute for the jungle law of politics made Senator JOHNSON a national figure at 46, considered even as presidential timber. It is a reason he has been called one of the best liked politicians in Washington.

The philosophy of doing what's right motivated the popular Texas Democrat in backing that part of the Eisenhower program he regarded as constructive and for the best interests of the country, regardless of politics, even though as a partisan he must have been pained at times by being called pro-Republican. He chose the term "constructive opposition" for his leadership and the results indicate its wisdom.

What the future will hold for Senator JOHNSON is uncertain, but doing what's right will always pay dividends.

[From the Romney (W. Va.) Review of July 6, 1955]

LYNDON JOHNSON

(W. S. A., for the Hampshire Review)

Sunday morning's newspapers carried the distressing news that Senator LYNDON JOHNSON, of Texas, had suffered a heart attack. Although not yet 47 years old, Senator JOHNSON had behind him a distinguished career in the House and Senate and ahead of him a political future without limit.

He had been Democratic leader in the Senate in the previous Congress, had been reelected by a comfortable margin in 1954 and since then had served as Senate majority leader in the new Democratic controlled Congress.

The job JOHNSON has done as majority leader has been tremendous. There is a unity in the Democratic Party in the Senate that seldom if ever has existed before. In part it is attributable to the fact that JOHNSON persuaded senior Democrats to forego some of their seniority claims so that every Democrat no matter how recently elected could serve on a major committee.

With Speaker SAM RAYBURN in the House, Senator WALTER GEORGE in the Senate and others, Senator JOHNSON has felt that the Democratic Party was under an obligation to provide more than mere opposition during this period, and that the national interest had to come first. The record in this regard speaks for itself and is generally regarded as a product in major part of LYNDON JOHNSON's resourcefulness, tact, and untiring efforts.

During the last 4 years, there has been a growing realization that JOHNSON possesses rare qualities of leadership, and in recent months, his name has been mentioned with increasing frequency as a possible presidential candidate. On the day the news of his illness appeared on the first page of the Washington Post, the editorial section of the paper carried an article entitled "JOHNSON Boomlet Is Fulminating."

These achievements have not been brought about without effort. Conscientious Members of Congress are under an awe-inspiring workload and strain. The leader's burden is even worse and particularly a leader who sets out to do the job which JOHNSON has done, and who leads by preparation, patience and persuasian, and by personally seeing and talking with a great number of people.

Coney Island Hospital To Open in Fall

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. MULTER. Mr. Speaker, I am very pleased to direct the attention of our colleagues to the following article which appeared in the August 2, 1955, Brooklyn edition of the New York World-Telegram and Sun. This is the story about another improvement of great value to my constituents.

CONEY ISLAND HOSPITAL TO OPEN IN FALL—550-BED, $15 MILLION BUILDING TO BE FINISHED IN OCTOBER—PATIENTS GO IN FOLLOWING MONTH

Construction of the new 550-bed Coney Island Hospital is expected to be completed

sometime in October, according to hospital officials.

Barring last-minute delays, the first patients will probably be transferred to the new building in November.

The new hospital, costing about $15 million, will be H-shaped. One arm of the H will be 10 floors high, the other 14 floors. It is on a 10-acre site, next to the old 6-story hospital at Ocean Parkway and Avenue Z.

FACELIFTING JOB

The old structure, built in 1910, will get a facelifting job, included in the construction contract. Its 250 beds will be used for chronic cases.

Officials estimate it will take up to a year to buy and install new heavy equipment. In the meantime, they say, the old equipment will be used.

Ground for the new building was broken June 30, 1953. Difficulties caused by boggy ground were met by a special building foundation which won for the hospital the hospital of the month award last August.

VIEW OF OCEAN

The exterior will be light gray glazed brick, with limestone and polished granite trim.

Most bed patients will have a view of the ocean. The outpatient department is designed to handle more than 600 cases daily.

The hospital will also have small tuberculosis and contagious disease units, an auditorium, television for operating room purposes, a central records room, and a central oxygen system with pipes leading to outlets in the wards.

States Rights and States Duties

EXTENSION OF REMARKS

OF

HON. THOR C. TOLLEFSON

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. TOLLEFSON. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a copy of a most timely and excellent address by the Governor of the State of Washington, the Honorable Arthur B. Langlie, at the 61st annual conference on Government of the National Municipal League held July 25, 1955, in Seattle, Wash.:

STATES RIGHTS AND STATES DUTIES

(Address by the Honorable Arthur B. Langlie, Governor of Washington)

Ever since the founding of the Republic the division of powers and responsibilities between the National Government and the States has been the cardinal question in our Federal system. The great debate before and during the Constitutional Convention aimed to find a balance between the necessary central authority and the greatest amount of individual freedom and local self-determination. It continued and is far from ended. The creation of the Commission on Intergovernmental Relations is proof of the increased interest in this question in recent years.

Inevitably the debate starts out or comes back to the words of the Constitution. Nothing testifies more to the wisdom and the foresight of the Founding Fathers than the fact that the blueprint of a more perfect Union they drafted in 115 days of painstaking labor during the sultry Philadelphia summer of 1787, still has the undivided enthusiastic support of the Nation. It is now more respected, admired, revered, more firmly embedded than ever. It has proven sufficiently flexible to fit rapidly changing conditions for the past 168 years, yet strong enough to remain unchanged in basic concept. We know that under the system it created, more people have enjoyed more of the fruits of liberty than during any similar period in the annals of the human race.

The Founding Fathers never intended to freeze for all future the allocation of governmental powers. They envisioned the Constitution as a living document to be adjusted to the changing needs of the Nation in the course of history. It is proper that from time to time we take another look at its provisions to see whether they are still adequate to serve the ends of government in today's world.

At times some of us may be perplexed by doubts whether the system of dual sovereignty, of keeping power diffused and poised among several independent governments, fits the exacting and urgent requirements in these fast-moving days. We may grow impatient when some States do not live up to our ideas of necessary standards of public service or seem remiss in caring for unmet human needs. We may feel frustrated when some of our cherished plans or favorite projects which call for prompt action are insufferably delayed or bog down in the necessity of securing the approval of several levels of government. We may resent the seeming duplication in political and administrative processes, balk at having to pay overlapping taxes to several governments, without being able to fix responsibility nor knowing whom we are paying for what.

We may then wonder whether we should not follow the example of most other countries in the world, to concentrate authority in one central government. Before we pursue such thoughts too far, it might be well to remind ourselves of the compelling reasons for the broad dispersal of powers that characterizes our system of government. Let me name just three:

1. We all know Lord Acton's famous statement that "All power corrupts and absolute power corrupts absolutely." The system of checks and balances which we accept as essential to the maintenance of our liberties requires that the powers be divided not only functionally among branches of government but also geographically. It is a natural tendency among the group forming the National Government to develop among itself a sense of omniscence and omnicompetence. The existence of strong government in the States acts as a brake on the temptation of a national government to impose its will in all matters, to enforce compliance, and to attain uniformity in extent and standards of activities which could gain by permitting diversity, local experimentation, and self-determination. A majority at the national level will be less able to attain an unconquerable position as long as a minority controls some of the State capitals.

2. Popular participation in activities and decisions of government is part of our American heritage. Only few can satisfy their aspirations in the National Government. State and local agencies provide opportunity for many more to learn about the working of government, to make themselves heard and their influence felt, to accept responsibility and train for broader duties, to understand the balancing of conflicting interest groups, and keep plans within the comprehension of the people and their willingness to support them.

3. The position of leadership of the free world which the United States had thrust upon it, overwhelms the President and Congress with problems of unprecedented magnitude and involvement. These globe-spanning questions affecting national security require, in this atomic age, knowledge of almost limitless scale and scope which taxes the ability of any man or group of men to study, comprehend, and coordinate. To select the right solutions is so vital to our very existence that the President and the Congress should be permitted to concentrate their attention and best thinking on them and be left unencumbered with other chores; they should not be called upon to make decisions on subjects which others are competent to judge. The division of fields of interest in our Constitution thus acquires added importance under today's conditions. Why in this time of specialization should we expect our overburdened Federal officials to be experts and make vital decisions not only in fields that concern national security but also in regard to everyday services to the people in the various States which can as well or better be judged in the areas where the services are rendered?

The States are well suited to perform the job assigned to them. A famous political scientist once said that if we did not have States, we would have to invent them. To be sure, the powers of the States cannot simply be justified by reference to the provisions of the Constitution. The purpose of the Constitution was not to guarantee States rights but to secure human rights.

Madison stressed in the Federalist that "the public good, the real welfare of the great body of the people, is the supreme object to be pursued; and that no form of government whatever has any value than as it may be fitted for that attainment of this object * * * as far as the sovereignty of the States cannot be reconciled to the happiness of the people, the voice of every good citizen must be, let the former be sacrificed to the latter." All grants of power to a government are only conditional, they must be earned by satisfactory performance every day and every year. The justification of the States and States rights lie mainly in two factors.

1. The existence and multiplicity of State governments prevents the accumulation of a monopoly of governmental power in one place.

2. States are able to serve the legitimate needs of the people for most domestic services in the long run better and at a lower cost than a central government.

To the degree to which the States fail to perform their duties satisfactorily, they forfeit States rights.

We all know that during our living memory a major change has occurred in our Federal system, that the tremendous growth in size and importance of the Federal Government has somewhat eclipsed the historic role of the States. This did not come about by a change in the Constitution. The 10th amendment still stands and declares that "The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively or to the people." But it has lost most of its effectiveness by the broad interpretations of the commerce and welfare clauses of the Constitution adopted in the past two decades. We may be reminded of John Randolph's famous statement, "You may cover whole skins of parchment with limitations, but power alone can limit power."

The real force in the march of power to Washington has been the expansion of grants-in-aid to the States for a multitude of their activities from a paltry $3 million at the turn of the 20th century to $3 billion in the current year. Grants-in-aid have enabled the Federal Government to buy authority and control in any field of activity is wished.

I want to make it clear that I am not opposed to Federal grants-in-aid as such. They have done much good, accomplished many worthwhile purposes. There is a legitimate place in our Federal system for stimulation of State functions and for assistance by the National Government. Nor do I believe that irreparable harm has resulted so far from

the transfer of decision-making power. But I wonder whether the States can go on taking more and more Federal money and expect to retain control of their own activities. It is naive to expect that more than a mere appearance of autonomy can be preserved by a body which subsists increasingly on subsidies from a central government.

The expansion of the grants-in-aid system and of Federal authority is often attributed to a failure of the States to provide by their own initiative and under their own powers the services and facilities which the people demanded. The charge is not without substance. The States have not always adequately exercised the powers they have. More than once the Federal Government stepped in because the States had failed to act under their own initiative.

Sometimes it is asserted that the States are financially unable to raise the necessary funds at home. That claim is patently without substance. All the income and wealth which can be taxed by the Federal Government is located within the 48 States and subject to their taxing powers. Grants-in-aid come either from taxes which the Federal Government collects from the citizens of the States and redistributed—less a brokerage fee and with strings attached—or from Federal deficit financing which is paid for by inflation.

Until the early part of the 20th century, State governments were largely lawmaking and law-enforcing agencies. The idea of the service state was barely known. Few of the hundreds of services which the States now perform were then in existence. States took little or no responsibility in the building or maintenance of roads, they did not participate in public assistance nor other public welfare services; activities for the conservation and development of natural resources—of fish and game, forests, water, agriculture—were at best nominal; industrial safety, industrial insurance, pollution control, and many other functions were unheard of. States generally maintained insane asylums that were a far cry from the mental treatment centers they operate today; they ran State prisons and a few small normal schools and colleges; they contributed little to the support of common schools. Regulatory activities in the professional and utility fields were rudimentary. Technical service and advice to local areas was nonexistent.

The need and demand for a multitude of public services skyrocketed in the first half of the 20th century, largely because of problems created by industrialization, urbanization, the greater mobility of our population, more rapid communications, and in general the progress in technology. The eradication of many once dreaded diseases with the help of public-health services lengthened the human life span by 20 years, which in turn created problems of support and care. The vast increase in productivity and higher earnings led to standards of living that were beyond the wildest hopes half a century ago. The income of the average American family reached a level of $6,002 in 1953 and is going up further. The family car, television set, electric range and refrigerator, washing machine, and hundreds of other conveniences accustomed the American people to a form of living no nation on earth had ever known.

The change in income and in the cultural and economic pattern has had its effect on our attitude. We tend increasingly to look to government for the solution to our problems. As levels of personal consumption rise to new heights, demands for expanded public services of higher standards multiply. We now expect that society not only protect us against the adversities of life but also indemnify us from misfortune, that it increasingly relieve family groups of part of the responsibility for their dependent members, for the young, the old, and the afflicted.

What has been the response of State government to the challenge of the 20th century?

Let me give you a few data on the changes that occurred between 1902—the year of the census of governments closest to 1900—and 1954.

The population of the United States doubled.

Prices tripled.

If State governments had maintained their services at the same level they would now be spending a little over six times as much as they did in 1902. Actually State governments spent in 1954 for the support of their many and diverse services just 99 times as much as they did in 1902. They were helped in 1954 through Federal grants-in-aid to the extent of 14 percent; in other words, $6 out of every $7 the States spent came from their own sources. Not counting Federal funds, State expenditures multiplied 86 times between 1902 and 1954; that is 14 times faster than the rise in population and prices.

During that period the national income multiplied 20 times. But State services—measured by expenditures—grew 4 times faster than the national income. In 1900 there was 1 State governmental employee (not including school employees) for every 950 persons in the population; by 1955 there was 1 for every 195 persons.

In no comparable time in history has any government expanded at such a rate nor adjusted its activities as rapidly to changing economic and social conditions. State government admirably responded to human needs and readily accepted the many novel duties of the new day. It was restrained only by a reluctance of the people to increase their tax burden as a faster rate.

State activities did not grow at an even pace. They rose much faster in the first 30 years of the 20th century than they did subsequently. Between 1902 and 1932 State expenditures—not including those from Federal funds—multiplied 9 times in dollars of constant value; since 1932 they multiplied 3 times. Between 1902 and 1932 State expenditures grew 4 times as fast as the national income; between 1932 and 1954 State expenditures barely matched the growth rate of the national income.

Depression and war had something to do with that. For 15 years now war and the recurring threat of war have forced the Nation to give precedence to the demands of defense, to devote a greater share of its products to military purposes, and to accord a lower priority to the domestic consumption of goods and services, both public and private.

Federal taxation has been a major influence in shaping State fiscal policies. Between 1902 and 1932 the Federal Government claimed between 3 percent and 5 percent of the national income—(except during World War 1). During the middle 30's the Federal tax take started rising; it reached 10 percent of the national income by 1941 and has been running between 20 percent and 25 percent ever since 1944. This heavy load pushed the total tax burden to the limit which the American people were willing to bear in peacetime or which the economy was able to sustain in the long run without losing its capacity for expansion. It made it economically and politically impossible for State and local governments to increase their share of the national income. The States' share of the national income dropped during the war, and has only in recent years regained its prewar position; the local government share is far below its earlier levels. In 1932 State and local taxes claimed 12.4 percent of the national income; in 1954 they took only 7.3 percent.

Progress of the States has been uneven. Some activities have advanced faster than others. Some States have acted as pace setters, others are lagging behind. Some States have strained their fiscal resources and others displayed only modest efforts. It is undeniable that in certain respects the States have not lived up to their responsibilities, that some of them have been slow to recognize the urgency of needs, and have not provided the services or facilities which their citizens expected.

Let me review briefly a few of the accomplishments and shortcomings in education and highways, the two largest areas of State activity which together account for about half of all State general expenditures and half of all State employees.

Probably the most important service rendered by the States—and the most costly one—is in the field of education. Until 1900 States discharged their responsibility for common schools largely by creating local school districts or other local units with taxing powers and by modest subsidies. Between 1902 and 1954 State contributions to public schools rose from $45 million to $3 billion, local contributions from $200 million to $5 billion. Between 1900 and 1954 the number of school-age children (5–17) rose 67 percent, daily attendance in public schools 150 percent; we are now spending 6 times as much in dollars of constant value per pupil. A greater percentage of our youth is attending school than ever before in history or in any other country; the educational opportunities available to our boys and girls are on a scale unknown elsewhere in the world.

We are painfully aware of critical shortages of teachers and of classrooms all over the Nation, caused partly by a lack of funds. In some areas conditions are deplorable and call for drastic action. Many States are catching up but others leave much to be desired. It is clear that the Nation cannot look on indefinitely while part of its youth is attending school under conditions which most Americans would not regard as acceptable.

States have maintained colleges for a long time. But only in recent years have they been called upon to shoulder the major burden for higher education in the United States.. States' contributions to higher education rose from $13 million in 1902 to over a billion in 1954. Around the turn of the century about 1 youth in 25 attended college; this ratio still prevails in Great Britain and other European countries. At the present time about 1 American youth out of 3 enters college. We have about one-fifteenth of the world's population; but enrollment in our institutions of higher learning almost equals college enrollment in the rest of the world. In a few years our colleges will face the tidal wave that is now moving through our elementary schools. It is well that we lay plans in sufficient time to meet the problem, lest the Federal Government be asked to enter this field with a major program.

There were virtually no State highways in the United States at the turn of the 20th century. Since then, the States have constructed by far the greatest highway system in the world, 600,000 miles of State highways besides 2½ million miles of local roads or streets. In each of the past 5 years State highway departments have built over 50,000 miles of roads. In 1946 State governments spent $1 billion on highways, in 1948 $2 billion, in 1954 more than $4 billion. State and local governments together spent in 1954 $6 billion on roads. They raised 90 percent of these funds and derived 10 percent from Federal aid.

In spite of this spectacular increase we must all agree that our roads are sorely inadequate. Thirty-six thousand people are killed, 1¼ million injured each year in motor-vehicle accidents, billions are lost in delays, nerves are wrecked in frustration, largely because of overcrowded, insufficient, obso-

lete roads. The truth is that States have not raised their revenues fast enough to catch up with the war-accumulated backlog and the skyrocketing traffic. The national administration has now proposed that for the next 10 years the Federal Government accept the major responsibility for financing a complete modernization of the 42,000-mile interstate highway system. This should enable the States to allot greater funds to the more than one-half million miles of other State roads. But they will have to increase their efforts at an even faster pace if they are to maintain a major role in the highway field.

These two examples, of schools and roads may suffice to demonstrate some of the reasons for the expansion in Federal activity. In areas of national concern, inadequate State action sooner or later leads to Federal intervention. The Federal Government may either take over certain functions or stimulate States into greater activity by grants-in-aid.

In the past 2 decades close to 50 programs of Federal aid were enacted, extending over a wide variety of fields. They have helped establish numerous useful activities and elevated standards in many vital services. In many respects they have been a healthy and beneficial influence. There is nothing inherently wrong with Federal grants—as long as they are taken in small doses. The trouble is that getting money the easy way is as habit forming as taking narcotics. It seems impossible to keep the amounts under control. The recipent, once he has had a taste, needs and demands increasingly stronger doses to produce a continued pleasant effect. They sap his strength to sustain himself by his own powers and rob him of his resistence till he becomes an addict, dependent upon ever-greater doses.

Public officials at State and local levels, aiming to please the various interest groups, try to give them the maximum in the desired services and facilities. They are restrained by the painful necessity of presenting their constituents with a bill. State and local services carry a price tag because State and local budgets generally must be balanced. The new school building, the new road, higher welfare checks may mean another percent on the sales tax, add another cent to the gas tax, an extra 5 mills on the property tax or lower exemptions on the income tax.

If the people have the alternative between paying higher taxes and foregoing a service they may often vote for the latter. Public officials at the local levels faced with a decision cannot easily evade political responsibility for it. The mayor, county commissioner, school board chairman, or tax assessor are clearly identified and must answer to their neighbors for higher taxes. It is an understandable human tendency to try dodging this unpleasant duty and to seek another way out. At the State level personal responsibility for tax boosts is somewhat diluted but still uncomfortably conspicuous.

At the Federal level there is no identifiable connection between the advocacy of higher appropriations and the responsibility for raising taxes. The proponents of Federal expenditures for some desirable and beneficial purposes are under no pains to stand up and be counted for higher tax rates. The names of the acts of Congress establishing major grant-in-aid programs are generally well-known: the Morrill Act, the Hill-Burton Act, the Clarke-McNary Act, the Bankhead-Jones and Smith-Lever Acts, the Smith-Hughes and George-Barden Acts, etc. But whoever heard of a tax bill named after those or any other Congressmen?

It is understandable that Representatives are eager to claim credit for the "manna from heaven" they secured for their constituencies. Their record will popularly be judged by the amount of bacon they brought home in the form of Federal money. Why? Because in most people's minds Federal money comes for free.

They do have a point. In the past 5 years Federal aid to the States totaled $13.8 billion, the budget deficit $17.6 billion. So, it seems that nobody had to pay for these benefits. That charm is hard to beat. Who wants to shoot Santa Claus? Only 3 out of the past 25 Federal budgets were balanced; meanwhile we piled up a national debt of $280 billion. Only now is there a chance that next year the Federal budget may be balanced—and will stay balanced.

You understand how hard it is for politicians to resist the temptation of handing out benefits—if they don't have to accept personal responsibility for higher taxes. Almost 100 years ago, President James Buchanan, in vetoing a bill making Federal grants-in-aid to the States, said: "Should the time ever arrive when the State governments shall look to the Federal Treasury for the means of supporting themselves and maintaining their systems of education and internal policy, the character of both governments will be greatly deteriorated." Two thousand years prior, Octavius Augustus took a more cynical—or as some would say realistic view, "I was strongly inclined to abolish forever the custom of distributing grain to the people at public expenses. * * * But I did not carry out my purpose, feeling sure that the practice would one day be renewed by someone ambitious of public favor."

It is essential for the maintenance of political responsibility that the level of government that decides on expenditure policies should also be responsible, as much as possible, for the raising of the necessary funds. The pleasure of spending public moneys should be tied to the pain of raising them.

The system of evading responsibility and seemingly getting something for nothing naturally whets the appetite of ambitious politicians for glory and of special interest groups for more of the easy money. Eventually, the system of depending increasingly on central government support must lead to central government domination. The only way out is, to deal with the American people honestly and squarely in presenting to them the bill for whatever services they wish. I believe that our citizens are able and competent to judge between the essential and the gingerbread, that they are willing and ready to pay for the cost of good roads, good schools, good care for the dependent and afflicted unable to care for themselves. I think that the people are way ahead of the politicians who think that they have to wrap it up nicely and hide the cost.

There are signs that the days of molly-coddling are coming to an end. A few months ago, a national magazine said in an editorial: "The politician of the cynical folklore decries inflation while favoring an easy money policy; he wants good roads, free colleges, free seeds and low taxes; he wants a United States Army second to none and deplores the draft; he wants high wages, rich farmers, and low prices. He favors States' rights and a strong Federal Government." The editorial's title was "Getting the Pussyfoot Out of Politics." That caption describes aptly what we need: statesmanship and courage.

I can see no reason why we should not raise at State and local levels the funds necessary to support the essential services that must be performed. There is no magic in the Federal Treasury beyond its ability to run up debts of astronomic proportions. In 1932 the gross Federal debt equalled 20 percent of the national income; State and local indebtedness was of the same magnitude. By 1954 the gross Federal debt had grown to 98 percent of the national income while State and local debt had shrunk to 12½ percent. Interest on the debt alone absorbs 10 percent of the Federal budget; interest on State debts amounts to only 1 percent of all State expenditures, interest on local debts 3 percent of local expenditures. Twenty years ago, interest payments took about four times as large a slice of State and local expenditures. Another significant sidelight on State and local fiscal ability: In the past 5 years State and local governments increased their investments in Federal securities by more than all other investors combined. They seem to be in a better position to taken on responsibilities than the debt-ridden Federal Government.

The crux of the Federal-State problem lies in the financial field. What we have to do at State and local levels is face up to the facts and quit looking to Washington for ever greater subsidies. A reduction in the Federal tax burden is the best avenue to enable State and local governments to get on their own feet. We had a major Federal tax cut last year, may possibly get another one next year. The keynote in governors' messages to the 42 State legislatures which met in January of this year was extension of services and acceptance of the fiscal responsibility for them. Legislative action so far indicates that the year 1955 may see more and heavier State tax boosts enacted than any year in recent history.

There has been a significant growth of social consciousness among the States. Serious efforts are being made in rich and poor States alike to rescue those in need and prevent distress, to create better opportunities for all their residents to grow up, work and live in decent conditions which are worthy of the promise of the American standard of life. Improvements can of necessity come only by degree. There is a limit to the additional tax burden our citizens can assume at a time when we devote—by no choice of our own—close to one-fifth of our earnings to the demands of national security. This imposes inevitable restraints. Those of us accustomed to the standards of the more advanced and economically more fortunate States must remember that part of the concept of liberty is tolerance of diversity among our sister States.

There are other fields beside the financial in which many States have failed to live up to expectations. Some of these shortcomings seriously affect the ability of States to exercise their duties in our Federal system. The most important ones among them seem to be these:

1. The structural organization of many State governments has become obsolete; we have reached a point where the ability of State government to work effectively and to discharge its duties efficiently is severely handicapped. Little Hoover commissions in more than 30 States prepared recommendations for organizational improvements. They stressed executive management, unity of command, limited span of control, a strong and comprehensive budget system, single-head departments, centralized auxiliary services. The legislative acceptance of these proposals has been discouraging. Actual accomplishments in most States have been moderate or negligible. There is an unfortunate lack of understanding of the compelling reasons and the urgency for integration of the State administrative structure.

2. State government has been conspicuously unable to compete with the Federal government or with private industry for administrative talent. Obviously, no Government can be better than the quality and competence of its employees. Fewer than half the States have a statewide merit system; in the majority of States, employees outside of certain Federal-aid departments are subject to the vagaries of elections every few years. There has been considerable improvement in the professionalization and the salary levels in certain specialized areas, in the medical fields, in engineering, in educa-

tion; this is not equally true in the field of general administration.

3. Legislative reapportionment is essential if State governments are to be representative of all their residents. For many years urban areas have complained that they are being discriminated against in the allocation of legislative seats. Unable to get adequate hearing or consideration of their problems from their State legislature, cities have been tending to appeal to the National Government for assistance in their legitimate needs. This lack of balance could be taken care of at the State level by cooperation and greater understanding of urban problems.

4. Over 100,000 governments exist and operate in the United States, more than half of them school districts. Many were carved out under an economic and settlement pattern that passed decades ago and do not have sufficient resources to provide their residents with adequate services at reasonable cost. The crazy-quilt pattern of coexisting, overlapping governmental units in some of our metropolitan areas is beyond belief. Consolidated government of those areas may be the cure for suburbanitis and other ills afflicting our cities. County government, that dark continent in our governmental structure needs a thorough overhaul. The pioneer work of the National Municipal League in the fields of county and city government ought to receive greater appreciation and recognition by State legislatures. True home rule and local responsibility cannot become a reality unless the States create or facilitate the creation of units of local government which are large enough in terms of area, population, and economic resources to stand on their own feet, finance their own services and run their own affairs.

5. In most States the administration of the property tax, the mainstay of local finance, is scandalous. The inequity and unrealistic level of assessments make a mockery of constitutional and statutory provisions for uniformity and assessment standards. The abuse of the property tax cuts the taxing and bonding powers of local governments to a fraction of their entitlement, it prevents them from rendering essential services and makes them more dependent upon State aid. The States in turn then rely on the Federal Treasury for relief. Few actions can contribute more toward restoring the vitality of local government than an honest and fair reassessment program which—as has amply been proven—must be directed from the State level.

6. State government has failed to sell itself to the public. Most people are far better informed about the National Government or about their local government and officials than about the manifold activities and vital services of State government. Newspapers and magazines give much less coverage to State government news particularly. In this they reflect the general lack of interest which is due in part to our own failure to tell about the investment in State government and the dividends in the form of services. The Federal Government is in the news all the time because the worldwide problems of the cold war have become our first item of interest. Also, it would be difficult not to be interested in an enterprise that takes about one-quarter out of every dollar we earn. Local government, our cities, school districts, etc., and their officials are physically close, affect us more directly in our everyday life. State government falls somewhat in between—it is in the middle—and somehow seems to fall between the two stools. State government will have to take the initiative, in finding media to lay its case before the public.

The points I have made may sound like a big bill. They are and they need to be because the States are facing an unprecedented task in the years ahead. In the next 10 years the population of the United States will grow by 25 million, the greatest increase in any 10-year period in our history. In 1954 58 percent of our population was in the most productive age brackets, 20 to 64 years. But less than one-third of the 25 million increase we expect will be in that group; more than 17 million will be under 20 or over 64. You can easily see what that will mean in terms of the public-service burden—in schools, hospitals, welfare institutions, and care for the young, homes, and support of the aged. and let's not forget that we are starting out with a multi-billion dollar backlog in facilities and with service standards that need to be raised to higher levels.

Under our traditional division of functions most of these responsibilities are in the realm of the States and communities. Will they be able to meet them? Or should we gradually relieve them of part of their duties? A man whose duties are being eased is usually the one who is being readied for retirement. A man's stature and position are measured by the extent of his responsibilities not by his rights. When we appraise the office of the President of the United States we talk about the weight of its responsibilities not about its rights. The significant trend of the past 25 years has not been that the Federal Government invaded States' rights but that it assumed part of the States' duties. That may have been the fault of the States as much as that of the Federal Government. I am convinced that most of what the Federal Government did for the States was for the good. But good government is no substitute for self-government.

Almost half a century ago Elihu Root said "If the powers of the States are to be preserved, and their authority is to be continued, the States must exercise their powers. The only way to maintain the powers of government is to govern." The measure of a man is whether he stands up and grows under greater responsibilities or whether he is trying to shunt them off. This holds equally true of a nation or a State. We cannot strengthen the States by lessening their responsibilities. The degree to which States will get ready and meet their greater responsibilities will determine their future position in our Federal system. If they fail, no claim or definition of historic States' rights will have any meaning.

For some years now by a process of constant attrition of constitutional safeguards we have been lowering the barriers against a monopoly of governmental power. Two years ago the eminent political scientist Leonard White, of the University of Chicago, wrote: "I do predict * * * that if present trends continue for another quarter century the States may be left hollow shells, operating primarily as the field districts of Federal departments and dependent upon the Federal Treasury for their support. This result would be bad for the Federal Government and would hold grave consequences for the kind of self-governing, local democracy that has been an essential part of our life."

A few weeks ago President Eisenhower said that the concepts of our forefathers were conceived at a time when none could have anticipated the changes in the social and economic conditions that mass production and modern incidents have created. But in adapting to these changes, he added, we should never let down those free Americans by adjusting the concepts out of existence.

The idea for which our forefathers bled and which they expressed in the Constitution was not the guarantee of permanence or specific rights to the States but "to promote the general welfare and to secure the blessings of liberty to ourselves and to our posterity."

The deepest commitment of this Nation is to the dignity of the person. The only inalienable rights are those of the individual and not of any government. The genius of the Founding Fathers bequeathed to us a system which by a broad dispersal of power aimed to assure the freedom of man against any possible tyranny of government. This system has values beyond the accomplishments of certain everyday conveniences. It is our sacred duty to transmit to our children their rightful heritage and not to squander it for temporary advantages. I trust that our political and civic leaders will show the courage and devotion to preserve for future generations their birthright to the institutions of free government. I am convinced that in this the American people will support them.

And So Is Mr. Howrey

EXTENSION OF REMARKS
OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1955

Mr. MULTER. Mr. Speaker, I direct the attention of our colleagues to the following article which appeared in the August 1, 1955, issue of the New Republic magazine:

AND SO IS MR. HOWREY

Edward F. Howrey, the Eisenhower-appointed Chairman of the Federal Trade Commission—created by Congress in 1914 to protect the public against unfair trade practices and monopolies—was for many years a lawyer representing big business clients before the FTC. One of these clients was the Firestone Rubber Co. When he assumed the chairmanship in 1953, Mr. Howrey promised to keep out of a price discrimination suit then being brought by the FTC against his old employer, Firestone, and a number of other rubber firms.

The Government won its case in district court. But on appeal, the circuit court reversed the decision. FTC lawyers thereupon requested the Solicitor General to ask the Supreme Court for a writ of certiorari, which would, in effect, have upheld the Government. Mr. Howrey, adhering publicly to his resolution to stay away from this particular case, did not vote with the other Commissioners on the action. Ultimately, the Solictor General decided not to go to the Supreme Court. That all happened in 1953. Now it has been revealed that Mr. Howrey paid a visit to the Solicitor General for a quiet chat before the Solicitor decided not to ask the Supreme Court for certiorari.

This news came out under questioning before a House Small Business Subcommittee, headed by Representative JOE L. EVINS, Democrat, Tennessee. The committee has begun an investigation of regulatory commission which is disclosing a pattern of White House control over these presumably independent agencies, stemming from the first Hoover Commission recommendations, accepted by President Truman. The Hoover reorganization plan gave the Chief Executive power to name the chairmen of the several commissions and empowered the chairmen, in turn, to appoint their staffs and exercise direct control over them. Heretofore, the chairmen—who held that post in rotation—had had no more power than their colleagues. Thereafter the 4 other members of the 5-man commissions tended to become superfluous personnel. Now commission decisions could be made between the White House and the White House-appointed chairman—in the above instance, Mr. Howrey. The budget too is now ma-

nipulated for control. Eisenhower's first budget director, Joseph Dodge—a Detroit banker—cut the FTC budget request $1 million and specified that the reduction would be in anti-merger prosecutions and anti-monopoly investigations. Former commissioner Stephen J. Spingarn—theoretically in charge of budget matters—protested this imposition by the Executive Department. But Chairman Howrey was content with being told what to do.

The Supreme Court has ruled that the FTC "cannot in any proper sense be characterized as an arm or an eye of the executive. It * * * must be free from executive control." The Securities and Exchange Commission seemed somewhat less than free from executive control (read, Sherman Adams) in its delaying action in the Dixon-Yates affair. And now the Federal Trade Commission has been reorganized, and the philosophy of the Commission transformed. As Business Week reported cheerily in June 1954:

"FTC's job has in no way changed, but the way it intends to carry it out has changed. As compared to the way the Democrats did things, the Republicans are making it easier for the businessman who is up on the FTC carpet, harder for the FTC lawyers handling the cases. * * * Some observers say that, as a practical matter, FTC is setting standards of proof that will make the lawyers' job almost impossible."

One of the Great Underdeveloped Resources in the Orient: Millions of English-Speaking Asians

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. JUDD. Mr. Speaker, most historians agree that the Battle of Quebec was one of the decisive battles in history, because it determined that English was to be the predominant language of the North American Continent. That meant that the basic culture and the basic ideas and philosophies of government in the United States and Canada were to be not French, but Anglo-Saxon—Anglo-Saxon law and jurisprudence, Anglo-Saxon ideas of individual freedom and democratic self-government, the concepts set forth in the King James Bible, the Magna Carta, Shakespeare, Pilgrim's Progress.

Too few Americans have realized the extent to which, before World War II, English had also become the dominant language in Asia, except in Japan, French Indochina, and the Dutch East Indies, in the sense that more people in more countries in Asia could read and write English than any other language. Most of their political ideas and aspirations had come from their study of English. This foundation is a strong asset the free world has in Asia, but which it has failed to appreciate and use with imagination.

This fact was pointed out strikingly by Mr. Ernest Lindley in the following report in Newsweek on his visit to the Bandung Conference and 14 Asian countries:

In nearly all of free Asia, English is the second language, where it is not the first. It was the official language of the Bandung conference. It is the only language in which most Asian countries can communicate with each other. In many, including Indonesia, the study of English is now compulsory, beginning in junior high school. One specific result of this prevalence of English as the second language is that most free Asian students who go abroad to study—as thousands want to do—prefer English-speaking countries. Many of these young people will rise rapidly to positions of influence—in most Asian countries trained men and women are in very short supply. It would be short-sighted of us not to provide more opportunities for them to study in the United States.

I think every American will realize how valuable this second language factor is to the spread of American ideas and ideals. But just to emphasize its potential importance, let's imagine the situation were reversed. Think what a staggering blow it would be if the second language of free Asia were Russian.

As an illustration of the power of a language and the documents written in it to influence a people's development, look at India, Pakistan, Burma, and Ceylon. One of the abiding residuals of several centuries of British rule is that their leaders have all been educated in English—it is the one thing they have in common. Most of their political and cultural ideas were imbibed from men, including the founders of America, who wrote in English and whose patterns of thought had been developed in that language medium.

It is no accident that the most successful elections in the newly independent countries of Asia have been those in the countries that learned their politics in England.

In contrast look at Japan. When she set out to modernize in the latter part of the 19th century, she sent a commission around the world to study the systems of government in various countries. It finally settled on the German system and the imperial Japanese Constitution was largely written in Germany. The Japanese adopted German, not English, as their foreign language and slavishly modeled their political system, their educational system, their military system, after the German imperial system. The results became apparent in the Japan that emerged a half-century later.

When China, after centuries of self-imposed isolation, was opened to outside influence, several foreign languages were introduced. For a while Russian predominated in Manchuria, French in southwest China, German in Shantung, English in the Yangtze Valley. But English gradually won out, due largely to the influence of two men: a cabin boy named Charley Soong, who was converted and educated in Christian schools in the United States and then founded a firm in China to publish the Bible and school textbooks in English; and Sun Yat-sen, who had a chance to study in mission schools in Hongkong and Hawaii.

Thirty years ago I found that Chinese schoolchildren began the study of English, not in high school, but in the fourth and fifth grades. I was surprised how many Chinese children knew as many facts about Washington and Lincoln as do our own youth. They studied our great heroes, memorized their writings, absorbed their ideas.

Almost the first thing the Communists did with Chinese schools was to abolish English and decree Russian as the second language. They understood better than we the power of a language to influence thinking and guide the direction a people takes in its political and economic development.

The Communists know, and we should never forget, that the West has in China a deep and abiding asset of western ideas and values which it will take the Communists decades to eradicate. We must not discount this asset in China and the continued opposition to Communist tyranny it will provide.

Even more urgent, we must not fail to appreciate and take advantage of the same priceless asset in the countries of Asia which are still free—and which do not need to be lost to the free world if we are alert and act intelligently. We should expand and improve our exchange programs for students and teachers; encourage private foundations and institutions to grant scholarships in the United States, Hawaii, the Philippines, to outstanding Asian students; and treat them, while in the United States, in a manner likely to enhance the ties of mutual respect, friendship, and cordiality between them and ourselves so they become ambassadors of good will—to us when here, and to their own people on their return.

Progress in Israel-Jordan Talks Egyptian, Syrian Attacks Continue

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, July 29, 1955

Mr. MULTER. Mr. Speaker, the following news item which appeared in the July 29, 1955, issue of the Israel Digest is deserving of our attention:

PROGRESS IN ISRAEL-JORDAN TALKS EGYPTIAN, SYRIAN ATTACKS CONTINUE

JERUSALEM.—Representatives of Israel and Jordan this week met under the chairmanship of Maj. Gen. E. L. M. Burns, Chief of Staff of the United Nations Truce Supervision Organization, to discuss the extension of the local commanders' agreement in the Jerusalem area along the entire Israel-Jordan demarcation line. A joint communique issued following the meeting announced that good progress had been made and that the discussions would continue next week.

The Jerusalem area commanders' agreement, concluded in April, provides for meetings and telephonic contact between local commanders and the use of only military personnel in the first line of defensive organization in the area. Since its conclusion, there has been a noticeable decrease in incidents in the area covered by the agreement.

Meanwhile, attacks upon Israel life and property by Egyptian and Syrian military personnel and infiltrators have continued during the past week.

On July 22, Syrians fired upon an Israel vessel sailing on Lake Kinneret.

On July 23, Syrians attacked an Israel border patrol near Tel Katzir in Galilee.

On July 23, hand grenades were thrown into houses in the Negev village of Patish by Egyptian infiltrators. Three persons were seriously injured. Twenty-three persons were wounded, and a young woman killed, in an attack on Patish on March 24.

On July 23 Egyptian infiltrators attacked an Israel patrol north of Ein Ha'Shlosha in the Negev.

On July 27 Syrians fired upon members of Gonen, in upper Galilee, as they were walking south of the village.

Peace With Prosperity, a Reality

EXTENSION OF REMARKS
OF
HON. HAROLD H. VELDE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1955

Mr. VELDE. Mr. Speaker, I am very happy and proud that I stand here today as a member of the great Republican administration that has after better than 2½ years lived up to the pledge to give the people peace with prosperity.

We are so prone to forget that the peace we enjoy today did not just happen. It had to be worked for and it will require even harder work to maintain it.

We promised the people 3 years ago to wage peace first and then go to work on building a sound prosperity based on that peace. Today under a Republican administration we enjoy them both simultaneously—something no Democrat administration has ever been able to do.

After ending the fighting in Korea, we seized the initiative for peace with a new foreign policy based on firmness and strength.

We strengthened our collective security throughout the world with membership in the Southeast Asia Treaty Organization — SEATO — achieving West German sovereignty and NATO membership; signing of the Austrian peace treaty calling for withdrawal of Soviet troops; we helped solve the Trieste, Suez base, and Iranian-oil problems; supported the defense pacts between Middle East countries; and entered into mutual-assistance agreements with Latin American countries and Panama.

In the last 2 years our Republican administration has built up our defenses at lower cost with greater effectiveness through increased emphasis on airpower and new atomic weapons. We have established an Air Force Academy.

President Eisenhower's atoms-for-peace program has been launched. The atomic-energy law has been revised to promote sharing of atomic-energy data with private industry and 27 other friendly nations. The President has appointed a Secretary for Peace with Cabinet status established to plan world disarmament.

Our world trade relations have been improved through genuinely reciprocal agreements. The Trade Agreements Act has been extended and customs rules simplified.

Our Republican administration has accomplished the transition from war to a peace economy without sacrificing prosperity.

The confidence, foresight, and determination of President Eisenhower, and our Republican administration have lifted this Nation's economy to a record-breaking pinnacle of prosperity.

Never before in history have so many people been working, investing, building, and producing. Beginning in 1953, when the American people became certain that an era of good government was at hand, the Nation's progress steadily increased to the historic peak that has been reached in the year 1955.

The future holds greater promise. By taking speedy action in freeing the economy from the shackles of wartime controls, the Republican Party laid a firm, progressive base for the rapid and continuing expansion of the American economy.

Business, industry, and labor alike, despite the outcries of phony doom-predicting political economists, shed their fears of the future when the new administration revealed its realistic program for the good of all the people.

Factory wheels have been set spinning, industries expanding and new businesses booming by the partnership in prosperity created by vast and immediate cuts in Federal spending and waste, by across-the-board tax cuts totaling $7.4 billion and by the restoration of the people's faith in honest government.

The faith of the American people in our Republican administration is being demonstrated every day. Once unshackled the economy of America responded to the wise leadership that has been available in the Nation since 1953.

Mr. Speaker, the Republican administration is dedicated to keeping the peace and continuing the progress and prosperity, and I am sure a vast majority of the American people have full confidence in our ability to live up to this pledge.

Working Record of 1st Session of the 84th and 83d Congresses

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. McCORMACK. Mr. Speaker, the 1st session of the 84th Congress handled a much greater volume of work than the 1st session of the 83d Congress according to official statistics just compiled.

The House of Representatives in its recent session passed a total of 1,597 measures as compared to 1,048 in the comparable session of the 83d.

Committees of the House of the 84th Congress reported a total of 1,528 measures as compared to 1,019 in the 1st session of the 83d.

On the Senate side, the statistics show that in the first session of the current Congress 1,324 measures were passed as against only 848 in the first sesson of the previous Congress. Committees of the Senate reported 1,393 measures in the session just ended in contrast to 969 in the 1st session of the 83d Congress.

Also, the Senate in its recent session confirmed more than 40,000 nominations—both military and civilian—compared to more than 23,000 in the 1st session of the 83d Congress.

This tremendous volume of work which included many important bills both in the field of foreign affairs and domestic affairs, is a tribute to the Democratic Party in the Congress.

Included in my remarks a breakdown of the 1st session of the 84th Congress in comparison with the 1st session of the 83d Congress which was controlled by the Republican Party:

Working record, 1st sess., 84th and 83d Congs.

	84th Cong.		83d Cong.	
	House	Senate	House	Senate
Measures passed, total	1,597	1,324	1,048	848
Senate bills	361	576	172	342
House bills	966	566	596	320
Senate joint resolutions	16	21	15	22
House joint resolutions	24	19	26	21
Senate concurrent resolutions	18	24	20	25
House concurrent resolutions	25	22	15	14
Simple resolutions	187	96	204	107
Measures reported, total	1,528	1,393	1,019	909

Voting and Attendance Record of Hon. Richard E. Lankford, of Maryland

EXTENSION OF REMARKS
OF
HON. RICHARD E. LANKFORD
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. LANKFORD. Mr. Speaker, under leave to extend my remarks, I include a report of my voting and attendance record during the 1st session of the 84th Congress.

This record includes rollcall votes and all quorum-call votes. For the purpose of identification I have included a brief description of each bill.

The purpose of this report is to provide my interested constituents with a simple compilation of my voting and attendance record.

I would like to point out that I was present for every rollcall vote.

Voting and attendance record, Representative RICHARD E. LANKFORD, *5th District of Maryland, 84th Cong., 1st sess.*

Roll-call No.	Date	Measure, question, and result	Vote
	1955		
1	Jan. 5	Quorum call	Present.
2	Jan. 5	Election of the Speaker (Rayburn, 236; Martin, 198)	Rayburn.
3	Jan. 25	H. J. Res. 159: Authorizing the President to employ the Armed Forces of the United States for protecting Formosa, etc. (Passed 410 to 3.)	Yes.
4	Jan. 27	H. R. 587: To provide that persons serving in the Armed Forces on Jan. 31, 1955, may continue to accrue educational benefits under the Veteran Readjustment Assistance Act of 1952. (Passed 366 to 0.)	Yes.
5	Feb. 8	H. R. 3005: To Extend Universal Military Training and Service Act and the Dependents' Assistance Act for 4 years. (Passed 394 to 4.)	Yes.
6	Feb. 16	H. R. 3828: To adjust legislative and judicial salaries; Congressmen to receive $22,500 plus $2,500 for expenses. (Passed 283 to 118.)	Yes.
7	Feb. 17	Quorum call	Present.
8	Feb. 17	H. Res. 142: Motion to stop further debate on the question of a closed rule on H. R. 1. (Defeated 207 to 178.)	Yes.
9	Feb. 17	H. Res. 142: To permit 5 hours of debate and amendments from the floor on H. R. 1. (Defeated 193 to 191.)	No.
10	Feb. 17	H. Res. 142: Closed rule on H. R. 1 to prohibit amendments from the floor. (Passed 193 to 192.)	Yes.
11	Feb. 18	H. R. 1: To recommit to Committee on Ways and Means with instructions to amend to require the President to comply with recommendations of the Tariff Commission except when national security is involved. (Defeated 206 to 199.)	No.
12	Feb. 18	H. R. 1: Final passage to extend the authority of the President for 3 years to enter into trade agreements for reduction of tariffs. (Passed 295 to 110.)	Yes.
13	Feb. 23	Quorum call	Present.
14	Feb. 24	Quorum call	Present.
15	Feb. 25	H. R. 4295: To recommit to Committee on Ways and Means in order to delete provision calling for a $20 credit against individual income tax for each personal exemption in tax year 1955. (Defeated 210 to 205.)	No.
16	Feb. 25	H. R. 4592: Extending existing corporate normal-tax rate and certain excise-tax rates and providing $20 credit against individual income taxes for each personal exemption. (Passed 242 to 175.)	Yes.
17	Mar. 1	H. R. 3828: An adoption of conference report setting judicial and legislative salaries: Congressmen to receive $22,500. (Passed 223 to 113.)	Yes.
18	Mar. 10	Quorum call	Present.
19	Mar. 10	H. R. 4720: To increase the compensation of members of the Armed Forces. (Passed 399 to 1.)	Yes.
20	Mar. 16	Quorum call	Present.
21	Mar. 18	H. R. 4903: Amendment to restore $4 million for the United Nations technical-assistance program which had been deleted by a point of order. (Passed 174 to 107.)	Yes.
22	Mar. 21	Quorum call	Present.
23	Mar. 21	H. R. 4646: To suspend the rules and pass the bill increasing postal employees' salaries on an average of 7.5 percent. (Defeated 302 to 120.)	No.
24	Mar. 21	Quorum call (considered 7.5 percent inadequate)	Present.
25	Mar. 21	H. R. 4957: To suspend the rules and pass the bill directing a redetermination of the national marketing quota for burley tobacco for 1955–56. (Defeated 260 yeas to 152 nays, a ⅔ majority being necessary.)	Yes.
26	Mar. 22	Quorum call	Present.
27	Mar. 22	H. Res. 170: To disapprove of the disposal of some of the Government-owned synthetic rubber plants. (Defeated 283 to 132.) (Effect of my vote: Permits sale of plants to private companies.)	No.
28	Mar. 23	Quorum call	Present.
29	Mar. 23	H. Res. 171: To disapprove of the disposal of some of the Government-owned synthetic rubber plants. (Defeated 276 to 137.) (Effect of my vote: Permits sale of plants to private companies.)	No.
30	Mar. 24	Quorum call	Present.
31	Mar. 28	Quorum call	Present.
32	Mar. 29	Quorum call	Present.
33	Mar. 30	H. R. 4295: To accept conference report extending corporate and excise taxes for 1 year and deleting the $20 income tax for each taxpayer and his dependents. (Passed 386 to 8.)	Yes.
34	Mar. 30	H. R. 5240: Amendment to restore a provision limiting to $1 per month the fee to educational institutions for reports on veterans. (Dfeated 226 to 156.)	No.
35	Apr. 13	Quorum call	Present.
36	Apr. 20	Quorum call	Absent.[1]
37	Apr. 20	H. R. 4644: Amendment to the postal pay raise which would increase the annual rate for certain classes of employees, raised the overall increase from 7.5 to 8.2 percent. (Passed 224 to 189.)	Yes.
38	Apr. 20	H. R. 4644: Motion to recommit to Committee on Post Office and Civil Service. (Defeated 287 to 125.)	No.
39	Apr. 20	H. R. 4644: On final passage of the bill as amended to grant a postal pay raise of about 8.2 percent. (Passed 324 to 85.)	Yes.
40	Apr. 21	Quorum call	Absent.[1]
41	Apr. 21	H. R. 4393: To provide for construction and conversion of certain modern naval vessels; calls for a $1.3 billion, 4-year Navy shipbuilding program. (Passed 373 to 3.)	Yes.
42	Apr. 27	Quorum call	Present.
43	May 3	Quorum call	Present.
44	May 4	Quorum call	Present.
45	May 5	Quorum call	Present.
46	May 5	H. R. 12: Amendment to remove peanuts as one of the basic commodities in the farm price-support program. (Defeated 215 to 193.)	No.
47	May 5	H. R. 12: To recommit to Committee on Agriculture. (Defeated 212 to 199.)	No.
48	May 5	H. R. 12: To restore the 90 percent of parity supports on 5 basic crops and fix the minimum level for support of dairy products at 80 percent of parity. Final passage. (Passed 206 to 201.)	Yes.
49	May 9	Quorum call	Present.
50	May 9	S. 1 and H. R. 4644: To recommit the conference report on the postal pay raise bills (8.8 percent increase) to the conference committee. (Defeated 275 to 118.)	No.
51	May 9	S. 1 and H. R. 4644: On final passage of conference report on postal pay raise bills (8.8 percent). (Passed 328 to 66.)	Yes.
52	May 9	H. Res. 223: To authorize consideration of the bill to permit statehood for Hawaii and Alaska. (Passed 322 to 66.)	Yes.
53	May 9	Quorum call	Present.
54	May 10	Quorum call	Present.
55	May 10	Quorum call	Present.
56	May 10	Quorum call	Present.
57	May 10	H. R. 2535: To recommit to committee the bill authorizing statehood for Hawaii and Alaska. (Passed 218 to 170.)	Yes.
58	May 11	Quorum call	Present.
59	May 11	Quorum call	Present.
60	May 12	Quorum call	Present.
61	May 12	Quorum call	Present.
62	May 12	H. R. 6042 (Department of Defense appropriations): To strike out provisions requiring approval by congressional committee before the armed services may move any permanent facility. (Defeated 202 to 184.)	No.
63	May 12	H. R. 6042: Final passage of defense appropriations bill. (Passed 382 to 0.)	Yes.
64	May 17	Quorum call	Present.
65	May 18	Quorum call	Present.
66	May 19	Quorum call	Present.
67	May 19	Quorum call	Present.
68	May 19	Quorum call	Present.
69	May 23	S. 727: To increase the salaries of judges for the District of Columbia. (Passed 282 to 32.)	Yes.
70	May 25	Quorum call	Present.
71	May 25	H. Res. 224: To create a select committee to investigate the White County (Ind.) Bridge Commission. (Passed 205 to 166.)	Yes.
72	May 25	H. R. 2851: To make agricultural commodities owned by the CCC available to needy persons in areas of acute distress. (Passed 343 to 1.)	Yes.
73	May 26	Quorum call	Present.
74	May 26	S. 727: To recommit to conference committee a bill which would raise salaries of District of Columbia judges to an amount greater than previously voted by the House. (Passed 170 to 165.)	No.
75	May 26	Quorum call	Present.
76	May 26	H. R. 5881: To recommit to committee the bill which provided for Federal compensation in non-Federal reclamation projects and for participation by non-Federal agencies in Federal reclamation projects in order to limit the scope of the bill to 17 Western States instead of all 48 States. (Defeated 229 to 62.)	No.
77	June 1	Quorum call	Present.
78	June 1	H. R. 3990: To authorize the Secretary of the Interior to investigate projects for conservation, development, utilization of the water resources of Alaska. Motion to recommit bill to Committee on Interior and Insular Affairs. (Defeated 278 to 79.)	No.
79	June 7	S. 2061: To increase salaries in the postal service by an average of 8 percent and to provide for reclassification. (Passed 409 to 1.)	Yes.
80	June 8	H. R. 5923: To authorize an appropriation of $57,730,000 to complete the Inter-American Highway. (Passed 353 to 13.)	Yes.
81	June 13	Quorum call	Present.
82	June 14	Quorum call	Present.

[1] Member, Board of Visitors, U. S. Naval Academy, Annapolis, Md.; appointed by the Speaker.

Voting and attendance record, Representative RICHARD E. LANKFORD, 5th District of Maryland, 84th Cong., 1st sess.—Continued

Roll-call No.	Date	Measure, question, and result	Vote
	1955		
83	June 14	H. R. 1: On acceptance of conference report on the Trade Agreements Extension Act of 1955. (Passed 347 to 54.)	Yes.
84	June 14	H. R. 6227: To provide for the control and regulation of bank holding companies. (Passed 371 to 24.)	Yes.
85	June 15	Quorum call	Present.
86	June 15	H. Res. 210: To authorize an investigation of the Federal Open Market Committee of the Federal Reserve Board. (Defeated 214 to 178.)	Yes.
87	June 16	Quorum call	Present.
88	June 20	S. 67: To increase salaries of civil-service employees by about 7.5 percent. (Passed 370 to 3.)	Yes.
89	June 20	H. Con. Res. 109: Authorizing the appointment of a congressional delegation to attend the NATO Parliamentary Conference. (Passed 338 to 31.)	Yes.
90	June 20	H. R. 6295: To raise the per diem allowance for subsistence and travel expenses for Federal employees from $9 to $13. (Passed 320 to 41.)	Yes.
91	June 21	H. R. 4663: To authorize the Secretary of the Interior to construct, operate, and maintain the Trinity River division, Central Valley project, California, and to authorize an appropriation of $225 million therefor. (Passed 230 to 153.)	Yes.
92	June 22	Quorum call	Present.
93	June 22	H. R. 6040: To recommit to committee the customs simplification bill with instructions to strike out sec. 2, which would make export value the primary basis for assessing ad valorem duties. (Defeated 232 to 143.)	No.
94	June 23	H. Con. Res. 149: Expressing the sense of Congress that the United States in its international relations should maintain its traditional policy in opposition to colonialism and Communist imperialism. (Passed 367 to 0.)	Yes.
95	June 27	H. R. 6992: To extend for 1 year the existing temporary ceiling on the public debt of $281 billion. (Passed 267 to 56.)	Yes.
96	June 27	Quorum call	Present.
97	June 27	H. R. 6829: To authorize certain construction at military, naval, and Air Force installations. (Passed 316 to 2.)	Yes.
98	June 28	Quorum call	Present.
99	June 28	H. R. 3005: To recommit the conference report to committee. (Defeated 171 to 221.)	No.
100	June 28	H. R. 3005: To extend the Universal Military Training and Service Act and the Dependents Assistance Act for 4 years and to extend for 2 years the Doctors-Dentists Draft Act. (Passed 388 to 5.)	Yes.
101	June 28	Quorum call	Present.
102	June 29	Quorum call	Present.
103	June 29	S. 727: To recommit the conference report on the bill which adjusts the salaries of the judges of the courts of the District of Columbia. (Defeated 157 to 227.)	No.
104	June 30	Quorum call	Present.
105	June 30	S. 2090: To authorize appropriations totaling $3,285,800,000 for carrying forward the mutual security program. (Passed 273 to 128.)	Yes.
106	July 1	Quorum call	Present.
107	July 1	Quorum call	Present.
108	July 5	Quorum call	Present.
109	July 6	H. R. 3210: To recommit the bill which would authorize the State of Illinois and the Sanitary District of Chicago to test, on a 3-year basis, the effect of increasing the diversion of water from Lake Michigan into the Illinois Waterway. (Defeated 74 to 316.)	No.
110	July 7	S. 2090: To adopt conference report authorizing $3,285,800,000 for the mutual security program. (Passed 262 to 120.)	Yes.
111	July 11	Quorum call	Present.
112	July 11	H. R. 7224: Appropriating $2,638,741,750 for mutual security during the fiscal year 1956. (Passed 251 to 128.)	Yes.
113	July 12	Quorum call	Present.
114	July 13	H. R. 6766: Conference report making appropriations for the AEC, TVA, and certain agencies of the Departments of Interior and the Army. (Passed 315 to 92.)	Yes.
115	July 13	H. Res. 295: To provide for the consideration of H. R. 7089, a bill to provide benefits for the survivors of servicemen and veterans. (Passed 376 to 24.)	Yes.
116	July 13	Quorum call	Present.
117	July 14	Quorum call	Present.
118	July 18	Quorum call	Present.
119	July 18	H. R. 7225: To amend the Social Security Act to extend coverage to certain disabled persons who are at least 50 years old, to women at 62 years of age, and to certain disabled children over 18 years old, and to certain occupational groups. (Passed 372 to 31.)	Yes.
120	July 18	Quorum call	Present.
121	July 18	Quorum call	Present.
122	July 19	Quorum call	Present.
123	July 19	Quorum call	Present.
124	July 20	Quorum call	Present.
125	July 20	H. R. 7214: To amend the Fair Labor Standards Act to make the minimum wage $1 an hour effective Mar. 1, 1956	Yes.
126	July 25	Quorum call	Present.
127	July 25	Quorum call	Present.
128	July 25	Quorum call	Present.
129	July 25	H. R. 7000: To agree to the conference report on the Reserve Forces Act of 1955. (Passed 315 to 78.)	Yes.
130	July 26	H. Res. 314: To provide for 3 hours' debate on H. R. 7474, the Federal-State highway construction bill. (Passed 274 to 128.)	Yes.
131	July 27	Quorum call	Present.
132	July 27	H. R. 7474: To recommit this highway bill to committee and to substitute therefor the administration bond-financing proposal for highway construction. (Defeated 193 to 221.)	No.
133	July 27	H. R. 7474: Final passage on the highway construction bill increasing certain taxes. (Defeated 123 to 292.)	No.
134	July 28	Quorum call	Present.
135	July 28	H. Res. 317: To provide for 3 hours of general debate on H. R. 6645, to amend the Natural Gas Act. (Passed 272 to 135.)	Yes.
136	July 28	Quorum call	Present.
137	July 28	H. R. 6645: To recommit to committee the amendment to the Natural Gas Act. (Defeated 203 to 210.)	Yes.
138	July 28	H. R. 6645: The Harris bill to amend the Natural Gas Act to remove from control of the Federal Power Commission natural gas producers and gatherers. (Passed 209 to 203.)	No.
139	July 29	Quorum call	Present.
140	July 29	S. 2126: To adopt the Wolcott substitute for the Senate housing bill. (Passed 217 to 188.)	No.
141	July 29	S. 2126: Final passage with the Wolcott substitute inserted in the housing bill. (Passed 396 to 3.)	Yes.
142	Aug. 1	Quorum call	Present.
143	Aug. 1	H. Res. 299: To grant to the Small Business Committee an additional $35,000 for operating expenses. (Passed 231 to 134.)	Yes.
144	Aug. 1	S. 2576: To strengthen the power of the District Commissioners in relation to the Capital Transit Co. and to authorize repeal of the franchise of the company. (Defeated 215 to 150, a ⅔ majority being required to suspend the rules.)	Yes.
145	Aug. 1	Quorum call	Present.
146	Aug. 2	Quorum call	Present.
147	Aug. 2	S. 2126: To adopt conference report on Housing Act of 1955. (Passed 187 to 168.)	Yes.

Arab Border Attacks Continue

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 28, 1955

Mr. MULTER. Mr. Speaker, the following news item which appeared in the Israel Digest of July 22, 1955, is deserving of our attention:

ARAB BORDER ATTACKS CONTINUE

JERUSALEM.—The attacks upon the life and property of Israel citizens by Arab infiltrators and military personnel have continued during the past month.

The following is a partial list of incidents perpetrated by Egyptian, Jordanian, and Syrian soldiers and marauders during the past 4 weeks.

On June 21, an Israel patrol in Taibe was fired upon by Jordanians. One of the Israelis was seriously wounded and died on June 26.

On June 22, Syrians opened fire upon Israel vessels sailing on Lake Kinneret (Sea of Galilee).

On June 22 and 23, Jordanians fired upon Israel patrols near Naharayim.

On June 25, Jordanians directed machine-gun fire at Neve Yamin from the village of Kalkilya.

On June 28, Syrians opened fire upon Israel vessels sailing on Lake Kinneret.

On July 1, Israelis at an observation post near Mefalsim in the south discovered a group of armed Egyptians in Israel territory and chased them back across the Gaza Strip border.

On July 1, an Israel patrol found landmines laid in the road northeast of Kissufim in the south. Examination of the mines showed that they were of Egyptian make.

On July 2, Syrians fired upon a group of settlers from Gonen, in upper Galilee, attempting to extinguish a fire which had broken out in their fields.

On July 5, Egyptian soldiers penetrated Israel territory northeast of Kissufim but were chased back across the Gaza Strip border by an Israel patrol.

On July 8, Egyptian marauders penetrated into Israel territory northeast of Mefalsim

in the south. They were chased back across the border by an Israel patrol.

On July 9, Jordanians fired upon Israelis east of Sha'ar Ha'Golan in the Jordan Valley.

On July 11, Syrians fired upon settlers of Hagovrim in upper Galilee.

On July 11, Syrians fired upon an Israel jeep traveling from Pardes Hahuri to Hulata in the northeast part of the country.

On July 13, Egyptian soldiers penetrated into Israel territory northeast of Kissufim. An Israel patrol chased them back across the Gaza Strip border.

On July 14, Syrians fired upon an Israel vessel sailing on Lake Kinneret.

On July 14, an Israel patrol encountered Egyptian marauders south of Erez in the northern Negev and chased them back across the Gaza Strip border.

On July 16, an Israel patrol encountered Egyptian marauders southeast of Mefalsim. The gang escaped across the Gaza Strip border after one of their members had been wounded.

On July 19, Syrians fired upon a jeep from the settlement of Hagovrim as it was traveling toward Hulata.

On July 20, several Syrian posts opened heavy fire upon the settlement of Hagovrim. Members of the settlement and an Israel border patrol returned the fire. An hour later, the Syrians again attacked Hagovrim and the patrol's camp in Mishmar Ha'Yarden.

The "Mouse" Project

EXTENSION OF REMARKS
OF
HON. THOMAS E. MARTIN
OF IOWA
IN THE SENATE OF THE UNITED STATES

Tuesday, August 2, 1955

Mr. MARTIN of Iowa. Mr. President, with the widespread interest in the recent disclosure of plans to send unmanned satellites into outer space, I wish to insert in the CONGRESSIONAL RECORD an article by Dr. S. F. Singer, of the University of Maryland, published in Interavia Review, an authoritative aviation magazine. Dr. Singer's work is well known in scientific circles.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE "MOUSE" PROJECT

(By Prof. S. F. Singer, University of Maryland)

(Associate professor of physics at the University of Maryland since 1953, the author has carried out extensive research into the origin of high-altitude radiation and the physical properties of the upper air layers. For this purpose he has used small experimental rockets for short-period measurements, but has also worked out plans for a miniature unmanned earth satellite for measurements over longer periods. His artificial moon, measuring only 30 centimeters in diameter, which bears the intriguing name "mouse" (an abbreviation of minimum orbital unmanned satellite, earth), is designed to obtain further information on ultraviolet and X-radiation from the sun. Professor Singer is a member of the United States Physics Society, Rocket Society and Geophysical Union, Britain's Royal Astronautical Society and Interplanetary Society, and the Washington Academy of Sciences. He also belongs to the Ionosphere Commission of the United States National Committee of the International Scientific Radio Union (U. R. S.) and from 1950 to 1953 was scientific liaison officer with the Office of Naval Research, United States Embassy, London.)

Space flight today finds itself at nearly the same point as aviation 50 years ago, but with two important differences. There was no science of aviation, no aerodynamics, when the first airships took wing; there exists today a completely worked out theory covering all the various aspects of space flight. The other important difference has to do with the tremendous rise within the last 50 years in the sciences of radio, electronics, instrumentation, and control.

Whereas airplanes had to be manned in order to fly, space flight will certainly start with vehicles which are flown and controlled by instruments.

There are, on the other hand, also important similarities; aviation was started by enthusiasts, by people without large means and support, with small motors and flimsy machines. If they had insisted on development of large aircraft engines before starting their experiments, aviation would never have come about because there existed no incentive for developing these engines. Similarly, for lack of direct motivation, and because of their great expense, large rocket motors will probably not be developed in the immediate future.

Instead, the approach to space flight will have to be made with available rocket motors and other developed components; these can then be put together into a multistep rocket vehicle. This appears to be the only method feasible at present for giving a small body the high velocities necessary for a satellite orbit or for escape. Even so, the limits set by present developments in large rocket motors allow us to place only extremely small payloads, of the order of 20 kilograms, at altitudes just barely beyond the effects of the atmosphere (at about 300 kilometers) where the atmospheric drag may be low enough to allow the vehicle to survive for some days or weeks. To place a satellite at a much higher altitude would decrease the present small payload even more and in order to send it into an escape trajectory out of the earth's gravitational field we would have to reduce the payload to a minute value.

Apparently we have reached a disappointing impasse; it seems very unlikely that more propulsion will be forthcoming soon which would raise the payload and altitude performance. On the other hand, what can be done with existing techniques seems disappointingly small and trifling unless we can demonstrate the usefulness of a 20-kilogram satellite orbiting the earth at about 300 kilometers. A demonstration of the worthwhileness of such a project would provide a motivation for its construction. For only by starting with a minimum satellite which is both feasible and worthwhile can we hope to advance into space flight.

Even with the present limitations of weight and altitude a properly instrumented satellite could provide us with a vast amount of important information about outer space and extraterrestrial radiations, particularly from the sun, and about the earth and its atmosphere. One can view such a satellite as an extension of present high altitude rockets which are being used to explore the upper atmosphere. During the past 8 years, over 200 of these rockets have been launched at the White Sands Proving Grounds in New Mexico, U. S. A., from ships at various positions in the Pacific and Atlantic Oceans, and even from balloons in the Arctic regions. They ranged from the huge V–2 down to very small rockets weighing only 100 kilograms. One small rocket which was launched from the nose of a V–2 at the end of its burning period reached the peak altitude of 400 kilometers above sea level, the highest ever attained by a man-made object.

A number of basic questions must now be answered: What is the purpose of the rocket or satellite observations? How are the observations performed? What results are obtained and how are they applied? Are they of practical importance?

The basic reason for rocket experiments comes about because the atmosphere, in spite of the fact that we can see throught it, is transparent only for the visible radiation (i. e. for electromagnetic radiation with a wave length of 7,700 to 4,000 Angström—Editor) and for certain radio waves. The atmosphere is not transparent, for example, to the ultraviolet radiations and X-radiation coming from the sun. It is also well known that the ionospheric layers in the upper atmosphere will not transmit radio waves but will bounce them back. All particle radiations (e. g. protons, atomic nuclei, etc.) coming from outer space are either completely stopped, or modified in character. Therefore, in order to study the radiations which are not transmitted through the atmosphere one has to go above it and carry out measurements at very high altitudes. Such studies have been done in a variety of ways and we know quite a bit by now about primary cosmic ray particles and about the emission of ultraviolet radiation from the sun. This latter knowledge is very important; it not only reveals much about the various mechanisms which operate on the sun's surface and in the sun's hot atmosphere, but these radiations also have a very profound influence on our own atmosphere. For example, they produce the ionospheric layers already referred to which are so important for radio communication. Although most of the heat energy which we receive from the sun arrives in the visible range of the spectrum, the ultraviolet is important because it produces gases such as ozone in the upper atmosphere which tend to trap this heat near the earth somewhat in the same fashion as a greenhouse. We suspect, therefore, that the ultraviolet emission from the sun may have considerable influence on our weather.

We know further that although the sun appears to be a stable type of star, it is actually quite variable when it comes to emitting ultraviolet and X-radiation. We believe that its output of ultraviolet radiation may change by factors of the order of 1,000 when the sun's atmosphere really becomes disturbed. Naturally, we would like to know more about these disturbing conditions. Here, however, appears the most important handicap of present-day rockets. It is true they can go to very high altitudes and therefore look at the sun directly and measure all of its radiations. However, they cannot stay up very much longer than perhaps 3 to 6 minutes. And one would like to observe the sun for a period of perhaps several weeks in order to learn something about these solar disturbances. It is for this reason that astrophysicists, particularly those interested in solar physics, have become very much concerned with the possibility of building a vehicle which will stay above the atmosphere for long periods of time.

From this discussion it appears that the requirements which a minimum instrumented satellite has to satisfy in order to be useful are very modest, merely to remain above the appreciable atmosphere, say 100 kilometers, for periods of days or even hours. The satellite is of course unmanned, but it is not even necessary to recover it physically in order to make it useful. All the information picked up by instruments in the satellite can be broadcast to ground receivers by radio telemetering techniques. The satellite would not even have to be visible; its position could be determined to good enough accuracy by radar techniques. It is clear also that the actual details of the orbit are of little consequence to the usefulness of this satellite. Even variations in altitude will not affect its essential value and it may therefore be allowed to depart

from a circular orbit into an elliptical one. This fact alone allows the removal of the most difficult control problems and makes it possible to talk about the project in a practical way.

Let us now consider what would be involved in building the smallest possible useful earth satellite. A proposal for such a satellite has been made recently by the author and has been christened the mouse (minimum orbital unmanned satellite, earth). It would consist of a spherical or cylindrical shell, about 30 centimeters in diameter, carrying a payload of about 20 kilograms of scientific equipment. In fact, we would instrument it with Geiger counters to measure the intensity of the cosmic radiation and with photon and X-ray counters to measure the intensities in the solar ultraviolet and X-ray spectrum. This satellite circling the earth once every 90 minutes at an altitude of 300 kilometers would keep us in touch with events on the sun and would allow us to link up these ordinarily inaccessible solar data with solar observations from the ground. This in turn would allow us to form a consistent theory of solar processes and perhaps make possible prediction of the solar effects which have such tremendous practical importance for radio communication and meteorology. It seems decidedly worthwhile therefore to tackle the difficult technical problems which will lead us to the final achievement of this research satellite.

The many problems connected with the Mouse satellite have now been investigated more closely in a theoretical manner. For example, it turns out that reasonable lifetimes of the order of days or weeks above the atmosphere are possible with only rudimentary control of the final angle of launching and with no necessity to control the final burnout velocity. The orientation of the satellite in space can be predetermined and controlled automatically by using the gyroscopic principle. By choosing the proper orbit, namely the one which goes across both poles of the earth, and by placing the satellite orbit in a plane perpendicular to the sun—earth line, the satellite can be made to view the sun at all times. This fact not only allows it to make continuous solar observations but, thanks to the development of the solar transitor battery, will enable it to obtain sufficient electric power for its radio transmissions.

Some of the more fascinating research applications of the satellite, in addition to the study of the all-important solar radiations referred to, will be investigations about the origin of the cosmic radiation, the nature and distribution of micrometeorites and cosmic dust, investigation of the causes of the polar aurora, studies of the properties of the outer fringes of the earth's atmosphere, and studies of the earth's albedo (sunlight reflected back into space by clouds) which may allow forecasts of long-term climatic changes. A small increase in the earth's albedo due to increased cloud coverage would lead to an appreciable lowering of the average temperature of the earth's surface. The Mouse satellite, by measuring the reflected sunlight on a continuous and worldwide basis, would allow us to make these economically important estimates. Another interesting experiment calls for the emission of sodium vapor from the satellite into the earth's upper atmosphere. Once emitted, the sodium would glow with its characteristic yellow light. Minute quantities suffice to lay down what amounts to a continuous sodium trail whose motion and dispersion can be observed from the earth.

There probably exist many other useful aspects of this minimum satellite, but the above examples may suffice. There appear to be no major obstacles at the present time to the launching of this minimum satellite, certainly not on the technical side. Even the cost picture is a very reasonable one, remembering that we are now spending of the order of $100,000 per minute for high altitude data in our most advanced types of upper atmosphere research rockets. A minimum satellite would provide many days of observations which could not be otherwise be made and could be built for less than the cost of a medium-sized modern bomber.

The arguments favoring such a satellite are so compelling that its establishment seems almost inevitable within the next 5 to 10 years, assuming that no other important activities develop. It is interesting to speculate whether the impetus of this first satellite will eventually lead to the development of larger rocket motors and other techniques which would be needed to produce larger and more ambitious satellites carrying television cameras and telescopes; satellites which are manned; and finally, space ships. I am willing to predict with confidence all of these developments during this century. We need only remember how utterly impossible and improbable supersonic flight and vertical takeoff appeared 50 years ago.

Louis M. Rabinowitz

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 28, 1955

Mr. MULTER. Mr. Speaker, the story of America is best told not in statistics or generalities, but in the character and achievements of a leading citizen. I am very happy, indeed, to recount the story of one of my constituents because I believe that we can all learn from his example and be justly proud of the type of man who is a leader in our democratic system.

Louis M. Rabinowitz, businessman and philanthropist, is a truly fine American. He is a modest, retiring individual who has given his support to all creeds, and regardless of race or color. His donations are given with heart and mind, never with ostentation.

On one occasion when the Academy of Music in Brooklyn was in serious financial difficulty, Mr. Rabinowitz was one of the first to come forward to give needed aid to the Honorable James G. McDonald, the president of the Institute of Arts and Sciences. Mr. Rabinowitz not only gave money, but gave his home in order to get the help of others.

He has also encouraged scholars in their educational research activities by gifts to Yale, Columbia, and other institutions.

The Jewish Hospital of Brooklyn was the recipient of the famous 16 murals, Children of Many Nations, by Albert Cugat, because of Mr. Rabinowitz' generosity. These murals were autographed by Lord Halifax, the late Wendell L. Willkie, Senator Herbert H. Lehman, former Gov. Thomas E. Dewey, Mrs. Eleanor Roosevelt, Gen. George C. Marshall, Gen. Omar N. Bradley, Adm. Louis Denfeld, Gen. Carlos P. Romulo, Dr. Ralph Bunche, and many others.

In 1942 Mr. Rabinowitz tendered a dinner to the Right Reverend Thomas E. Molloy, archbishop of Brooklyn, where among others, the late Alfred E. Smith, the late Wendell L. Willkie, and Rabbi Jonah Wise paid tribute to His Excellency Bishop Molloy. At that time, he was presented with a painting of His Holiness Pope Piux XII.

Just this year Mr. Rabinowitz has added another achievement to his already ample list. By contributing $106,000 to Hunter College, of New York, Mr. Rabinowitz has made possible a coeducational graduate school of social work to meet the critieal need for trained field personnel. A 2-year, full-time program will be offered to students at less than half the tuition charged by other schools of social work in New York City.

Mr. Rabinowitz' record as a responsible and intelligent American deserves the commendation of all.

Commodity Credit Corporation

SPEECH
OF
HON. ALBERT RAINS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1955

Mr. RAINS. Mr. Speaker, I am, of course, giving my full support to H. R. 7541, a bill to increase the borrowing power of the Commodity Credit Corporation from $10 billion to $12 billion.

In view of the adverse financial condition of the Commodity Credit Corporation resulting from executive branch application of the sliding-scale farm philosophy, the Congress has no alternative at this time but to increase its borrowing power if the Government is to fulfill its price support commitments to farmers in the year ahead. I believe, however, that it is imperative that we keep the record straight as to what the true reasons are why the sliding-scale administrators had to come to Congress for $2 billion additional borrowing authority.

The administration assertion, in the letter from Under Secretary of Agriculture Morse to the Speaker of the House requesting this legislation, that increased borrowing authority is required because of 90 percent price supports in 1953 and 1954 and limited sliding scale in 1955 is inaccurate, untrue, and the Department of Agriculture has already published all the facts that would lead one to believe that Morse knows his statement to be untrue, that is unless we are to believe that he signed the July 1, 1955 Report of the Crop Reporting Board without reading it or knowing what is in it. Now, Mr. Speaker, Mr. Morse is a trained economist and statistician and cannot be said to be stupid. Therefore the only conclusion that can be reached is that he has purposely tried to mislead the Banking and Currency Committee and the Congress in making the statement that the $2 billion increase in Commodity Credit Corporation borrowing authority is needed because of 90 percent price supports in effect in the past.

The Department of Agriculture complains about the increased production of

feed crops. Secretary Benson, however, has had full authority to set price support levels at any level he wanted to on all the feed crops except corn. He has, in fact, exercised this authority and has flexed these prices downward drastically. The only crops he was prevented from flexing downward in 1953 and 1954 were wool, sugar, and the six basics—wheat, corn, cotton, tobacco, rice, and peanuts. Only these latter six, except tobacco, were on the limited sliding scale in 1955. The production of all these basic crops was drastically reduced from 1952 to 1955 by operation of acreage allotments and marketing quotas, contrary to the implication of Morse's letter to the Speaker. The other crops, the ones with the increased production of which Morse complains, have never had mandatory minimum price support levels set by law, nor have their producers been authorized to make use of marketing quotas as a means of keeping supply in line with demand. It was on these crops that Benson attempted to demonstrate the validity of his sliding scale theory; that reduced price supports rather than marketing quotas are the best way to reduce overproduction of farm commodities. The record shows clearly however that the Republican sliding scale theory of farm economics is fallacious. The increased production of feed grains from 1952 to 1955 demonstrates that lower price support levels do not prevent the production surpluses that Benson has shed so many crocodile tears over.

Mr. Speaker, I shall conclude my remarks by reading into the RECORD a chart which I have prepared based on official publications and reports from the United States Department of Agriculture:

Crops with 90 percent mandatory supports

Commodity	Support level				Estimated production		
	1952	Percent	1955	Percent	Unit of quantity	1952	1955
Wheat	$2.20	90	$2.06	82	Billion bushels	1.3	0.9
Corn	1.60	90	1.58	87	do	3.3	3.4
Cotton	.31	90	.31		Million bales	15.1	11
Tobacco		90		90	Billion pounds	2.3	2.1
Rice	5.04	90	4.66	85	Million bags	49	47
Peanuts	.12	90	.12		Billion pounds	1.4	1

Crops without mandatory minimum 90 percent supports

Commodity	Support level				Estimated production		
	1952	Percent	1955	Percent	Units of quantity	1952	1955
Milk		90		75	Billion pounds	98	107
Soybeans	$2.56	90	$2.04	70	Million bushels	292	404
Barley	1.22	80	.94	70	do	227	384
Oats	.78	80	.61	70	Billion bushels	1.3	1.5
Rye	1.42	80	1.18	70	Million bushels	15.9	27.2
Sorghum grain	2.38	80	1.78	70	do	83.3	(1)

[1] Up 96 percent.

Mr. Speaker, I believe that the figures which I have just read conclusively prove that the Eisenhower administration's theory that flexible price supports will reduce production is erroneous. The Democratic position has consistently been that marketing quotas are the most effective method of bringing about a proper balance between the supply and demand of agricultural products. These figures make it obvious that the Democratic position is 100 percent right.

In Tribute

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 28, 1955

Mr. MULTER. Mr. Speaker, high tribute to the work of the late Chief Judge Harold M. Stephens, of the United States court of appeals, and to Mr. Bernard G. Segal, of Philadelphia, chairman of the Commission on Judicial and Congressional Salaries, is paid in this letter and attachments received by me. I commend them to the attention of our colleagues.

ARLINGTON, VA., *June 4, 1955.*

Congressman ABRAHAM J. MULTER,
House of Representatives,
Washington, D. C.

DEAR MR. MULTER: The Nation suffered a great loss in the death of Chief Judge Harold M. Stephens, of the United States Court of Appeals, and his passing was sad news to those who have the privilege of working with him. I recently received a letter from him which reflected his excellent qualities.

Reference was properly made to the important work he did, among other great accomplishments as a judge and a leading citizen, toward improving public administration. He was most active in the efforts to have congressional and judicial salaries appraised and adjusted in keeping with the duties and responsibilities of office.

Great credit was also due to you for your own insistence that the studies of salary legislation be conducted so that the best thinking on the subject should be reflected in the decisions that were made.

As you are aware, it was my honor to have played a small part in the work of the Commission on Judicial and Congressional Salaries, and it was indicative of the thoughtfulness of Judge Stephens and of Mr. Bernard G. Segal, the brilliant Philadelphia attorney, who headed the Commission, that they should have taken time to recognize that small contribution.

The encouragement of both Judge Stephens and Mr. Segal was indeed an inspiration to those of us who believe that private citizens, working only in the public interest like our legislators and the judiciary, can help to improve the processes of public administration.

With sincere good wishes, I am,

Yours truly,

HAROLD J. MILLER.

DEAR MR. MILLER: Now that the President has signed Public Law 9, providing more equitable salary scales for Members of the Congress and of the Federal judiciary, I wish to express appreciation to you for your efforts in gathering material on the subject, testifying at the public hearings conducted by the Commission on Judicial and Congressional Salaries, and informing the American people on this important subject.

Having been an advisory member of the Commission I know at first hand that the information you presented was extremely helpful to the Commission. I refer particularly to the data you gathered during your interviews with Members of Congress.

Sincerely yours,

HAROLD M. STEPHENS,
United States Court of Appeals, District of Columbia Circuit.

DEAR MR. MILLER: Now that the work of the Commission on Judicial and Congressional Salaries is completed and the President has signed Public Law 9, increasing the salaries of Members of the Congress and of the Federal judiciary, I want to extend to you on behalf of the Commission, and of myself as chairman, our appreciation for your cooperation in appearing and testifying at the public hearing conducted by the Commission.

Your testimony, particularly the data as to the cost of operation of their offices by various Members of the Congress, was especially valuable to the Commission in its deliberations and in the preparation of its report to the President, the Chief Justice, the Vice President as President of the Senate, and the Speaker of the House. I am sure you must derive a great deal of personal satisfaction out of your contribution to the effort to correct, at least in part, the gross inequity which existed in the compensation being paid by our Government to its Federal judges and Members of Congress.

Sincerely yours,

BERNARD G. SEGAL,
Chairman, Commission on Judicial and Congressional Salaries.

Report to My Constituents in the Sixth Congressional District of Maryland

EXTENSION OF REMARKS
OF
HON. DeWITT S. HYDE
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. HYDE. Mr. Speaker, at the close of the 1st session of the 84th Congress, I feel it is my duty to make a report of my voting record to the people of the Sixth Congressional District of Maryland. An analysis of this report will show that I cast my vote on every bill that was brought to a vote except one. On that day, I attended a function for the benefit of the Youth Opportunity Camp in Montgomery County.

Voting record of Representative DEWITT S. HYDE, 6th District, Maryland, 84th Cong., 1st sess.

Date	Measure	Vote
Jan. 25	H. J. Res. 159: Authorizing the President to employ Armed Forces of the United States for protecting the security of Formosa, the Pescadores, and related positions and territories of that area. (Passed 410 to 3.)	Yea.
Jan. 27	H. R. 587: Provides that persons serving in the Armed Forces on Jan. 31, 1955, may continue to accrue educational benefits under the Veterans' Readjustment Act. (Passed 366 to 0.)	Yea.
Feb. 8	H. R. 3005: To amend the Universal Military Training and Service Act by extending authority to induct certain individuals and to extend benefits under the Dependents Assistance Act for 4 years. (Passed 384 to 4.)	Yea.
June 28	H. R. 3005: Conference report on above bill. Motion to recommit. (Failed 171 to 221.)	Yea.
June 28	H. R. 3005: Conference report, on passage. (Passed 389 to 5.)	Yea.
Feb. 16	H. R. 3828: To adjust salaries of judges of United States courts, United States attorneys, Members of Congress. (Passed 283 to 118.)	Yea.
Mar. 1	H. R. 3828: Conference report on above bill. (Passed 223 to 113.)	Yea.
Feb. 17	H. Res. 142: Providing for consideration of H. R. 1, to extend the authority of the President to enter into trade agreements under sec. 350 of the Tariff Act of 1930, as amended, and for other purposes. On ordering previous question of closed rule. (Failed 178 to 207.)	Nay.
Feb. 17	H. Res. 142: Providing for consideration of H. R. 1. Amendment to previous question calling for open rule. (Failed 191 to 193.)	Yea.
Feb. 17	H. Res. 142: Providing for consideration of H. R. 1. On agreeing to resolution. (Passed 193 to 192.)	Nay.
Feb. 18	H. R. 1: To extend the authority of the President to enter into trade agreements, under sec. 350 of the Tariff Act of 1930, as amended, and for other purposes. On motion to recommit with instructions amending the bill to give Tariff Commission authority to limit imports causing serious injury to a domestic product, unless the President shall declare such limitation not in best interest of our national security. (Failed 199 to 206.)	Yea.
Feb. 18	H. R. 1: On passage of above bill. (Passed 205 to 110.)	Yea.
June 14	H. R. 1: Conference report on above bill. (Passed 347 to 54.)	Yea.
Feb. 25	H. R. 4259: To provide a 1-year extension of existing corporate normal-tax rate and of certain existing excise-tax rates, and to provide a $20 credit against the individual income tax for each personal exemption. On motion to recommit to delete income-tax provision. (Failed 205 to 210.)	Yea.
Feb. 25	H. R. 4259: On passage of above bill. (Passed 242 to 175.)	Nay.
Mar. 30	H. R. 4295: On conference report which provided 1-year extension of existing corporate normal tax and excise-tax rates. (Passed 387 to 8.)	Yea.
Mar. 10	H. R. 4720: To provide incentives for members of uniformed services by increasing certain pays and allowances. (Passed 399 to 1.)	Yea.
Mar. 18	H. R. 4903: Making supplemental appropriations for fiscal year ending June 30, 1955, and for other purposes. Amendment for technical assistance. (Passed 175 to 107.)	Yea.
Mar. 21	H. R. 4644: To increase rates of basic salary of post-office employees and to eliminate certain salary inequities. On motion to suspend rules and pass; ⅔ vote required. (Failed 120 to 302.)	Nay.
Apr. 20	H. R. 4644: Moss amendment to above bill to increase to 8.2 percent. (Passed 224 to 189.)	Nay.
Apr. 20	H. R. 4644: Motion to recommit above bill. (Failed 125 to 287.)	Yea.
Apr. 20	H. R. 4644: Passage of above bill. (Passed 324 to 85.)	Nay.
May 9	S. 1: To increase rates of basic compensation of officers and employees in Post Office Department. Motion to recommit with instructions to report bill same as H. R. 4644. (Failed 118 to 275.)	Yea.
May 9	S. 1: On adoption of conference report. (Passed 328 to 66.) Bill vetoed by President; Senate sustained veto	Nay.
June 7	S. 2061: To increase rates of basic compensation of officers and employees in Post Office Department and to eliminate certain salary inequities. On motion to suspend rules and pass; ⅔ vote required. (Passed 410 to 1.)	Yea.
Mar. 21	H. R. 4951: Directing a redetermination of the national marketing quota for burley tobacco for 1955-56 marketing year, and for other purposes. On motion to suspend rules and pass; ⅔ vote required. (Failed 230 to 151.) Passed Mar. 24 on majority vote; no record vote.	Yea.
Mar. 22	H. Res. 170: To declare that the House of Representatives does not favor sale of the facilities as recommended in the report of the Rubber Producing Facilities Disposal Commission submitted to Congress on Jan. 24, 1955. On agreeing to resolution. (Failed 132 to 283.)	Nay.
Mar. 22	H. Res. 171: To disapprove proposed sale to Shell Oil Co. of certain synthetic rubber facilities as recommended by the RPFDC. On agreeing to resolution. (Failed 137 to 276.)	Yea.
Mar. 30	H. R. 5240: Making appropriations for sundry independent executive bureaus, boards, commissions, etc., for fiscal year ending June 30, 1956. On amendment providing no part of appropriation shall be used to pay more than $1 per month for reports on each eligible veteran enrolled in institution. (Defeated 154 to 227.)	Yea.
Apr. 21	H. R. 4393: To provide for construction and conversion of certain modern naval vessels, and for other purposes. (Passed 373 to 3.)	Yea.
May 5	H. R. 12: To amend the Agricultural Act of 1949, to provide rigid price supports at 90 percent parity on basic agricultural commodities. On amendment to eliminate peanuts. (Failed 193 to 215.)	Yea.
May 5	H. R. 12: On motion to recommit above bill. (Failed 199 to 212.)	Yea.
May 5	H. R. 12: On passage of above bill. (Passed 206 to 201.)	Nay.
May 9	H. Res. 223: Providing for the consideration of H. R. 2535, to enable the people of Hawaii and Alaska each to form a constitution and State government and to be admitted into the Union on equal footing with the original States. (Closed rule without amendments.) (Passed 322 to 66.)	Nay.
May 10	H. R. 2535: To enable the people of Hawaii and Alaska each to form a constitution and State government and to be admitted into the Union on equal footing with the original States. On motion to recommit. (Approved 218 to 170.)	Yea.
May 12	H. R. 6042: Making appropriations for the Department of Defense for fiscal year ending June 30, 1956, and for other purposes. On amendment to strike out sec. 639 re contract work by the Department of Defense. (Failed 184 to 202.)	Nay.
May 12	H. R. 6042: On passage of above bill. (Passed 384 to 0.)	Yea.
May 23	S. 727: To adjust salaries of judges of the municipal court of appeals for the District of Columbia, the municipal court for the District of Columbia, the juvenile court of the District of Columbia, and the District of Columbia Tax Court. (Passed 283 to 33.)	Yea.
May 26	S. 727: Conference report on above bill. On motion to recommit. (Approved 170 to 165.)	Nay.
June 29	S. 727: Conference report on above bill. On motion to recommit. (Failed 158 to 226.)	Nay.
May 25	H. Res. 244: Creating a select committee to investigate the White County Bridge Commission, Harmony, Ind. On agreeing to the resolution. (Passed 205 to 166.)	Nay.
May 25	H. R. 2851: To make agricultural commodities owned by the Commodity Credit Corporation available to persons in need in areas of acute distress. (Passed 344 to 1.)	Yea.
May 26	H. R. 5881: To supplement the Federal reclamation laws by providing for Federal cooperation in non-Federal projects and for participation by non-Federal agencies in Federal projects. On motion to recommit. (Failed 62 to 229.)	Absent.
June 1	H. R. 3990: To authorize the Secretary of the Interior to investigate and report to the Congress on projects for the conservation, development, and utilization of the water resources of Alaska. On motion to recommit. (Failed 79 to 278.)	Nay.
June 8	H. R. 5923: To authorize certain sums to be appropriated immediately for the completion of the construction of the Inter-American Highway. (Passed 353 to 18.)	Yea.
June 14	H. R. 6227: To provide for the control and regulation of bank holding companies, and for other purposes. (Passed 371 to 24.)	Yea.
June 15	H. Res. 210: Authorizing the Committee on Banking and Currency to investigate the Federal Open Market Committee of the Federal Reserve Board. On agreeing to the resolution. (Failed 178 to 214.)	Nay.
June 20	S. 67: To increase the basic compensation of certain Federal employees. On motion to suspend rules and pass; ⅔ vote required. (Passed 370 to 3.)	Yea.
June 20	H. Con. Res. 109: Authorizing the appointment of a congressional delegation to attend the North Atlantic Treaty Organization Parliamentary Conference. On motion to suspend rules and pass; ⅔ vote required. (Passed 337 to 31.)	Yea.
June 20	H. R. 6295: To amend Travel Expense Act to provide an increase in per diem allowance for subsistence and travel. On motion to suspend rules and pass; ⅔ vote required. (Passed 320 to 41.)	Yea.
June 21	H. R. 4663: To authorize the Secretary of the Interior to construct, operate, and maintain the Trinity River division, Central Valley project, California, under Federal reclamation laws and authorized appropriation of $225 million. (Passed 230 to 153.)	Nay.
June 22	H. R. 6040: To amend administrative provisions of Tariff Act and repeal obsolete provisions of custom laws. On motion to recommit. (Failed 143 to 232.)	Nay.
June 23	H. Con. Res. 149: Expressing sense of the Congress that the United States in its international relations should maintain its traditional policy in opposition to colonialism and Communist imperialism. (Passed 367 to 0.)	Yea.
June 27	H. R. 6992: To extend for 1 year the existing temporary increase in public debt limit. (Passed 267 to 56)	Yea.
June 27	H. R. 6829: To authorize certain construction at military, naval, and Air Force installations. (Passed 316 to 2)	Yea.
June 30	S. 2090: To amend the Mutual Security Act of 1954. (Passed 273 to 128)	Yea.
July 7	S. 2090: Conference report on above bill. (Passed 262 to 120)	Yea.
July 6	H. R. 3210: To authorize State of Illinois and Sanitary District of Chicago, under direction of Secretary of the Army, to test, on a 3-year basis, the effect of increasing the diversion of water from Lake Michigan. On motion to recommit. (Failed 74 to 316.)	Nay.
July 11	H. R. 7224: To make appropriations for mutual security for fiscal year ending June 30, 1956. (Passed 251 to 123)	Yea.
July 13	H. R. 6766: Conference report on public works and civil functions appropriations for fiscal year ending June 30, 1956. (Passed 316 to 92)	Yea.
July 13	H. Res. 295: Providing for consideration of H. R. 7089, to provide benefits for the survivors of servicemen and veterans. On agreeing to resolution. (Approved 376 to 24.)	Yea.
July 18	H. R. 7225: To amend Social Security Act to provide disability insurance benefits for disabled who have attained age of 50, to reduce to age 62 the age on the basis of which benefits are payable to certain women, to provide for continuation of child's insurance benefits for disabled children. On motion to suspend rules and pass; ⅔ vote required. (Passed 372 to 31.)	Yea.
July 20	H. R. 7214: To amend the Fair Labor Standards Act to increase the minimum wage to $1 an hour. (Passed 362 to 54.)	Yea.
July 20	H. R. 7000: To provide for strengthening of the Reserve Forces, and for other purposes. On adoption of conference report. (Passed 315 to 78.)	Yea.
July 26	H. Res. 314: Providing for consideration of H. R. 7474, to authorize appropriations for the Federal-State highway construction. On agreeing to resolution. (Passed 274 to 129.)	Yea.
July 27	H. R. 7474: To authorize appropriations for the Federal-State highway construction program by increasing certain taxes. On motion to recommit and substitute language on financing. (Failed 193 to 221.)	Yea.
July 27	H. R. 7474: On passage of above bill. (Failed 123 to 292.)	Nay.
July 28	H. Res. 317: Providing for the consideration of H. R. 6645, to amend the Natural Gas Act. On agreeing to the resolution. (Approved 273 to 135.)	Yea.

Voting record of Representative DEWITT S. HYDE, 6th District, Maryland, 84th Cong., 1st sess.—Continued

Date	Measure	Vote
July 28	H. R. 6645: To amend the Natural Gas Act. On motion to recommit. (Failed 203 to 210.)	Nay.
July 28	H. R. 6645: On passage of above bill. (Passed 209 to 203.)	Yea.
July 29	S. 2126: To extend laws relating to housing, slums, urban communities, and public housing. Public housing not tied in with slum clearance or redevelopment. On amendment to remove public housing under these conditions. (Passed 217 to 188.)	Yea.
July 29	S. 2126: On passage of above bill. (Passed 396 to 3.)	Yea.
Aug. 2	S. 2126: On conference report which provided for 45,000 units of public housing not tied in with slum clearance or urban redevelopment, and other provisions. On adoption of report. (Passed 187 to 168.)	Nay.
Aug. 1	H. Res. 299: Resolution providing for $35,000 for further expenses for the Select Committee on Small Business. On passage. (Passed 231 to 134.)	Nay.
Aug. 1	S. 2576: To amend the joint resolution of Jan. 14, 1933, to give District of Columbia Commissioners power to settle the Capital Transit strike. On motion to suspend rules and pass; ⅔ vote required. (Failed 215 to 150.)	Yea.

Appraisal of the 1st Session of the 84th Congress

EXTENSION OF REMARKS
OF
HON. HAROLD H. VELDE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1955

Mr. VELDE. Mr. Speaker, the 1st session of the 84th Congress is drawing to a close, and the time has come for an appraisal of the work done. There was much conjecture at the beginning of the session as to just how President Eisenhower and our Republican administration would fare with a Democrat-controlled Congress.

I suspect that when every Member has had his say there will be just about as many varied opinions registered as there are Members of this distinguished body, all colored by individual tastes, political affiliation, and peculiar interests.

As I see it, this 1st session of the 84th Democrat-controlled Congress left more undone than it accomplished except in the field of foreign affairs and national defense.

The following major legislative proposals of President Eisenhower were not enacted by the Democrat Congress:

First. Expanded highway program.

Second. Federal aid to school construction.

Third. Federal grants to needy school districts.

Fourth. Atomic peace ship. Authorized but not enacted.

Fifth. Customs simplification bill. Passed House, pending in Senate.

Sixth. Hawaiian statehood.

Seventh. Legislation strengthening internal security of United States.

Eighth. Amendments to Taft-Hartley law.

Ninth. Work-hours legislation.

Tenth. Aid to low-income farmers.

Eleventh. Strengthened Federal program of drought aid.

Twelfth. Constitutional amendment lowering voting age from 21 to 18.

Thirteenth. Comprehensive program of water resources.

Fourteenth. Immigration and refugee law amendments.

Fifteenth. Federal health reinsurance program.

The record of actual accomplishment except in the field of foreign affairs and national defense is disappointing particularly in domestic affairs. The box score of major legislation enacted is as follows:

First. Authorized President Eisenhower to use the Armed Forces in defense of Formosa and the Pescadores.

Second. Extended to July 1, 1959, authority to draft men 18½ to 26.

Third. Extended to July 1, 1957 authority to draft doctors, dentists, and allied specialists.

Fourth. Extended provisions of the Dependents Assistance Act.

Fifth. Established a national program for Military Reserves.

Sixth. Provided rewards for information on illegal importation, manufacture or acquisition of nuclear material or atomic weapons.

Seventh. Extended to June 30, 1958, President's authority to make reciprocal trade agreements, reduce tariffs 5 percent a year for 3 years.

Eighth. Authorized and appropriated $2.7 billion for program of economic and military aid to foreign countries under the Mutual Security Act.

Ninth. Increased pay for Federal classified workers, postal employees, Federal judges, district attorneys, and Members of Congress.

Tenth. Extended to April 1, 1956, existing excise tax schedule, and the 52 percent corporate income tax.

Eleventh. Increased minimum wage from 75 cents to $1 an hour effective March 1, 1956.

Twelfth. Authorized 3-year program to complete the Inter-American Highway.

Thirteenth. Approved sale of 25 synthetic rubber plants owned by the Government.

Fourteenth. Extended Reorganization Act of 1949 to June 1, 1957.

Fifteenth. Extended for 2 years the period for making emergency loans to farmers and stockmen.

Sixteenth. Repealed the penalty that withholds soil conservation payments from farmers who exceed planting allotments.

Seventeenth. Granted $63 million in Federal aid to airports.

Eighteenth. Authorized free polio shots for 33⅓ percent of unvaccinated children between the ages of 1 and 19, and for expectant mothers, the program to end February 15, 1956.

I realize that it is not fair to compare the record of a single session with that of an entire Congress but on the basis of what little was done during this 1st session of the 84th Congress all the stops will have to be pulled out during the next session if the 84th Congress is to come anywhere near matching the enviable record of the Republican controlled 83d Congress.

As a parting word I would just like to say that I am sure many of our friends on the Democratic side of the aisle will find while home in their constituencies that the President's program is favored by the majority of the people the country over, and they ought to firmly resolve to join with our side in getting the entire program enacted into law next session.

Waste on the Upper Colorado

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Tuesday, August 2, 1955

Mr. DOUGLAS. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an excellent letter to the Washington Post by the able historian and writer on public affairs, Mr. Irving Brant, which appeared on June 26, 1955, emphasizing the basic issues of waste involved in the upper Colorado River project.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

WASTE ON THE UPPER COLORADO

If the backers of the upper Colorado River project want to get it through the House of Representatives they had better do three things fast:

1. Take the Echo Park Dam out of it. (They intend to.)

2. Offer a public oath that this dam, invading the national park system, will not be put back into the project at a later date, as is now planned.

3. Bring the bill to a vote before enough people realize that the whole enterprise is a half-baked squandering of billions of dollars.

A few days ago, talking in congressional circles, with an arguer for the bill, I mentioned the fact that former Governor Miller, of Wyoming, said that the cost of irrigation, under this project would amount to nearly $3,000 per acre.

"You can't charge the whole cost to irrigation," was his reply. "It is also a public power project."

"And how," I asked, "can you charge the cost to public-power investment when the estimated cost of that power is 10 times as high as at Grand Coulee and higher than the cost of producing it in steam plants in the same area?"

Not from him, but from another person discussing the subject, came this objection: "Is there enough coal in the upper Colorado region to produce the electric power that will be needed in the future?"

The three States of Utah, Wyoming, and Colorado contain one-sixth of all the known coal deposits in the world. That tri-State area contains 40 times as much energy, in its coal, as the entire reserves of oil and gas in the United States. It contains vast, barely touched deposits of potash and phosphates, which, with the coal and other minerals, furnish the raw materials for an industrial empire.

Did the Bureau of Reclamation and the Federal Power Commission take account of these energy resources and industrial potentials in planning the upper Colorado River project? Did the Senate consider them before it passed the bill? Not a word on the subject was spoken in debate. And if these factors had been considered in the bureau planning, the dams would not have been located where they are.

Hydroelectric and steam electric plants both need water. Both should be close to coal deposits, so that they can be integrated without heavy transportation and transmission costs. The Bureau of Reclamation thought of nothing but irrigation and hydroelectricity, and in regard to these it asks the taxpayers to spend billions for fantastically expensive results.

Congressmen talk about the waters of the Colorado flowing wastefully to the sea. Two lakes in Utah evaporate as much water annually as the entire States of Utah, Wyoming, and Colorado are permitted to take from the Colorado River. The central Utah Basin has a rainfall of 40 million acre-feet per year, which is being wasted while the Bureau of Reclamation asks Congress to pump half a million acre-feet over the mountains at an overall cost of $2,900 per acre.

Even the proposed Glen Canyon Dam, near the Arizona line, is part of the folly. Wastefully located from a power standpoint, outside the coal belt, its vast storage capacity is to insure delivery to the lower States of 75 million acre-feet per decade guaranteed them by the 1920 interstate compact. And how many 10-year periods have there been when the unstored waters of the Colorado failed to deliver that much? Not one.

All of this information has been available both to the Bureau of Reclamation and to Congress. The energy resources of the tri-State area are fully described in the publications of the Bureau of Economics and Business Research of the University of Utah, written before the politicians took over from the scientists.

Truly, the backers of the upper Colorado project had better act fast if they are going to get their bill through a House of Representatives whose 435 Members all have to face the voters next year.

IRVING BRANT.

WASHINGTON, D. C.

Eulogy of Richard B. Vail

EXTENSION OF REMARKS
OF
HON. HAROLD H. VELDE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1955

Mr. VELDE. Mr. Speaker, I know many Members of this House are sorely grieved as I am to have learned this past weekend of the passing of our former colleague, Richard B. Vail, of Chicago.

There was no more militant foe of communism in the Congress than Dick Vail. He was known for his steadfastness and firmness of conviction. Dick always spoke out as his conscience dictated regardless of political considerations and everyone respected him for it.

Those of us who knew Dick so well will miss the warmth of his friendship, the wisdom of his counsel, and the determination of purpose with which he met every problem.

Our deepest sympathy goes out to Dick Vail's family and close associates in their hour of bereavement.

The First Session Ends

EXTENSION OF REMARKS
OF
HON. ELFORD A. CEDERBERG
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. CEDERBERG. Mr. Speaker, as the 1st session of the 84th Congress comes to a close, we find the Nation enjoying the highest level of employment and prosperity ever achieved. In July expanding job opportunities had reduced the number of persons receiving unemployment compensation below 1.2 million for the first time since the end of 1953. In Michigan the rate of covered workers receiving benefits dropped from 5 percent in July 1954 to 1.9 percent in July this year. Everything is booming but the guns.

What you think of the accomplishments of the 1st session of the 84th Congress depends on whether you are a Democrat or a Republican. The Democrats, citing their bipartisan cooperation with the Eisenhower Republican administration in foreign affairs and their support of predominently popular legislative proposals advanced by the President, will tell you it was a session of glorious accomplishments, thanks to them. As a matter of fact on those particular domestic issues which the Democrats brag about supporting, it would have been politically unpopular for them to have acted otherwise with a national election only a few months away.

Legislation killed, blocked, or delayed by Democrats includes:

President Eisenhower's sensible highway program, legislation designed to give Michigan and other sugar growers a greater share of the sugar market, amendments to the social-security law extending coverage and liberalizing provisions for widows, helpless children, and totally disabled adults; labor-backed amendments to the Taft-Hartley act and the President's plan for broadening health programs.

Measures enacted into law include the following:

Selective service: Extended to June 30, 1959.

New Reserve program: Designed to have a Ready Reserve of 2,900,000 trained men by 1962. Youths 17–18½ years may volunteer for 6 months of active training followed by 7½ years Reserve training and receive draft-exempt status. Training may be delayed until completion of high school or reaching age of 20, whichever comes first. Men in service when law becomes effective exempt as are men with prior service.

Defense Facilities Act: In connection with new Reserve program, another $250 million provided for armories, airfields, and other training facilities.

Military career incentive pay: Designed to encourage reenlistments in Armed Forces and reduce expensive training of new recruits due to increasing number of men leaving services for jobs in private industry.

Defend Formosa: This resolution, which President Eisenhower said would "make clear the unified and serious intentions of our Government," strengthened our position abroad.

Small business: Life of Small Business Administration extended to June 30, 1957. Loan limit to single companies increased from $150,000 to $250,000.

One dollar minimum wage: The former minimum wage rate of 75 cents an houre was raised to $1 an hour, effective March 1, 1956. Because prevailing rates are generally higher already, new law will affect only about 2 million of the 24 million covered workers.

Veterans' benefits: Home loan benefits for veterans engaged in farming enlarged funds appropriated for President's Commission on Veterans Pensions to appraise scope of present benefit laws, established period of entitlement for outpatient dental care, permit renewal of term insurance 120 days after separation from service.

Woman's Obligation to Maine's Motto

EXTENSION OF REMARKS
OF
HON. MARGARET CHASE SMITH
OF MAINE
IN THE SENATE OF THE UNITED STATES
Tuesday, August 2, 1955

Mrs. SMITH of Maine. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD a letter of Mrs. Joseph B. Goodbar appearing in the July 18, 1955, issue of the Portland Press Herald. Dr. Harold M. Dudley, vice president of the Washington Pilgrimage, requested that I do so.

There being on objection, the letter was ordered to be printed in the RECORD, as follows:

WOMAN'S OBLIGATION TO MAINE'S MOTTO

EDITOR OF THE PRESS HERALD:

The Latin word "dirigo," meaning "I direct, or I show the way" is the Maine motto. It is the proud boast of the people of the Pine Tree State, that they, consistent with this motto, have supplied a generous portion of the able men and women who have shaped American life.

For the sons and daughters of Maine the cloister of memory is peculiarly rich with the records of Maine women.

Truly extraordinary is the story of Dorothea Dix, who galvanized the public conscience with respect to the treatment of the

insane. In 1841 she became aware that iron cages, chains, clubs, and starvation were the accepted means for handling insane persons. Burning with indignation, she undertook singlehanded the herculean task of overwhelming and uprooting such cruel and ignorant methods with the force of enlightenment and logic.

Under the impact of her inspired efforts State after State was induced to build hospitals for the insane. She is credited with having revolutionized the lunacy laws of England. In Italy she talked with Pope Pius IX himself, and later he warmly thanked her, though a woman and a Protestant, for crossing the seas to call to his attention the cruel treatment then visited upon the mentally ill members of his flock.

Less spectacular than Dorothea Dix, another great humanitarian among Maine women was Mrs. Lillian M. N. Stevens, a disciple of Frances E. Willard, and for 16 years national president of the Women's Christian Temperance Union. In 1900, after 2 years as national president, she became also vice president of the Women's Christian Temperance Union of the World.

Not only devoted to the cause of temperance, Mrs. Stevens led many hearings at the State legislature in advocacy of votes for women, of prison reform, and of a State reformatory for women. Her energy and influence were potent forces in shaping the thoughts and ideals of her era.

Some of our most important Maine women took no direct part in public affairs, but nevertheless exerted tremendous indirect influence through the training they gave their sons.

Among these perhaps Matha Washburn, of Livermore, Maine, is outstanding. She had a supreme honor of raising 7 sons, every 1 of whom became famous. Four of the Washburn brothers represented 4 different States in Congress, 3 serving at the same time—a situation without parallel in United States history. Two were governors of two different States. Two were foreign ministers. One was United States Secretary of State. One was a major general. One was commander of a ship. Among them they founded the Washburn Flour Mills in Minnesota.

In the field of writing perhaps the earliest and the most influential of all Maine women was Harriet Beecher Stowe, who, at the age of 41, produced Uncle Tom's Cabin, the antislavery book that electrified a nation. Wife of a professor of religion at Bowdoin College, and sister of Henry Ward Beecher, she found inspiration in the sea, where the shore stretched out its long, narrow fingers into beautiful Casco Bay, with its strips of rock, its sandy beaches, and its thickets of pointed fir. The vision of this book came to her at the Congregational Church in Brunswick during a sermon by her husband. Published in 1852, Uncle Tom's Cabin swept the Nation and later the world. More than 300,000 copies were sold within a year, burning a message into every reader's heart, preparing the way for the conflict between the States. Probably the pen of no other woman has had so large a part in shaping such stormy events as did that of Harriet Beecher Stowe.

At a more recent period came the career of Kate Douglas Wiggin, whose books and stories have brought fame and fortune at home and abroad. Not only a writer, she used her ability to initiate and establish free kindergartens for young children. Her maiden story, and her most successful, The First Christmas Carol, published in St. Nicholas magazine, was written to raise money for the establishment of the first free kindergarten on the Pacific coast. The success of this kindergarten inspired the founding of similar schools in Japan, Australia, New Zealand, British Columbia, and the Hawaiian Islands. Leadership, indeed, and of a most constructive kind.

It would be unfair to close this letter without mentioning Mrs. Laura Howe Richards, author of nearly a hundred books. Of her books, perhaps the best known is Captain January, used as the basis of a most successful motion picture.

It is a wonderful thing to have the heritage of so great and fruitful a past. But how much more wonderful, if we of the present day prove ourselves not only worthy heirs of a great ancestry, but also in our turn, inspiring ancestors for the future. In this sense the obligation of the women of Maine to the motto of the State faces both the past and the future. It is at once both glory and responsibility. Each day something new is added to memory's gallery of pictures. What will be found there in the years to come? May women and mothers not forget that what they are, as individuals, is God's gift to them. But what they do with themselves in worthy accomplishment is their gift to God.

Mrs. JOSEPH E. GOODBAR.

PORTLAND.

The Salk Vaccine: What Caused the Mess?

EXTENSION OF REMARKS

OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, August 2, 1955

Mr. LEHMAN. Mr. President, the current issue of Harper's magazine contains a very interesting summary and analysis of the Salk vaccine affair, written by Mr. Leonard Engel, an experienced reporter in scientific matters.

I ask unanimous consent that this interesting and revealing article be printed in the Appendix of the RECORD.

There being no objection, the summary and analysis was ordered to be printed in the RECORD, as follows:

THE SALK VACCINE: WHAT CAUSED THE MESS?

(By Leonard Engel)

The peak of the polio season usually comes in the second half of August or the first part of September. This year, we might have had substantially fewer cases of polio than usual. As it is, the number we do have will be largely a matter of luck.

We will have whatever number of cases do occur instead of the smaller number we might have had because of the great vaccine mess. During this past spring, the country was made to witness a spectacle without precedent. On April 12, Dr. Thomas Francis, Jr., of the University of Michigan, reported on the largest and most carefully executed field trial of a vaccine product in history, the 1954 test of the Salk polio vaccine. The trial confirmed a major medical discovery. The Salk vaccine was found to be adequately effective in preventing paralytic poliomyelitis, and remarkably safe. A month later, the hopes the Francis report had aroused, and the vaccine itself, had been very nearly dissolved in an incredible sea of confusion.

How did this come about? Who and what were responsible? It is no doubt too early for anyone to attempt a final assessment of what happened. The principal details, however, can be established.

The great vaccine mess was a tangled compound of many factors. It involved technical questions so abstruse there are scarcely twoscore men in the United States competent to pass on them, and everyone with a direct part in the situation, or nearly everyone, acted from the best of motives.

But demagogy and political expediency also contributed to the brew. So did oversensationalism by the press, radio, and TV, and a misguided attempt by the Department of Health, Education, and Welfare to withhold from the public for many weeks information the public was entitled to have from the beginning. Also involved were timidity and lack of leadership; a complete failure to educate the public properly on vaccines (despite all the propaganda); the constitutional unwillingness of scientists to give absolute guaranties; and many things more.

The point is, though, that the mess was unnecessary. Even if better planning might not have avoided the accident with Cutter vaccine, many more children than were inoculated could have been immunized safely in time for this year's polio season. The vaccination program was perhaps not the best that could have been devised. But it was not a bad program. It could have been kept on the track. All that was necessary was a little judgment and some capacity for decisive action in the right places at the right time.

HOW IT ALL STARTED

The best way to unravel the great vaccine mess is to set down, first, a simple chronology of events as they were seen, let's say, by an average newspaper reader or TV viewer. Then we can get on to some other things that also happened—though they were not in the papers—and to a reexamination of what went wrong.

The place to begin is New York in October 1954. In that month, the National Foundation for Infantile Paralysis, whose office is on downtown Broadway, announced that it was taking a calculated risk. The foundation had paid for the development of the Salk vaccine and paid for and arranged the field trial. Now, without waiting for Dr. Francis' report on the trial, it was ordering enough vaccine to immunize 9 million children. Its purpose was to get manufacturers into production and to have vaccine on hand as soon as the trial results were announced—in the event that these were favorable.

During the March of Dimes in January, foundation workers and foundation publicity carried the message of the calculated risk into nearly every home in the country. As the date for the Francis report drew near, interest was whipped up still more by advance newspaper stories—like an erroneous New York World-Telegram and Sun report that the vaccine had been found 100 percent effective.

The date for the Francis report was set by Dr. Francis himself. It could not be later than mid-April (otherwise the inoculation of school children could not be completed before the end of the school year). Dr. Francis was pressed by the big news magazines to make it early in the week (to meet their deadlines). The University of Michigan, where a special scientific meeting was held to hear the report, asked that the day not be a Monday (to avoid calling out a make-ready crew on a Sunday, at Sunday rates). So it was April 12, the second Tuesday of the month and the 10th anniversary of the death of Franklin D. Roosevelt, the most famous polio victim of all—a circumstance which was to lead to caustic remarks later, but of which Dr. Francis insists he was at the time unaware.

By 9 a. m. of the big day, nearly 200 newsmen were jammed into a temporary newsroom on the third floor of the Michigan graduate school administration building, awaiting copies of the report. These arrived at 9:15 under the escort of a university press officer and four Ann Arbor policemen. (It took the four policemen to get the press officer and his cargo through the crowd of newsmen and into the newsroom.)

Dr. Francis began reading his report to an audience of 500 physicians and scientists in the auditorium downstairs an hour later. As the cameras ground, he announced that

the vaccine had been between 60 and 90 percent effective in preventing paralytic polio, and even more effective in avoiding the bulbar form of the disease. Side reactions among the 440,000 children who had received the vaccine had been very few and mild. There was no evidence to connect the vaccine with the cases of polio that did occur among inoculated children; those children simply did not develop immunity or did not develop it in time.

In Syracuse, N. Y., the success of the Salk vaccine was signaled by air-raid sirens, church bell, and the turning of all traffic lights red for 1 minute. In Washington, late that afternoon, the Secretary of Health, Education, and Welfare signed licenses for manufacture of the vaccine. Parke, Davis & Co., 1 of 6 vaccine firms under contract to the polio foundation, made its first shipment less than 4 hours after its license was signed. Vaccination of first- and second-graders under the foundation program got underway, in San Diego, April 16.

Dr. Hart E. Van Riper, medical director of the polio foundation, predicted that there would be enough vaccine to immunize 20 million children by July 1. This was raised to 30 million when the foundation's medical advisory committee decided on two shots for each child this spring, with the third put off until next winter. (The longer interval between the second and third injections, Dr. Salk reported, would provide more solid, longer-lasting immunity.) Newspapers reraised Dr. Van Riper; they guessed there might be enough vaccine to inoculate 45 million children before the polio season.

To get some of this vaccine for youngsters not covered by the foundation program, State and local health departments throughout the country began placing orders with the vaccine manufacturers. The manufacturers said no orders could be accepted until commitments to the foundation had been fulfilled. It was soon evident that vaccine production was neither so large nor so elastic as expected and that the foundation contracts would take longer to complete than anticipated. New York and many other communities had to postpone scheduled inoculation clinics repeatedly because the vaccine had failed to arrive. The World-Telegram and Sun (Republican) charged that vaccine was being diverted to commercial channels and the black market. Congressmen (mostly Democratic) charged that the Eisenhower administration was failing to make adequate plans to meet the demand for the vaccine, and introduced bills to control the vaccine's distribution.

THE CUTTER CRISIS

Over the next 10 days, the vaccine shortage dominated the news. Then, during the night of April 26–27, the United States Public Health Service received word of six cases of paralytic polio in children inoculated with vaccine manufactured by the Cutter Laboratories of Berkeley, Calif. This was more than could have been expected to occur by chance, among the comparatively small number who had received Cutter vaccine, in the postinoculation interval before immunity develops. The Surgeon General of the United States, Dr. Leonard A. Scheele, at once banned the Cutter product and started an investigation to see what, if anything, had gone wrong with it.

Additional cases of post-inoculation polio soon appeared, many involving Cutter vaccine, but also some where the injections had been the product of other manufacturers. The latter almost certainly had nothing to do with the vaccine. Like all other vaccines, polio vaccine takes a period of some weeks to produce immunity. During this interval, the inoculee is still susceptible to the disease, and some inoculees will get it, if there is polio around—as there was in most of the areas where inoculations were taking place. But no one in a responsible position had the wit or courage to make this clear for many weeks, not in the Public Health Service, not in the American Medical Association, not even in the polio foundation itself. So the panic grew.

In the meantime, on April 29, a committee of polio experts met at the National Institutes of Health (the research arm of the United States Public Health Service) to consider the problems posed by the Cutter vaccine. The committee, on April 30, recommended continuation of the polio program with the vaccine of other manufacturers, and the appointment of a smaller committee to see whether more stringent safety standards for polio vaccine were possible.

This second committee met on Thursday, May 5. On Friday, it was joined by representatives of the vaccine firms. At 4 a. m., on Saturday, May 7, the Surgeon General ordered a complete halt to the immunization program. He said he had acted because mass immunizations were scheduled in several States over the weekend, and because there had been insufficient time to evaluate the committee's findings.

During the next several weeks, a team of Public Health Service experts and consultants visited the vaccine plants. As a result, vaccine of two manufacturers that had been distributed but not used was recleared for use. (Vaccine of two other manufacturers was cleared later.) Between trips, the touring experts consulted with more experts at ad hoc conference. These went on at the National Institutes of Health until far into the night.

Finally, on May 25, Dr. Scheele appointed still another committee. This one, which consisted of two representatives of the Public Health Service and five polio experts (including Dr. Salk), recommended a series of changes in the procedure for testing polio vaccine. After a day of debate, the changes were accepted by the manufacturers.

Meanwhile, it developed that there was live polio virus in some Cutter vaccine. But this information did not come from the Public Health Service; to all questioners (and there were many), PHS was still replying as late as the first week of June that investigation of the Cutter vaccine was not yet completed.

The information came from Dr. Louis B. Gebhardt, of the University of Utah, via an enterprising young lady named Jane Krieger who works for the New York Times. Dr. Gebhart undertook to test a sample of Cutter vaccine for the Idaho Health Department. One of his monkeys died of polio after inoculation with the vaccine. Without leaving her office, or talking to Dr. Gebhardt, Miss Krieger got hold of this interesting news even before (according to a PHS spokesman) the Public Health Service.

During the weeks following the first Cutter cases, Dr. Scheele many times reiterated his faith in the Salk vaccine. But his actions and his constant qualifying phrases ("there is still some information we are checking") belied his brave words. Parents and local health officials took the hint. Attendance at immunization clinics fell sharply. Communities in 10 States put off their immunization programs (but most later reinstated them).

A few days before this article first went to press, Dr. Scheele announced that the program was "back on the track." But new supplies of vaccine did not begin to flow for another week. Even Dr. Scheele conceded that it would be July before the second round of shots in the foundation program could be completed in most States. It would take still longer to restore public confidence in the polio vaccine and in the United States Public Health Service.

WHAT HAD GONE WRONG

Even a cursory reading of the record raises many questions about the way the Salk vaccine has been handled. For example, the national foundation has been severely criticized for the huge publicity sendoff the vaccine received. It is certainly true that the Salk vaccine has received much more publicity than any medical discovery should. But it is also true that the vaccine would have had an overexuberant sendoff no matter what the foundation did.

Over the past two decades, polio has been built up into something more of a threat to health than it really is (though the incidence of polio has been rising in recent years, and it was well on its way to becoming an important health problem). The buildup was partly a consequence of the polio foundation's annual drive for funds, but only partly. It was also a product of polio's uncommon nastiness. This has made polio a dramatic story—and newspapers, radio, and TV feed on dramatic stories.

"It wouldn't have made a particle of difference if Dr. Francis had read the report to himself in his bedroom or sent it in to the most obscure medical journal he could find," comments a veteran Associated Press man. "Reporters would have broken into his bedroom or stormed the journal's printing plant and taken the report out of there line by line. The Francis report was the story of the year. The newspapers would have got it somehow and played it for all it was worth." It will take something more than simple restraints on the part of sponsoring agencies to avoid runaway publicity on other medical discoveries in the future.

It has also been argued, on the one hand, that the Cutter incident would not have occurred if the vaccine had not been rushed into production prematurely, and, on the other, that it would not have occurred if the Federal Government had made plans for orderly large-scale production and distribution of the vaccine in advance of the Francis report. The contention that mass production of the vaccine was premature ignores the fact that the Salk vaccine is one of the most thoroughly tested biological products in history, and that a very large quantity of it—3,500,000 cc—was produced last year. It also ignores the chaos and the outraged cries of press and public that would surely have resulted if there had been no vaccine on hand when Dr. Francis released his report.

It may be that trouble could have been avoided by a Government vaccine program, as in Canada (where a modest government program, which seeks to immunize about one-quarter of Canadian children by summer, has been going very well). However, the kind of trouble that occurred at Cutter can occur in plants operated by or working under contract to the Government, as well as in plants producing for the foundation or the commercial markets. In view of some of the technical difficulties that have since developed, moreover, it would hardly have been desirable to produce vaccine on a big enough scale for the entire United States before the Francis report had approved it.

In any event, the contention that the Federal Government should have ordered vaccine before the Francis report neglects political realities. During the weeks when the vaccine shortage was uppermost in the country's mind, the Eisenhower administration still resisted Federal control of distribution. It is absurd to suppose that the President could have been persuaded to endorse, or the Congress to pass, a vaccine production program last fall or winter when the need seemed far less pressing.

More serious, to my mind, is the evidence that there was a notable lack of real planning for the technical aspects of producing vaccine on the part of the foundation, agencies like the American Medical Association, and—most important, because they have the legal responsibility—the Public Health Service and the Department of Health, Education, and Welfare. No matter how it's sliced, the production of 3,500,000

cubic centimeters last year was mass production. Any difficulties that turned up this year could and should have been detected last year. Whether or not it could have been avoided, in any event, the Cutter incident was subsequently so mismanaged that it very nearly wrecked the program we had.

In the first place—for reasons that I find hard to understand—the Department and the Public Health Service have not been candid with the public. From about the beginning of May through at least the first week of June, a curtain of silence was drawn down around Public Health Service scientific and technical personnel working on the polio vaccine problem. When I visited Washington and Bethesda (the Washington suburb where the National Institutes of Health are located), I was not permitted to see any PHS scientific or technical people. The excuse offered was that all were busy preparing a report for the President on new measures to reassure the safety of the vaccine. But reporters had not been able to obtain information directly from PHS technical people for weeks; and, except for a press conference held by Dr. James A. Shannon, Associate Director of the Institutes of Health, the press had seen PHS personnel only casually (mainly in the NIH hospital cafeteria, the only eating place in the sprawling medical research plant). Reporters were forced to submit questions through Department and PHS press officers. Practically all the important questions went unanswered for weeks, though no secrets of state were involved, just the health of the American people.

THREE BIG QUESTIONS

One can nevertheless establish some of what happened in the great vaccine mess, and much of what the Department and the Health Service did not see fit to tell. I address myself to three questions: What went wrong with the Cutter vaccine? Why did Dr. Scheele call off the immunization program at 4 o'clock in the morning of May 7? And who finally got the vaccine program back on the track?

Let us take up the Cutter affair first. Although the Public Health Service has been at some pains to avoid saying so, there was presumptive evidence of the presence of live virus in some samples of Cutter vaccine from the first dozen polio cases associated with it. First, some cases turned up in areas like Idaho, where polio does not ordinarily occur at that time of year. Second, in most of the first cases, paralysis began in the injected limb; such an association is not usual, though it may occur once in a while, when there is no connection between vaccine and postinoculation disease.

By now, of course, the presence of live virus in one sample of Cutter vaccine has been confirmed. (As recently as June 7, however, the Health Service refused to say whether its scientists had found virus in the vaccine or not.) How did it get there?

As Dr. Shannon of NIH points out, this may never be known for certain. The vaccine involved was shipped from the Cutter plants shortly after April 12. Its defects did not become known until 2 weeks later. How can one be sure precisely what submicroscopic viruses were where when that vaccine was processed, perhaps months before?

Nonetheless there appear to be only two ways in which live virus could have got into the vaccine. One was somehow to survive the killing treatment and pass undetected through the battery of safety tests to which all polio vaccine is subjected. Recent calculations suggest that this could have happened.

The other possibility is that the virus got in accidentally during bottling or at some other time after the killing agent was neutralized. (The agent employed to kill the polio virus, formaldehyde, is toxic to human tissue as well as virus and must be neutralized before the vaccine can be used.)

In favor of the second possibility is the fact that part of one of the suspect lots was apparently all right; no cases of polio turned up among children injected with a 22,000 cubic centimeter sublot of one of these lots. This implies (though it by no means proves) that the virus got in after manufacture was completed and before the vials in which the vaccine was packed were sealed. Moreover, Cutter alone among the six vaccine manufacturers bottled in the same building where live virus was handled. Polio virus may well get into the air in such a building. Two considerations would imply this. First, production workers in at least one other polio vaccine plant have been found to have very high concentrations of antipolio antibody in their blood, sure evidence of repeated exposure to the virus. Some of this was probably airborne. Second, accidental polio infections have occurred from time to time in diagnostic laboratories. Some of these are also thought to have been airborne.

It should be emphasized, whatever went wrong or was wrong at Cutter, that the Public Health Service is right in the boat with Cutter. The PHS Laboratory of Biologics Control prescribed the safety tests. PHS regulations permitted bottling in the same building with live virus, provided certain precautions were observed (and they were observed). PHS inspectors visited and approved the Cutter layout before Cutter received its license.

Almost none of the above was stated or admitted by the Public Health Service. Nor was the Surgeon General telling the whole story when he stated that he had called off the immunization program on May 7—the act that really sent the program into a tailspin—to allow more time to evaluate the findings of the expert committee that had been meeting in Bethesda.

During the 10 days between the first Cutter cases and May 6, Secretary Oveta Culp Hobby had evidently made it plain to Dr. Scheele that there must be no more postinoculation polio cases on the Eisenhower administration's political doorstep. The immunization program was to be stopped unless and until the Surgeon General could give, or obtain from the experts, an iron-clad guaranty of no more Cutter incidents.

Dr. Scheele is an experienced public-health man. He knew that there is no medical preparation whatever that is absolutely and unconditionally safe; that some risk is taken when any medicine, even as innocuous as aspirin, is given. He knew also that the product of the other five vaccine manufacturers was (and is) as safe a vaccine as there is; and that the risk of another Cutter incident was very small—especially since other manufacturers began strengthening their safety procedures as soon as word of the Cutter affair got around.

But the Surgeon General is not a specialist in immunology, one of the most highly complex branches of modern medicine and biology; not one physician or public-health officer in a thousand, for that matter,, can have a really adequate knowledge of it. Dr. Scheele put the problem to the experts who met on May 5 and 6. Being experts, and therefore men who wouldn't absolutely guarantee anything, the committee would not give him the guaranty he needed. Furthermore, they brought up a variety of technical problems concerning the vaccine which should have been thrashed out prior to April 12 but which were now brandnew to Dr. Scheele. He felt he had no choice but to close down the program.

The person who finally started the program back on the track was none other than Dr. Jonas Salk. In the 2 weeks after the shutdown order, Dr. Scheele called platoons of additional experts to Washington. ("I've had more calls to the Washington Airport in the past 2 weeks than in the last 20 years," said a Bethesda cabdriver.) The experts now met in ad hoc conferences. This meant that anyone could say whatever he wanted to, at any length he desired, and no one had authority to decide anything. The ad hoc conferences stretched on and on into futility until one man decided he had had enough.

On Friday night, May 20, Dr. Salk went home to Pittsburgh. On Saturday night, he sent Dr. Scheele a wire informing him that he would attend no more ad hoc conferences and calling upon the Surgeon General to appoint a committee with power to act and get the program going again. A wire from Basil O'Connor, president of the polio foundation, seconded Salk's proposal. The committee (a larger one than Salk had suggested) was appointed May 25; Salk was named a member (though he had not proposed himself). In 2 days, this committee—given different titles in different Public Health Service releases—drew up and secured acceptance for a new set of safety standards. At last, the wheels slowly began to turn again.

LOOKING BACK

The new safety standards, which were announced May 27, make three material changes in the procedure for testing polio vaccine. First, larger samples of each lot must be tested to make more certain that any live virus present is picked up. Second, the killing process is somewhat lengthened and two successive negative tests for live virus instead of one are required at the end of the killing process. Third, the vaccine must be tested for live polio virus after bottling.
